Why not visit

The SUDAN

this Winter?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

The Past Year in South-Eastern Europe.

As far as any generalization can hold good, the past year has been for the countries of South-Eastern Europe one of internal consolidation or reconstruction, with, on the whole, a satisfactory tendency towards the adjustment of external relations. Both Roumania and Yugoslavia have been hard at work in a drastic overhauling of the machinery of government; the former with special reference to the economic rehabilitation of the country, the purging of the administration and the introduction of decentralization; the latter, under the driving force of the Dictatorship, with a view to bringing about a real unification not only of legislation and the administrative machinery, but also, as far as may be possible, of the constituent elements of the Yugoslav people. Bulgaria, in celebration of the thousandth anniversary of the death of Tsar Simeon, has sought to heal internal wounds by a wide amnesty, which aimed at removing from the Agrarians any lingering grievance of a political stigma, tending to merge them too closely with Communists; but for the greater part of the year she has had her attention riveted on her relations with her neighbours and the vexed question of reparations. Political progress in Greece has been represented by the institution of a Senate, for which elections were held on May 20, to be followed by the formal appointment of Admiral Kondouriotis as President. Before the year ended, however, the first President of the Republic had resigned, but the election of his successor in the person of M. Zaimis presented no difficulties. M. Venizelos has endeavoured to stabilize the republican régime by offering a plebiscite to the Monarchists to determine Greece's final word on the subject of the form of government; but so far no alacrity has been shown by the Monarchists to accept the challenge. In the international sphere the countries of South-Eastern Europe have shown equal activity during the past year. Relations between Greece and Bulgaria were improved by the payment in May by the Greek Government of the first instalment of the compensation due to Bulgaria under the Molloff-Kaphandaris agreement, which Greece had previously refused to honour until the question of Bulgarian reparations had been settled. A Treaty of Arbitration and Neutrality between Bulgaria and Turkey was signed on March 6, and an Arbitration Pact between Greece and Roumania was ratified by Greece in July. Yugoslavia and Greece reached a settlement over the vexed question of the Yugoslav Free Zone at Salonika on March 17, and ten days later were able to sign a Treaty of Friendship and Conciliation. Roumania reached an agreement with Great Britain, France and Italy regarding the scope of the European Commission of the Danube, and thereby settled a question which has long troubled Roumanian *amour propre*. In other directions, however, the year has passed without recording any notable advance in the settlement of international disputes. Greece and Turkey, after having congratulated themselves on an agreement in principle on the points outstanding between them since 1923, found on further investigation that they could not agree regarding the question of the return to Constantinople (now to be known as Istanbul) of certain Greeks who left with passports, valid at the time, soon after the Greek disaster in Asia Minor in 1922, whom the Turks are resolved to keep out of the country. As between Yugoslavia and Italy there has been no noticeable improvement in relations, in spite of the marked anxiety of King Alexander's Government to maintain a correct attitude towards Italy. Roumania and Hungary, moreover, have failed to settle the Optants problem, although the mere passage of time appears in one way or another to diminish the seriousness of a dispute, in which it has been difficult for the outside world to detect any more serious explosive material than is provided by dialectical fireworks. Finally, after marked vicissitudes the relations between Yugoslavia and Bulgaria reach the turn of the year in a more hopeful position that at any other time during the twelve months. The first Pirot Conference early in the year was able to draft an agreement, but this was subsequently denounced by the Yugoslav Government, at a time when the relations between the two countries were at their worst. Wiser counsels subsequently prevailed, and a second conference was held at Pirot in September, to be followed by further negotiations in Sofia, which offer some prospect of constituting a turning-point in Yugoslav-Bulgarian relations.

Yugoslavia's Troubles.

Optimism in regard to the Balkans must always be prepared for occasional chastenings. A special dose of the latter would seem to be in course of being administered, when the observer reads of a "terrorist plot" in Yugoslavia, an attempt to kill the new Roumanian Regent, M. Saratzeano, by the derailment of the train by which he was

Digitized by Google

to have travelled, and alleged attempts on the Orient Express, in addition to the normal excesses that characterize the feuds of rival Macedonian factions. Yugoslavia's problem is admittedly a difficult one, and the commentator is handicapped by the absence of any clear explanation by King Alexander's Government of the policy that it is pursuing. On January 6 the present régime will have completed its first year of power, and expectation has been raised that the occasion will be improved upon to indicate how much progress has been made in the attainment of the goal that the King set himself in the memorable and masterly proclamation of January 6, 1928. That the administration has been improved admits of no doubt; but it is not equally clear that the work of promoting national unity has achieved the same measure of success. The first attempt to redeem the political pledges of a year ago was made on October 3 when the old divisions of the country were swept away, and a new measure of local administration was introduced. There has been no time as yet to judge the merits of a reform which came into full operation only on December 1, but it should be possible for the Government to clear away any ambiguity as to the intention of the new scheme, which is variously represented as a great act of decentralization and as a more scientific application of a policy of rigid centralization. That the capacity of a certain section of the Croats for passive or active resistance had been underrated seems to emerge from the fact that it has been necessary during the year to arrest, place under observation or drive into exile many of the political leaders of the Croats, including M. Pribitchevitch, M. Matchek, and Dr. Trumbitch. In the interests of the country's future it is unfortunate that the present régime has not been able to convince all sections of the Yugoslav people of the sincerity of its desire to bring about a real national unity in which no element shall be over or under another, or at any disadvantage in a common effort to promote the true interests of the State. Western opinion can have no sympathy with "terrorist" methods; nor would there seem to be any clear case for not giving the present Government more time to make its intentions better known, in view of the hopelessness of the condition to which Yugoslavia was reduced under a constitutional régime, unless it be, indeed, that the Croats have adequate reason to suppose that the old fatal tendency to make of the new kingdom a Greater Serbia instead of a union of Southern Slavs is still being manifested in Belgrade.

Palestine in its Larger Setting.

The important letter signed by Lord Balfour, Mr. Lloyd George, and General Smuts which was published in *The Times* of December 20 might, perhaps, have had more weight had it been written immediately after the disturbances in Palestine last August. Many intelligent minds deplored the appointment of a Commission of Inquiry with limited terms of reference, for it was felt that it was much more in the realm of major policy than of details of administration that changes might profitably be made in Palestine. This sentiment of the desirability of investigating the Palestine problem *de novo* was expressed most sincerely by the most unprejudiced, that is, by those who had neither Arab nor Zionist axe to grind: it was considered as an Imperial necessity of the highest importance that the obscurity, the mist of sentiment, in which the Palestine problem had too long lain, should be lightened and dissolved. Those who looked at the question mainly from the British point of view were disposed, therefore, to regret the categorical statement made by various political leaders just after the disturbances that any change of major policy was quite out of the question. Not until some idea of the probable findings of the Shaw Commission of Inquiry has been gained, however, has there been much public canvassing of the need for the appointment of a Commission of wider scope. That such a larger Commission would be helpful there is no doubt at all, and we would here reiterate the suggestion that we made on September 5, namely, that the ideal Commission for Palestine is one composed, not of politicians or of lawyers, but of men who know the East. Palestine, if it is to be correctly envisaged, must be seen not only in its past (Jewish or Christian) setting, but also in its present setting. A Commission which set out to study the problem of Palestine as a whole could not neglect, for example, the fact that the inhabitants of countries such as Iraq, Syria, Trans-Jordan, and Egypt have manifested a very lively sympathy with those who seek to abrogate the Balfour Declaration. It would probably see that, beside the difficulties that rise from the actual physical position of the Holy Land, the legal and technical difficulties with which the Mandate is enveloped are but slight and temporary. The microscope which the Shaw Commission has been focussing on Palestine will, questionless, produce valuable results, but it is rather a telescope which shall, so to speak, sweep back across the centuries and into the ages to come, that is needed. The Palestine problem is, in short, largely one of nicely calculating the respective forms of Arab Nationalism and of Jewish Nationalism, and of finding means of harmonising the inevitable development of the one and the desired development of the other.

Clearer Definition.

From the immediate point of view, it is, we think, beyond dispute that a clearer definition is needed of British obligations than is provided in the Mandate. "Our pledge," say the distinguished authors of the letter in *The Times* to which we have referred, "is unequivocal": but surely if any blame attaches to Britons responsible for the implementing of the Mandate it is they who made the Balfour Declaration and their successors in office who interpreted, or failed to interpret it. The Balfour Declaration, it may be argued, means what it says; yet if there is one thing certain in the present controversy, it is that the Balfour Declaration and their successors in office who authors, however admirable their sentiments, meant in the light of the limited knowledge of Palestine which they possessed in 1917. This Declaration has once been officially interpreted, by Mr. Winston Churchill in 1922. The necessity for such an interpretation derived from nothing less than knowledge gained since 1917 of the various factors in the Palestine problem. Now since 1922 additional knowledge has been gained, primarily by those actually responsible for the administration of Palestine. Can there not be provided, in the light of post-1922 experience, a fresh interpretation? At it is, things are in a mess very largely because of the groping policy that has necessarily been pursued in Palestine. The various peoples there are working on different planes of thought. As the *Jewish Chronicle*, with which we do not often have the pleasure of agreeing, frankly puts it: "Zionists work in Palestine without paying the least regard to the restrictive terms of the (Churchill) Memorandum." So many of British difficulties in the East arise from the difference in the plane of thought upon which the administrator and the administered conduct their lives. One need only mention Iraq, as a further example of this, where the promise concerning the entry into the League of Nations in 1932 has apparently been interpreted by authoritative Iraqis as the immediate granting of independence. We do not under-estimate the difficulty in making clearer definitions, but in Palestine, at any rate, the obligation to do so is of such urgency that the thing must be achieved.

In Trans-Jordan.

The affairs of Trans-Jordan do not often appear upon the horizon of the British public, but since they are likely to have their attention drawn to Palestine and its surrounding countries for some time to come, it may be prudent to notice the meeting of the Trans-Jordan Nationalist Congress last month at Amman. We do not wish to over-emphasise the force of Nationalism in Trans-Jordan, which is at best an artificial State and at worst a sop to the Amir Abdullah. It would be folly, nevertheless,

Digitized by Google

to neglect certain straws in the wind that are occasionally manifested in that rich but undeveloped country. The habit of Nationalist Congresses is, of course, to resolve abundantly, and we cannot reproduce in this Note all the Amman resolutions; but the following resolutions of this Trans-Jordan Congress are worth study: (1) to express their continued loyalty to the Amir Abdullah; (2) to pursue such a policy as will secure the complete independence of the Arab nation; (3) to demand a national local government in Trans-Jordan, which would have the full confidence of the people; (4) to confirm adherence to the Arab national oath to secure a Federated Arab State; and (5) to protest against the Balfour Declaration and the attitude of the Palestine Government towards the Arabs during recent events.—Froth, the cynics may say. Yet foam produced by the sea is not unlike froth produced by gas, and it is for the wary to perceive the difference.

The Syrian Problem.

Even the most ardent supporters of the League of Nations would scarcely contend that the mandatory system as applied to Class "A" has been a striking success. The difficulties which Great Britain has had to meet in Palestine and Iraq are both vivid in the memory and present to behold. France in Syria has had no less strenuous a time. Partly because of her own fault, partly because of the variety and intractability of the human factor in Syria, France has not even yet in sight a solution of the political problem of her ward. Hesitation has characterised her handling of the problem—though it should never be argued that where she has partly failed some other Power surely would have wholly succeeded. Such a statement would show ignorance alike of Syria and of France. Popular judgments are superficial and fickle, and in case the British public should suppose that France, not Great Britain, is the *bête noire* of Arab Nationalists, it may be well to record that since the establishment of order in Palestine consequent upon the disturbances last August, France has actually succeeded to comparative (though doubtless transient) popularity in Syria. But the immediate condition of popular feeling apart, it is worth noting that yet another revival of the movement to convert Syria into a Principality is discernible. This time, instead of a somewhat embarrassing list of conditions, but one man is being mentioned as likely to succeed to the Throne at Damascus, namely, Sharif Ali Haidar Pasha. So far this Arab nobleman has been marked rather by his failure to get jobs than by actual achievement. His history will be familiar to all those who have studied the twentieth-century story of the Sharifs of Mecca and that of the establishment of the Amir Faisal in Iraq. Sharif Ali Haidar Pasha lived after the War at Constantinople, where he became known to many Britons. After the accession of Mustapha Kemal Pasha to the Presidency of the Turkish Republic, however, he retired to Beyrout, where he has been living ever since. His claims would appear to lie in the realm rather of culture and racial descent than of achievement in action. In any case, this can be foreseen: that against whomsoever France may possibly choose as King of Syria there will be something to say and somebody to intrigue.

INDIAN NOTES.

The Lahore Congress.

The chaos and confusion which marked the opening of the momentous Lahore session of the Indian National Congress on Sunday appear to be no more than a pale reflexion of the conflicting counsels and elements within that body itself. At the time of writing the fate of Mr. Gandhi's resolution defining Swaraj as independence, categorically declining the invitation to the Round Table Conference and calling for a fresh boycott of the legislatures and local bodies is still undecided, but the issue seems scarcely in doubt. It is true that the Working Committee of the Congress in two respects has hesitated to go all the way. The first is over the question whether the boycott should be extended to the schools and law courts and the second as to the time and manner of the next step if the resolution is passed. By the terms of the resolution the All-India Congress Committee is authorised, "whenever it deems fit, to launch a programme of civil disobedience, including non-payment of taxes whether in selected areas or otherwise, and under such safeguards as it may consider necessary." As the voting in the Subjects Committee has clearly shown, it is on this issue that the split, which now seems inevitable, is likely to occur, although it is hard to believe that many members of the Legislatures will give up their seats without a struggle. The temper of the extremist element is well illustrated by the tone of the Presidential address and the stubborn opposition within the Working Committee to the resolution congratulating the Viceroy on his escape, which was passed only by 117 votes to 69. It is a welcome relief to turn from the frankly revolutionary and intractable attitude of the Congress leaders to the more sane and statesmanlike inaugural address by Sir Phiroze Sethna at the meeting of the National Liberal Federation at Madras the same day. The Federation has since followed up its President's plea for co-operation with a courageous and trenchant denunciation of the independence programme, which demonstrates afresh how strikingly successful Lord Irwin has been in rallying the moderate opinion throughout the country.

A Valuable Document.

It is a matter for regret that circumstances, largely beyond the control of the authorities, should have necessitated the release of the Report of the Indian Central Committee at a time when the public attitude in this country towards Indian affairs is inevitably coloured by the recent happenings in Delhi and Lahore. While the time chosen for its publication is, therefore, in some respects unfortunate, the document itself, a short descriptive summary of which will be found on another page, is of outstanding interest and importance. Comment upon the detailed recommendations of a body whose labours have been complementary to and largely interdependent with those of the Statutory Commission itself must manifestly be reserved until the picture can be presented in its entirety. For the moment we may say, without committing ourselves to a final judgment upon any particular set of conclusions, that both the report proper—which, incidentally, takes up less than one-fifth of a formidable Blue book of some 520 odd pages—and the dissenting and explanatory memoranda are ably written

THE EGYPTIAN ELECTIONS AND AFTER.

As soon as the decision of the Liberal Constitutional Party was taken not to make the proposed terms for an Anglo-Egyptian treaty the basis of an organised appeal to the electorate, the success of the Wafd at the elections held on December 21 was a foregone conclusion. In the event the Wafdists secured more than two hundred seats in a Chamber of 235, and their leader, Nahas Pasha, is expected shortly to become Prime Minister. The attitude adopted by the Wafd towards the treaty proposals was that they could be considered only by Parliament after the reconstitution of that body as the result of a general election. In the Notes exchanged on August 3, 1929, between Mr. Arthur Henderson and Mahomed Pasha Mahmoud, it was agreed that the proposals should be submitted to the verdict of the newly-elected Egyptian Parliament, but it may be taken for granted that the possibility of elections that did not turn on the acceptance or rejection of the proposals did not occur to the British Government. In Egypt, however, constitutionalism is not interpreted as in Britain. Even when the main purpose of a Parliament is to pass a verdict on definite proposals for a treaty with Great Britain—a vital subject for independent Egypt—the political leaders of the nation lay down the rule, in which the electorate meekly acquiesces, that the judgment of the people does not count. The ruling is in keeping with the tendency of the East to adapt constitutionalism to its own requirements and does not call for challenge from the West. It would seem, however, to cut the ground from under any attempt to impugn the validity of the most autocratic régime; for it is obvious that, if a single leader can dictate the attitude of his party on such a question as an Anglo-Egyptian treaty without reference to the electorate, another leader can be said to have equal authority for a decision that the abolition of Parliament is in keeping with the views of the nation as a whole. The matter is probably only one of temporary interest, as the ignoring of an electorate must become increasingly difficult as that body emancipates itself from the serfdom of illiteracy, and, becoming more vocal, imposes upon its leaders the obligation of a more orthodox interpretation of constitutionalism.

For the present the main interest for the British public in Egyptian affairs centres in the harmonising of conflicting theories regarding the future of Anglo-Egyptian relations. Last week's debate in the House of Commons was useful for its clear enunciation of the differences between two schools of thought on this subject. On the one side is the British Government, acting in complete good faith and prepared to extend to the Egyptian people the trust and confidence that it asks for in return. Its sincerity is shown, first, by its readiness to overlook the incongruity of its own action in making its offer to Mahmoud Pasha, whose attitude towards Great Britain, which alone rendered the negotiation of the treaty possible, is denounced by the Wafd as treason to Egypt, and, secondly, by its anxiety to ignore past history in its stipulation that the terms offered should be endorsed by those who have hitherto stoutly maintained that Egypt can make no terms with Great Britain, but must insist upon unconditional independence. The British Government, the Secretary of State for Foreign Affairs declared, "had proceeded on the lines that no agreement could be of permanent value, unless credit were given to the Egyptians for a desire to operate the agreement in the same spirit in which its provisions had been conceived." The purpose that the Government had in view, he continued, was the establishment of a firm and lasting friendship with the Egyptian people by the removal of those sources of suspicion which in the past had been the cause of so much damage to the interests of both peoples. The other school of thought lays stress on the fact that the Wafd, which claims to speak for the great majority of the Egyptian people and has now swept the poll at the elections, has consistently maintained that it will never accept any arrangement with Great Britain which does not guarantee Egypt absolute independence, free from all reservations whatsoever. On what ground, therefore, this school asks, does the British Government base its belief that the Wafd will accept proposals that still make reservations? For the Wafd to agree to the proposed treaty, it is argued, entails the stultification of its whole position, and if there are to be further negotiations, which side is the more likely to give way? If each party stands firm, what has the British Government achieved beyond weakening the British position, and providing a fresh base from which renewed attacks upon it may be made by the Wafd? To these and similiar criticisms it must be supposed that the Government will still reply that it is better to have trusted and lost than never to have trusted at all. It considers that its predecessors in office were inclined to withdraw with one hand what they offered with the other. Its own offer is made with two open hands, and it clings to the hope that the Egyptians will accept it in the same spirit of genuine co-operation.

In a few weeks' time the Egyptian Parliament will have indicated, if it has not actually declared, its attitude. Further negotiations there must be between the Egyptian and British Governments, for the draft proposals have to be translated into treaty phraseology and agreement will be necessary on the text that is to be submitted to the respective Parliaments for ratification. In these discussions there will be ample opportunity for the Wafd leaders to show whether they reciprocate the spirit of the British Government, or whether they still adhere to a policy of independence without reservations. Two at least of the points raised in the course of the debates in the two Houses of Parliament must come up for discussion, it would be thought, before a formal treaty can be drafted. These are the contracting-out of an Anglo-Egyptian treaty from the scope of Great Britain's endorsement of the Optional Clause, and the relation in strength between the British force to be kept in the Canal Zone and the Egyptian Army. It was, perhaps, unfortunate that Mr. Henderson should have thought it necessary to whittle down the effect of a decision to withdraw the British garrison from Cairo and Alexandria by expatiating on the length of time that the transfer may take. The result may well be to make some Egyptians doubt whether the British Government's offer is altogether without mental reservations, or at least to afford them an excuse for declaring that it is not. Be that as it may, the new Egyptian Government will not be able to avoid the real issue before it—an issue of wider significance than a purely Egyptian question—whether it will support the gradual friendly adjustment of relations between West and East, or whether it will strengthen the hand of reaction and confirm the belief that, as between the two there can be no give-and-take, the West must cling at all costs to the advantages which it still retains. Rightly or wrongly, the British Government has made an unexpectedly generous gesture to Egypt, which can be met in the same spirit or be repudiated. No arguments that the Egyptians can adduce will shake the world's conviction of the generous nature of the offer made, and there can be no more convincing proof that the circumstances of the case did not justify the British confidence in Egypt than the rejection, whether contemptuously abrupt or under Oriental disguises, of the offer.

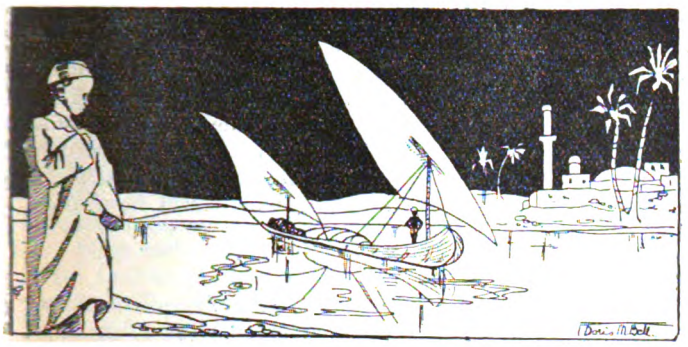
*The Near and Middle East

From Our Own Correspondents.



EGYPT.

Cairo, December 21.

The High Commissioner.

Last evening the High Commissioner and Lady Loraine left by special train for Shellal *en route* for the Sudan. They were accompanied by Mrs. Turner, the wife of the Commercial Secretary, Mr. Herbert, Private Secretary, and Mr. Graham, Attaché to the Residency. According to the programme drawn up, on arrival at Wadi Halfa, Sir Percy will go ahead of the party and fly to Khartoum, where he will spend four days as the guest of the Governor-General. The party will leave on the 27th by car for Gebel Aulia, whence they will proceed by Government steamer to Kosti, where a duck shoot has been organised. From Kosti, while the rest will return by water to Khartoum, the High Commissioner will fly across the Gezira to Gedaref, where he will spend two days shooting; after this he will fly to Makwar, where he will be met by Lady Loraine. After visiting the Dam they will go by car to Singa, the capital of the Fung Province, and take steamer for Makwar ,whence they will return by train for Wad Medani. There they will visit the Gezira Research Farm and Barakat. Then they will return to Khartoum and embark on their return journey to Egypt. This is the first visit Sir Percy Loraine has paid to the Sudan, which comes within his jurisdiction as High Commissioner of Egypt and the Sudan. He will be away for just less than a fortnight. He is due back in Cairo on January 8, and so will be in time for the opening of Parliament, which takes place on January 11.

***Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.**

Victoria College.

The High Commissioner and Lady Loraine spent Monday in Alexandria, where they had a very full programme. In the afternoon they attended the prize-giving at Victoria College, where Sir Percy made his first speech to the boys. There was a humorous touch about the proceedings, in that vouchers were presented to the successful boys in lieu of prizes as the books had not yet arrived from England. Mr. Reed, the Headmaster, pointed out that they had been able to make important additions to the school premises in the shape of an additional storey and two corner towers—thanks to the generosity of the Alexandria community and the good offices of the General Committee of the New British Schools, which had given the School £10,000 out of the total of £80,000 subscribed for educational purposes in Alexandria. The addition to the School provides extra boarding accommodation, which is badly needed and more class rooms and quarters for the gradually increasing teaching staff. He added that a hundred new boys had been entered at the opening of the School year as against fifty who had left the School, and their total numbers were now just about 350, twice as many as the School had four years ago.

In his speech to the boys, Sir Percy Loraine, who assured them all that he took as great an interest in British education as his predecessor and friend, Lord Lloyd, said that the College was an example of a bold experiment which had become brilliantly successful. He stressed the value of British education, since it inculcated the spirit of team work and saw that moral intelligence and physical development proceeded regularly in proportion and not one at the expense of the other. He enjoined the boys to do all they could for the credit of their School, and equally for the credit of them all. If British education was what he believed it to be, each of them would have the best chance of developing the best characteristics of the nation to which they belonged. And above all he enjoined them when they left the College to remember their former companions as Old Victorians and to maintain their old school connexions, associations, and friendships.

British Community in Alexandria.

In the evening the High Commissioner and Lady Loraine were the guests of the British community at a dinner given at the Sultan Hussein Club with Sir Henry Barker, President of the community, in the Chair. The speeches after dinner were memorable because they afforded the President an opportunity to voice the anxieties of the community in regard to the proposals put forward by the British Government for a settlement of the Egyptian question. Sir Henry Barker said that,

EGYPTIAN STATE RAILWAYS

A pleasure trip to Egypt, the Land of Eternal Sunshine, is now within the reach of nearly everybody.

Combined Steamship, Railway, Sleeping, Restaurant and Pullman Car Tickets, from Marseilles to Assuan and return, including accommodation at the Leading Hotels, are available from 1st November, 1929, to 31st January 1930, as under :—

1st Class throughout.

B. 10 days sea-passage & 25 days stay in Egypt...L. Stg.: 81.10.

Digitized by Google

while there were many things about the proposals which many of them disliked, they had to admit that reforms were due. The two main questions that concerned them were taxation and the administration of justice. Their enjoyment of special privileges was no reason to hamper the Egyptian Government in its development of the resources of the country. Obviously, if an increase in revenue is needed, they must, as they always had done, pay their share. But it was essential that all classes should be treated alke, that what they might be called upon to contribute would be equally and indiscriminately levied from all and that the revenue of the country would be wisely and usefully spent.

In regard to the reform of the administration of justice there should be no reason why a new system, which would make everyone subject to the same laws should not be evolved and made to work for the benefit of all concerned. But they enjoyed peculiar privileges, which had come down to them through the ages and as a result of which Egypt had attained her present state of prosperity. If these privileges were to be relinquished or curtailed they had every right to demand that whatever régime might be introduced would fully guarantee equal and impartial treatment for all. The whole question was a complex one, without parallel in other countries, but if the present proposals succeeded in attaining the object for which they were framed and it was possible satisfactorily to replace the régime to which they still clung, he saw no reason for being over-pessimistic.

Sir Percy Loraine in his reply said that he agreed with Sir Henry Barker that a reference to the political situation was a delicate matter, not because there was anything to be hidden or because an indiscreet remark might reveal a sinister conspiracy that was being hatched, but because they had put a friendly question to a friendly nation and were awaiting its answer. They were leaving Egypt quite free to give her answer in her own way. If there should be difficult times ahead he was bold enough to hope that those difficulties would only be those necessarily attendant on a process of readaptation, necessitated by the new policy, a stage which he would describe as a transition from a position based on military guarantees to one placed on political guarantees, of which the lynch-pin was an alliance between the two countries. Good will would be needed on both sides not only to reach the agreement but also to ensure it. He was quite unable to believe that British interests in the destinies of Egypt would cease if the proposed treaty were concluded. The interests of Great Britain and of Egypt so complemented and completed each other that sooner or later a form must be given to the relationship between the two countries that would dovetail those interests together, and it was certainly the wish of the three great political parties in England that this form should be found. Without agreement a firm and durable basis of relationship could not be found, without mutual concessions there could not be agreement, and without the will to agree there could not be concessions. They had shown their will to agree and the concessions they were willing to make to secure agreement, and they awaited tranquilly the answer of their Egyptian friends in the hope that a few months hence they would be their Egyptian allies. After the dinner the High Commissioner and Lady Loraine attended the annual ball in aid of the British Benevolent Fund, and the party returned to Cairo the next day.

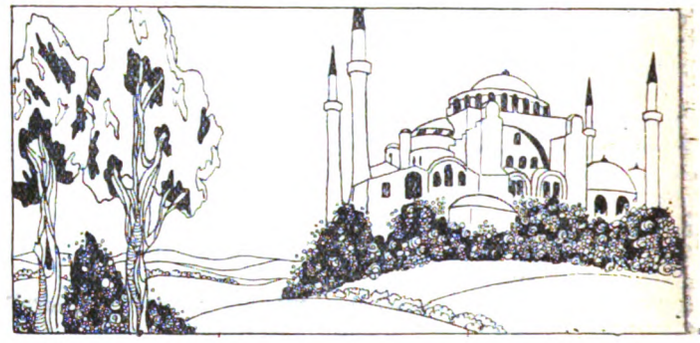
The Narcotic Intelligence Bureau.

Cordial congratulations are due to the Narcotic Intelligence Bureau directed by Russel Pasha, Commandant of Cairo City Police, for their success in running to earth the important international gang which is amongst those responsible for the smuggling into Egypt of noxious drugs. It is true that the Swiss and Italian authorities played up wonderfully well as soon as they were put upon the track. But if Cairo had not seized the opportunity of the discovery of the Roumanian consignment to follow the matter up to its source, the gang would still have been operating actively.

Port Said.

A good send-off to the branch of the British Chamber of Commerce, which was formed recently at Port Said, was given this week when the President of the Chamber, Sir Henry Barker, the Chairman of the Cairo Committee, Mr. R. C. Martin, and the Secretary, Mr. Trimen, went to that town in order to attend the second meeting of the local committee held under the presidency of Mr. W. B. Broatch. It was agreed that Port Said would follow the example of Cairo and Alexandria, and send delegates to attend meetings of the Chamber in either of those centres whenever anything affecting their community was to be discussed, and that at least four meetings should be held in Port Said every year at dates to permit of the Secretary's attending from Cairo. Thus another step has been taken to link up all the different British communities and secure harmonious co-operation between them for their own good and for that of British interests in general.



TURKEY.

Istanbul December 18.

The Visit of M. Karakhan.

The Soviet Assistant Commissary for Foreign Affairs, who arrived in Istanbul from Odessa about a week ago in a Russian destroyer, has been the guest of the Turkish Cabinet for the past few days. His presence in Ankara is attributed in the semi-official Press to the necessity of putting the finishing touches to the negotiations which have been proceeding for some time past between the two Governments with the object of framing a new Russo-Turkish Trade Agreement and Pact of Amity.

That the need for the former is indeed a dire one may be deduced from the attitude of the Turkish dailies towards the innumerable tergiversations and pettifogging annoyances to which Turkish exporters have found themselves exposed at the hands of Soviet officials, when doing their best to foster and develop commercial relations between the two countries. It is not going too far to say that feeling has now run so high on this side of the Black Sea that leader-writers have indulged in invective of the most virulent type against their northern neighbour.

On the Pact of Amity, which was signed yesterday afternoon, December 17, until the text of that diplomatic instrument is made public, it is yet too early to offer any remarks. M. Karakhan would appear, at all events, to

Digitized by Google

have received striking evidence of the lavish scale on which Turkish official and semi-official hospitality can on occasion be literally showered upon the stranger within the gate. Not only has he been entertained by the Government and individual Cabinet Ministers, but he has also been the guest of honour at several banquets given by Members of the Assembly.

The last Russo-Turkish Pact of Amity was signed in Paris in 1925, and it will be interesting, therefore, to see whether in the text of the new instrument any notable departure has been made from established precedent. The semi-official Turkish Press has already pointed out that, despite persistent rumours to the contrary, no secret clauses have at any time been contemplated nor have any been embodied in the Pact or any Annexe.

Be that as it may, there can be no denial of the fact that the Constantinople and Ankara representatives of certain Continental Chanceries are looking forward to perusing with the greatest gusto whatever the local Press may publish as "le texte intégral du Pacte d'Amitie entre les deux nations soeurs."

The atmosphere which has been created as a result of the negotiations between the high contracting parties—viewed from a purely British and strictly insular point of view—cannot, I imagine, be better portrayed than by quoting the reflexions which have suggested themselves to the mind of the leader-writer of the Russian *Izvestia*, when commenting on the incidents which have marked M. Karakhan's reception in the Turkish Capital.

"The struggle for domestic reforms in Turkey which was initiated as soon as the war of liberation had come to its appointed end," says the Editor of that daily newssheet, "the abolition of both the Caliphate and Sultanate, the war to the knife against reactionary elements and the sledge-hammer blows aimed at religious institutions throughout the land are unquestionably calculated, sooner or later, to drive the whole of the peoples of the Orient into open revolt, with probably a fallow field for the most tangible result in the politically fertile areas of Persia, Afghanistan and neighbouring countries."

The Rate of Exchange.

Athough relative stability has been imparted to the Turkish pound by the imposition of drastic Treasury regulations which have directly affected even the State Departments themselves, it is far too early in the day to prognosticate on the power of the Government to keep the Lira definitely "pegged" at its present rate of approximately 1,025 piastres to the pound sterling. Much water must yet flow under the bridges of the Golden Horn before an definite scheme of stabilisation or revalorisation can be brought into the field of practical politics, even though the creation of a State Bank—that hoped-for, but perhaps rather utopian panacea for the ills of a wildly gyrating currency—may by then have advanced well beyond its forthcoming introduction to and passage through the House of Assembly, as a draft law.

The recent fluctuations of the Turkish pound have brought in their train, at all events, a hopeful though tardy awakening in the mind of both politician and peasant alike as to where exactly the shoe is pinching. It is gradually dawning on the laymen that perhaps, after all, the economists, bankers and statistical experts were not very far from the truth when they pressed and pleaded for a stringent policy of vigorous retrenchment in the import of foreign goods, more particularly of those commodities known by the generic term of luxury articles.

The feminine element in this country, which, in certain respects, is, not to say more patriotic, at least more practical than mere man in its concepts of what effects are likely to follow upon given causes, has come into the limelight within the last few days as the sponsor of a national campaign for the speedy encouragement and development of home industries. The slogan of the moment is "Be Turkish, buy Turkish, though the price of the native article exceed that of the foreign commodity by ten per cent."

The industrialisation of an agricultural country like Turkey cannot, of course, be said ever to go hand in hand with the mere raising of capital and the mushroom growth of private or public companies, but the recognition of the existence of inexorable economic laws by a people who in the past have looked upon the latter, if not as chimerical, at least as negligible factors, must unquestionably whet and reinforce the will to win through—when volition is accompanied by a frank recognition of the practical effects and teachings of those primordial economic precepts and principles which the Western World had to take to heart so many centuries ago.

A Turkish Boxing Day.

December 25, our own Noel, has been hit upon by the Directorate of the "Ish Bankassi" or Banque d'Affaires—whether intentionally or fortuitously the writer is unable to say—for the inauguration of a National Savings Campaign to be accompanied by lectures and courses of instruction to mothers, grannies, aunties, school-teachers, free-lance governesses and Nannies on the practical methods of inculcating in the minds of the very young a proper and healthful spirit of thrift.

The whole scheme hinges on a system of collecting-boxes of which the cashiers of the bank will possess the only key. Although the idea is a sound and perfectly legitimate one, which will, no doubt, be pushed by its sponsors for all it is worth on patriotic grounds, if on no other, the high cost of living in both Ankara and Istanbul certainly militates against any overwhelming success of the attempt, as matters now are. With the stabilisation of the national currency and the drop which should at a later period automatically occur in the price level of articles of prime necessity, the scheme might stand a better chance than a similar attempt to introduce money-box collecting which was made by a foreign bank before the Great War in Beyoglou (or Pera), the European quarter of the former Turkish Capital, when the game was not found to be worth the proverbial candle.

In addition to the foregoing, one should not blink at the fact that the old-fashioned and anti-mundane farmer or peasant of Anatolia much prefers to this day burying his treasure in some lonely spot in his fields or pasture land to entrusting his life-savings to any bank on earth. That attitude held good, at any rate, when gold and silver together constituted the national circulating medium of the country. To-day, with a paper currency, the farming fraternity are probably not so keen on hiding their nest-egg where, even though "moths and rust" do not corrupt, damp and the ubiquitous earthworm can and do play havoc with mere bits of mouldering paper.

December 25 has been fixed as the "Annual Savings National Convocation," and the campaign is to be carried on wherever the Ish Bankassi possesses branches and agencies.

The Bulgarian ship Varna sank in the Sea of Marmora on Christmas Day as the result of a collision with the Greek ship Chrissi.

It is officially learned that the Chinese Government has refused to accept Mr. Obata, the former Japanese Ambassador to Turkey, as Japanese Minister to China.

Commander Kenworthy, M.P., who left London on December 12 for Cairo, later proceeded by aeroplane to India. During his stay in Cairo he visited the King of Egypt, and lunched at the Residency with the High Commissioner, Sir Percy Loraine. He also visited Madame Zaghloul.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 12.

The Viceregal Pronouncement.

As there may still be those on your side who doubt if it was wise for the Viceroy to make any pronouncement (I still think, myself, that he should not have said a word about Dominion Status, for it meant Mr. Baldwin's having to nullify it, which he has done), I should like to quote the opinion expressed to me by a deeply-read student of the Indian constitutional question; the author of a good book on it, moreover. He begins his letter, having the recent debates in Parliament in mind, by telling me to ask a common friend what he thinks of Mr. Lloyd George. He goes on: "I think the same! And Lord Birkenhead and Lord Reading are as bad. Men whose souls have lost themselves. And they are said to be so clever. Aren't they clever enough to see that the Round Table Conference, with the Indian States thrown in, is just the one way of compelling the Indian politicians, after you have eliminated the out-and-outers, whose opinion does not really count, to face realities? I know of no other way. In India this is perfectly well understood. Hence all the fuss about the Viceroy's pronouncement there. In India the pronouncement came almost as an anti-climax. Its great merit is that it saves people's faces—saves our, saves theirs; and that, after all, is a masterly achievement. Don't you think so?"

The Out-and-Outers.

The elimination (in another than my correspondent's sense) of the out-and-outers may be very largely their own doing, I have thought myself, and that was clearly also the opinion of a member of the All-Parties Conference (we owe the Nehru Report to that body), with whom I was talking a day or two ago. It is a time, he told me, to mark time; it is even time when the Indian leaders must mark time; for just as the Statutory Commission did conduct its inquiry in India, in the teeth of the boycott, so the Round Table Conference will be held, or a Round Table Conference will be, however well or ill-received the idea of one now. Short of open rebellion or war, there is nothing to be done but to wait till the Conference has been held. If the proposals laid before Parliament after the Conference are considered unsatisfactory, the door will again be open for an organised political movement. The door at the moment is shut; the Viceroy has shut it in the extremists' faces.

Quem Deus Vult Perdere.

It is a time, then, thinks my friend, to mark time, yet the extremists, with no end to serve save possibly their personal position in Indian political life, are apparently determined on action at the Congress meetings at Lahore at the end of this month. He will not, therefore, attend, he says. There will inevitably be a split, and whoever is now left to think that the Indian National Congress is representative of public opinion in the country, will no longer be able to think even that. The extremists' endeavour will probably be twofold: (1) to bring still more pressure on the Government of India to secure a general amnesty for political prisoners, spreading the net to include assassinators, or would-be assassinators; (2) to make their acceptance of the Prime Minister's invitations to the Round Table Conference conditional upon the larger number of those invited being members of the Congress, or persons with strong leanings to the Congress, while not actually members of the body. They will not care so very much for these things for themselves. They will be their rallying-ground and their battle-cry.

The Round Table Conference.

A Machiavellian Government in Great Britain would see in listening to the popular tongue in India the line to take in deciding whom to invite to the Round Table Conference; for the popular tongue will clamour that every interest should be represented, and the bigger the body, the weaker it will be. The popular tongue has so far been heard, I believe, only in the Punjab Legislative Council among the Councils. Speaker after speaker in that body urged "the necessity of securing full and adequate representation for the Punjab at the Round Table Conference." The only man to utter what I should call sense was Mr. Muhammad Sadiq, who is reported to be "of opinion that all-India men should be sent to the Conference. In this view the best course was to leave the Viceroy free to make the selection."

Hindu-Muslim Variance.

The Deputy-President of the Legislative Assembly (the All-India Council) has been exercising his mind upon the question of how to make the Round Table Conference a success. He sees the attainment of a sufficient degree of accord between Hindus and Muslims as the first thing to be done. He had a letter in the *Pioneer* that was worth attention. "Past experience," he wrote, "has fully demonstrated the futility of Unity Conferences. . . . What I imagine would really serve the purpose, is to bring together no more than half a dozen sober-minded representatives of both the nations, who can command the confidence of their co-religionists. They should sit with the idea of saving the honour of the motherland and not in a spirit of niggardly bargaining. Extremes can never meet, and the folly of trying to make possible what is really impossible should not be repeated."

The Popular Tongue.

A passage follows in the Deputy-President's letter that is worth rescuing from that troubled sea into which so many utterances sink. These are the words: they immediately follow those I have just been quoting: "Shelter should not be taken behind what is alleged to be public opinions. It is the aspiring leader who incites feelings, in order to win popularity, and who gives vent to his own ideas in the name of an *indifferent and innocent people.*" I would earnestly call the attention of any on your side who think that the masses in India are awaiting the grant of Dominion Status with anxious hearts, and that the grant of only a very partial measure of self-government will be resented by them—I call their attention to the words of the Deputy that I have italicised. He knows. The masses know and care nothing. Here or there, this time or at that, some villagers may be stirred to some action by a ready-tongued agitator. They would soon forget and lose all interest. What danger there is lies in the spirit of, and the lack of employment among, large numbers of the *intelligentsia*. The first, of course, is largely born of the second.

Democracy in India.

The Punjab poet, Sir Muhammad Iqbal, has been addressing the students of the Muslim University at Aligarh. He had a useful word on the subject of democracy in India. He had spoken of two of Europe's gifts to India; he went on: "The third thing that England has brought to us is of a very doubtful value, and that thing is democracy. The form in which democracy has already come, and the form in which greater doses are likely to come in the fullness of time, does not, I am afraid, appeal to me. I personally do not believe in democracy, and tolerate it only because I do not know of any substitute for it. But since it has come, it is necessary to see what it means for the present generation of young men. It means free and open discussion among those who know nothing, whose whole 'intellectual' life is a parrot repetition from books?"

THE REPORT OF THE INDIAN CENTRAL COMMITTEE 1928-29.

The Report of the Indian Central Committee—the body appointed last year to sit with the Statutory Commission during the latter part of its inquiry—is published as a Blue-book (Cmd. 3451. 7s. net) in advance of the main Report, which is not expected for several weeks. The document is a stout volume of 428 pages, of which little more than one-fifth is taken up by the Report proper. The rest of the space is occupied by memoranda and minutes of dissent by the members singly or in groups, and by a separate Report of some 40 odd pages by Mr. Kikabhai Premchand, who returned to India before the agreed recommendations were finally settled.

Subject to the many dissenting minutes and explanations given in the annexes, the Report, which was signed by Sir Sankaran Nair, the Chairman and the remaining eight members shortly before the Viceroy's recent declaration, recommends that, with the exception of the Portfolio of Law and Order in Bengal, each province should be made autonomous by means of a Cabinet responsible to the Legislature for all subjects, save those specifically classed as central, but with certain powers reserved to the Governor. In the event of a breakdown or inability to maintain law and order in the province, except in the case of financial insolvency, the Governor-General may be authorised to supersede a local government and to carry on the administration. Dyarchy should be introduced in the Central Government, all subjects, except the defence of India and the relations with foreign and Indian States, being transferred to the control of Ministers responsible to the Legislature. Without the previous sanction of the Governor-General, however, the latter shall not be competent to deal with any measure affecting the public debt or public revenues; the religion or religious rites and usages of any class of British subjects; the discipline or maintenance of any part of his Majesty's forces; relations with foreign Princes or States; or any measure repealing or amending an Act of a local Legsilature or any Act or Ordinance made by the Governor-General. The Council of the Secretary of State should be abolished, and he should have no power of intervention in the provincial field or in respect of the large range of subjects proposed to be transferred to the Central Government, half of which should be composed of Indians.

Other recommendations include the doubling of the present electorate, and the concession to the Provincial Legislative Councils, whose membership should be enlarged, of the power to alter the franchise at the end of their second term (i.e., after eight years), with a view to ensure that at least one-third of the population shall be compulsorily enfranchised in 1941, two-thirds in 1951, and the whole in 1961. The nomination of non-officials should be done away with and, except in the case of Europeans in all provinces, Anglo-Indians and depressed classes in Madras, and Karens and Indians in Burma, communal electorates should be abolished, seats being reserved for other minorities in joint electorates. In provinces in which they are in a minority Muslims should be given the privilege of electing whether the reservation shall be on a population basis or on their voting strength, according as to which method may be the more favourable to them, and they shall further be permitted to contest seats in general constituencies beyond the number actually reserved for them. A like choice should be given to Hindus and Sikhs in the Punjab and to Sikhs in other provinces where their numerical strength entitles them to representation. In every province five per cent. of the total seats in the Legislative Council should be reserved for women. A second Chamber in the provinces is considered unnecessary except in the United Provinces, where a Senate should be created tentatively for a period of ten years, the franchise being the same as for the Council of State. The Senate's powers in regard to legislation should be concurrent with those of the Legislative Council, except that all money bills should be introduced in the Legislative Council by which body alone Budgets and supplies should be voted and to which the Ministry should be responsible.

Until the Government of India is constituted on a popular basis by the transfer of departments to Ministers all the revenues of a province should be at the disposal of the local government, subject to an obligation to pay to the Government of India such contributions as may be fixed by an impartial tribunal. In order to preserve the independence of the judiciary, the powers at present exercised by the provincial governments in respect of the High Courts should in future be assumed by the Government of India. The present reservation of seats in the High Court for members of the Indian Civil Service should be abolished, one-third of the judges, including the Chief Justice, to be barristers of not less than ten years' standing, and one-third advocates or vakils who are not barristers. A Supreme Court should be established in India.

Except in Madras and Bombay the new unitary governments should be free to decide whether the All-India services should be retained or provincialised, due regard in the latter event being paid to the adequate representation therein of all communities. In Bombay the remaining All-India services should be provincialised at once, all the prospects that their members now enjoy being reserved to them, while in Madras the two "security" services should remain All-India services at present. No order affecting the emoluments or pensions, no order of formal censure and no order on a memorial should be passed to the disadvantage of any officer of an All-India or provincial service without the personal concurrence of the Governor. Immediate steps should be taken to effect the separation of executive from judicial functions.

The terms of the Provincial Legislative Councils and the Legislative Assembly, which should consist of 300 members, should be extended, it is suggested, to four and six years respectively. At the same time the strength of the Council of State should be increased from sixty to one hundred members, the additional seats being distributed among the various communities and interests in the same proportion in which they are now held. Reforms should be introduced into the North-West Frontier Province on the lines of the Morley-Minto scheme. The Committee is not prepared to recommend the separation of Burma from India, but the majority are in favour of the creation of a separate province of Sind if the inhabitants are prepared to shoulder the financial burden

Having set forth in detail some of the principal changes which the majority would like to see introduced in the present constitution, the Committee proceeds to state in more explicit terms what it considers to be India's main demands. These are—a clear and unequivocal declaration by Parliament that full Dominion Status is the goal at which it aims: that an immediate and substantial step should be taken towards the attainment of that goal by a liberal measure of provincial autonomy and by making the Government of India responsible in most matters to its Legislature. It is also asked that the new Act should make provision for the goal to be reached without the necessity for further inquiries by statutory commissions or other agency. There is held to be no safe half-way house between such a policy and "an ultimate surrender by the British Government after years of agitation and bitterness to India's insistent demand."

As the Report is signed by all the members of the Committee except Mr. Kikabhai Premchand, the concluding paragraph states that: "Some of us do not agree with all the conclusions reached by the Committee; and in some cases, even where we are agreed, we desire to put forward the arguments by which we support those conclusions more fully than could be done in the main report. We therefore sign the Report subject to our minutes of dissent or explanation which are appended." Thus the cardinal recommendation that the Executive Government in the nine major provinces and in Sind, if separated from

Digitized by Google

Bombay, should consist of a Governor, appointed by the Crown, and Ministers responsible to the Legislature is qualified by the statement that it represents no more than the majority view. As the same phrase appears frequently in the Report it will be recalled that sharp differences of opinion arose on nearly all the major issues and it is stated that in many cases a majority vote was secured only by the casting vote of the Chairman. No member of the Committee has refrained from notes of dissent or other memoranda, their independent observations ranging from the voluminous contribution of nearly 160 pages of Sir Hari Singh Gour, which was apparently originally intended for inclusion in the main Report, to the three pages in which Raja Nawab Ali Khan voices his disagreement with his colleagues on two specific questions—the introduction of reforms into the North-West Frontier Province and the reservation of law and order in Bengal. It is not easy to find which members are in accord with even the major recommendations, but Sir Hari Singh Gour also dissents strongly from the last-mentioned proposal. It is also clear that at least three members were emphatically opposed to any weakening of the authority of the Central Government by the introduction of dyarchy, a course to which, short of the complete transfer of responsibility, the majority of the Committee can see no feasible alternative. The joint dissenting minute of Nawab Zulfiqar Ali Khan and Dr. A. Suhrawardy contends, for example, that without the effective maintenance of the authority of the Central Government there can be no guarantee of peace between the different communities, of progress, or, in fact, of the continuity of the provincial autonomy now contemplated. There is still more evidence of marked division of opinion on the question of the maintenance of separate electorates for special communities, and particularly for the Muhammadans.

This failure to reach agreement on many fundamental points is emphasised by Sir Arthur Froom, the only European member of the Committee. In a very sound and well-reasoned minute he states, inter alia, his inability to agree that the franchise for the provinces should be doubled. After recording his firm conviction that separate electorates and special constituencies must be continued for the present, he contends that not until majorities by their impartial legislation and just administration have won the confidence of minorities can these special protective expedients be withdrawn and then only with the consent of those concerned. Further he advocates the establishment of second Chambers in the provinces. Sir Arthur also expresses astonishment that any of his colleagues should recommend the introduction of any form of dyarchy in the Central Government, since it has been so soundly condemned in the provinces, largely on the ground of its failure to create a sense of responsibility. He gives various reasons for his view that the Governor-General and his Cabinet must remain for the present responsible to Parliament, and why the Governor-General must retain his powers of veto and certification.

In many respects the most interesting, and certainly not the least valuable, contribution towards the solution of the most difficult problem in the world to-day, the separate report by Mr. Kikabhai Premchand merits particular attention. Writing not as a politician but as a business man desiring to the best of his capacity to serve India, Mr. Premchand's able description of the guiding principles which "should govern the action imperatively necessary to secure the harmonious development of India to the full Dominion Status which is so ardently desired" will probably be found to approximate more closely to the findings of the Statutory Commission itself than any other section of the Report. The keynote to his proposals, which are wisely confined to broad questions of principle, is the immediate establishment of full provincial autonomy and responsibility under condtions which will guarantee the security and stability of the administration. For a number of reasons, which are enumerated, he is convinced that "there can be no improvement in the political situation in India unless the constitution is radically developed in the direction of real responsibility, both in the Provinces and in the Central Government, with due precautions to secure the stability of the administration, and peace, order and good government."

The outstanding features of Mr. Premchand's report may be summarised, in his own words, by a quotation from the concluding chapter. "My recommendations are accordingly directed to the establishment of full responsibility and autonomy in each and every Province, but at the same time to provide for the stability and progressiveness of these Provincial Governments, by freeing the judiciary from any shadow of political control, ensuring the direction of the police without communal or particularist bias, strengthening the administration by the assistance of an element of the All-India services which will secure the recruitment of the best men, and vesting in the Governors the powers necessary to deal with exceptional measures. In the Central Government my recommendations are equally directed to the establishment of a very wide measure of responsibility reserving only for a term of years defence, foreign affairs and relations with the Indian States, with prudent provision for the reduction of the heavy military expenditure. In view of the immense responsibilities of the Government of India I propose the retention of the existing bi-cameral system, and the strengthening of the Legislative Assembly by the introduction of a strong representative element from the provincial Legislative Councils. I am also of opinion that the interests of stability and good government necessitate the retention of the special powers vested in the Viceroy under the Government of India Act.

"Finally, I am very definitely of opinion that immediate steps should be taken to deal effectively with the evil of communalism, which is such an effective barrier to our national progress. Whilst opposed on principle to all forms of communal representation, I am willing to waive these objections, in order to allay the apprehensions of our Muhammadan fellow-citizens, for a term of years so that they may feel full confidence in the new administration." "The surge towards self-government and full Dominion Status," Mr. Premchand concludes, "is universal, and in the end must be irresistible. Rightly understood, it is the pride and glory of the British connexion with India. It is the task of wisdom and statesmanship to meet it now in a spirit of generosity and confidence, and not wait until thwarted aspirations have driven men of status and goodwill out of politics and made them the prerogative merely of those holding the most extreme views." A noteworthy example of the breadth of view displayed by the detailed proposals, to which Mr. Premchand's unrivalled experience of Indian finance and economics lends added weight and importance, is his advocacy of the policy of Imperial Preference as an integral part of the Indian fiscal system.

INDIAN NOTES.

(Continued from page 3.)

and informed throughout by an evident desire to face facts. The gravest defect is the extent to which what might appear at first sight to be unanimous findings are found subsequently to be subject to qualifications in several essential particulars by two or more of the signatories themselves. Having regard to the composition of the Committee and the conditions under which it had to work, the effect, if disconcerting to the general reader, is to hold up a mirror to the complexities of the Indian problem which will be of considerable value when the time comes to consider the Statutory Commission's own more detached and dispassionate analysis of the same evidence. Moreover, if the divergences of opinion which the Report reveals are acute and often fundamental, they are honest and sincere differences, and it is well that they should be recognised and faced before the forthcoming Round Table Conference meets.

EGYPT: ITS TRADITIONS AND RENAISSANCE.*

Immotus nec Iners.

By GEORGES CATTAUI.

As soon as one finds oneself in the presence of Egypt, one is struck by the fact that here, in the course of seven thousand years of history, have followed one another four civilizations entirely distinct and fundamentally original—that of the Pharaohs, that of the Ptolemies, the Coptic, and the Muslim. Each of these periods is itself rich in an extreme variety of atmospheres, styles and currents; so much so that one may say that these phases seem to belong to different countries, to be the expression of the genius of different nations. This fact, however, is not unique in history. Here too in England one finds at every turn traces superimposed of original civilizations, without apparent connexion one with the other. Conquered by the Romans, by the Danes, by the Saxons, by the Normans, England has more than once changed her appearance. What connexion would the layman discover at first sight between the towers of a Saxon Church, a Roman cloister such as that of Durham, a Gothic Abbey such as that of Westminster and a Renaissance Cathedral such as St. Paul's? Nevertheless, in spite of so many dissimilar and variegated garbs, so many borrowed ornaments, your historians do not hesitate to declare the persistence of an English type, of a British civilization and tradition—in a word, of a genius which belongs in its own right to your race. They do not hesitate to state that, from century to century, in spite of vicissitudes, your original soul has been transmitted down to you unchanged. It is the same with Egypt. In vain have the historians and the archæologists arbitrarily partitioned the history of Egypt into disunited sections, separated by watertight compartments. It is in vain that these technicians and specialists, studying only the material that interests them, without occupying themselves with what preceded or with what followed the epoch of their choice, have detached and isolated each successive aspect of Egyptian life. In spite of so many changes, of so many counteracting influences, the history of Egypt is one, one and indivisible. As it is in space, Egypt is in its duration a river that comes to us from the remoteness of the ages, from an unknown source, and which has never been entirely lost in the sands.

The personality of Egypt is even so strong, so marked that, vanquished, she has always conquered her fierce victor. At these cross-roads, the most frequented in the world, all the races of Asia, of Africa and of Europe have come to mingle together and to coalesce. Fallahin, Copts, Greeks, Arabs, Turks, Moghrabis, Kurds, Armenians, Jews, Nubians, Syrians live here, for thousands of years, side by side, often intermingled. All these races Egypt mixes, kneads, pounds, fashions, absorbs, assimilates. The men who from pre-historic times inhabit the valley of the Nile present a type of a fixity so remarkable that, despite invasions and infiltrations of foreign blood, the aboriginal mass after more than fifteen thousand years has remained unchanged. This stability, moreover, is not the heritage of the human species only, but also of the bovine, since—Schweinfurth has pointed it out—in spite of the diseases which have decimated the autochthonous race, the cattle of Egypt display to-day the same characteristics as those depicted on the Pharaonic frescoes.

In connexion with this point let me quote a passage in Schweinfurth:

> No country in the world, no race of people presents so marked and unchanging an individuality as the Egyptian. It is, therefore, most probable that this unvarying type is the product of the soil itself, and that the character of the people who settled at different periods on the banks of the Nile, whatever it may originally have been, has in due course of time been moulded to the same constant form by the mysterious influences of the river. This fidelity to type is by no means in accordance with the common theories as to the decline and degeneration of the Orient. These races seem to possess an innate capacity that is absent from Western nations—the capacity, namely, of permanently preserving the original type.

That which particularly belongs to it, Egypt marks with its seal. Hyksos, Persians, Macedonians, Romans, Arabs, Turks have conquered it in turn. No people, not even the Arabs themselves who have given it their language and religion, have ever succeeded in altering the profound, permanent character of the Egyptian. It is these essential traits that we are going to try to disengage. Neglecting the ornamental, the transient picturesque, we will pursue, below the exterior imagery, the subterranean reality, the invisible soul, always present, the immanent sense of Egyptian life, its principle and its significance, in a word, the eternal face of Egypt. If life is persistence through all the changes of something that does not change, Egypt has never ceased to be living.

I should like here to deal with a prejudice that I have frequently encountered. It is said that since the time of the Pharaohs Egypt has ceased to be independent and that she has always been dominated by foreign races. Nothing is more false, nothing more unjust.

In the year B.C. 525, after 6,000 years of independence and of supremacy in the Orient, Egypt was conquered by the Persians. But the conqueror did not interfere with the religion, the life or the traditions of the Egyptians, who were not long in shaking off the foreign yoke and who welcomed Alexander the Great as a liberator. On the death of the Macedonian, Egypt constituted afresh, under Lagids, a sovereign kingdom. And, although the dynasty was of foreign origin (as is the case to-day with the majority of Western monarchies), the Egyptian nation lost none of its specific characteristics. The Ptolemies adopted the protocol, the style, the traditions and all the ritual of the Pharaohs. It was under their reign that the temple of Edfu was built, one of the most characteristic monuments in the Pharaonic style, and the veritable "Pantheon" of the Egyptian religion. When, after the Battle of Actium, Cleopatra exclaimed: "Egypt, I die," one might have believed that Egypt itself was going to die with that unhappy queen. It did nothing of the sort. Egypt became for a period part of the Roman Empire, sharing in this way the fate of the Mediterranean world and of the whole Eastern world. (It was in this way that the peoples of the Nile and those of the Thames came under the same domination and made their submission to the same Emperor.) But, after the partition of the Empire, when Egypt fell to the lot of Byzantium, it recovered a certain amount of autonomy. At the time of the Arab conquest, the head of the Copts, Makaukas, had refused to pay tribute to Constantinople and the Copts welcomed the Arabs as liberators. If Egypt was at one time, in the Middle Ages, a province of the Caliphate—just as the nations of Christianity recognised the nominal supremacy of the Pope and of the Emperor—from the ninth century Ibn Toulun made it an hereditary independent monarchy, and shortly afterwards, under the Fatimites, Cairo became the seat of the Caliphate, the veritable metropolis of the Muslim world. It remained so politically until the Turkish conquest in 1517; and even after the sixteenth century Egypt preserved its spiritual primacy, the University of Al Azhar remaining the centre and the brain of Islamic thought.

I do not wish to dwell longer on this subject. I would rather try to penetrate with you the real character of the Egyptian soul, recognise under so many dissimilar elements, among so many foreign accessories, the profound movement which comes to us from the remote ages, and which makes our people still to-day the heir of the ancient peoples of Menes and Cheops. Let us try to hit upon the spiritual link which, across the centuries, unites a Muslim theologian such as Shaikh Mohamed Abdu, who was Grand Mufti of Egypt at the end of last century, an Arab poet of the time of the Abbassids, such as Ibn-al Farid, an Alexandrian philosopher of the Ptolemaic epoch, such as Philon the Jew, and a Pharaoh of the eighteenth dynasty such as Amenophis IV, whose

* Translation of a Paper read in French before the Near and Middle East Association on December 6, 1929.

mystic hymns have a note at once so fiery and so soft that in reading them one is reminded of the Psalms of David and the Fioretti of St. Francis of Assisi. Listen to him when he cries:

O Aton, Initiator of life, thou waxest in the East; the earth is rich with thy fervour.
All lands, all things uncreated thou envelopest with thy rays.
Thou, O Ra, uniting them in the bonds of thy love, thou fillest with delight all they offer.
Thou art far off, but thy rays touch the earth; day accompanies thy steps.
Thou shootest out thy shafts and the darkness takes to flight, and the two lands rejoice.
Men awaken, and it is thou that makest them to stand erect on their feet.
Their limbs bathed, their hands are raised in adoration of thy rising.
The flocks graze in the pastures, the trees and the grass grow,
The birds, worshipping thy double, fly in the thickets with wings extended,
And the sheep gambol, and all the birds come to life again in their nests when thou risest for them.

Barrès, on landing in Egypt, remarked:—

I should like to know the moral elements of Memphis, of Thebes, some note that touched the innermost fibres of their soul. I should like to recognize in the medley of ideas on which I live the Egyptian part and to develop it on the spot. I should like to find what they have committed to me. I shall love them if I find them in my heart; I am impatient to hear their appeal.

Let us see what part of the Egyptian soul is always present in a popular story, a folk-lore song, a legend transmitted from mouth to mouth, a saying, a superstition, a local cult, a joke sometimes more than 3,000 years old. The materials that they weave to-day have the same thread, the same ornamental designs as the Pharaonic, the Coptic and the Muslim fabrics; the harmonies, the colour schemes have remained the same. Trades have not changed. The knowledge and the professional knack of the potters, the weavers, the workers in glass, in stone or in wood have remained the same. If the taste for the sciences has been lost in this country which witnessed the birth of chemistry, the Copts have none the less preserved certain secrets, certain hermetic traditions. They possess to our day a particular method of calculating, the secret of which they will not divulge. For purposes of agriculture and field-work to-day it is still the nomenclature of the Coptic Calendar that is used.

Thus, with different orchestrations, we follow an ancient theme, which dies away and returns at intervals, still sounding from age to age, a leit-motif, differently interpreted, whose return stirs the imagination, whose variations haunt us. These intimate resemblances evoke at long distances strange echoes, and reverberations spreading in ever-widening circles.

Let us try then to define these immutable traits of the Egyptian genius. First of all, we shall find in the fellah a mixture of resignation, humour and seriousness, which never belies itself. The Egyptian is supposed to be a realist, or satisfied with his lot. There is indeed no people in the world who toils more, who is a greater slave to hard work. Subjected to the fatality of floods, sands and winds, the Egyptian has for all time been resigned; one might say, taking the word in its literal sense, that he was a "Mussulman" before Islam. He is at once economical and prodigal. This fellah, of narrow hips, is abstemious; he lives on an onion and a date. His meagre savings, amassed with such pains at the price of such privations, he will, however, dissipate in a night; he will spend them in expensive rejoicings, to celebrate the marriage of a daughter, the circumcision of a son, or to give his parents a worthy funeral. For one of the eternal characteristics of Egypt is respect, the cult of the dead, inherited from the ancient Egyptians. While the real badawin consign to the sand the remains of the dead with the words: "Dust thou art and to dust thou shalt return," the Egyptian Muslim has constructed at the gates of Cairo immense mortuary cities. These were formerly the tombs of the Caliphs and the tombs of the Mamelukes; it is to-day the necropolis of Imam Shafai, where the living keep long vigils for prayer shut up in the vaults of the dead.

This religious and mystic character seems to have always been one of the traits of the Egyptian soul. In his book, "Mystics and Saints of Islam," Claud Field his written:—

Egypt has always been a soil favourable to the development of mystic tendencies. Christian asceticism took early root there, and during the first centuries of our era thousands of anchorites inhabited the deserts of the Thebaid, and carried on there religious exercises of extreme austerity. We do not know what secret connexion may exist between the climate of the valley of the Nile and the character of its inhabitants, but if the Arab chroniclers deserve any credit, Arab mysticism originated in this country.

One cannot say of ancient Egypt that it was pagan in the narrow sense of the word. The appeal of the Divine, the sense of mystery, the intuition of the invisible, subtle relations between beings and things get the better of the senses. More than Greek art, Egyptian art elevates us, carries us away from earthly realities. It is because Egypt has her mystery, more terrible than the mystery of darkness. Here is the mystery of brightness, the mystery in the brightness; the mournful oppression of the hard light striking straight down; the implacable torrid midday; the dazzling splendour of the sun that one cannot look at. The Gods of Egypt do not hide themselves in the shade; they disappear, they are reabsorbed in the light. Further, there is the secret of the sands, their silence.

What Egypt teaches us is spirituality, mysticism. The singular genius of this race is expressed in a religion in which myths and symbols are as troubling, as hermetic as they were human and smiling in Greece. There is here none of that happy carelessness of youthful Greece. Under the azure of her skies and her implacable sun Egypt is sad. Of this country one might say that even its joy is a little sad. Listen to the songs which have been sung for twenty centuries by the labourers, the boatmen, the masons. Hence this gravity, this melancholy mingled with humour and fantasy that one finds in the Egyptian. Hence this religious sentiment towards nature, towards the divine presence in all uncreated things. Hence this lyric interpretation of life, these symbols which ascribe consciousness, which give a face and a soul to all forms. By her talismanic formulæ, her magic, by her resources, the echoes which she awakes in nature, Pharaonic Egypt allies herself to the India of the Brahmins, while by her dogmas of redemption, of sacrifice, of the resurrection of the body she prefigures the religion of Christ. Beyond paganism, the Gothic soul is the heir of the Egyptian soul. Rodin and Bourdelle have understood this, for they reveal Egyptian mysterious influence and Egyptian affinities in the work of the image-vendors of Chartres.

Like the ancient granite-cutters, the medieval artisans put their faith, their love in these stones, in which nature speaks through symbols; Gothic gargoyles, chimæras and dragons are related to Thot, to Anubis, to Hathor, to the composite gods of Pharaonic Egypt. It is not the only patrimony that Egypt has transmitted to the medieval West. Egypt has not been credited with a large enough share in the esoteric formation of the Mediterranean religions. Fraser, Chabas, Moret have shown the way. It is not without reason that the evangelists show us the infant Christ sleeping his first sleep in the same places where was to be found the antique sanctuary of Heliopolis, in this land of Isis where the history, so simple, so touching, of the first Joseph is unfolded.

(To be continued.)

Mme. Moldoveanu, wife of the Roumanian Vice-Minister of Health, was drugged and robbed on December 12 in a railway train between the Roumanian border and Lwow (Lemberg).

The Turkish Government has made a money grant to a 95-year-old forest keeper at Eskishehr named Chakaldayi, known as the "Terror of the Jackals." He has fifty-nine children and grandchildren, not counting daughters-in-law and sons-in-law, all living under the same roof.

PERSONAL AND GENERAL

TO-DAY

January 2, 1930 (New Style).
December 20, 1929 (Old Style).
Shaaban 1, 1348 A.H., of the Muslim Calendar.
Tebet 2, 5690, of the Jewish Calendar.

Mrs. Hugh Flower has left England for Cairo, where she will remain until May.

Lord and Lady Melchett will leave London on a visit to South Africa on January 10.

Mahmoud Sami Pasha, Egyptian Minister to Washington, returned to Cairo on December 16.

The Hon. Mrs. George Young sailed from London in the Comorin on December 27 for Port Said.

Sir Laurence and Lady Philipps left London on December 30 for Port Said. They will fly from Gaza to Karachi.

Viscount and Viscountess Brentford are joining the s.s. Comorin at Marseilles to-day (January 2) for Port Sudan.

Sir Delves and Lady Broughton left London last week for Egypt, the Sudan, and Kenya, and will be away until April.

Brigadier-General Sir Charles Magniac joined the P. and O. s.s. Maloja at Marseilles on December 21 for Bombay.

Mr. Mark Ogilvie-Grant has been appointed Hon. Attaché at the Residency, Cairo, and is expected to arrive in Egypt early in January.

Lord and Lady Hawke left London on December 20 for Marseilles to join the P. and O. s.s. Maloja for India. They will be away until April.

The Japanese Minister to Persia, H.E. Akio Kasama, presented his Letters of Credence to the Shah on December 15.

Major-General Sir Richard Bannatine-Allason sailed from Tilbury on December 27 in the P. and O. s.s. Comorin for Port Sudan.

Mr. and the Hon. Mrs. Douglas Vickers have left London for Egypt and will not be back till the end of February.

Sir Murdoch Macdonald arrived in Cairo on Christmas Eve to superintend the preparations for the raising of the Assouan Dam.

Sir John Norton-Griffiths left London on December 19 for Egypt. Lady Norton-Griffiths and Miss Norton-Griffiths left London yesterday (January 1) to join him.

Lord Annaly sailed from Tilbury on December 20 in the P. and O. s.s. Ranchi for Marseilles. Lord and Lady Headley, Lord Rathdonnel, and the Hon. T. L. McClintock-Bunbury were among the passengers for Port Said.

Lady Fairhaven sailed on December 20 in the P. and O. s.s. Ranchi for Marseilles, where she joined s.y. Sapphire for a cruise to the Near East. She expects to be away until early April.

Dr. S. M. Zwemer left Cairo on Christmas Day for America to take up his appointment as professor of Islamics at Princetown University. He was accompanied by Mrs. Zwemer.

His Excellency the Persian Minister and Madame Taqizadeh and his Excellency the Ethiopian Minister, Nagadras Makonnen Idalkatcho, had the honour of being received by the Queen at Buckingham Palace on December 19.

Mr. Raymond Geist, American Consul at Alexandria, who has been transferred to the Consulate at Berlin, left Egypt on December 19 by the s.s. President Monroe for Germany.

Mr. G. E. Woods Humphery, General Manager of Imperial Airways Ltd., with Mrs. Woods Humphery, arrived in Cairo last week from London, and expects to spend about a month in Egypt. They are staying at Shepheard's Hotel.

Lieut.-Colonel B. T. Wilson, R.E., D.S.O., arrived in Egypt recently and has proceeded to the Sudan to take up his appointment as successor to Colonel F. P. Nosworthy Pasha, D.S.O. M.C., as Chief Staff Officer and Assistant Kaid El' Amm.

The India Office states that India will be represented at the Naval Conference by Sir Atul C. Chatterjee, High Commissioner for India. Commander H. L. Davis, Royal Marine, will act as an expert Adviser and Mr. K. Anderson as Secretary to the delegation.

Shah Wali Khan, the newly appointed Afghan Minister to Great Britain, and Ahmed Ali Khan, the newly appointed Afghan Minister to France, landed at Marseilles on December 27 and left immediately for their respective destinations.

The Vacuum Oil Company announces that Mr. R. Stewart has been appointed General Manager of the Near East Division, succeeding Dr. Frank Hamilton Henry. Mr. Stewart has been connected with the Vacuum Oil Company since 1919. Shortly after joining the Near East Division he was made Manager of the Syrian territory with headquarters at Beyrout, and later was transferred to the head office in Cairo to assist the General Manager, whom he now succeeds.

Sir Ronald Storrs, Governor of Cyprus, and Lady Storrs, who arrived at the Residency, Cairo, on December 13, as the guests of the High Commissioner and Lady Loraine, left Cairo on December 16 for Luxor, where they expect to remain until to-day, when they will be returning to Cairo for a short visit before going back to Cyprus. Before their departure for Luxor, Sir Ronald and Lady Storrs were entertained at luncheon by Mr. and Mrs. Arthur Merton at their flat in Kasr el Doubara. The other guests included Prince Mohamed Aly, Mr. de Bildt, and Mohamed Izzet Pasha.

THE WEEK AT HOME

London, Tuesday Morning.

After Christmas.

England certainly made holiday at Christmas this year. The Stock Exchange closed from December 24 to December 30; thousands of people took a week's leave from the Monday to yesterday; and most of those who were unable to get so much were allowed either the Tuesday before or the Friday afterwards. London, indeed, shamelessly lost even the pretence of working on Tuesday or Friday: what people were in its streets were obviously visitors, aimlessly, it seemed, bent on pleasure.

It was a queer feeling, after Christmas, this lack of vitality and movement—rather surprising in a nation whose crying need at the present time is harder work. Of course it was argued that work in such a week was really supererogation. *Cui bono* was a refrain most eagerly taken up. But, as Dr. Shaw said in Boswell's "Johnson": "I hate a *cui bono* man."

Everyone is agreed, however, that it was a good Christmastide. The weather was sunny and mild, it is true, but it seldom is as the Christmas-cards depict it. Turkey was probably more widely consumed than it has been since the War; only to-day, in fact, can one be invited to a meal and be fairly certain not to have turkey offered to one. Possibly some of the lazy feeling was due to unusual repletion.

Inter Annos.

To write between the years must, I think, induce greater reflexion than prospect. To a certain extent, of course, it depends upon temperament: there are those who, banishing the past (which to them is always inferior) as soon as, so to speak, it is done with, eagerly project themselves into the always hopeful future. Nor is this necessarily a bad thing, if it mean only that over the future men are resolved to have more control, whereas over the past they can have none. But very often it appears to imply a belief that the past is dead and of no more influence—which is utterly false.

This is not the place, however, for philosophical meditations on the nature of progress, whether it march in a straight, inevitable line, or in cycles, or whether, indeed, it exist at all. Enough that to-morrow is the time, and an excellent time, for new resolutions. Probably no one, not even the most confirmed Diogenes amongst us, would deny that it is in the province of practically every man and woman to make 1930 better and brighter (an improvement, that is, both material and spiritual) than was 1929; and with the hope that it may indeed be so I had better leave the subject. It is wiser to think of "O youth, whose hope is high" than of *Eheu fugaces labuntur anni.*

A Discomfiture for Moralists.

How many times the story of Robert Bruce and the spider has been told is incalculable; certainly abundant use of it has been made at New Years. It was, therefore, a most bitter blow when, a few days ago, Mr. Thomas Johnston, Under-Secretary of State for Scotland, brutally informed the world at large that "Robert the Bruce was a feudal bully, and the story of Bruce and the spider is an invention." He further said (what has, incidentally, long been acepted as truth) that in the winter of 1306-7 Bruce was spending his time not in semi-starvation watching spiders in an island cave, but amid the rude comforts obtainable at the Court of the Norwegian King.

This publicity on the real nature of Scotland's hero is terrible. How many a young Caledonian has been fired by early homilies on ultimate success after repeated failure not, indeed, to fight for his country's freedom (which is absolute) but to conquer, in the material sense, the hated Sassenach who once subjugated his beloved land! Presumably, however, our hardy generation is sufficiently realist to stand such exposures, and it was probably inevitable that Bruce's spider would go the way of all picturesque things, from the fire at the Library of Alexandria to Alfred the Great's cakes. Mr. Johnston might, however, have left the discharge of his arrows a little later, by which time the sermon on Bruce's spider might so have sunken into certain young breasts as to have made the lessons to be derived from its almost second nature.

Political Prospects.

The Parliamentary session which ended on Christmas Eve with the spectacle of Mr. Snowden offering to his predecessor in office, Mr. Winston Churchill, an acid tablet in the form of Christmas greetings, has been most variously interpreted by the pundits. On the Labour side it is claimed that the Government is in a stronger position than ever, that the party organisation is solid (the defections of small sections having been absurdly exaggerated), and that the difficulties which arose in Parliament were entirely due to crowding too much into one session. It is asserted, on the other hand, that the recent debates in the House showed unmistakably that, unless the Government modifies its policy and shows more amenability to the Opposition, a General Election is inevitable within a few months, and that the country as a whole has shown genuine alarm at the possibility of financial revolution. Another comment which is frequently heard is that the downfall of the Government will surely come—but not through the action of Conservatives or Liberals, but through the determined opposition of the Wheatley-Maxton group, which is held to have made a bad dent in the Government's armour.

Things certainly are unquiet. There is considerable dissatisfaction everywhere. To me it appears rather as if disillusionment were setting in, rather than fresh resolve to put any new set of people at the head of affairs. They may be right who foresee an anti-Labour Administration in office in 1930, but I doubt it. It is true, of course, that the individual reputation of Mr. Lloyd George has risen very considerably in the last few months; it is equally true that the unfolding of Mr. Thomas's plans for meeting *the* great problem of the nation—unemployment—has been greeted sadly. But there is little evidence that I can see of any general reversion of policy towards the *fainéance* of the Conservatives or the highly speculative promises of the Liberals. An individual success in the Opposition, an individual failure in the Cabinet means so little in these days of opportunism. So long, in short, as Socialism is moderate, it serves. It will be time enough to prepare for changes when or if the Socialists act as if they were in power.

It must be remembered, however, that behind the bogy of Socialism as we knew it, say, thirty years ago, are no longer to be found the present Government. The nature of Socialism has changed, even as the nature of Conservatism or Liberalism has changed. There are many leading Socialists whom one might without injustice call Liberals, just as Mr. Baldwin himself might be called a Liberal. Label-sticking, therefore, is an out-of-date game, and it is by their acts, not by their professions, that the Labour Government will be judged. I know of certain members of it who at home, on platforms, trot out the old stuff that goes down well enough, but in Whitehall guard most jealously—more jealously than many "capitalists" of the Opposition did—the traditions and honour of particular Departments. To judge senior Labour politicians by their extra-Parliamentary speeches is misleading, for the permanent officials in Government service could, if they would, tell you a quite different tale of how keen they are, how ready to learn, and how rapidly efficient they are becoming at their posts.

Book Reviews

THE HELLENISTIC MONARCHIES AND THE RISE OF ROME.

"THE CAMBRIDGE ANCIENT HISTORY." Vol. VII. With fourteen maps. (Cambridge University Press. 37s. 6d. net.)

The Editors of this great work show much of the talent of practised serial writers, in working up the interest of each volume to a climax which leaves the reader anxious for the next. Or, perhaps, it would be more appropriate to praise their success in dividing up their narrative in such a way that each volume has, so far, treated of an epoch with fairly well-marked limits, leaving us eager to learn the consequences of that epoch on the next.

Here, under the very able guidance of Mr. W. W. Tarn, with the assistance of Professor Rostovtzeff, we follow the story of Greece and of the Hellenistic monarchies which arose from the break-up of Alexander the Great's Empire, realising how inevitably their quarrels and ambitions were leading them to the fatal weakness which was to culminate just as the Romans were ready to take advantage of their discord in order to end their independent existence. Incidentally, Mr. de Navarro gives us a sketch of the early migrations of the Celts and their highly disturbing arrival in the Mediterranean world; Mr. Angus and Mr. Barber treat of the intellectual life in Athens and Alexandria respectively; while Mr. Jones and Sir Thomas Heath sum up the scientific achievements of the Greek and Hellenistic world.

It is in this volume that we first approach the history of Rome. As every student of early Roman history well knows, it is extraordinarily difficult to pick one's way safely through the mass of legend and late accretions. The reader is quite safe in the hands of Professor Stuart Jones and Mr. Last, who indulge in no guesses or haphazard work and make a clear picture out of what may reasonably be regarded as sound historical facts. Their particularly valuable chapters, followed by one by Professor Homo, of Lyons University, on the Gallic Wars of Rome, carry us down to the middle of the fourth century B.C. After Professor Adcock has treated the complicated and difficult question of the Samnite Wars and of the final Roman conquest of Central Italy, the main thread of Roman history is taken up by the able pen of Professor Tenney Frank, of the John Hopkins University. His chapters cover the Pyrhric and first Punic wars and the conquest of Sicily, together with the completion of the work of Roman federation in Italy, leaving Rome strong in the peninsula and already beginning to feel out to her overseas Empire. Finally, we are prepared for what was to come further east by a chapter of quite special interest, by Professor Holleaux, of the University of Paris, which expounds the state of affairs in Illyria towards the end of the third century and makes clear the inevitableness of Roman interference in that quarter, with all the mighty happenings which followed on it. At this fateful point we are called on to await Vol. VIII.

Two further sections, however, we must not omit to call attention to. One is by Dr. M. Cary, on the astonishing career of Agathocles of Sicily. The other, by Professor Schulten, of Erlangen, throws much light on the very difficult and obscure history of the Carthaginian settlements and empire in Spain, the correct understanding of which will be very necessary when we come to the campaigns of Hannibal.

The special interest of this period has always seemed to the reviewer to be the gradual development of the political sense of the Roman people and the wonderful evolution of their constitutional concepts as their circumstances changed. We can assure our readers that this very important aspect has been kept steadily in view and that they will find in these pages much that is enlightening, and much that is new, on the subject. C. S-W.

IN SEARCH OF OPHIR.

"TREASURE OF OPHIR." By Commander C. E. V. Craufurd, R.N. (Retd.) Illustrated. (London: Skeffington. 18s.)

In the publication of this book, the author, whose theories upon the identification of the site of Ophir will be well known to readers of THE NEAR EAST AND INDIA, has presumably had two aims: the writing of a rollicking and very readable account of a sailor's experience in the waters of the Persian Gulf and of the Red Sea, with a few terrestrial impressions thrown in, and a more detailed justification of the thesis which he has for some years maintained publicly, namely, that it is between Bandar Raisut and Ras Murbat, in Southern Arabia, that there lies the ruined Biblical city of Ophir. In the first of these aims he has succeeded admirably. A pleasant inconsequence and breeziness pervade his pages, from which defects in literary technique are but small detraction. The fresh, inquiring mind that the author obviously put to work on all kinds of problems in this ever-fascinating part of the world is fully portrayed, and the intimate touches which are frequently introduced should secure for the book a certain popularity.

To serious students of Arabian problems, particularly to Biblical scholars, there may, however, be disappointment in store. It is, we believe, generally accepted that, although the ancient Ophir may very well have been in Southern Arabia, the evidence which has so far been brought in support of the thesis has been too thin to command acceptance. Nor will the scholar find very much in this book to alter his verdict of "Not Proven." Some of the arguments, particularly the philological argument, previously adduced to connect Ophir with Dhufar have here been dropped, apparently; and other evidence is put in too sketchily, it would seem, to convince those whose minds have been open upon this long disputed problem of the identification of Ophir.

Yet it is an undoubted contribution to the problem which Commander Craufurd has made. He has, so far as we know, been a pioneer in the attempt to solve the question by sea-methods, and his account of Hiram's voyage, to which a parallel can be made to-day in vessels very similar to those used by Hiram's men, is a distinct development in the renewed testing to which the story in Scripture is being put in our time. The author has hit on an aspect of the problem which has too long been neglected, and it would appear that the conclusions which he has drawn from the use of the sea-method deserve to be supported by more serious evidence in other directions. Certain of his statements concerning the original inhabitants of Arabia, the Flood, and so forth, are witness rather than an imaginative mind has been at work than of an adequate possession of existing knowledge on this subject.

It is to be hoped that, in the next edition of the work, mistakes in proof-reading will be corrected, repetitions deleted, and unnecessarily complicated or wrong spellings of words, such as "sherriff" for "sharif," "gopher" for "goufa," "Tihima," "seyidt," "Mahomedt," and so on, avoided. Nor is it fair on Commander Craufurd that before the reader embarks on his own story he should have to discount the "blurb" which the publisher has inserted on the cover of the book.

THE NEAR EAST IN PARLIAMENT.

Cyprus.

Cyprus figured twice during question time in the House of Commons before the adjournment over the Christmas holidays. On December 18 Mr. Denman asked the Under-Secretary of State for the Colonies whether he would consider the revision of the Constitution of Cyprus so as to satisfy the legitimate desire for increased self-government. Dr. Shiels replied: "The Secretary of State is not satisfied that the time has yet come when it would be to the general advantage of the people of Cyprus to make a constitutional change of such a nature."

On December 23 Mr. Rennie Smith asked whether the Colonial Office had received any objections to the Cyprus Elementary Education Bill. Dr. Shiels replied: "Certain objections have been received. The purpose of the Bill was to place elementary education more effectively under the control of the Central Government. I understand that the Legislative Council, which contains a majority of Unofficial Members, has now passed the measure."

Bulgaria.

On December 23 Mr. Charles Buxton asked the Secretary of State for Foreign Affairs whether he had had conversations with the Foreign Minister and Finance Minister for Bulgaria; whether he had discussed the economic crisis in that country and the political consequences which might follow, if the payments proposed by the Committee of Experts on Eastern Reparations were insisted upon?

Mr. A. Henderson replied: "I am glad that the recent visit of the Bulgarian Ministers for Foreign Affairs and Finance afforded me an opportunity of discussing with them the fixation of Bulgaria's reparation debt. As, however, this matter is on the agenda of the forthcoming Conference at The Hague, it would be unsuitable for me to make any statement on the subject on the present occasion."

JUNKERS IN PERSIA.

Le Messager de Téhéran of December 12 contained a remarkable statement of the enterprise of the Junkers Aerial Service in Persia. In January, 1927, it is pointed out, a contract was signed by the Minister of Posts and Telegraphs giving to Junkers a five years' monopoly in the aerial postal service in Persia. In the following month, a line from Teheran to Pahlavi was opened, according to contract, and in March, another line, Teheran-Hamadan-Kirmanshah-Qasr-i-Shirin, was opened. In August, 1927, the Junkers aerodrome at Teheran was inaugurated. In February, 1928, the Teheran-Pahlavi line was extended to Baku. In April, 1928, an aerial route was opened Teheran-Isfahan-Shiraz-Bushire. In April, 1929, the important step of extending the Teheran-Kirmanshah route to Baghdad was taken. In May, 1929, connexion was established between the capital and Meshed, and later in 1929 both the Teheran-Bushire service and the Teheran-Baghdad service were doubled (though there was no obligation to do so under contract). Statistics show that, whereas in March, 1927, there were 54 passengers transported, in March, 1928, there were 228, and in June, 1929, there were 351. The total number of passengers in 1927 was 193,039, as against 337,494 in 1928. It is worth noting that, whereas in 1927 only ten per cent. of the passengers were Persian, in 1929 75 per cent. were inhabitants of the country.

RANKEN & CO., LTD.,

NEWS IN BRIEF.

The Rev. Archimandrite Agathangelos Moschovakis died last week at the Greek Church Vicarage at the age of 87.

M. Stark, the new Soviet Ambassador to Afghanistan, recently presented his credentials to Nadir Shah at Kabul.

Through a recent fire in the Natural History Museum at Sofia valuable botanical collections have been destroyed.

The recently instituted Academy of Athens has, by a unanimous vote, chosen M. J. Gennadius a Corresponding Member of that body.

The Syrian Government last week prohibited the holding of a meeting organised by local Iraqis for the 40th day after the death of Sir Abdul Muhsin.

The new Yugoslav copyright law, implementing the scheme worked out by the International Association for the Protection of Authors' Rights, has received the Royal assent.

Reouf Bey Chadirchi, the new Iraqi Minister to Turkey, presented his Letters of Credence to Mustapha Kemal Pasha, the Turkish President, on December 29.

The Egyptian Ministry of the Interior on December 23 instructed the Governor of Alexandria to prevent the departure of Anba Youannis, the Coptic Patriarch, for Abyssinia, where grave unrest is reported.

The two Australians, Messrs. Monson and Wilson, who have been engaged upon a long-distance walk from the Cape to Cairo, arrived in Cairo on December 22, after having covered over 7,000 miles in fifteen months.

On December 20 a man entered the establishment of two rich Armenian brothers in Bucharest, named Tijurian, and demanded payment of a debt. Failing to receive a satisfactory answer, he drew a revolver and shot both the brothers dead.

The *Sétareh'yé-Djèhane*, the Teheran journal which has been appearing for nearly a year three times a week, has become a daily. This is welcome testimony to the way in which its aim is being fulfilled of making known to the world in general present-day Persia.

M. Argyropoulos, Greek Minister of the Interior, and M. Papas, Under-Secretary for Health, have tendered their resignations owing to criticisms of the Government made by General Kondyles, the leader of their group.

The Commission of Inquiry into the Palestine riots left Jerusalem for England on December 29 after hearing evidence *in camera* the previous day. A large number of Arabs, including *fallahin*, were among those at the station.

The King of Yugoslavia has conferred on the Bishop of Guildford (Dr. Greig) the Order of St. Sava. This is the premier national order of the country, and has been given on this occasion to mark the gratitude of the King and Yugoslav Government to Dr. Greig for the interest he has shown for many years in the welfare of the Yugoslav people.

Sir Percy Loraine, High Commissioner for Egypt, arrived in Khartoum on December 23, having accomplished the last stage of the journey from Wadi Halfa by air. Lady Loraine arrived the following day by train. The High Commissioner is staying in the Sudan a fortnight and is including visits to the Gezira cotton-growing area and other places of interest, and will return to Cairo on January 8.

An Italian postal seaplane on the Athens-Constantinople line, carrying a crew of five, was caught in a violent storm on Christmas Eve and crashed into the Ægean Sea in the neighbourhood of a small island near the Turkish coast. A wireless message for help was sent. The Greek cruiser Helle was dispatched, but was unable to find any trace either of the machine or of its occupants. The machine was not carrying any passengers, but only the regular crew.

Captain Le Brix and M. Rossi, who left Paris in a Potez monoplane on December 16, hoping to reach Saigon in five days, landed at Allahabad on December 21. Owing to the development of an internal defect in the machine, Captain Le Brix telegraphed to Paris for instructions and spare parts. The two Frenchmen stopped at Benghazi and Basrah and accomplished a remarkable feat in reaching Agra on December 19, a distance of 6,310 miles, in 72 hours after leaving Paris.

Two Roumanian Opposition journalists, M. Damian Mircea and M. Jon Constantinescu, were sentenced in Bucharest on December 19 to, respectively, four months' and two weeks' imprisonment for *lèse-majesté*. A few weeks previously Prince Nicholas, one of the three Regents of Roumania, was driving at top speed through the streets of the capital when he collided with a taxi-cab. The Prince got out of his car and, according to the two journalists, beat the cab-driver so severely that he was taken to hospital. The two accused men indulged in severe criticism of the Prince, declaring that his devotion to speed had caused a somewhat similar scene two years ago.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Trepca Mines.

Elsewhere in this issue will be found a report of the general meeting of the Trepca Mines, Ltd., one of a group of companies established to work mining concessions in Yugoslavia. Mr. W. Selkirk, who presided at the meeting in the absence of the Chairman, Mr. Chester Beatty, gave encouraging details with regard to the company's concession. The total area of mining and prospecting rights is about 500 square miles, but operations have been confined in the past year principally to the development of the Stantrg mine. The lowest of the four development levels is 760 metres below datum, and boreholes have indicated the continuation of the ore body to a further depth of over 150 metres. For the development of the extension of the ore body in depth an adit is being driven in at the 610 metre level which will have a length of about 2,600 metres and will eventually become the main outlet of the mine. The valuation of the ore reserve at July last showed a tonnage proved or indicated of 1,750,000, but Mr. Selkirk pointed out that subsequent developments indicated a very considerable addition to the ore reserves. Besides the work at this mine the company is investigating extensive old underground workings, notably at Meljenica and Trepca Hill, and has already located sulphide ore at the lowest level reached by the ancient miners. It is hoped to find lead zinc ore deposits at these workings similar to those of Stantrg. The importance to Yugoslavia of the development of an important mineral industry is obvious, and it is a tribute to the vision of the Yugoslav authorities that they are doing everything possible to further the work of the various companies in this group. These mining enterprises, it may be added, afford one more indication of the growing connexion between Great Britain and Yugoslavia, and the successful development of undertakings in Yugoslavia through the medium of British capital will go far to pave the way for increasing commercial relations between the two countries. For this reason in particular the progress of the Trepca Mines will be watched with the keenest interest.

Conditions in Greece.

The effect of one of the most abnormal years since the War, Sir John Stavridi pointed out at the meeting of the Ionian Bank, has been to create great difficulties for the smaller countries such as Greece. He was able, however, to strike a hopeful note as regards the coming year, and referred to the recent Budget speech of the Greek Finance Minister as a bright spot for the future. It will be recalled that as a result of the successive Budget surpluses it was found possible to announce various reductions in taxation, while the Finance Minister, in reviewing the economic conditions in the country, was able to give a most encouraging survey of the development of production. No one who knows the important works that are now being carried out in Greece or will shortly be undertaken with a view to bringing lands at present uncultivated within the productive areas can doubt that in time to come Greece must have before her a most prosperous period. That outlook is to some extent a compensation for a trying time in which taxation, as in so many other countries, still bears too heavily on the population.

The Over-production Crisis.

In the dim pre-War days such a thing as a serious crisis due to over-production was scarcely to be imagined. From time to time the supply of certain commodities was in excess of the demand, but the natural law always operated and matters inevitably readjusted themselves. But in the last few years, as a result of conditions arising out of the War, we have come to be faced with a different position. The factors now in operation are several and may be briefly summarised. There is first of all an undoubted excess of supply of some of the most important staple products, such as wheat and grain among foodstuffs, and oil, rubber, American cotton, and tin among other commodities. But the difficulty does not end here, but goes on to manufactured products. Thus the output of cotton goods is beyond the world's requirements, so is the production of motor cars and of various other manufactures. The third important factor is that in most of the important markets of the world, not excluding that of Great Britain, the economic conditions are such as to exercise a restrictive influence on purchases. The position has been ameliorated to some extent by what is known as the hire-purchase system, the advantages of which in the long run are open to grave doubt. The system which seems to have come to this country from America and has spread all over the world, can only have the effect of anticipating future purchases, while it might, if it were widespread, have awkward consequences in the event of a serious economic crisis.

Effect on the Balkan Markets.

The chief factors in bringing about over-production in manufactures are two—first, the increasing competition of other countries since the War in regard to such commodities as cotton goods and iron and steel products (which is the explanation of a large amount of the unemployment in this country), and secondly, the introduction of mass production, for which again we have to thank America. In a world where the demand for commodities is constantly on the increase the introduction of more rapid methods of manufacture is comprehensible, but in the existing conditions it implies nothing more nor less than a more intensive war between the various manufacturing countries. The effect of this policy is likely to be felt in an unmistakable way now that by all accounts the American market is reaching saturation point and it will be necessary for the pioneers of mass production to find new markets for their surplus manufactures. Compared with this over-production of manufactured goods the over-production of raw commodities is relatively a simple matter, and it is capable of adjustment, as regards a

number of products at any rate. But its consequences have been sufficiently serious. In this connexion the effects of the grain surplus on the Balkan countries may be cited. The restoration of purchasing power in the Balkans is a vital matter for the economic recovery of the various countries, and the excellent harvests of wheat and maize gave rise to justifiable hopes that 1929 would mark a turning-point, but as it happens low prices for grain have supervened and unless the unexpected happens it is now obvious that Roumania and the other countries will not receive the due reward for their harvests. Grain, however, it must be pointed out, is in a very different category as regards surplus production from such commodities as rubber and tin, the position with regard to each of which has brought about a fall in prices. In these cases agreement for restricted output is the obvious solution, and it is more than probable that 1930 will see this arrived at. Probably it was the inevitable consequence of the War that production should run ahead of consumption in both manufactured and unmanufactured commodities, but unfortunately developments since 1918 have intensified the problem.

COMMENTATOR.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, December 31.

Members of the London Stock Exchange are earnestly hoping that the New Year will be very much better than its predecessor, which was one of the worst they had experienced for a long time. After a last spell of activity terminating when Bank Rate was put up to 5½ per cent. in February, events on the Stock Exchange moved from bad to worse, culminating in the repercussions of the Wall Street collapse and then an aftermath of drooping values in a number of financial groups.

The New Year, however, shows signs of possible improvements. Money, with Bank Rate at 5 per cent., is cheaper than it has been for eight months and the international outlook suggests that money is likely to be cheaper rather than dearer. Besides easing the position on the Stock Exchange itself this leaves the field freer for financing sound industrial activity. While the outlook is thus hopeful the embarrassments of 1929 linger on and time must elapse before the revival can make itself felt.

Bewildered Investors.

The heavy losses which the decline in values of Stock Exchange securities has brought about have to a greater or lesser degree affected a very large number of investors. The latter, although in some cases they have only themselves to blame, often have a legitimate grievance. While it is generally admitted, and all the authorities join in declaring that "saving," by which is meant investing, is essential for the salvation and progress of the country, there is undoubtedly a grave lack of proper means of advising people how to invest. Investment knowledge is a specialised knowledge, and as a rule, the only specialist with whom the investor comes into contact is his broker. The broker's special duty is, however, to buy or sell as he is told. He is above all an agent who has to carry out his instructions and not give advice. In practice of course, brokers do give advice either by personal communication or by publishing periodicals and reports circulated to clients. It might be suggested, as a working rule, that when clients do consult their brokers they should make it quite clear how much money they intend to devote to investments and, above all, to what extent they are interested in revenue earning securities, or in a speculative security. This would do much to make the practical relationship between broker and client clearer, and would avoid much subsequent misunderstanding and vain regrets.

New Year Dividends.

The dividend season for the leading banks is now drawing near and bank shares are coming to the forefront. The year which has now drawn to a close was an extremely difficult one for the financial world, but the typical policy followed by the British banks has enabled them to pursue what the accounts will probably reveal to have been on the whole, an even course. An important banking factor during the year was the high Bank Rate, which enabled the banks to obtain a good return on the monies they advanced to clients, and the volume of advances has been well maintained. The higher Bank Rate also means, however, that banks have had to pay higher interest rates on the sums deposited with them, and a high deposit interest usually attracts money from current account into deposit account. The banks also received very little revenue during 1929 from commissions and charges in connexion with new capital issues, and as agents they have no doubt suffered by the decline in Stock Exchange activity. Several banks have sustained direct losses as a result of the various financial collapses. Banks, however, adopt a very conservative policy which should enable them to weather the sort of bad year as that through which they have just passed, and enable them to keep to their custom of unchanging dividends. Among low donomination shares, Lloyds £5 ordinary, £1 paid, yield about £5 10s. per cent., and Westminster £4 shares £1 paid, yield about £5 8s. per cent.

Another Merger.

Since rationalisation in the tin producing industry was first publicly mooted in the summer of 1929 events have moved quickly, and an important merger of three finance copanies and two Nigerian operating companies has now taken place, marking an important step in tin production rationalisation. The London Tin Syndicate, formed in 1925, now, by an exchange of shares in varying ratios, absorbs the Tin Selection Trust, London Malayan Tin Trust, Anglo-Bauchi Tin Dredging and Mongu Tin Mines After the merger the three first-named finance companies are to receive, in lieu of the new share, one non-cumulative 8 per cent. preference share of 10s. and one ordinary share of 10s., furthermore additional preference shares are to be allotted to the London Tin holders prior to merger, and to both the Tin Selection Trust and the London Malayan Tin. The London Tin will now have an issued capital of about £2¼ million. There have been many changes in the directorate, Lord Askwith and Sir Edward Locke Elliot retiring and Mr. John Howeson, Lord Brabourne, and Mr. O. V. G. Hoare, three gentlemen connected with other mining interests, and the latter also connected with West African trading, join the board. The new merger now practically controls all Nigerian mining besides being concerned with dredging in the East. The results of rationalisation are sometimes slow in benefiting eager shareholders, but this merger, in the long run, should improve tin mining prospects as a whole.

King Boris left Sofia on December 22, accompanied by his brother, Prince Cyril, and his sister, Princess Eudoxia, for a long visit to Western Europe, *incognito*. In his absence the Prime Minister, M. Liaptcheff, will govern the country.

BIRMINGHAM HEAVY INDUSTRIES FAIR.

Only a few stands, all of comparatively small dimensions, are now available to last-minute exhibitors at the Heavy Section of the British Industries Fair to take place in Birmingham next February. A number of firms, having delayed their reservations of space until arriving at a decision as to the actual character of their display, have been disappointed in finding they could not secure the position and area desired. In some cases the management have been able to meet them, in partial measure, by reason of the considerable extensions of display space brought about by the new conference halls, restaurants, business lounge and kitchens in a separate wing communicating directly with the centre of the 11-acre exhibition hall. Other late-comers—and mostly, as it happens, newcomers to the Fair—whose requirements cannot at this stage be accommodated to the grouping system now in process, have been obliged to content themselves with small stands for 1930.

One new exhibiting firm, which claims to have perfected a fan which gives greater efficiency at half the horse-power usually required, saving up to £2,000 a year on the running costs of a large equipment, struck a lucky circumstance. No space being open of the dimensions applied for, the manufacturers accepted a small stand at the end of the Electrical Section. This stand, as it chanced, was adjacent to the Royal Room, used during most of the fortnight for conference luncheons, and an enterprising suggestion that the exhibitors should be allowed to turn this to account, in demonstrating the practical merits of the apparatus, compensated in large measure for their inability to obtain the considerable space for which they applied.

The 1930 Fair in Birmingham will be notable for several developments in its immense display of heavy products. For a good many years now, it has become the recognised practice of manufacturers to make it the occasion of first introducing their new machinery, apparatus, equipment, and fabricated goods. Advance particulars supplied at this early stage to the Birmingham Chamber of Commerce (Inc.) prove that almost every exhibitor acts upon the policy of reserving his demonstrations of new inventions or improvements for this annual assembly of approximately 125,000 trade users and distributors.

The section allocated to building construction, public works and roads is a striking example. Space here has had to be extended, by advancing the metal group more to the west, to provide accommodation for many new exhibitors. This year, probably for the first time, the building section may be regarded as thoroughly representing all the numerous activities comprised in the term. Building plant, machinery and materials, ironfoundry as applied to the building trades, patent roofings, floorings and windows are among the products in which progress will be officially recorded.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.

*First class passengers only. Specially low fares. †Calls Port Sudan.
‡ First and Third class passengers.

T.S.S. TUSCANIA 17,000 tons leaves LIVERPOOL Feb. 11. MARSEILLES Feb. 17. Carrying FIRST Class and THIRD Cabin passengers.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Waterworks Plant.—The Egyptian Ministry of the Interior invites tenders for the supply and installation of pumps, filers, 1 artesian well to be drilled, and 400 metres of steel piping. February 25. (D.O.T.)

Metal Furniture.—The Inspector, Giza and Fayum Division, State Buildings, Giza, invites tenders for the supply and fixing of metal furniture at the Egyptian University, the Library, at Giza. March 1.

Paper, etc.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper, inks, adhesives, stationery, and materials for Photo-Copying Office, required for the year 1930-1031. February 17.

INDIA.

Mild Steel Bars.—The Indian Stores Department, New Delhi, invites tenders for the supply and delivery of mild steel bars for concrete reinforcement of gate and road bridge arches. January 21. (D.O.T.)

Air Compressors, etc.—The Indian Stores Department inviites tenders for the supply, delivery, and erection, etc., of two electrically-driven air compressors, capacity of 600 c. feet of free air per minute, two air receivers and switchboard, etc. January 13. (D.O.T.)

NEW MESSAGERIES MARITIMES STEAMERS.

The Messageries Maritimes have a new steamer under construction for service on the Indian Ocean Line for East Africa, Madagascar, and Mauritius. The vessel will be named Marechal Joffre, in continuation of the policy of the company in giving to the steamers on this service the names of famous French officers who have been connected with the formation of the Colony of Madagascar. The company have also arranged to build a new steamer for their China and Japan Line, which when finished will be named the Aramis and will, with the Porthos, Athos, and D'Artagnan already on this service, complete the famous quartet of Musketeers. Both of these new steamers will be motor vessels.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Britannia for Bombay (Manchester, January 4; Birkenhead, January 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Masirah for Calcutta (Birkenhead, January 9); s.s. Malakuta for Calcutta (Glasgow, January 13; Birkenhead, January 21).

Bibby Line.—S.s. Staffordshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, January 8).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, January 11); s.s. Hatimura for Bombay (London, January 25).

Cunard Line.—S.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Corfu, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Gruz, and Ancona if sufficient inducement (Liverpool, January 18; Swansea, January 21); s.s. Bantria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, January 23; Swansea, January 24; Liverpool, January 25).

Johnston Line.—S.s. Jessmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 18); s.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (the first steamer of the season for the Danube) (Liverpool, February 1).

P. and O. Line.—S.s. Nankin for Calcutta (London, January 17); s.s. Viceroy of India for Bombay (London, January 17).

Prince Line.—S.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 8); s.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 18).

Ellerman and Papayanni Lines.—S.s. Mardinian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 11; Swansea*, January 11); s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Malta, Patras, Syra*, Smyrna, and Constantinople (Liverpool, February 1; Swansea*, February 1). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers, Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Motors and Motoring.

(By Our Motoring Correspondent)

Braking Troubles.

If the brakes of a car do not synchronise in action, trouble is often caused by the shoes not freeing themselves properly. This may be due to improper or ineffective lubrication, but whatever be the cause, the trouble is easily rectified by a little attention. It may be, and often is, found that as soon as the clutch is let in the engine is pulling against the brakes which have not been properly released, owing to uneven adjustment. There is generally no difficulty in ascertaining this; to the experienced motorist the trouble is self-evident, yet even an old hand has been known to ignore the warning and to trust to the brakes pulling themselves free in a few yards. The slightest indication of engine trouble is usually sufficient to cause attention to be given to the fault; any trouble in the steering mechanism almost invarialy is sought out immediately and put right, but for some obscure reason the driver who will pay instant attention to carburretor or steering gear faults will often neglect, seriously, his brakes, with the result that just at the moment when he wants them to function properly and instantly to avoid a smash, they let him down either by coming on unevenly and so causing a skid, or by only partially operating, and so preventing him from pulling up in time. Either of these things are unexpected and consequently are dangerous. They may easily be the cause of a more or less serious accident, and in the interests of road users as a whole, it is the duty of every motorist either to examine his brakes periodically and put and keep them in order, or to instruct whoever looks after his car to pay special attention to the brakes.

In wet, snowy, or frosty weather, it is necessary, when driving, to watch the surface of the road with more than usual care, and to drive in such a manner that neither the brakes nor the accelerator pedal need be called into action more than is actually required. It is true that a good many drivers seem to think that all they need in driving is to keep one foot on the "gas" and the other on the brake, but in wet and frosty weather such drivers are only looking for trouble, and as a rule, they find it all right. At this season of the year, on all but well-surfaced, bone-dry roads, a car should be driven so that neither the accelerator nor the brake should have to be applied hurriedly, and at no time should even well-adjusted brakes be applied harshly. If that precaution is observed, and if proper attention has been paid to the adjustment of the brakes, winter driving will be shorn of all its terrors, and will be as safe and simple as is driving in the height of a dry summer.

American Scheme for Traffic Congestion.

Experts consulted regarding the American scheme of running several white lines along crowded thoroughfares as a means of minimising traffic congestion and of preventing accidents are by no means enthusiastic about it nor confident that it will result according to plan. The idea is that in crowded roads, where the width of the carriageway is sufficient, three lines of traffic should be possible in each direction, and to that end the road is ruled along with a broad centre line and two other lines on either side so as to give three lanes, each just over car width, for cars in both directions. Theoretically the idea seems good; it should prevent drivers from getting in front of, or impeding other vehicles and result in a maximum and even flow of traffic.

To insure that the traffic lanes were used properly, placards were fixed at regular intervals explaining that drivers were allowed to park in the outside lane close to the kerb, travel in the next division at a medium speed and go as quickly as they wished up to 30 m.p.h. in the inner lane. All vehicles plying for hire and picking up or setting down passengers were ordered to travel only in the slow lane of traffic.

To ensure that motorists observed the regulations, motor-cycle police patrolled, regularly, the traffic lanes and at first it seems that they met with a good deal of difficulty in showing motorists that the regulaions were for their direct benefit. As soon, however, as road users learned that that were not to wind in and out of the traffic lanes as they pleased, the system began to work smoothly, and before long it was found that a far greater number of cars were using the road, the average speed was higher, and that there was a substantial reduction in the number of accidents. The chief difficulty was that no driver in any one of the traffic lanes was able to pass the man in front, and as few motorists can view with equanimity any one ahead of them, but must try to pass them as soon as possible, within a few hours of the scheme being put into operation, the traffic disarrangement and the consequent road congestion was as bad as ever. It was not until offenders were dealt with severely that the system began to work smoothly. It is now more effective in reducing traffic speed than any system of speed limits could be, as no one is allowed to overtake and pass any car in its own traffic lane.

The scheme may be introduced into this country, but it is doubtful whether it would be effective over here. In the first place all our drivers would try to crowd into the fast traffic lanes which would simply have the effect of narrowing the actual road width. These are other disadvantages which are readily apparent, connected with cross roads. In certain American cities—Detroit is one—these have been overcome by painting curving lines with intersecting arrows to show when cross roads are being approached, but the difficulty there is one that it seems will increase as the scheme develops, and that is that motorists have to watch the road so carefully to see all the multitudinous signs that are painted thereon that they are really unable to attend properly to the driving of the car.

Speed Tyre Secret.

The closest secrecy is being observed in the making of the tyres on which Mr. Kaye Don will attempt to break the world's land speed record. The place where they are being made is not known, and the manufacturers have even decided not to allow their name to appear upon them. "The tyres are of a highly specialised type," said the technical expert in charge of their manufacture in an interview. "Not the least of our problems in making tyres to stand up under speeds of 200 to 300 miles an hour is the difficulty of carrying out tests. Tests on Mr. Kaye Don's Sunbeam itself are not, of course, possible for the simple reason that his car cannot be run at the required speed except over one or other of the few world tracks where the record attempt can be made.

"His tyres have, therefore, to be tested by special apparatus. Here the difficulty is that there are no means, such as we have in normal cases, of comparing the mechanical tests with the actual running of tyres on the road. The responsibility of the tyre maker is therefore no light one, and I think that he is to be congratulated on his success in providing mechanical tests which up to now have resulted in tyres capable of standing up to world record speeds such as Seagrave's.

"To be frank, we have always been anxious about tyres to be used at these enormous speeds, because we realise the risks of failure which no power on earth can provide against. Consder the forces at work on a single tyre revolving at 300 miles per hour. First, the centrifugal force is so great that it becomes one inch larger in diameter than when it is at rest. It consumes 1,792,000 foot pounds of energy every minute—enough power to lift a heavy express train a foot off the ground. There are, of course four tyres; so multiply this by four and it will be seen how great is the engine power consumed in the tyres themselves. Actually it exceeds 200 h.p. Its temperature increases to boiling point of water in about 15 seconds. It tends to fly apart with a force of about 29,000 lb. and each pound of it, if free to move outwards, contains enough energy to lift a Rolls Royce car.

"Even when the tyre is made to resist such terrific stresses, nothing we can do could prevent it when going at these speeds from being cut clean through by a piece of glass, or even the edge of a small shell lying in the sand. Kaye Don, Segrave, and Malcolm Campbell are as well aware as we are of the risks of a sudden cut, and though they may not talk about it much, their courage in trusting to luck as they do is splendid.

"We are often asked whether it is not just a waste of energy to make tyres for these enormous speeds. I do not think it is. In the first place it would, of course, be useless to build high speed cars without tyres to run them on. The tyre is essential to the high speed car, and at this time of day no one will contend that the high speed car has not taught the motor car manufacturer lessons of material value. What the tyre maker learns from making high speed tyres is the other reason for building them. It is not too much to say that the knowledge gained in the production, the testing and the actual use of tyres under such exceptional speeds is of very great importance.

"Naturally, we cannot disclose the precise nature of the result of that experience; this I can say, that every opportunity is taken to embody in standard production every improvement and advancement in tyre construction arising out of our efforts to meet the very strenuous conditions of speeds varying from 200 to 300 miles an hour. You must remember that all the more important recent developments in making not only passenger cars and popular sports models, but even the modern char-a-banc and 'bus aim mainly at higher engine power, greater acceleration and more efficient braking. Each of these factors directly concerns the tyre; indeed, all of them tend to impose upon tyres conditions of usage ever more nearly approaching the demands made upon them by a car like Kaye Don's.

"I do not say that there are not some tyre features looked for in the equipment of the modern car which are not essential to the highest speed racing car, yet the fact remains that the tyre in general demand to-day is the tyre which will best stand up to the effects of high speed, rapid acceleration and powerful braking. No better proof of the fitness of tyres to meet these conditions can be found than their performance on these high speed monsters. It is true there have been references in the Press to fantastic methods of construction, and it has been stated that silk would be used for the fabric, but I can say, without giving anything away, that silk neither will be, nor could be, used, and that there is nothing fantastic about the methods of construction.

"The constructional details have been carefully worked out step by step to meet the necessities of the severe tests The materials employed have only been obtainable as the result of very prolonged work on the part of our chemists, upon whom has fallen the responsibility for overcoming the very great difficulties arising from the extraordinarily high temperatures, resulting from the tremendous power consumption within the tyres at these extreme speeds."

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

Company Meetings.

LAND BANK OF EGYPT.

Distribution Maintained.

The following is a translation of the report of the Land Bank of Egypt for the year ended September 30 last, which was presented at the annual meeting at Alexandria on December 3 :—

Continuing the policy of the prudent development of our business inaugurated in 1926, after the years of observation and caution which were imposed upon us by the conditions of the stock market and then by the profound modifications following on the end of the Great War, our company issued in March last a new series of 5 per cent. bonds in Egyptian Pounds. This issue of £E500,000, as in the previous year, was taken in its entirety by the National Bank, which we do not know how to thank sufficiently for its constant and faithful support. Owing to this increase in our liquid funds our capital investments secured by mortgages are £E5,205,513.051, as compared with £E4,652,928.412 in 1928. This amount includes £E147,945.774, sums due from purchasers of securities sold by auction.

The bond debt of the Land Bank of Egypt stands at £E3,383,631.312, against £E2,944,189.008 last year, or an increase of £E439,442.304, as soon as the ordinary amortisations have been covered, while the mortgage loans have increased by £E552,584.639, not including the arrears due by the borrowers. The securities assigned to our holders of bonds are thus strengthened compared with the previous year. The new transactions include 18 sales and 488 loans for a total of £E1,189,147.627.

The Cotton Position.

At the beginning of the last cotton season we had cause to hope for an important increase in the annual payments; the fall in price and a certain uneasiness in agricultural circles have had a pronounced repercussion on our encashments. The arrears amount to £E548,088.237, of which £E231,524.711 relates to maturities before the current year. It may, however, be observed that the total does not represent the amount of one year's payments, and that the proportion of arrears is below that of the past year by comparison with the total of the capital invested. The property account has been reduced to £E50,646.715, as against £E54,231.665 for the previous year.

In accordance with its policy of ordinary prudence your Board recommends making important provisions for redemption and to strengthen our position for the future by increasing as far as possible our contingencies accounts in the form of various provisions. The net distributable profit stands at £E211,760.398, or almost the same as that of the previous year. The dividend maintained at the same total will be 14s. 6d. for the ordinary shares and £E8 for the founders' shares. The distribution will be carried out in the way which was inaugurated in 1924 with the modification voted by the general meeting of 1928. In conformity with Article 44 of our Statutes the ordinary shareholders will first receive 5 per cent. under the head of annual non-cumulative interest. Then are paid to each of the categories having rights interest at 5 per cent. on the amounts carried to their credit after the amortisations effected in the past five years. Then the dividends and ordinary percentages will be paid according to the order and the proportion laid down in the statutes of the company. As last year, to the ordinary dividend of 14s. 6d. and to the dividend of £8 for the founders' shares will be added a bonus of 4s. 10d. for the first, making a total of 19s. 4d., and of £4 for the second, making a total of £12. We are confident that you will adopt your Board's proposals, which are inspired at once by prudence and by anxiety to continue to develop our business in the manner best suited to the bank's interests.

Your Board is sure that it will be interpreting your wishes in giving your thanks to the personnel of the Land Bank, always faithful and devoted as in the past.

Profit and Loss Account.

The receipts of the year arising from interest on mortgage loans, short term advances, deferred interests, etc., have been £E439,998.178. The service of the bonds, general expenses, fiscal taxes paid or due to the French Government, and various amortisations we propose to you, which stand at £E39,574.748, absorb a total sum of £E228,237.780. The profits to be distributed amount to £E211,760.398. From that sum there has first to be deducted the statutory 5 per cent. in favour of our 195,000 shares, £E47,531.250, and there remains to be divided £E164,229.148. On that balance there has to be deducted, in conformity with the decisions of the general meeting of December 2, 1924, the interest at 5 per cent. on £E738,479.650, profits carried forward on the 4 per cent. bonds. The interest falls to the various categories as follows :—Reserve £E3,989.050, the directors £E2,994.085, ordinary shares £E20,958.593, founders' shares £E8,982.254, £E36,923.982, leaving to be divided £E127,305.166. In accordance with our statutes, 10 per cent. is placed to the statutory reserve £E12,730.516, and 10 per cent. goes to the board of directors £E12,730.516, £E25,461.032. Of the balance £E101,844.134, 70 per cent. to the ordinary shares, £E71,290.894, to which has to be added the amount brought forward from the year 1927-28 £E4,262.728. In addition the share accruing from interest on profits carried forward £E20,958.593, making £E96,512.215. We propose to you to give out of this sum to the 195,000 shares 9s. 6d. per share, £E90,309.375, which, added to the statutory interest of 5 per cent. already mentioned, will represent a total dividend of 14s. 6d. per share. The carry forward of the shares will thus be £E6,202.840. An interim dividend of 5s. having been paid on June 15, it will remain to pay a dividend of 9s. 6d. per share. The 30 per cent. belonging to the founders' shares represents £E30,553.240. Further, their share of the interests arising on the amount brought forward £E8,982.254, to which has to be added the amount brought forward from the year 1927-28 £E1,047.859. We propose to distribute a dividend of £8 on each founders' share, and to carry forward £E1,583.353.

By drawing on the capital recovered on the mortgage loans and in conformity with the resolutions of the ordinary general meeting of December 4, 1928, there will be distributed from the profits carried forward realised on our 4 per cent. bonds a bonus of £E82,053.296, divided as follows :—To the reserve £E8,864.555, board of directors £E6,653.522, ordinary shares £E46,574.652, founders' shares £E19,960.565; £E82,053.294. The ordinary shares will have thus £E46,574.652, plus the carry forward from the previous year £E912.885; £E47,487.537, or 4s. 10d. per share, £E45,946.875, with a carry forward of £E1,540.662. The founders' shares will

Uganda

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms
The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.
The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

have £E19,960.565, plus the carry forward from the previous year £E669.806; £E20,630.371, or £4 for each founders' share, £E19,500, with a carry forward of £E1,130.371.

The Resolutions.

The general meeting unanimously (1) approved the accounts and balance-sheet for the year ended September 30, 1929, and gave the directors their discharge for their administration. (2) Approved the division of profits proposed by the directors and fixed the dividends as follows:—(A) A distribution of 14s. 6d. for each ordinary share: that distribution, in conformity with the decision of the general meeting of December 2, 1924, includes, besides the ordinary dividend of the year, interest at 5 per cent. on £E419,571.870, profits carried forward, realised on the 4 per cent. bonds. An interim dividend of 5s. per ordinary share having been paid on June 15, it will remain to pay a final settlement for the year 1928-29 of 9s. 6d. per share. (B) A distribution of £8 on each founders' share: that distribution, in conformity with the decision of the general meeting of December 2, 1924, includes, in addition to the ordinary dividend of the year, interest at 5 per cent. on £E179,645.088, profits carried forward, realised on the 4 per cent. bonds. It was resolved to carry forward £E6,202.840 for the ordinary shares and £E1,583.353 for the founders' shares. (3) By deduction on the capital recovered on mortgage loans, and in conformity with the resolutions of the last ordinary general meeting of December 4, 1928, the meeting decided on the same amortisation as last year on the profits carried forward realised on the 4 per cent. bonds, which will result in a supplementary distribution of 4s. 10d. for each ordinary share, with, on that amortisation, a carry forward of £E1,540.662, and of £4 on each founders' share with a carry forward of £E1,130.371. (4) Re-elected MM. R. Abdy, E. Bourre, and Th. Zarifi, the retiring directors. (5) Nominated as auditors, MM. Georges Mazet, Franz Sofio, and Joseph Desvernois.

TREPCA MiNES.

Mining and Prospecting Operations.

Satisfactory Drilling Results.

Mr. W. Selkirk on Ore Reserve Position.

The second ordinary general meeting of Trepca Mines, Ltd., was held on December 23 at River Plate House, Finsbury Circus, London, E.C. Mr. W. Selkirk presided.

The Secretary (Mr. C. S. Johnstone) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—I am sorry that our chairman, Mr. Chester Beatty, is unable to be present to-day. He caught a chill a day or two ago, and is compelled to remain in the house. He asked me to tell you how sorry he is that he cannot be present, and he hopes you will accept his apologies.

After dealing with the balance-sheet, the Chairman continued: While the total area of our mining and prospecting rights is now about 500 square miles, we have continued the policy to which I referred last year of confining our operations principally to the development of the lead zinc orebody known as the Stantrg Mine. This mine has been developed by four levels, the lowest of which is 760 metres above datum, and below this boreholes have been put down which indicate the continuation of the orebody and the maintenance of lead zinc values to a further depth of over 150 metres.

In order to develop the extension of the orebody in depth an adit is being driven at the 610 metre level which will have a length of about 2,600 metres. This level will eventually become the main outlet of the mine, and it will also act as a drainage tunnel for the water from the upper levels.

No revaluation of the ore reserves has been made since July last, when the tonnage proved or indicated amounted to 1,750,000 tons, with an average grade of 11½ per cent. lead, 10½ per cent. zinc, and 3 oz. silver per ton. The fact, however, that drilling below the lowest level in the mine has shown such satisfactory results, indicates that further development in depth will add very considerably to the ore reserves.

Owing to the very satisfactory results of the development work during the year, it was decided to erect a concentration plant for the treatment of the ore, the first unit of which will have a capacity of 500 metric tons of ore per day. This is being laid out, however, so that the capacity can be easily and economically increased. The preparation of the mine is now sufficiently advanced to provide this tonnage.

Transport Facilities.

The mine will be connected to the concentration plant by an aerial ropeway of about 6½ kilometres in length. This ropeway is designed to carry 100 tons per hour, and will therefore provide transport facilities for future additions to the concentration plant.

A site has been secured for this plant adjoining the new direct railway from Mitrovica to Belgrade, which is now under construction, and which has been completed as far as this point. The foundations of the mill buildings and power house have been completed, and construction will continue during the winter months with a view to bringing the plant into operation at the earliest possible date, which, I hope, will be about September next. Portions of the permanent plant have already been shipped, and delivery of the whole equipment is expected early in the coming year. Following our usual policy, every effort is being made to place as large a proportion as possible of the orders with British firms.

The ore, after being crushed at the mine in the primary crushing plant, will be delivered over the aerial ropeway to a main storage bin at the mill site. From this it will be transported by conveyors through the secondary crushing plant to the feed bins. There are two of these bins, each of 500 tons capacity, and situated immediately ahead of its respective concentrator section. The concentrator will be composed of two 250 ton per day sections. Each section will be equipped with Hardinge mill, classifier, and lead and zinc flotation machines, with double cleansing of both lead and zinc concentrates. These concentrates will then be delivered to the thickener and filter plant, where they will be dewatered either for loading direct into trucks for shipment or to stock piles for storage.

It is expected that the ore will yield a lead concentrate assaying 65 per cent. to 70 per cent. lead and a zinc concentrate assaying from 45 per cent. to 50 per cent. zinc, with a satisfactory recovery of the metals

Electric Power Supply.

The entire plant has been laid out with a view to extension. Provision has also been made for receiving ore delivered by railway trucks from points without our property or elsewhere, in addition to that from the aerial ropeway. Ample store houses, shops, and fully-equipped assay offices are being provided. All mining and concentrating plant will be supplied with electric power generated by a 1,000 kilowatt steam turbine plant, which is under construction at the mill site.

Quarters are being built for the employees, who will be housed under comfortable and sanitary conditions. These will include houses for married men and single quarters. Suitable provision will also be made for recreation. Attractive building sites have been acquired in close proximity to the mill and also near the mine.

I think I have now dealt fully with the progress at the Stantrg Mine, which is, of course, at present the outstanding feature of our properties.

There are, however, other interesting prospects in the immediate vicinity of this mine, notably at Maljenica and Trepca Hill, where we are investigating extensive old underground workings, and have already located sulphide ore at the lowest level reached by the ancient miners. Prospecting work will be continued at these and at other points with a view to proving additional orebodies.

Before closing I should like to say a few words with regard to conditions in Yugoslavia. It is not yet generally realised that, as a result of the Peace Treaties which were concluded after the Great War, a new country has sprung into existence which possesses all the elements necessary for the creation of a prosperous State. Our own experience in Yugoslavia is, I am pleased to say, most satisfactory, and our relations with the authorities and the people of the country have throughout been of a most friendly nature.

Government Co-operation.

The Government, realising the importance of facilitating the establishment of a successful mining industry in the rich mineralised region of Southern Yugoslavia, has co-operated with us in every way, and I have every confidence that we shall by our operations contribute in increasing measure to the prosperity of that section of the country.

Digitized by Google

Our thanks are due to the staff in Yugoslavia for the efficient manner in which they have carried out their duties.

The Chairman concluded by moving the adoption of the report and accounts, which was seconded by Lieut.-Colonel R. Micklem, C.M.G.

The Chairman, in reply to a shareholder who asked whether any further information could be given about the developments at Meljenica and Trepca Hill, said that it was hoped that there were lead zinc ore deposits similar to that at Stantrg. There was the same geological formation as at Stantrg, and similar ore had been discovered, but it was too early to state definitely what they had there.

The resolution was carried unanimously.

Shareholders' Congratulations.

Mr. Titcomb said that as a shareholder and as a mining engineer of some 30 years' experience, he had followed the progress of the company with a great deal of interest and attention. He had just returned from a three months' trip to Yugoslavia, where he had gone over many mining properties, among them the Trepca Mines. He thought it might be interesting to shareholders if he told them some of the opinions he had formed. He considered that the chairman's speech was a conservative one, and he thought that the shareholders could take everything that had been said as facts. He was very pleased at the way the property was being run and developed, and very pleased with the quality of the men who were operating there. The work done on the construction of the mill was a very creditable performance, and the whole place was being conducted in a good mining and businesslike way. Speaking simply as a shareholder, he would like to say that he thought that there was a good deal more ore than was indicated in the estimate of last July. His guess was that there should be about 2,000,000 tons of ore in the zone below their present level down to the lowest level, and probably a million tons above the present level. He had followed very closely the survey and work done at Meljenica and Trepca Hill, and he would say that there was an even chance of a very good ore body existing at Meljenica. He wished that they could spend more money on the development of these two properties but he was quite content with the policy of the board. (Hear, hear.) He thought the staff in Yugoslavia, the engineers, and the directors were to be congratulated, and he personally felt very pleased with the whole situation. (Hear, hear.)

Mr. W. S. Stephenson said that he had listened with great satisfaction to what the chairman had said, and it was very gratifying to know that they were in a young company, whose prospects, if the progress to date was any indication, were very bright. They could look forward to the future with confidence, and he was sure that all the shareholders would join him in tendering a vote of thanks to their chairman, directorate, and managers for the very able, energetic, and far-sighted way in which they were conducting the affairs of the company. (Hear, hear.)

The motion was carried with acclamation, and after the Chairman had thanked Mr. Titcomb and Mr. Stephenson for their remarks, as well as the shareholders for the vote of thanks, the proceedings terminated.

IONIAN BANK.

A Difficult Year for Greece.

The nineteenth annual ordinary general meeting of the proprietors of the Ionian Bank, Ltd., was held on December 23 at the offices of the company, 25-31, Moorgate, London, E.C.

Sir John Stavridi, the Chairman of the bank, presided, and in the course of his speech said:—I believe I can assert without fear of contradiction that the past year has been one of the most abnormal periods in regard to banking, finance, and business in general since the termination of the War. It had been hoped that with the settlement of the problem of Reparations, conditions would gradually return to normal. This might have happened had it not been for the disquieting conditions existing in New York, which seriously affected the money market throughout the world. Under such circumstances it was inevitable that smaller countries, such as Greece, going through the painful consequences of stabilisation and heavy taxation, should be more acutely affected. The past year has, indeed, been a difficult one for Greece, where a few old-established industries and many established since the War have been facing hard times.

The smaller Greek banks have also been affected by the abnormal conditions in the country. Some of them have suspended payments, whilst others have sought safety through amalgamation under the ægis of larger institutions. The reduction in the number of banks should be all to the good, tending as it does to eliminate competition.

During the past year, the principal banks have come together and formed an association for dealing in unison with all questions affecting their interests and regulating business on proper banking lines. We have naturally joined the association, and look forward to its benefiting all financial institutions in Greece. Taxation weighs heavily on business undertakings to the detriment of the best interests of the country. Banks, industry, and trade all contribute very considerable proportions of their earnings, heavier even than those borne in this country, and, unfortunately, at times methods become arbitrary.

Our profits in Greece have been affected by the conditions which I have described, but your Directors are taking all necessary steps for the protection of your interests during this stabilisation period until conditions become again normal.

The problem facing Egypt, the other main centre of our activities, is political, but of the highest importance in regard to its future relations with the British Empire. Egypt has had a fairly prosperous year, and remained practically unscathed by the financial troubles of the world, excepting for the higher rates of interest which are affecting the movement of the new cotton crop. Our results in Egypt are better than in the previous year, but did not come fully up to our expectations. In Cyprus we have made progress and are approaching the stage when the results should be beneficial to the bank.

Last year I informed you that our Constantinople branch was in liquidation. The liquidation is now completed. This in itself will mean a substantial economy.

Before dealing with the accounts, I should like to reassure our shareholders on a question that has been put to me. Your bank was in no way interested either in what is known as the "Hatry failure" or in any of the other failures that have followed in London, or in the collapse brought about in America by the wild stock exchange speculation in that country. Any check your institution has suffered has been in its ordinary fields of operation.

As you are aware, the position of the bank in regard to its holdings in British Government securities is very strong, and we have always considered them, and do still consider them, as our anchor of safety. That there should have been such a decline in value as mentioned in our report is naturally very disappointing, but I can assure you that it causes me no anxiety. These investments do not represent operations on which the bank looks to make a profit, but are held for the security of your undertaking. The balance-sheet shows the strong position of the bank as regards cash, which is increased from £663,111 to £715,088, and you will observe that the larger part of this amount was actually in London.

The result of the year's trading is a net profit of £48,046, as compared with £53,680 for the previous year, a reduction which your Directors regret. Having regard, however, to the difficult conditions under which the bank has been working during the past few years, and to the writing off of the final losses in Constantinople, they are of opinion that it is not unsatisfactory. Last year, as you are aware, your Directors adopted measures of prudence when, instead of a transfer to reserve fund, the carry forward was increased by some £5,700. As times are still difficult they have decided to continue husbanding the resources of the bank, and this explains their recommendation of a reduced distribution, and a further increase of the carry forward by £6,000. The interim dividend was paid at the usual rate of 3 per cent., free of tax, which is equivalent to 3¾ per cent., less tax, and the cost to the bank of the final dividend which is now recommended is £24,000, made up of the amount of the dividend which will be distributed to the shareholders, £19,200, and the amount of tax thereon, £4,800.

As a contrast to the picture it has been my duty to present to you, I cannot refrain from mentioning what strikes me as a bright spot for the future. A few weeks ago, when presenting the Budget to Parliament, the Greek Finance Minister was able to record a series of surpluses, to announce remissions of taxation, and to show that the productive capacity of the country is steadily improving. He stated that trade over the last financial year showed a tendency to improve, and that there had been a remarkable reduction in the adverse commercial balance. I sincerely hope that he is right and that his prognostication of the future will prove correct. Your institution would certainly benefit thereby. Your Directors, however, are not content to wait on these events. They have taken steps to reduce expenditure to the lowest margin commensurate with efficient and safe working, and I trust that when next I have the pleasure of addressing you I shall be able to show you satisfactory figures resulting from these steps.

On the motion of the Chairman, seconded by Mr. Charles S. S. Guthrie, the report and accounts were adopted, and the dividend recommended was approved.

The Right Hon. Lord Ritchie of Dundee was re-elected a director, and Mr. A. G. M. Dickson was elected to a seat on the board.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended December 21 :—

Grain.—The revival in business which, as a rule, one expects to set in on the eve of the closing of navigation, has failed to manifest itself, and the week under review has been characterised by the same stagnation as the previous one. On the other hand, however, shippers with stocks on hand are gradually changing their minds and are making preparations to despatch cargo to Sulina for the winter. A few shipments in fulfilment of old sales, mainly for English ports, have been effected this week, and it was with great difficulty that one or two fresh parcels could be sold to complete the respective steamers. In the circumstances, there was hardly any activity in chartering, although for any odd parcels for which immediate shipment was required as much as 17s. 6d. for the Continent and 19s. for the U.K. had to be paid. At Constantza the market was, if anything, quieter with rates at about 9s. to 9s. 3d. for the Continent.

Timber.—Suitable vessels being still available in excess of the demand, agents have been able to get off their hands parcels for difficult destinations, for which they had not been able to secure tonnage till recently, owing to the greater demand for destinations more attractive to shipowners.

Weather and Crops.—The weather was still mild, but somewhat colder, at the beginning of the week, with a more or less overcast sky and occasional scattered precipitations in the form of rain or snow. On Wednesday a gale sprang up from the north-east accompanied by snow, and in the central and southern districts trains were snowed up at various points, though in the Galatz neighbourhood the quantity of snow was not great. On Thursday the temperature here fell below freezing point for the first time, and it has since varied between four and five degrees below freezing at night, and one degree above at mid-day. The temperature of the water in the Danube, though steadily falling, is still well above freezing point, so that even if the weather should suddenly become much colder, there should be no danger of an immediate closing of navigation.

Sulina.—Though the dredgers have only been able to work on four days during the last week, the Bar depth is maintained at 24 feet. River.—Minimum depth unchanged at 24 feet.

Constantza.—This week about 9,500 tons of grain arrived from the interior, and about 15,000 tons were shipped to Hamburg, Antwerp, Rotterdam, Weser, whilst about 2,000 tons went to Trieste, Genoa, Marseilles, Hull, Liverpool. Fifteen vesels loaded about 34,500 tons petroleum products, and six took oil fuel for bunkers.

Bulgarian Report.

Bourgas, December 14.—Grain.—The better demand for space for the Continent continued, and about 2,500 tons have been booked for Antwerp and Rotterdam at rates from 10s. 6d. to 11s. 6d. Business to the Mediterranean is very quiet. The weather has generally been cloudy and rain fell at intervals. It was mild at the beginning of the week with a temperature of 16 degrees Centigrade, but it has been gradually getting colder, light frosts being experienced in some places, though in most parts of the country the temperature remained above zero. *La Bulgarie* states : "The autumn sowings have been made under exceedingly favourable conditions. The Agricultural Bank of Bulgaria has distributed this autumn to farmers at reduced prices 12,000 tons of selected seed wheat, 400 tons of rye, and 700 tons of barley.

A circular issued by the Bourgas Harbour Authorities states : "It is brought to notice that at a distance of about one mile south-west from the harbour entrance light, a whistling buoy has been placed which has no signification for navigation, having been moored there for trial."

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended December 19, state :—

Since our last report the futures market has been rather more active, but the tone has remained heavy. The week's summary of price movements is as follows :—Sakellaridis : January, 27.11 dollars, 0.16 dollars down ; March, 27.51 dollars, 0.31 dollars down ; May, 27.78 dollars, 0.55 dollars down ; July, 28.03 dollars, 0.63 dollars down ; November N.C., 28.83 dollars, 1.08 dollars down. Ashmouni : December, 19.00 dollars, 0.04 dollars down ; February, 19.20 dollars, 0.11 dollars down ; April, 19.41 dollars, 0.29 dollars down ; June, 19.60 dollars, 0.42 dollars down ; August, 19.73 dollars, 0.59 dollars down ; October N.C., 19.93 dollars, 0.51 dollars down.

Sakel.—The amount of business done during the couse of the week has been larger, but nevertheless prices, particularly of the more distant options, have further declined on liquidation of a few old bull positions and some speculative selling. For the last few weeks the atmosphere in the market has been distinctly heavy, and the further decline in New York, coupled with the increasingly depressing industrial conditions in Lancashire, America, and on the Continent, have in no way tended to relieve the situation. The demand from the trade has continued to fall off, and the effect of this is shown on the spot market at Minet el Bassal, where the amount of business done has declined to extremely modest figures. On some days during the week less than 1,000 bales changed hand,s a record in dullness for the height of the season. Rumours have been put about that the Government would increase its limits for buying March and May deliveries to 27½ dollars and 28 dollars respectively, but, for the moment, there is no official confirmation. We hope that the Government will not take any such decision and, if present conditions do not improve in the meantime and it thinks itself called upon to intervene in March and May deliveries also, we trust that it will do so at limits lower than the 27 dollars fixed for the January option. Only by so doing will it place the prices of Egyptians on a trading basis and more in line with the prices of varieties grown in other countries which are used by spinners in competition with our cottons. The present supply must at all costs find its way into the hands of consumers during the current season, and this object will

not be achieved by means of artificial prices. The outlook continues at the moment for prices to remain at round about the limits fixed by the Government.

Uppers.—The Uppers market has been moderately active, with a weak trend. There was a fair amount of selling of December at 19 dollars, with the Government as the buyer; it is expected that there will be heavy tenders against the December contract at the third tender of the month, and the total which the Government has already received, and will receive, against this delivery is estimated at well over 130,000 kantars. The demand from the trade has been moderate, and prospects for an improvement in the near future can scarcely be called encouraging. The weakness of American and the approach of the holiday season are both factors diminishing spinners' interest in our cottons.

Spot.—The market has been very quiet indeed during the week under review, the total turnover amounting to about 9,000 bales, of which we estimate 3,500 bales Sakellaridis, 5,000 bales Ashmouni and Zagora, 400 bales Pilion, and 100 bales other varieties.

Sakellaridis.—There has been no revival, as yet, in the demand for this variety. The good grades are entirely neglected and premiums show a much easier tendency. A small business has been done in the medium grades and here, also, spot differences have eased.

Ashmouni and Zagora.—The turnover shows a considerable decrease and the business done has been confined practically entirely to the medium grades. Spot differences has eased slightly all round.

Pilion.—There has been a small demand at about last week's premiums.

Other Varieties.—Practically no business.

NEWS FROM ALL SOURCES.

We regret to announce the death, which took place recently in London, of Lady Cargill, wife of Sir J. T. Cargill, Bt., chairman of the Burmah Oil Company.

The total imports into Egypt for the month ended November 30 are £E5,405,370, against £E5,261,573 for the corresponding month last year; and exports £E6,388,429, against £E7,459,417 for November, 1928. Cotton exports amounted to £E5,309,858, against £E6,176,155.

Mustapha Pasha Kemal, President of the Turkish Republic, in order to set an example to the nation in its economic crisis, has decided, according to the *Djumhouriet* of Constantinople, to discontinue the use of all wearing apparel made of foreign material. In the place of tea or coffee visitors to the Ghazi's residence at Chankaya, near Ankara, are served with a beverage concocted from a locally grown plant.

A meeting of the Calcutta Electric Supply Corporation is to be held on January 10 to pass certain alterations in the articles of association. These alterations fall under two heads. The first consists of changes which are rendered obligatory by the new Companies Act, and the second set of alterations is proposed in order to secure that the control of the company shall remain in the hands of British subjects. The provisions drafted have the effect of restricting the holdings of foreign shareholders to a maximum of 20 per cent. of the whole share capital.

Why not visit
The SUDAN
this Winter?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

Egypt in the Limelight.

Outside Egypt the eyes of all those who are interested in Egyptian affairs are turned on Nahas Pasha. He has squared his account with his predecessor, Mahmoud Pasha, who can, without any misgivings, leave his own record to the judgment of history. The new Prime Minister, on the other hand, has his reputation yet to make, for both history and contemporary Egypt will expect some more concrete service to the country than a personal recovery in the see-saw of political life. Not the least virtue attaching to the treaty proposals is the fact that they draw, of necessity, a veil over the past. Old labels may remain, but it is not a Wafd that can still claim to be fighting for independence which is now in power. Great Britain has no lack of precedents for welcoming as friends and co-operators those who have fought her to-oth and nail, and she has no difficulty in understanding in part the vexation of spirit with which the more zealous Wafdists despaired of ever attaining independence. The unexpected, however, has happened. Terms which they had never anticipated have been offered, and independence is there for them to take hold of it. These terms they can either accept or reject. One thing is certain: no contention that the terms are not generous enough will meet with endorsement from the outside world; nor, after having flouted the electorate by refusing to allow the proposed terms to be submitted to its judgment at the elections, could the Wafd leaders claim the support of the Egyptian people for the rejection of the proposed treaty. Acceptance of the terms offered will bring them into line with the considered opinion of civilised nations; rejection will completely isolate them. There should be little doubt, therefore, as to the course that they will adopt. In these circumstances it is contrary to the spirit of allowing the dead past to bury its dead that alarmist reports should be spread of the intentions of a Parliament which has not yet met. It would be easy enough for the new Egyptian Parliament to pass measures such as the Public Assemblies Bill or the Firearms Bill, to which the British Government had objected before the new treaty terms were offered. Such action, after the conclusion of the treaty, will no longer affect Great Britain, as responsibility for law and order and the protection of foreigners will be Egypt's own. The British Government, and the world at large, will merely take note of the spirit in which Great Britain's offer of friendly co-operation is reciprocated and draw their own conclusions. The golden rule that things do not matter as much as one is inclined to think they do will, probably, be found to apply to Egypt. Friendliness makes for the smoothness of relations between two countries that have to work together, but it is possible to become inured to friction. Even rejection of the proffered treaty would affect Great Britain much less than it would Egypt; it would certainly rejoice the heart of the big foreign communities in the country, and, one would think, could hardly fail to add to the Wafd's embarrassments.

Education in Cyprus.

It was inevitable that the passage into law of a new educational measure in Cyprus shortly after a further rejection of the oft-repeated demand for union with Greece should be regarded by the Greek-speaking inhabitants of the Island as a fresh act of "tyranny" on the part of an "alien" Government. Education, however, is a delicate, as well as a technical, subject, and it is hoped that in their own interests those who are inclined to use the new Law for purposes of propaganda against the Government will not allow their political zeal to outrun their reputation for intelligence. Educational reform in Cyprus has long been overdue. The system of education in vogue was the outcome of the peculiar conditions prevailing at the time of the Occupation. The Turkish authorities had paid no attention to the education of the Greek-speaking population, but had left the matter entirely in the hands of the people themselves. With the advent of British rule the principle of Government aid was introduced, with as little disturbance as possible of the existing system. The basis of this system was that the village school should be in the hands of an elected village committee, while the rôle of Government was restricted to a certain measure of supervision. Under this arrangement school teachers became, in the words of a leader of the Greek-speaking members of the Legislative Council "factors in the country, socially and politically. . . the teachers have helped us in our controversies with the Government. . . . They have in this way educated the people in fighting for their rights." On the other hand, the teachers in turn became the sport of political factions, had no security of tenure, and were pathetically under-

Digitized by Google

paid, while the interests of education suffered. There seems no reason to suppose that the new Education Act has had any other object in view than the furthering of the cause of education and with it of the interests of the teachers. That in carrying out this purpose the principle of leaving the teachers to the mercy of local intrigue and the wire-pulling of rival political factions should have to be scrapped goes without saying. Hence the opposition to the Act, which, incidentally, was passed by a majority of the elected members of the Legislative Council through the "defection" of three Greek-speaking members to the Government side. The spectacular demonstrations which have been organised against the new system of education would have carried more conviction and reflected more credit on the Opposition leaders' intelligence and sense of humour, if, instead of citing Turkish rule as the Golden Age of Cyprus, they had shown that in Greece herself a Republican Government invariably left teachers free to carry on Monarchist propaganda and to train their pupils to shout "Down with the Republic," while no Royalist Government would ever dream of interfering with the right of teachers to instil republican propaganda in the school children. It would seem as if the Cyprus Government belongs to the category of wicked animals that have been known to defend themselves when they are attacked.

Suspense in Palestine.

It is a little ironical that the probable site of Sodom, about five miles north of the Dead Sea, should have been discovered at a period when men of good will in the Holy Land are worth their weight in gold. For unquestionably a rein is afforded, in this interval before the Report of the Shaw Commission of Inquiry is published, to men addicted to evil, whether by act or speech or thought. The immediate situation in Palestine is unpromising, however it be viewed. Sporadic brigandage is frequently reported; a considerable number of loose spirits appears to be roaming the country intent on making mischief; nor amongst more moderate men does there seem to be much attempt to forestall the recommendations of the Commission of Inquiry by finding a *modus vivendi* as between Arab and Zionist. We do not, of course, suggest that the authorities have not the situation well in hand, or that there is any probability of renewed trouble upon a vast scale: the endeavour to present Palestine in an alarmist light is merely propaganda. But all this lawlessness—hold-ups, robberies, and so forth—does indubitably point to an increase, rather than a diminution, of tension. It is in these circumstances all the more to be hoped that the necessity for the speedy publication of the Committee's Report will be realised. Naturally the members of the Commission, who returned to London on January 4, fully realise the gravity of the situation, and it is difficult to believe that the early publication of their findings and recommendations will not lead to a sensible improvement. The thing to be avoided at all costs is delay. Drift has been the curse of British policy in the Middle East on a hundred occasions. Whether this policy of drift has been indulged in deliberately, in the belief that dangers always blow over, provided that there is no time-limit, or whether it has been allowed merely because of administrative difficulties, we need not now inquire. Suffice it to reiterate the paramount importance of establishing a clear and unequivocal policy of Palestine which, in the minds of honest men, can give rise to no misunderstandings.

King Ibn Saoud's Success.

Despite the gloomy forebodings entertained in certain quarters on the possibility of the Najdi rebels' evading justice at the hands of the Wahhabi King by means of escaping into territory under British influence, namely, Kuwait or Iraq, King Ibn Saoud's campaign against the dissident elements, sponsored by Faisal al Duwish, seems so far to have been quite successful. In a battle at the end of the year the rebels are reported to have been decisively beaten, and those that have escaped into Iraq are similarly reported to have been disarmed by the authorities. It now remains, apparently, for these disturbers of the peace to be extradited—a step which the British and Iraqi authorities showed themselves, in the last abortive negotiations which the late Sir Gilbert Clayton had with the Wahhabi ruler, to be willing to take. Naturally, surrender to King Ibn Saoud must be absolutely unconditional. Too long these roving insurgents have been allowed to exercise a disturbing influence in Eastern Najd: this time there must be made to their nefarious activities a final end, in the interests not only of the Dual Monarchy of the Hijaz and Najd but also of the whole of desert Arabia.

The Question of Copyright.

Credit must be given to the sincerity of the lament that has greeted Yugoslavia's strict adherence to the International Law of Copyright. It is better, say the Yugoslav intelligentsia, to be regarded as barbarians, because we do not adhere to the Law, than to become barbarians by adhering to it. The implication is, of course, that, if foreign literature cannot be pirated gratis, it would be worth no one's while in Yugoslavia to translate and publish it. As so often happens, the event may show the position to be less tragic than the lament anticipates. Few authors will be so hard-hearted as to make the rights of translation prohibitive, and possibly Yugolav publishers may be found to blaze the entirely new trail of not making the royalty an occasion for adding two or three times the amount to the cost of the book. Egypt's position in regard to copyright is not so clear. No adequate law on the subject exists, but the Government has travelled as far as a draft measure, which was shelved. It may be doubted whether the list of pirated works in Egypt is as long as the Yugoslav one, and the absence of a law of copyright may be more reasonably attributed to political preoccupations in other directions. One effect of such a law must be to restrict the freedom with which the non-Arabic Press in the country solves the ever-present problem of space-filling articles, leading or leaded; while instances have occurred of the colourable imitations of whole publications that would do credit to Japanese ingenuity, which reached its zenith when trade labels on imitated British goods passed with impunity, if they could show a single word, such as Glasgow, mis-spelt.

According to a report from the Colonial Office unemployment among Jews and Arabs in Palestine decreased during October.

Mr. B. N. Anantani, a member of the East African Indian deputation, who arrived in London last week, is to urge on the Colonial Office the desirability of establishing a common electoral roll in Kenya.

THURSDAY, JANUARY 9, 1930.

THE LAHORE CONGRESS AND AFTER.

Now that the Lahore session of the Indian National Congress has come to an end it may be useful to attempt to review the existing political situation. At one time there seemed to be a possibility that all sections of opinion —not excluding the most extreme—might, perhaps, be willing to take part in the proposed Round Table Conference. But, even before the Congress assembled, it was made perfectly clear by the Nationalist leaders, at their much-discussed interview with the Viceroy, that they had no such intention. They declined to have anything to do with the Conference except on impossible conditions. They rejected the proposal, just as they rejected the Reforms scheme ten years ago. Their position is now, as it was then, that they want self-government, but that they will not allow Great Britain to give it to them. The Congress itself endorsed the attitude taken up by its leaders, and it resolved, accordingly, to decline to be represented at the Conference. Further, it declared "that Swaraj in the Congress creed shall mean complete independence." It threw over the Nehru scheme of Dominion Status; as a preliminary step in the independence campaign, it declared "a complete boycott of the Central and Provincial Legislatures"; and it called upon Congressmen to abstain from participating directly or indirectly in future elections. It also authorised the All-India Committee "to launch a programme of civil disobedience including non-payment of taxes," whenever and wherever it may deem fit. Lastly, it resolved to repudiate "the financial burdens directly and indirectly imposed on India by a foreign Administration." By these resolutions the Congress has frankly declared itself to be a revolutionary body, aiming at the destruction of British rule. Obviously this is a serious matter, for no Government can be expected to tolerate such a campaign as the Congress proposes to launch. At the same time it would be wrong, we think, to attach undue importance to the Congress and its threats. There is nothing which is really new in any of its present decisions. Nor does there appear to be anything in them which should cause exceptional alarm. The one danger is, of course, that "non-violent non-co-operation," which is the weapon to be used in the independence campaign, may lead, as it led before, to violence of a most serious character. It is true that Mr. Gandhi never tires of preaching the merits of non-violence. Some of his associates are not, however, so peaceably disposed, as they have made abundantly clear in several of their recent speeches. But "non-violent, non-co-operation" has been in force at intervals for some years past; and the Government of India may be expected to be alive to their responsibilities in regard to its results.

The proposed boycott of the Councils is simply a reversion to 1919, when Mr. Gandhi started non-co-operation. What was then a novel form of agitation was directed in the first place against the Rowlatt Act. It became a general movement in 1920 when, at a Special Calcutta Session of the Congress in September, it was formally adopted as the Congress creed. As a result the Legislative Councils, which were then being established under the Reforms scheme, were boycotted by the Extremists, who attempted at the same time to extend the boycott to Law Courts, schools and all other institutions subject to the control of what Mr. Gandhi pleasantly described as a "Satanic" Government. Practical experience of the new movement soon convinced astute politicians, such as the late Mr. C. R. Das, that it was leading nowhere. They saw that the Councils were tending to become the real centres of political life and activity; and they were forced to the conclusion that they could not remain outside. Like Mr. Gandhi, they too wanted to destroy the Reforms scheme; but, unlike him, they believed that they could be more destructive inside the Councils than outside. Mr. Das, and the other leaders who agreed with him, accordingly stood as candidates at the elections of 1923; and the non-co-operation movement thereupon collapsed as regards the Councils. From that time to the present the Swarajists have been members of the Central Legislature and of the various Provincial Legislatures. And it is not easy to believe that they will now consent to revert to non-co-operation, the barrenness of which as a practical policy they have already acknowledged. In view of the attitude which they might be expected to take up, their absence from the Legislatures would not be necessarily an unmixed evil. For, presumably, their one endeavour would be to use their membership to destroy the new Indian Constitution whatever form it may take. The Congress resolution is silent on the question of a general boycott extending to schools, Law Courts, etc.; and it may be assumed, therefore, that this hopeless move is not to be attempted again. Civil disobedience, that is to say, a refusal to pay taxes, has long been threatened, but no practical attempt to enforce it has yet been made, the reason being, no doubt, that a sufficient number of would-be martyrs cannot be found. The formal repudiation of the Indian National Debt need not be taken too seriously at the present stage of the independence movement.

As we have repeatedly pointed out in these columns the Congress has been for a long time past an essentially Hindu organisation, and has lost all valid claim to the title of National. The latest available information goes to show that the Lahore session is unlikely to make it increasingly popular with the Muslims and other minorities who hold themselves aloof from it. On the contrary, we gather that the various communities are beginning to wake up to the dangerous implications of the Congress policy, and are rallying to the support of the Liberals. A few weeks ago we pointed out that the Viceroy's much-discussed declaration had enabled the Liberals to retreat from the untenable position which they took up when the Statutory Commission was appointed. Their recent meeting at Madras strongly supported the proposal for a Round Table Conference, and vigorously condemned the attitude of the Congress. "We know," said Sir Phiroze Sethna, "from bitter experience that non-violent non-co-operation is but a myth. Violence cannot but be resorted to, and the President of the Congress not only foresees, but endorses it. The Congress idea reeks of Bolshevism, and will lead nowhere, but to chaos, confusion, revolution and anarchy." Sir Tej Bahadur Sapru, Sir Chimanlal Setalvad, Mr. Sastri, and other recognised leaders were equally emphatic. The National Liberal Federation, in an appeal which it has issued, says that "those of us who believe in the peaceful evolution of India cannot but deplore that any section of the people of this country should raise the cry of independence and so involve our future in turmoil and confusion." It is greatly to be hoped that the Liberals will not rest content with these expressions of opinion, satisfactory and outspoken as they are. The weakness of the moderate, or Liberal, elements in Indian public life is their want of organisation. In this respect they are far behind the Swarajists, who, to do them justice, are the best organised and most active and energetic of all the parties. The Liberals would appear to have no lack of suitable material, and they ought, therefore, to be able to create a strong party organisation, capable of effectively expressing Liberal opinions, and of holding its own against the Swarajists.

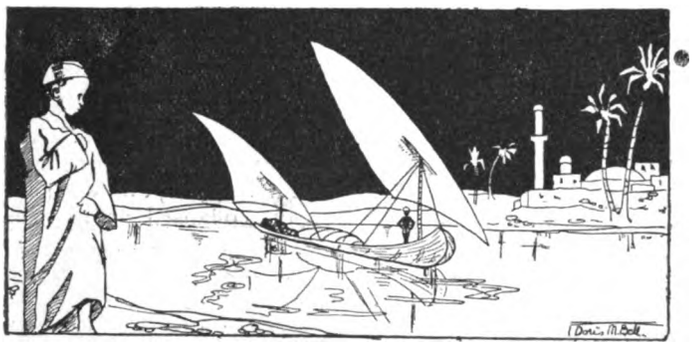
*The Near and Middle East

From Our Own Correspondents.



EGYPT.

Cairo, December 28.

The Season.

Yuletide was celebrated with traditional zest in both hotel and private house, and the festivities will, as usual, continue well into January as a consequence of the duplication of feasts resulting from the difference in the calendars of the Western and Eastern Churches. The hotels are by no means as full as is their wont at this juncture, but their managers declare themselves to be satisfied with the prospects. Their opinion is, however, not shared by the majority, who anticipate considerable cancellations later on owing to a combination of circumstances, among which are the unsettled state of affairs in Palestine, which nowadays is taken as part of the Egyptian programme, the uncertain outlook in Egypt, which nevertheless is not likely to produce any disturbances, and the financial position in the world in general.

The New Customs Tariff.

The new Customs tariff is now in the hands of the various Chambers of Commerce, who are consulting with the commercial interests that they represent with a view to seeing to what extent the new provisions affect them and what representations should be made to the Egyptian Government for the removal of whatever disabilities this new tariff creates. Whether it will be possible to submit these representations to the Government within the two months which intervene before the tariff is to be applied—the commercial conventions expire on February 17 next—is a moot point. As things are at present, the Government is disinclined to postpone the introduction of the new régime, and it remains to be seen what the attitude of the Powers interested will be on this point and on that of the right of Egypt, once she has denounced her Commercial Conventions, not to raise her Customs tariff, but to introduce regulations applicable to foreigners without the previous consent of the Powers interested.

The new tariff is not entirely specific as was at first intended. There are a very great number of categories where the *ad valorem* system has been retained. But in all categories except where it is desired to encourage local industries or to protect them against competition from outside the rate has been raised. It is difficult to analyse the tariff within a small scope, but it can be said that the general level is not above 18 per cent., except in the case of articles of luxury, such as, for example, wines, liqueurs, champagnes, silk textiles, playing cards, etc. The reason why *ad valorem* duties have been retained in so many categories is that otherwise the tariff would have been an unduly complicated one. In the simplification which has now resulted from the final study of the proposals made by the experts, the British expert, the Canadian Trade Commissioner in Brussels, and Ahmed Bey Abdel Wahab, Under-Secretary of State for Finance, have played a great part.

Lord Lloyd.

Following the example of the British Chamber of Commerce, the British Union in Egypt has considered the situation created by the retirement of Lord Lloyd and has unanimously passed the following resolution: "The Council of the British Union at a full meeting reaffirm their regret at the immense loss suffered by the British community in Egypt in consequence of Lord Lloyd's departure, and their appreciation of the high conception of duty which caused him to resign."

Lawn Tennis.

Lawn tennis players have been afforded a great treat this week thanks to the sporting generosity of Prince Abbas Halim, who enabled the French players, MM. Cochet, Brugnon, Rodel, and Landry, who are now on their way home from India, to give a series of exhibition games at Gezira and in Alexandria. Two days were reserved for the purpose in Cairo and one morning in Alexandria, and those who took advantage of the opportunity saw some exceptionally good tennis. The champions, who showed what real champion lawn tennis can be, were partnered by the best local men and lady players, who rose to the occasion in a remarkable manner.

The Copyright Congress.

The Congress of the International Literary and Artistic Association was opened on Monday by Hafez Hassan Pasha, Minister of Education, at the headquarters of the Société Royale d'Economie Politique de Statistique et de Legislation, and the Congress is now discussing the various subjects forming its agenda. Egypt is nowadays one of the few countries where there is no proper law governing copyright. A draft decree was prepared some time ago, but nothing ever came of it, although the necessity for some more definite protection in the form of regular legislation than the mixed Tribunals are able to afford by their decisions is much felt. The Egyptian Government seems, however, to hold the view that it would be against the interests of Egypt to enact any legislation on the subject, and so the matter is likely to be left where it is in spite of the conference which is now proceeding.

The Khedive Ismail.

For some time now King Fuad has been anxious that an authoritative history of the reign of his father should be written, and the Warden of New College, Oxford, the Rt. Hon. H. A. L. Fisher, has been entrusted with the task. He has now arrived here, accompanied by Mr. E. L. Woodward, Fellow of All Souls' College, Oxford, and they are investigating the documents existing in the archives of Abdin Palace with a view to selecting those necessary for the work.

THE HIJAZ.

Jidda, December 20.

A Temperate Climate.

After the recent rainfall the climate of Jidda has become altogether delightful, with temperatures seldom reaching 80 degrees, and on one occasion actually falling below 60 (59.9 to be quite exact). Cultivation of melons and millet is proceeding apace in the hope that the favourable weather conditions will not produce a recrudescence of the locust plague, which showed some signs of visiting the country last October, when the country had but little entertainment to offer to the invaders.

The Pilgrims.

The pilgrims (as usual, mostly from Java) continue to arrive in a steady stream. Their number up to date is 11,621, which compares favourably with 9,625 of last year up to the corresponding date, and the 10,873 of the previous (record) year, though it falls short of the 11,947 of the first regular Wahhabi year (1926). The Javanese pilgrims probably find the cool climate of these days somewhat trying, but the vital statistics published weekly by the Hijaz Health Department have not yet begun to reflect the fact. The average weekly number of deaths from ordinary and epidemic causes in the five towns of the Hijaz during the off-season would seem to vary between 80 and 100; and the total number of deaths from small-pox during the last six months is only 43. This figure will now steadily increase, if one may accept the experience of previous years, with the increasing numbers of pilgrims arriving in the country; and, seeing that all pilgrims are vaccinated at their ports of embarkation, it would be of considerable interest to know how their advent results in an increase of small-pox deaths in this country. Visitors from Egypt speak of two kinds of vaccination in that country, namely, the real thing, and the formal vaccination for certificating purposes which is apparently forced on all unwilling eastward-bound travellers on every occasion of their leaving Suez (even if the occasions are separated by only a short interval). Can it be possible that the same formality takes the place of serious vaccination in other pilgrim ports, or is it that vaccination does not guarantee a reasonable immunity from the disease? It would be an interesting study subject for the International Quarantine Board.

Relations with Persia and Italy.

With the ratification of the treaty with Persia (the instruments of ratification are to be exchanged shortly at Cairo) by the Persian Government and by King Ibn Saoud, the way is now clear for the establishment of a Persian Legation at Jidda; and the Persian authorities have already submitted the name of a Chargé d'Affaires for the acceptance of the Hijaz Government. The identity of the incumbent of the new office will, however, not be known until the King's answer has been communicated to the Persian Government.

Negotiations are once more in progress with the Italian Government for the conclusion of a political and economic treaty with the Hijaz and Najd, and presumably the Italian Government will proceed to the establishment of a Legation here as soon as these negotiations have been completed. In fact it is probable that the example set by France, whose representative will probably present his Letters of Credence to the Amir Faisal towards the end of this month as Chargé d'Affaires, will be widely followed by the various Powers during the next few months; and it is believed that the British Government will no longer delay giving effect to an overdue change in the manner of its representation at the Court of Arabia. The French Government is now following up its decision to establish a Legation at Jidda with negotiations for a political treaty with the Arabian Government.

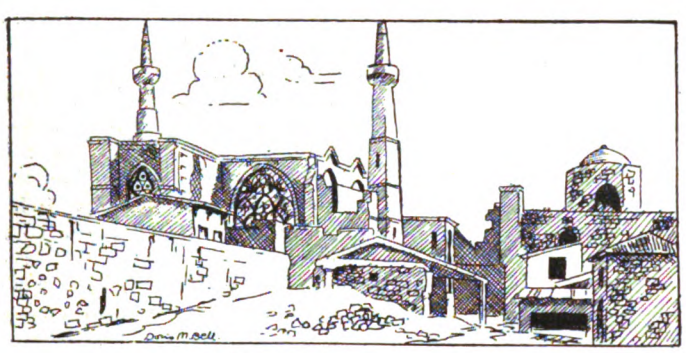
Rebels in Najd.

For some time now we have been without news of the King's campaign against Faisal al Duwish and his fellow-rebels, but information may be forthcoming at any moment. It is understood that the British Government has refused to allow an asylum in Kuwait territory to the rebels; and it is scarcely probable that in these circumstances they will be able to hold out much longer against the pressure which is being brought to bear on them by the King's forces.

Engineering Developments.

The Government is now inviting applications from engineers qualified to study the mineral resources of the country and to draw up plans for the improvement of the Jidda harbour; and a scheme for a large power-station to provide both Mecca and Jidda with electric light is now under further consideration. Since the beginning of his reign in the Hijaz in January, 1926, King Ibn Saoud has steadily followed a policy of consolidation rather than of rapid expansion, but the time is now not far distant when a policy of steady expansion on modern lines may be rendered possible by the development of the suspected mineral wealth of the country.



CYPRUS.

Nicosia, December 12.

The Mission to London.

The members of the deputation of Greek-speaking Cypriots returned to Cyprus on December 5, and met with a great reception at the port of Famagusta, at Larnaca, and several villages which they passed on proceeding to Nicosia. It is recognised that the delegates did all they could while in England, and the feeling prevails that, although the hopes formed in Cyprus have not been realised at the hands of the Labour Government, some advance has been made, and the Cyprus "question" has now become a reality. Some regret is expressed that the delegates did not stay longer in London in hopes of seeing Mr. MacDonald. They had an interview with Mr. Lloyd George, who asked many questions about the island. They attended the Memorial Service for Mr. T. P. O'Connor, and placed a wreath on his tomb. The Greek Archbishop has sent telegrams to Mr. Lloyd George and the *Manchester Guardian*.

The Legislative Council.

The Council met on December 6, when the Governor communicated the reply, which he had received the day before from the Secretary of State, to the Greek memorial, stating that the Government could not entertain the petition for union with Greece. Replies to the other matters before the Colonial Minister would be dispatched in due course, as the delegates were informed in London.

The Famagusta Harbour.

It is proposed that Famagusta harbour, which was built on the smaller of two plans made in 1878 by Mr. Samuel Brown (who afterwards became Director of Public Works in the island), should now be widened. It is said that the estimated cost would be £200,000 (which would probably be exceeded). If the members of the Council will agree to a loan of £150,000, the Imperial Government will grant £50,000. The harbour, as it is, can admit only a small number of large vessels, and in stormy weather fails to protect incoming ships.

Excavations.

Many more interesting objects of antiquity have been unearthed by the Swedish Mission. At Ayia Irene, in the Kyrenia district, over 100 statues, and over 800 statuettes, in terra cotta, similar to those found at Episkopi and various other places in the island, have been found. They date, apparently, from 700 to 400 B.C. Work carried out at the site of Kition, in the Larnaca district, indicates that the temple where work has proceeded, and which was super-imposed on traces of still more ancient places of worship, was dedicated to a god named Mukal, or Mikal, a presiding deity of Kition and that its date was 600 to 500 B.C.

Cruelty to Animals.

The Society for the Prevention of Cruelty to Animals has made good progress. An exhibition of animals, organised by the Society, was recently held at Nicosia with much success. Various prizes were given for horses, mules, asses, and camels. Sir Ronald and Lady Storrs were present. The Society does much good. Injured and sick animals are treated and advice is given to those who apply for help.

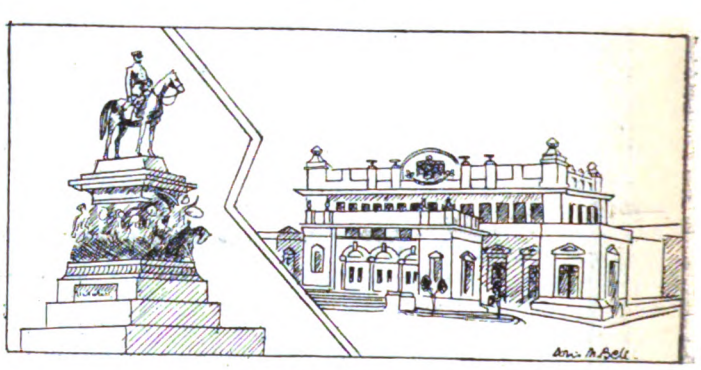
General News.

The Governor and Lady Storrs have left for Egypt.

Mr. Watts, Director of the Land Registry Office, is leaving to take up an appointment in Uganda. He is much esteemed by all classes in the island.

Mr. B. Dickenson, Puisne Judge, is also leaving, having been appointed judge in the Supreme Court of Kenya.

A new Greek newspaper "Cyprus" *(Kypros)* is being published at Nicosia.



BULGARIA.

Sofia, December 24.

Parliament and the King.

In accordance with a scrupulously observed tradition, King Boris has recently received a large Parliamentary delegation, comprising the notable men of all the groups in the Sobranye, which gave to him the answering message of Parliament to the Speech from the Throne. On this occasion, the King made before the deputies a remarkable speech, in which he emphasised the economic difficulties with which Bulgaria is contending and which make the proposed settlement of the Reparations question so dangerous. "Economic improvement and the financial consolidation of the country," said the King, "are with us, as almost everywhere else, one of the most serious problems, a satisfactory solution of which demands a common effort on the part of us all. Our urgent duty is to collaborate in the work of the people in building up prosperity to-day and the welfare of the future, and to strengthen it in its belief in its own moral and creative force. One of the conditions of our prosperity is that we all, in serving the country, have the sincere conviction

Digitized by Google

that it is the general good which must before and above all things guide us and inspire us. Imbued with this idea, let us work calmly and patiently, convinced that we can thus regulate the economic and social problems which life presents at every moment, even though such a regulation is made less easy by the difficult conditions in which we live."

Passing to the situation abroad, the King strongly insisted that Bulgaria is unswervingly following a policy of peace and that policy can be productive only of good. Then, desiring, apparently, to dissipate the misunderstandings to which the visit to Rome of two Bulgarian Ministers, MM. Bouroff and Moloff, might give rise in certain international circles (on the subject of a certain Italophil or Francophil orientation in Bulgarian policy), he added these significant words, in order to demonstrate clearly the consistent neutrality of Bulgaria towards the increasing rivalry of certain Great Powers in the Balkans: "We hold sincerely to our good relations existing with all States and we welcome with joy and a firm hope the noble efforts for peace which confirm our faith in justice and international solidarity, the benefits from which we patiently await."

After this ceremony, which was confined strictly to the King and representatives of Parliament, the King, as usual, had long interviews with the President, M. Tsankoff, and with the leaders of the different Parliamentary groups—with the exception of the Socialists, who traditionally abstain from appearing at this function. The Sovereign thus received in audience, after M. Tsankoff, M. Michael Majaroff, President of the Government group of the Democratic Entente, M. Mushanoff (in place of M. Malinoff, who was indisposed), Vice-President of the Democratic Group, M. Smiloff, delegate of the Liberal Group, M. Ilia Gheorgoff, President of the Radical Group, MM. Thomoff and Omartchevski, delegates of the two Agrarian groups, and M. Tzéno Tabakoff, delegate of the Workers' Group. It was a remarkable fact this year that all who spoke with the King, even MM. Tsankoff and Majaroff—though these two delegates belong to the Governmental majority—severely criticised the political and economic situation, and indicated the responsibility for this state of affairs, leaving the King to draw his own conclusions. As for the other delegates received in audience by the King, all those belonging to the Opposition at once and openly advised a change of Government as the only way out of this serious situation, which is occupying the attention of all quarters.

The Bulgarian University.

A few days before he started on his foreign tour, King Boris entertained, at a large academic dinner held in the Palace, the teaching staff of the University of Bulgaria, which had recently bestowed upon him the title and diploma of Doctor *honoris causa* of Natural Sciences. This dinner, to which had been invited a certain number of students, proved the mutual attachment existing between the Head of the State and this powerful scientific institution which has played so important a rôle in the intellectual and cultural development of the Bulgarian nation.

The history of the Bulgarian University marks in effect the evolution of the whole intellectual life of the country, resuscitated after a five centuries old political serfdom, which, however, was not able to extinguish in the soul of the Bulgarian people a deep and unalterable aspiration towards light and progress. At first there was a modest High School, which, founded in 1888 at Sofia, grew rapidly through the creation of three Faculties—of Letters (Literature, Philology, History, and Philosophy), Sciences (Physics, Natural Science and Mathematics) and, later, of Law. In 1905, this Higher School, already endowed with all the institutions and organisations necessary, was officially raised to the rank of a University, which was soon recognised by the great Universities abroad. Since that time, the Bulgarian University has steadily expanded, and has extended the number of its Faculties, adding a Faculty of Theology, of Medicine, of Agriculture, and finally a Veterinary Faculty—not to mention the Academies of Arts and of Music which have a separate existence.

The organisation of all these Faculties has been a laborious and difficult task. Its magnitude will be better understood when it is recalled that at the Liberation the Turks left the country almost without schools, save those few which the Bulgarians themselves had created and which they kept up at their own expense. The Bulgarian people thus had to remake the whole of its material and spiritual culture. Its poverty constitutes the most important obstacle to greater and quicker progress. In spite of that, the results achieved have been truly colossal, because in the space of fifty years the number of illiterates has been reduced, by the covering of the country with all sorts of schools, to less than five per cent., and has attained in this respect an enviable position in the Balkans. But the meagreness of the resources at the disposal of public instruction is always the greatest bar to the consolidating and perfecting of the work accomplished. This is shown in the Annual Report issued by the Rector, where he sets out the sums allocated in the State Budget for the material support of the different Faculties in the University:—in 1925-26, 11,894,656 leva; in 1926-27, 27,124,087 leva; in 1927-28, 28,126,962 leva; in 1928-29, 33,065,000 leva; and in 1929-30, 19,600,000 leva—or, counting salaries and honorariums for professors and lecturers, in 1925-26, 39,092,066 leva; in 1926-27, 62,943,626 leva; in 1927-28, 66,668,358 leva; in 1928-29, 73,540,300 leva; and in 1929-30, 60,118,980 leva. The already meagre resources of a University containing seven Faculties show a tendency to decrease, by reason of Treasury difficulties, which is obliged to make inroads on University credits in order to make the Budget balance. But these economies are such that they threaten to compromise the normal development of the great national institution, which is the pride of the country, and for which all Bulgarians, generally so divided among themselves, have a pious respect. The danger threatens most severely the University Library, the largest in Bulgaria, which has 168,000 books and 1,466 periodicals, of which 680 are Bulgarian and 786 are foreign. The amounts allotted to the upkeep of this Library (purchase of books, subscriptions to journals, rebinding, and so forth) were: in 1925-26, 1,841,287 levas; in 1926-27, 1,393,942 levas; in 1927-28, 881,105 levas; in 1928-29, 1,700,000 levas; and in 1929-30, 1,000,000 levas. These amounts suffice only for the purchase of periodicals, the acquisition of new works having been abandoned for lack of money.

As for the students, their numbers, a little reduced in 1929, was 4,103, of whom 2,925 were men and 1,178 were women. They were thus divided as regards Faculties:—Law, 1,122; Literature, History, and Philosophy, 1,002; Physical Science and Mathematics, 724; Medicine, 534; Agriculture, 367; Theology, 180; and Veterinary work, 174. The teaching staff consists of 309 persons whose works appear in the University publications.

The King's Foreign Tour.

On December 20, King Boris left *incognito*, under his usual name of Count Rilski. The King, who is accompanied only by his aide-de-camp, Colonel Draganoff, has gone to Germany, where he will spend Christmas with his sister Nadejda, wife of the Duke of Wurtenberg. His

sister Eudoxia and his brother Cyril, who were at Sofia, also left with him for this family reunion.

Afterwards the King, probably with Princess Eudoxia and Prince Cyril, will go to Rome, where he will be present at the marriage of Prince Umberto and Princess Marie-José.

Belgrade, January 2.

A Year's Work.

On New Year's Eve King Alexander called all his Ministers to a Cabinet meeting held in the new Palace at Dedinye, near Topchider, just outside Belgrade. As the old year reached its end the President of the Council, General Peter Zhivkovitch, made a speech summing up the work of the Royal Government during the year. He said, among other things, that his Government had accepted the tasks laid down in the King's proclamation of January 6, 1929, and always kept its terms in mind. He was pleased to say that the whole nation had accepted this proclamation enthusiastically—as was shown by the delegations from all parts of the country that recently came to pay homage to the King. "The Kingdom of Yugoslavia," he said, "by its name and its division into nine banovinas since October 3 of this year, represents the complete and synthetic solution of our national and political problems . . . and the Royal Government, with complete confidence awaits, in the near future, the most satisfactory results of good administration and internal consolidation." Believing the unification of the law of the country to be most important for national unity, the Government had done everything to bring this about as quickly and thoroughly as possible. Much had already been accomplished in this direction, and the work would, he said, be completed in a short time. The future of the State depended also on the strong and permanent foundations of the education, culture and physical training of the young. Therefore the Government had first passed laws unifying and reforming former legislation on these matters. The principle of full liberty and tolerance towards all religions had led the Royal Government to pass laws regulating the relations of the State with all the recognised religions. This work was now being completed and would lead to peace and content among the various religious bodies of the country. Care had been taken of the interest of all classes, but the first care of the Government had been for the peasant and their still difficult economic situation. The workers had been protected against anti-social and anti-State influences, the Civil Service had been improved and the Army administration reformed. Every help had been given to the country's growing industries. The taxation system had been unified and reformed. Everything possible had been done to raise the reputation of the country abroad and to enable it to play its part is all international movements. On behalf of the Government General Zhivkovitch thanked the King for his confidence in them, and added: "The great ideas expressed in Your Majesty's proclamation of January 6 and the significant act of October 3 are bound together in the sound ideal of the union of our nation without regard for religion, tribe or historical differences." He then handed to the King detailed reports from each Minister on his work during the year.

In reply King Alexander thanked the Government for their loyal support in the work, first, of quieting tribal hatreds and then of consolidating the union by introducing a new administrative system, and asked them to continue to bear in mind in their work only the interests of the people. He appealed for special care in the fields of economic development and finance.

An interesting statement was made by General Zhivkovitch in an interview which he gave to the Zagreb newspaper *Novosti* for the Christmas number. In this statement he emphasised two points; that the whole people were satisfied with the new régime, as was shown by the fact that all newspaper and other public comment was favourable, and, secondly, that Yugoslavia is not in need of a foreign loan and is not trying to conclude one at present. Indeed, under present conditions on the world money market, it would be unpatriotic to conclude a loan, in view of the fact that the national income is sufficient to cover all current expenditure and even to allow of certain investments. Later, when conditions on the money market become more favourable, a loan may be sought to allow of the completion of big productive works.

The Law of Copyright.

On December 25 King Alexander signed a new Act on the Protection of Authors' Rights. Yugoslavia has never agreed to enforce the Berne Conventions on this matter, but the present Act will bring it not merely up to date, but ahead of most European countries in the protection now given to authors. Publishers and book-lovers are bitterly disappointed at this Act and hold the opinion that it would have been better for this country to allow foreigners to call them barbarians for not giving protection to authors than to make them barbarians by cutting off the supply of cheap translations of the best books of the world, which they have enjoyed up to the present. This country, they point out, has nothing to gain by the protection of its few authors' rights abroad, and much to lose by being forced now to pay for permission to translate and print the works of foreign authors. As the number of book-readers in the country is extremely low, even a comparatively low fee for such permission will greatly increase the price of books.

The Cost of Living.

New octroi duties, which vastly increased the tax on the most necessary commodities of life, were recently put into force by the Municipality of Belgrade appointed by the King after January 6. These new duties led to very great discontent among the people of the capital. An example of the tremendous rise is that of flour, the duty on which was increased from 35 dinars per wagon (ten tons) to 1,500 dinars. As a result of these new taxes the price of commodities were raised even out of proportion to the rise in the duty, and the poorer people of Belgrade were very badly hit. Great satisfaction was, therefore, expressed when General Zhivkovitch ordered the duties to be suspended on the ground that they laid the heaviest burden on the articles most consumed by the masses and actually decreased the charges on certain luxury articles. It is believed that the Mayor, M. Savtchitch, will resign.

The Alleged Terrorist Organisation.

The Zagreb police claim to have discovered a complete terrorist organisation among the young members of the former Croatian Peasant Party, which planned a whole series of outrages for December 17, the anniversary of the King's birthday. Bombs were to have been placed in the Cathedral at Zagreb to explode during the service on the 17th, and an infernal machine was to have been exploded on the Sava bridge near Zagreb, when the train bearing the delegations from Croatia and Dalmatia to pay their homage to the King in Belgrade passed. It is claimed that this organisation was financed from abroad, chiefly by Italian and Austrian Fascists. In proof of this it is stated that certain Italian and Austrian newspapers published news of the blowing up of the Cathedral and of the trainload of delegates as having actually happened on the 17th, showing that they knew in advance of the plans made, which were foiled by the police.

INDIA'S ECONOMIC FUTURE.

Speaking at the annual dinner of the Indian Chamber of Commerce at the Hotel Cecil on December 30, the Secretary of State for India emphasised the necessity for internal peace and good order as a condition of economic progress. Mr. D. S. Erulkar, Chairman of the Chamber, presided.

Proposing the toast of "India's Economic Future," the Chairman, in the course of a lengthy survey of economic conditions in India, said that they welcomed the recent declaration of the Secretary of State in the House of Commons, that the idea of exploiting India in British interests was a thing of the past. India's economic wealth should be a source of strength to the Empire. They merely asked that the policy of the British Government should aim at obtaining the maximum good for the Indian people. That need not be inconsistent with the security of British interests.

The misunderstanding which had arisen in regard to the Coastal Reservation Bill was largely due to the belief that the object of the Bill was an aim in itself, whereas it was merely a means to a much larger end. He commented particularly upon the failure of opponents of the measure to put forward a single constructive suggestion. If the impending Conference should arrive at an equitable alternative method of attaining the desired result, nobody would welcome it more warmly than the Indian mercantile community.

Mr. Wedgwood Benn, replying to the toast, said that reference had been made to the past glories of Indian Commerce. It was well for us on this small island to recall that at a time when we were clothing ourselves with woad the merchants and philosophers of India were taking to far-off lands of the East their treasures of riches and learning. The Indian merchant of to-day had difficulties to contend with, but he believed they were living in a period when on both sides there was a genuine desire for co-operation in Indian interests. It was in that spirit that he had approached every question that had presented itself since his appointment to his present post. Who could doubt that with India's inexhaustible resources, with a plentiful supply of willing workers, and with her business men carrying on their work in the spirit of service there would be in the future a great extension of Indian wealth.

The policy and the purpose of the Government of India was to raise the standard of living of the people, and in that it had the heartiest support of His Majesty's Government in Great Britain—not in order that India should be a better market for British goods, but in the human interests of the people of India themselves, so that they should have the fullest oportunity to develop those gifts with which Providence had so richly endowed them.

The entry of Indians to membership of the Baltic Exchange and the London sale rooms was only a sign of the times. In every Imperial and international conference now one found India represented, not only with increasing dignity to herself but with valuable service to mankind. He believed that the key to the problems which faced us to-day was to be found in enlightened Indian patriotism. India was an important part of the British Commonwealth—a Commonwealth founded upon the principle of equality, with each member free to pursue its own destiny in a voluntary unity, recognising that that way lay the path of the greatest service to mankind.

Replying to the toast of "The Guests," proposed by Mr. K. M. Banthiya, vice-chairman of the Chamber, Sir Stephen Demetriadi, chairman of the East India section of the London Chamber of Commerce, said that a British tradition which had stood our trade in good stead was that in no circumstances should political considerations be allowed to influence the course of business. Business, when left to itself, was governed by economic laws, which are knowable and permanent; politics—and this is especially true under all forms of democratic government—were, on the other hand, capricious and changeable.

"Every attempt to subordinate the trade of a country to its political aims has resulted in economic disaster. It creates uncertainty, and uncertainty is the greatest enemy of business and, above all, is the greatest enemy to the investment of capital. If you have any doubt as to the truth of this statement," he continued, "I ask you to consider the complete inability to attract foreign capital of those countries which have, in our own day, subordinated business to politics; countries which, prior to the adoption of that course, had no difficulty in obtaining on the most favourable terms the capital which they required for their development. The more undeveloped the country, and the greater consequently its need for capital, the more deadly the self-inflicted wound."

Mr. Fakirjee Cowasjee and Mr. John E. Parry, chairman of the Baltic Exchange, also responded. The toast of "The Chamber," was proposed by Sir Atul Chatterjee, High Commissioner for India, and Mr. R. J. Udani briefly responded. Among others present were:—

Mrs. Wedgwood Benn, Mrs. Erulkar, the Maharajadhiraj of Burdwan, Dr. R. P. Paranjpye, Sir Edward and Lady Headlam, Sir John Biles, Sir Binod Mitter, Sir B. K. Mullick, Sir Reginald Clarke, Messrs. N. D. Allbless, K. P. Mehta, M. Daud, E. Steiner, Arthur H. Jones, W. W. Henderson, H. S. L. Polak, and F. C. Walker.

THE DELHI OUTRAGE.

The following message has been issued in India over the signature of the Viceroy:—

> Since the day on which an attempt was made by the explosion of a bomb to derail my train a few miles from New Delhi I have received from every quarter of India hundreds of messages congratulating me and those who were travelling with me on the failure of the attempt, and repudiating utterly and without reservation the action of those who originated and carried out the design.
>
> Every class and every community have joined in this universal condemnation; ruling Princes and people of India; associations political, commercial, social, and communal; and individuals in every walk of life.
>
> I would have desired to thank separately every one who has sent me a message of this kind, but the numbers make this impossible. I wish, therefore, now, on my own behalf as on that of all my party, to express deep gratitude to all those who have sent me at this time an expression of their good will. It is a convincing proof, if proof were necessary, that Indian public opinion condemns such methods and realises that those who resort to them are the worst enemies of their own country.—IRWIN.

At the general session of the Indian National Congress, which opened at Lahore on December 31, a resolution moved by Mr. Gandhi, deploring the bomb outrage and congratulating the Viceroy and his party on their escape, was carried after an acrimonious debate by 897 votes to 816.

THE CHURCH AT NEW DELHI.

The providential escape of the Viceroy and Lady Irwin from the recent bomb outrage lends additional interest to the final appeal which Lord Irwin is making on behalf of the building fund for the church at New Delhi. Particulars of the efforts which are being made to complete the church, of which the Viceroy laid the foundation stone last winter, before the close of his term of office were given in a recent issue of THE NEAR EAST AND INDIA.

After freely acknowledging the generous help already received from many quarters, Lord Irwin, in a letter to *The Times*, states that to date approximately £37,000 has been collected. To finish the architect's design and cover internal fittings another £13,000 is still required. Of the former sum about £11,000 has been subscribed in India, and having regard to the entirely official and fluctuating character of the British population in New Delhi, Lord Irwin does not think that any further substantial amount can be raised locally.

"It is necessary, therefore," the letter proceeds, "to rely upon the good will of the people in England if we are to see the realisation of our hope for a church in New Delhi worthy of our faith. . . . There must be many who have not yet subscribed, but who will appreciate my anxiety to provide the new capital of India with a building which may fittingly express, in material form, the inspiration of the faith which has been fundamental to all the best things which the British nation has tried, and is trying, to do in India." Contributions should be sent, as heretofore, to the Marchioness of Titchfield, 16, Portman Square, W.1.

The Secretary of State for India has appointed General Sir Alexander Cobbe, V.C., G.C.B., K.C.S.I., D.S.O., to be Military Secretary, India Office, in succession to Field-Marshal Sir Claud Jacob, G.C.B., K.C.S.I., K.C.M.G., when the latter vacates the appointment on May 9, 1930.

INDIAN POLITICAL PERSONALITIES.

(By Our Calcutta Correspondent.)

Ever since India learned from the cabled reports of the debates in Parliament that Mr. Lloyd George had spoken of the Indian political leaders as "men of extraordinary ability," there have been a few of us here, asking how able the ablest of them really are. One of the writer's Indian friends is a man in the service of one of the up-country Governments. He is an administrator; he holds a high position in the Government; he may any day have to deal with a claim from a large group of peasant-cultivators for a remission of the land revenue; he will trace its origin to a political meeting held in the district at the time of one of the *melas* (fairs). So far from being uninterested in the vagaries of the itinerant political agitator, he has done a lot of thinking about him. The chief itinerant political agitator in the country is the Mahatma, Mr. Gandhi. The friend has done most of his thinking about Mr. Gandhi. Two nights ago he gave your Correspondent the benefit of it, and a summary of what he said may be of interest to English readers.

One evening, years ago, the writer was with a few Hindu students in the Eden Hindu Hostel here. In half an hour there was going to be a feast, and he had come for it, the only non-Hindu invited. Just for something to say, because of course he knew the answer, he asked if there was anything that he could do, to be admitted to the caste of the Brahmins, and be invested with the sacred thread. He was told that there was nothing whatever; that no man not born a Brahmin could ever be one. "But," he said, "if I went and lived in a cave that I know of—one of those in the Barbara Hills near Goya—and practised long austerities, what then?" The answer was: "Oh, then you would be greater than any of us." In that word was shown the respect that the Indian has for asceticism, and the reverence in which he holds the ascetic. If it pleased your Correspondent, he could go and become the holy man of a whole district, for all that he is non-Indian born. He has, in fact, sometimes amused himself, thinking that it would be great fun, thus to acquire greater influence throughout India than any Viceroy, or anyone else in the country. India would feed him and worship him, and a word of his might be whispered from one end of the sub-continent to the other. But his ascetism would have to be real; not humbug.

If that thought could come to an Englishman, to one caring so very little for the acquisition of political power in India, how certain must it be that there has come to many an Indian among those lusting for political power the thought that the surest way to it is the way of an asceticism assumed with that end in view. The point of all this is that Mr. Gandhi is an ascetic, and undoubtedly owes the greater part of his power to the fact. Was not a man knocked down the other day by Mr. Gandhi's car and fatally injured; an old man rushing forward to kiss Mr. Gandhi's foot for his soul's release, or to help his soul's release? Mr. Gandhi, to most Indians, even to most Europeans and Americans, is a saint before he is a politician. If his asceticism was assumed for political ends, as the friend thinks it was, then—well, in that case there is something mixed with his sainthood. The friend's father, an Arabic scholar, was intimate with a great Sanskrit scholar of Benares of the day. The two men had that bond between them; that they were both scholars. The Sanskrit scholar would speak more freely to the other, and the other to him, from their both being scholars. Now the Sanskrit scholar became an ascetic, and wore no clothes. From that time he began to be worshipped. One of the great Rajput Ruling Princes built a temple beside the ascetic's house. He opened the door of it one day, that his friend might look in. The "idol" was a marble image of himself. On the Arabic scholar's protesting against it all—the nakedness, the image in the temple—the other said "that it pleased the *fools* and was profitable to him." There was *that* mixed with his asceticism.

Too much, perhaps, has been said on that aspect of the matter; for what English readers are concerned with is not whether there is a rift in the sainthood that gained Mr. Gandhi his political power, but what use he would be likely to make of it. The same friend is sure it would be a bad use, Mr. Gandhi having no practical ability whatever. The Mahatma must know that himself? The friend thinks not; that he is so blindly set on something as never to have asked himself sincerely whether it would be to India's good that he should be as administrator with power in the country. What he is so blindly set on is feeding his rancour against the British. That is the friend's conviction—that Mr. Gandhi is filled with a rancorous hatred of the British. "You will have noticed," he said to the writer, "that the man cannot laugh nor smile; he only grimaces and grins sourly. He makes one think of something in your Bible." There he paused, looking as at one who should know the Bible better than an Indian. "Do you mean," the writer replied, "'grin like a dog and run about the city'?" "Yes; that's it. You will have noticed how well the description of Cassius in 'Julius Cæsar' fits Gandhi—he has a 'lean and hungry look.' Well, Cassius was your born conspirator; he was moved by hatred."

Asked if he know why Mr. Gandhi should hate us so, his reply was "No; he had never been able to make sure of that. There may not be anything in particular. Gandhi hails from the South. What do you expect to find in the South, in the land to which wave after wave of Aryan immigration and Mughal immigration steadily drove the irreconcilables. The South has never been quiet, nor ever will be. It has always, except when sufficiently controlled from without, been in a ferment of conspiracy and rebellion. Where did all the conspiracies and rebellions in Aurangzeeb's time originate?" In the South. Gandhi I think of as born hating you. I can see his kind conspiring in what they call a self-governing India. You see, the centre of the administration would be in the North; the people of the South—*those* people especially—would think of it as an alien Government. You British should give Gandhi no power, and you should watch him ceaselessly."

The man passed then to the reforms of 1919. The step then made was not justified, he thought. "India was not ready in 1919 for even that amount of self-government. The administration has suffered all round from the immixture of Indian politicians as Ministers, as colleagues of the old governing men, and from the multiplying of questions due to the extension of the powers of interpellation of the members of the Legislative Assembly and the provincial Councils. The work of all of us has more than doubled. We spend endless time dealing with questions, asked merely to annoy and vex us." Men who have never been concerned with Departments of a Government cannot conceive what goes on.

INDIAN CRIMINAL TRIBES.

It is now over twenty years since the Salvation Army commenced its work for the Criminal Tribes by establishing a settlement for Doms at Gorakpur. Thousands of criminals have been transformed into respectable and law-abiding citizens since that time, and the Army's bold experiment has been amply justified.

The following extract from the recently published annual Report on the Administration of the Police in the United Provinces shows that the good work continues:—

"One hundred and fifty-one Bhantus and Karwals were sent to the Andamans at their own request during the year, and early in the present year two further contingents, totalling 309 persons, have been sent there as volunteer settlers. There are now some 700 Bhantus settled there. This experiment has proved a great success. As soon as these tribes get away from their natural environment they appear to become different creatures. They have already evinced a real desire to reform, given up their evil ways, adopted an honourable means of livelihood, and become more alert in mind and body, and remarkably industrious. Adjutant Sheard, who undertook the onerous task of colonising the settlers sent to the Andamans, is to be congratulated on the wonderful success he has achieved. . . . The Salvation Army have been notable pioneers in this field and their excellent work over a number of years has won well-merited public recognition."

EGYPT: ITS TRADITIONS AND RENAISSANCE.

By GEORGES CATTAUI.

II.*

Nothing of importance has been done in the Mediterranean basin in which Egypt has not played a part. It was there that Alexander founded the capital of his Empire; Cæsar there knew Cleopatra, by whom he had a son, Cesarion. Anthony, in the arms of this same Cleopatra, lost the Empire there, and the victory of Actium made Augustus Emperor and master of the world. Egypt has seen Saint Louis and Saladin and Napoleon pass, and, more recently still, the most popular of your soldiers, who founded his reputation there. But the Nile has known others than great captains. Egypt is *par excellence*, the land of sages and philosophers. In Heliopolis Moses was initiated. There Plato was instructed in the wisdom of the Egyptian priests. Homer, Herodotus, Lycurgus, the astronomer Eudoxius, Solon, and Thales of Miletus visited Egypt. Pythagoras there set out the science of numbers which, like Relativity in modern Physics and the Atomic theory in modern Chemistry, sought to find in the idea of numbers the essence and symbol of everything, and placed the reality of phenomena not in their substance, but in their structure.

Possibly, too, the esoteric traditions of Masonry may derive from Pharaonic Egypt. Did not Viollet-le-Duc claim to have discovered, as the central feature of the vertical *tracé* of many Gothic cathedrals an isoceles triangle which he called Egyptian, and which he supposed was borrowed from the profile of the Great Pyramid? This triangle may have been transmitted to the architects of the West by the Crusaders, when they came into contact with Arab monuments inspired by the School that flourished at Alexandria just before the rise of Islam.

In his remarkable "Aesthetic of Proportions in Art and Nature," Matila Ghyka has discovered medieval traditions which ascribe an Egyptian origin to certain architectural rules. On the other hand, Emile Mâle has proved that the Coptic preserves of Bawit, belonging to the sixth and seventh centuries, had inspired the sculpture in the cloister of Moissac. Thus Egypt would appear to be concerned with the origin of the statuary as well as of the architecture of the twelfth and thirteenth Christian centuries. Let me add, that according to Elliott-Smith, Ireland owed its first civilisation to the work of Egyptian monks who left the Valley of the Nile in the seventh and eighth centuries.

We have scarcely begun to discover this art of Coptic Egypt, its importance and significance. We know perhaps better the Egypt of the Pharaohs. And notwithstanding that its monuments have been studied for more than a hundred years, numberless heresies have been entertained in regard to its art. Let me give you some examples.

In an oft-quoted passage, Vogüé writes:—

> In the beginning of all things, in the confused mist of what, in the light of our historical knowledge, are the first days of humanity, we find here the spirit, that is to say, a powerful civilisation, come whence we know not, born where we know not, the mother of all the others. Two thousand years before Jewish thought concerned itself with questions of origin, this people lived, thought, and wrote in a fully developed way.

Thus, as Vogüé recognised, it is Egypt which has contributed, across Judaea as across Greece, in the shaping of Western thought. It is through her that "this clarity which was the Mediterranean" descended on the world.

Yet this same Vogüé, who seems so well to have understood the literary genius of Egypt, shows absolute incomprehension of Egyptian art. He says of this art that it is—

> essentially realist; its sole aim is the balancing of realities; the Hamitic race never had any conception of the ideal; in its most finished works there is to be found only the most careful copy of Nature; one would seek in it vainly for the soul and individuality of the artist and one could without too much injustice refuse the name of art to this tradition which ends by no longer even seeking for signs of ideas.

And he concludes:—

> There is the secret of the profound inferiority and of the indifference in which it leaves us. This inferiority is especially noticeable if one meets among the masterpieces of Egyptian art the most mediocre production of Greek art. How its charm grows upon us, the more fully it responds to our innermost feelings!

Nothing could be more erroneous than such a conception of Egyptian art. This lack of comprehension was so general a quarter of a century ago that the most eminent of Egyptologists himself seems to have shared in it. Maspero could write thus: "In fine, all the forms in Egypt, architecture, sculpture, painting, tend not towards the search for the beautiful, but towards the realisation of the useful."

And Renan himself has written:—"Egypt is a China born fully developed, and almost decrepit, having always had this air, at once infantile and senile, which its monuments reveal. We are in a land of clear and rapidly acquired knowledge, but a knowledge limited and stationary."

As you see, these are only so many proofs of the lack of aesthetic comprehension of last century. Léon Bloy, with his profound mystical intuition, was one of the first to proclaim the primacy of Egyptian art: "With the Greeks Apollo kills the serpent Python. He suggests nothing but quiet majestic strength. With the Egyptian, Mercury takes the sinews of the Python and makes from them strings for the divine lyre." Rodin, Bourdelle, and Maillol do not hesitate to proclaim to-day the pre-eminent place that Egypt holds among all the schools. On the other hand, only a superficial observer can fail to see the immense differences which separate the earliest Egyptian art, that of the classic epochs and the decadent art of the reigns of Amenophis IV. and of Tutankhamen, when "strict objectivity and a hide-bound conception of ancient masters were replaced by plastic refinement and the search for most subtle forms." "Faces," writes the critic Feichheimer, "treated formerly in an architectural way, now reflect inner emotions. In the diffuse light which is no longer concentrated only on the eyelids and lips, the skin assumes a living complexion and under the eyes is beautifully transparent. Equal distribution of light on all planes and pathos in lines of movement are new features; they serve to express the sensitive personality of the king, whose most hidden decadent traits captivated the artist." Might not a writer of this epoch have formulated his theory of aesthetics in terms of which neither Cézanne nor El Greco would have disapproved. "Art lies in maintaining an equilibrium between curves and straight lines, cubes and cones."

One can speak similarly of Egyptian architecture. Until the present it has been judged by works of the decadent period, pompous, heavy, ornate. But the art of the earliest periods and of the classic epochs was not like this: on the contrary, it was striking in its hardness of line, the justice of its proportions, and the perfection of its divisions and joints. At Sakkara a monument of the third dynasty has just been found which is more than five thousand years old, but the columns of which are already Doric. I should like to read to you the enthusiastic description which Princess Bibescu has made of it:

> Great news! At Sakkara I have found the home of Greek art! Doric columns have recently emerged from the sand. Imothep, architect of King Zozer, whose work it is, was the first Egyptian to use freestone. The inscription says that he was placed among the Gods, after having built these two temples. At any rate, he ought to have been. They are divine, small, perfect, more beautiful than that of the Wingless Victory, on the Acropolis, which they resemble, with something more finished, more compact in its perfection.
>
> They date back about five thousand years, thirty centuries before Phidias. They make me feel only more keenly the aristocratic order which governs our human heritage. Precedence is to be found in Egypt. Those who have held up the free art of the Greeks as against the slavish art of the Egyptians must, with Taine, hang their heads in shame since the discovery of the Sakkara columns.

* The first part of this Paper was published in THE NEAR EAST AND INDIA of January 2.

As I have already said, Egypt has inherited four traditions, of which one, the Muslim tradition, is still living. I should like to read to you a passage which portrays the astonishment of a medieval Ambassador at the magnificence of the Palace of a Fatimid Sultan: it is from a chronicle of William of Tyre, who lived in the twelfth century.

After going through the courts and passages, the Ambassadors came upon marble porticos and colonnades with gilded platforms and variegated flooring—so that the whole was stamped with regal splendour. The material and workmanship were so precious that the two envoys could scarcely contemplate the sight, the perfection of which surpassed anything that they had previously witnessed. There were fishponds of marble filled with the purest water, birds of all kinds (unknown to us), of various voices, shapes, and strange colours, and of marvellous appearance. Thence they were conducted by eunuchs into other halls, exceeding the first in beauty. There they saw a multitude of quadrupeds, such as the countries of the South and East alone produce, and which the West never sees, and of which they hear only rarely.

Let me add that, according to the historian Makrisi, the Caliph Mostanser possessed in the eleventh century eighteen thousand crystal vases, of which some were worth more than a thousand dinars; four hundred golden cages and six thousand golden vases, twenty-two thousand amber jewels, tables of sardonyx, cocks, peacocks, gazelles in gold studded with pearls and rubies, a garden with soil of vermilion, paths of amber, trees of silver, and fruit of precious stones.

And all that is dead? All that, the work of these clever craftsmen, who decorated with foliage and arabesques and birds blocks of crystal and precious woods, who engraved bronze, set jewels, moulded the glass of lamps in mosques and worked inimitable patterns in old ceramics? All that, the work of architects who built the Mosque of Ibn Touloun, of Sultan Hassan, of Al Azhar, of Qait-Bey, and the Blue Mosque of Ghouri; the Mouristan of Kalaonn, the Palace of Mostanser, the house of Gamal-ed-Din, and, at the gates of Cairo, the tombs of the Caliphs, "whose palaces, arcades and columns, the precious marbles, the painted interiors, and the enclosures, the domes and minarets, crazily multiplied, have served only to house coffins." Do there remain here only stones as witness of a so mighty past? We have infallible signs which enable us to say: No. Egypt is awakening, is shaking off the dust in which she has lain, is stretching herself out, opening her eyes, listening, and gathering herself together. It seems that she awakening to a new life. This resurrection, or reawakening, has been announced for a hundred years. There was first of all the movement started by the great Mohammed Ali and his successors, thanks to which the prophecy of Napoleon was realised.

What would this beautiful country be, said Napoleon, with fifty years of prosperity and good government? Imagination conjures up an enchanting picture. Thousands of dams would master and distribute the flooding of the water all over the country; the eight or ten milliards of toises of water which are lost every year in the sea would be used to fructify all the lower parts of the desert; numerous steam pumps and windmills would take up water and store it in reservoirs, whence it would be drawn for irrigation; abundant emigration would quadruple the population; trade with the Indies would inevitably adopt its old route. It is through Egypt that the peoples of Africa can obtain light and prosperity.

It was under the régime of the Khedive Ismail that Egypt began to re-become what she had been under the Fatimids, the spiritual centre of the East, the intellectual head of Islam. Then were founded the National Library at Cairo, the Arab Museum, the Egyptian Museum, the Geographical Society; then canals and roads were made; then Cairo was embellished with gardens and parks: then, through the important journals and periodicals in the Arabic language, through the intellectual activities of her *élite*, as well as by the long-standing prestige of her University of Al Azhar, Egypt began to shed light among all the peoples of the East, as she had done in the Middle Ages. How few have understood Arab and medieval Egypt, with its slow, profound, mysterious rhythm! To appreciate all its charm, one must see, in the Great Court of Al Azhar, under the arcades of the Kibla, fifteen thousands students, come from Tiflis or from Zanzibar, from Marrakesh or from Samarkand, Arabs and Turks, Persians and Moghrabis, Indians and Circassians, one must follow piously the lessens of their masters, descendants of the theologians of Baghdad and of Cordova. One must, sitting on the benches of an Arab café, hear songs sung to the accompaniment of the Ut, the Kanoum and the Rababa, the marvellous adventures of Saif Dhoul Yazan and of Abu-Zaid al Hilali. One must, in the burning noon, taste the freshness of the shadow spread by the gate of an old Turkish house, and, going into the court inside with its blue-washed walls, one must hear, near the basins, the rippling of the banana tree in the wind. One must listen long to the three monotonous notes of the Arab song of the goatherd, as he draws them out at break of day in his high-pitched, drawling tone.

(To be continued.)

THE NEW YEAR HONOURS.

[*The following awards, contained in the New Year Honours List, will be of particular interest to our readers.*—ED.]

BARONS.

DICKINSON, The Right Honourable Sir Willoughby Hyett, K.B.E., J.P., D.L., Honorary Secretary of the World Alliance for Promoting International Friendship through the Churches. For public services and for services in the cause of peace.

TRENCHARD, Marshal of the Royal Air Force Sir Hugh Montague, Bt., G.C.B., D.S.O. Chief of the Air Staff since 1919. Colonel, Royal Scots Fusiliers.

PRIVY COUNCILLOR.

GOSCHEN, Colonel George Joachim, Viscount, G.C.S.I., G.C.I.E., C.B.E., V.D. Lately Governor of Madras.

KNIGHT.

DAVIDSON, Nigel George, Esq., C.B.E. Legal Secretary to the Sudan Government.

C.B. (Military Division).

DOBBIE, Colonel (temporary Brigadier) William George Shedden, C.M.G., D.S.O. (late Royal Engineers), Commander, Cairo Brigade, Egypt.

K.C.M.G.

BALFOUR, Lieutenant-Colonel Andrew, LL.D., M.D., C.B., C.M.G., Member of the Colonial Advisory Medical and Sanitary Committee, Director of the London School of Hygiene and Tropical Medicine.

HONORARY K.B.E.

TURIAN, His Beatitude Elisee, the Armenian Patriarch at Jerusalem.

C.M.G.

ATCHLEY, Shirley Clifford, Esq., O.B.E., Translator at His Majesty's Legation at Athens.

CAMPBELL, Major the Honourable Cecil James, Legal Secretary to the Financial Adviser to the Egyptian Government.

MATTHEW, John Godfrey, Esq., O.B.E., Secretary for Education, Sudan Government.

C.B.E. (Civil Division).

HEATHCOTE-SMITH, Clifford Edward, Esq., O.B.E., His Majesty's Consul-General at Alexandria.

WILLIS, Charles Armine, Esq., O.B.E., Governor of Upper Nile Province, Sudan.

C.I.E.

MORE, Lieutenant-Colonel James Carmichael, D.S.O., Indian Army, lately Political Agent, Kuwait, Persian Gulf.

ORIENTAL MUSIC.

We learn from the *Egyptian Gazette that* King Fuad of Egypt on December 26 inaugurated the new Institute of Oriental Music in Cairo. At the new Institute he was received by the Prime Minister, Mustapha Nahas Pasha, and the Ministers and the members of the Administrative Council of the Institute. Mustapha Bey Rida, President, made a speech welcoming King Fuad and thanking him for the interest he had taken in the Institute. Mohamed Effendi Abdel Wahab then sang some Arabic songs, as did Aziz Effendi Osman. Various examples of Arabic music were given. Ali Effendi el Garem recited a poem by Ahmed Shawby Bey.

The Institute of Oriental Music first began as a Club in 1913, having been started by Mustapha Bey Rida. Out of the Club grew the School of Oriental Music, which was started in 1925. In the new building of the Institute there is a museum of instruments which have belonged to famous Egyptian musicians. There are also a number of valuable manuscripts.

PERSONAL AND GENERAL

TO-DAY

January 9, 1930 (New Style).
December 27, 1929 (Old Style).
Shaaban 8, 1348 A.H., of the Muslim Calendar.
Tebet 9, 5690, of the Jewish Calendar.

Mr. Bernard Eckstein has left London for the Sudan, and will be away about three months.

Sir Percy and Lady Newson will leave London to-morrow (Friday) for Egypt.

Lord and Lady Dunsany will return to London from India at the beginning of March.

Mrs. Donner has left Kington-Langley, Chippenham, for Egypt, where she is spending the winter.

Lady Norton-Griffiths and Miss Norton-Griffiths left for Egypt on January 1.

Sir Ian Malcolm will join the P. and O. s.s. Viceroy of India at Marseilles on January 24 for Egypt .

Baroness de Goldsmid left London on December 31 for Egypt, and will be away until February.

Viscount Younger and the Hon. Edward Younger will leave London on January 10 for India.

Viscount and Viscountess Brentford left Marseilles on January 3 in the P. and O. s.s. Comorin for Port Sudan, and expect to be away for about three months.

Sir Laurence and Lady Philipps joined the P. and O. s.s. Comorin at Marseilles on January 3 for Egypt. They are expected to be away for about three months.

Sir Delves and Lady Broughton have left London for Egypt, the Sudan, and Kenya, and will be away until April.

King Fuad has conferred the Grand Cordon of the Order of Ismail on Sir John Maffey, Governor-General of the Sudan.

In the New Year Honours List Mr. V. S. Srinivasa Sastri appears as a Companion of Honour. Mr. Sastri was the first incumbent of the post of Agent of the Government of India in South Africa.

Major-General Sir Henry Freeland, for Bombay, and Major Sir Archibald Boyd-Carpenter, for Port Said, left London on January 2 to join the P. and O. s.s. Macedonia at Marseilles.

Viscount Erleigh, K.C., returned to London on January 1 from Palestine, where he appeared before the Commission of Inquiry as one of the counsel for the Jewish Agency.

Lord Lloyd, former High Commissioner for Egypt, presided on January 3 at a dinner to some three hundred destitute men at the Church Army's Emergency Night Shelter in Waterloo Road.

Sir Hamilton Grant, Foreign Secretary to the Government of India throughout the War, was the chief guest of the Royal Empire Society at a dinner and meeting at the Hotel Victoria on January 7, and gave an address on "Afghanistan and the Pathan Border."

The King has given authority to Mr. Archibald James Matthew to wear the Insignia of the Fourth Class of the Order of the Nile, which decoration has been conferred upon him by the King of Egypt in recognition of valuable services.

Mr. Douglas and the Hon. Mrs. Vickers, who have left London for Egypt, will not be back until the end of February.

The Marquess of Northampton arrived at Plymouth on January 2 in the P. and O. s.s. Viceroy of India on his return from Egypt.

General Sir Ian Hamilton and Lady Hamilton have been spending the recent holidays with the latter's brother and sister-in-law, Sir Kay and Lady Muir, at Blair Drummond, Perthshire.

The Marchioness of Titchfield, who is at present at Welbeck Abbey, Worksop, will leave 16, Portman Square for India this month, joining the P. and O. s.s. Viceroy of India on January 24 at Marseilles.

It is officially announced that the King has approved the appointment of Mr. Richard Roy Maconachie, C.I.E., I.C.S., of the Indian Political Department, to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Kabul.

ARABIC CAPITAL LETTERS.

Seventy-five competitors have participated in the contest promoted to evolve Arabic Capital letters, which was held at the wish of His Majesty King Fuad. A Jury-committee has been formed of Tewfik Rifaat Pasha, Ahmed Teymour Pasha, Abdel Fattah Sabry Bey, Dr. Faris Nimr, Sayed Mohamed el Biblawi, Shaikh Abdel Latif el Fahham, Mohamed Bey Hassanein el Ghamrawi, and Sadek Bey Gohar. This Committee will examine the proposals presented by the competitors.

NEW EGYPTIAN CABINET.

Mustapha Pasha Nahas, who on January 1 was charged by King Fuad with the formation of a Cabinet, has completed his task as follows:—

Mustapha Pasha Nahas	... ...	Prime Minister and Interior.
Wassef Pasha Ghali	... ...	Foreign Affairs.
Hassan Pasha Hassib	... ...	War.
Neguib Pasha Gharabli	... ...	Justice.
Mohammed Pasha Safwat	...	Agriculture.
Osman Pasha Moharram	...	Public Works.
Mahmud Bey Bassiuni	... ...	Finance.
Makram Effendi Ebeid	... ...	Wakfs.
Baha-ed-din-Bey Barakat	...	Education.
Mahmud Fahmy Effendi Nekrashi		Communications.

Hassib Pasha was War Minister and Ghali Pasha was Minister for Foreign Affairs in Zaghloul Pasha's Cabinet in 1924, Gharabli Pasha was Minister of Wakfs, and Ebeid Effendi Minister of Communications in Nahas Pasha's Cabinet in 1928. Moharram Pasha was Minister of Public Works in Adly Pasha's Cabinet in 1926.

The new members are Barakat Bey, who is Counsellor of the National Court of Appeal, Bassiuni Bey, Vice-President of the Senate, and Nekrashi Effendi, who was Under-Secretary for the Interior in the Zaghloul Cabinet of 1924.

Where to stay in the East

Write for particulars of attractive offer for Advertising Hotels on this page.

BUCHAREST—The Grand Hotel.
CAIRO—The National Hotel.
JAFFA—Hotel Jerusalem.
JERUSALEM—Hotel Fast. *H. Fast, Proprietor*
KYRENIA, Cyprus—Sea-Side Actaeon.
KYRENIA, Cyprus—Sea-View Hotel.
NICOSIA, Cyprus—George Hotel.
PORT SAID—Casino Palace Hotel. Grand Hotel de la Poste.
SOFIA—Union Palace.

CYPRUS.

SAVOY HOTEL: Port of Famagusta. | **PALACE HOTEL Inland City of Nicosia**

OLYMPUS HOTEL: Port of Limassol.
(Opened all the year round.)
OLYMPUS HOTEL: On Mt. Olympus (Troodos)
(Summer resort; altitude 6,400 ft)
Offer excellent accommodation at reasonable tariffs.
These four prominent hotels are owned and operated by:
NAJEM HOURY & SONS, LIMASSOL, CYPRUS.
Merchants, Agents, Planters of flax and tobacco, also Exporters of Cyprus products.

THE WEEK AT HOME

London, Tuesday Morning.

The Italian Exhibition.

Incomparably the greatest event of 1930 in London is the Italian Exhibition which opened last week at the Royal Academy. The difference between a visit to this Exhibition and, say, a visit to the recent Dutch or Flemish Exhibitions in the same place, was a wonderful psychological experience. In one, the world, the Protestant but jolly or coloured world, was supreme: in this it is the other world, the world of Saints and Gods and Supermen that dominates one's thoughts. To wander through the Galleries is like wandering through some vast Cathedral, whose windows and roof seem to the awful observer ever-widening, letting in great draughts of fresh, exalting air, but seldom violating the reverent or incense-laden air. Not even the mighty urge of the Renaissance could in Italy rob art of its ordered, ecclesiastical expression, and one could know, from this Exhibition alone, that no Italian Renaissance could produce an Italian Reformation. The consistent mood is rare, high, beautiful—a marvellous demonstration of sustained sublimity.

It is impudent, really, to write of these things after but one visit, for these masterpieces—most of them are little less—are not subjects for hasty generalisation but for prolonged study and meditation. Gallery I, for instance, which contains the exquisite "Primitives" of that glorious flowering-time of the Middle Ages, the thirteenth and fourteenth centuries, holds in itself enough material to keep a medievalist always there and most people making constant reference, if only for comparative purposes, to it. Naturally, all will have their several predilections, and one need scarcely mention the majesty and timeless beauty of the works of such as Botticelli, Titian, Giorgione, or Michael Angelo. Even the prepared, however, the original splendour of some of these countlessly reproduced masterpieces will hold in a spell.

For myself (who hope to make many more discoveries in an Exhibition which not so much enchants as transports) I noted with particular delight a Sassetta, among the Primitives; some marvellous Pesellinos among the fifteenth century men in the next Gallery; Gallery III is so full of nobleness and classic imagination that only the expert art critic could choose to discuss respective merits: time and repeated visits are necessary to clarify the bewilderment caused by the utter loveliness of profuse Titians, Correggios, Botticellis, Raphaels, Mantegnas, and the unforgettable rest.

After a visit to this Gallery III, the other Galleries, leading up to the nineteenth century art of Italy, are apt to receive less time than they unquestionably deserve. To dismiss the works in them as imitations or examples of mere virtuosity would be unfair indeed. In addition to the paintings there are some exquisite drawings, bronze and marble statuary which, though considered by the omnivorous connoisseur as an inadequate criterion of Italian genius in sculpture, are yet magnificent, and several *objets d'art*, which include, notably, some perfectly engraved glass.

In fine, one can only say that, though it was generally recognised that Italy led the world in painting and sculpture, one did not quite realise before by how much she led it. Her ducal prerogative must now for ever be unchallenged. Further, that of the Catholic spirit which informed all things at the time when the earliest works in this Exhibition were made, there could have possible been no such worthy possessor and pattern as Italy. This Exhibition, if it does nothing else—and, of course, it will inspire, disturb, flutter, impel, convert, and confirm thousands of people—will dispel the always ridiculous legend that Catholic countries inevitably tend towards stagnation.

North and South.

Even the most nicely-minded Englishman is apt at times to be misled by taking labels at their face value. The prejudices and misconceptions which govern the relations of North and South, for example, are very wide—the "Northerner" too often being considered as a stiff-necked, "cliquey," confident individual whose industries since the War have gone to "pot" and who represents, therefore, the most dangerous tendency towards advanced politics in this country, and the "Southron" as an effeminate, namby-pamby, conceited individual who would have no claims to distinction at all but for the fact that London is the financial and social capital of England.

But, after all, as has just been pointed out in an interesting article in *The Times*, this division of England into North and South is a purely arbitrary one, "for which the Ministry of Labour is primarily responsible." As most people know, the boundary line goes from the Wash across the north of Nottinghamshire, Derbyshire, and Staffordshire, and stops at the Welsh border. So it is that, whereas the South gets the credit for the prosperity of the Midlands and particularly for the developments in the Nottinghamshire coalfield, the North is saddled with the responsibility, not only for its own depressed industries, but also for the state of the coalmining, tinplate, and ship-repairing industries of South Wales.

In any case, the North appears to be full of good hope about its material future, denigrate it howsoever the luxury-loving South may. The increasing industrialisation of the South of England is wholly unconnected, it is claimed, with the depression in the North of England. New and light industries are independent of climatic conditions, where Lancashire must be the home of the cotton industry, as Yorkshire is the home of the woollen industry; and it is quite certain that the development of the South has not been to the detriment, or at the expense, of the North.

Tinned Music.

The democratic argument is being applied with a vengeance to Music, the Art which perhaps more than any other is being affected by modern scientific discovery. Upon the enormous development of gramophones, transmission by wireless, sound-films, and so on, musicians are notoriously divided, one set rejoicing in the fact that good music can now be brought to the ears of an incomparably greater multitude than hitherto, the other deploring the taste so far manifested by the purveyors of "tinned music," and foreseeing the decay of the executive musician and of public musical taste in general.

The possibilities of mechanical musical development were very seriously discussed at the annual conference last week of the Incorporated Society of Musicians. One speaker, taking the sensible view that the development of mechanical music was inevitable, said it was the duty of musicians to help mechanical music to aim high, rather than to take a malicious pleasure in watching its struggles and failures. Another lamented the disastrous effect which it was having upon the prospects of thousands of musicians.

Well, the outsider must observe two things. First, that all this talk of artists' adapting themselves to new commercial media—the writer for the scenario, the composer for the sound-film, and so on—is very unconvincing. These scientific developments are primarily used for business purposes, and the true artist can never write nor compose nor paint nor design primarily for business purposes. Secondly, the displacement of executive musicians is as inevitable as is that of old-fashioned cotton hands by the automatic looms. Tears are idle.

There will, of course, always be a perspicacious minority—it will never be more than that—which knows that transmission of music by wireless or by gramophone is not, can never be, the real thing. Reproduced art is an excellent thing if it but lead to the original, but alas! how many are spurred on to consult the original, being content that they already have the perfect thing!

ALTER EGO.

Book Reviews

THE BEGINNERS OF BRITISH INDIA.

"THE CAMBRIDGE HISTORY OF INDIA. Vol. V. British India 1497—1858." Edited by H. H. Dodwell. (Cambridge University Press. 30s. net.)

The preface to this volume, to the appearance of which all students of Indian history have been looking forward, contains some ominous sentences. "The reader will find in this and the following volume the scale of treatment has had to be materially reduced." "The allocation of space has offered many difficult problems. In the circumstances it seemed to me desirable to economise as much as possible in the space given to political history in order to provide room for an outline of the development of the administrative system."

It is with sincere regret that we have to recognise frankly that the fears aroused by these warnings are justified. It is, of course, not in any way suggested that Professor Dodwell and his band of experts have not done good work, but it seems only too clear that most of them have written their chapters with the fear of the measuring-tape before them. There are, as we know, artists, like the late Phil May, who can contrive to convey a vast amount of information by means of a few lines. But this is a rare gift, and no one would think of relegating another artist to an inferior position, merely because he requires a canvas and time to produce his effects. The writers of this volume are, with the possible exception of Mr. Archbold, men who require reasonable space in which to do themselves justice. Here they are denied this indulgence and, in consequence, fail to do themselves justice. All of them struggle manfully to minimise the disadvantages under which they are working, and their exceptional abilities, learning and knowledge leave their welcome mark on their respective contributions. But the general result is difficult to follow and one which takes too much previous knowledge on the part of the reader for granted. This criticism applies with special force to the chapters dealing with political history. Among these we have found only the two by Mr. Archbold entitled, "Afghanistan, Russia and Persia," and "The Conquest of Sind and the Punjab," really satisfactory. That this is so appears to be due not only to Mr. Archbold's gift of bold sketching, but also (as it seems to us) to somewhat kindlier treatment by Procrustes.

While we cannot think that it was wise to "economise" on the chapters on political history, we do very heartily welcome those on administration which we are said to owe to this "economy." Not only are existing accounts of this side of Indian History incomplete, unsatisfactory and often inaccurate, but much has remained dark and unintelligible. Though, here again, we cannot but deplore the grievous limitations of space imposed on the authors, we may at least congratulate them on producing something which was badly wanted.

The title of this volume is a little misleading. It is really a history of the dealings of England with India from the beginnings of the East India Company till just before the Sepoy Mutiny, this narrative being prefaced by three short chapters dealing very summarily with the efforts made by Portugal, Holland and France to establish themselves in India.

While, as is usual in "Cambridge Histories," we are supplied with an excellent index and full bibliographies, we cannot but deplore the entire absence of any maps or battle-plans.

C. S-W.

INDIA IN THE PERIOD OF MAHABHARATA.

"THE HEROIC AGE OF INDIA" By K. N. Sindhanta. (London: Kegan Paul, Trench, Trubner and Co., Ltd. 12s. 6d. net)

It is a tempting idea to reconstruct a period of India's prehistory from a careful study of the great epic poem known as Mahābhārata. The difficulties are, of course, immense. For the materials of the poem must have changed very substantially in the centuries which elapsed before they were put in writing, and it is quite certain that, in the course of transmission and especially in the act of final composition, innumerable changes and additions crept in. Most of these we owe to priestly intervention, an influence which was wholly inimical to the correct preservation of an epic which served originally to extol the virtues, not of the priestly but of the warrior caste. In many cases these later alterations are perfectly clear and can be ignored, but it is not possible to disentangle old from new in most of the important episodes. This is quite frankly recognised by Professor Sidhanta, who, we would note, treats his great national poem in an entirely objective manner, as an historical inquirer and not as a patriotic enthusiast.

Realising his difficulties, therefore, he has set to work to see whether the use of the comparative method can help him. He calls in the help of Homer, Beowulf, Scandivanian Sagas, Serbian tales, Hungarian stories and other records of what he, like his master Professor Chadwick, calls the "Heroic Age" in various countries. By this term he means the period in each country when "Mars and the Muses" worked together, though in chronology they were far apart. In carrying out his task he displays much real learning and gives us a book full of interest and written, if we may say so without impertinence, in flawless English. But we must confess that he leaves us with the impression that his difficulties have proved nearly insurmountable, and that his conclusions are mostly of a very doubtful nature, while the picture we had looked for is almost entirely wanting.

In arriving at this conclusion, however, we greatly commend the way in which he has attacked his theme. Incidentally, we know of no book which, in a comparatively small space, gives us a better idea of the great poem itself, and of none which shows how it compares with similar, if much shorter, poems and tales in other lands.

If we may make one criticism, we would regret the absence of a short bibliography of the books read and consulted by the author.

"The revolutionary changes—political and religious—in the wonder lands of Islam will focus the eyes of the World for decades to come. To miss THE MOSLEM WORLD therefore is to be out of touch with the most living issues in the world of to-day."—BASIL MATTHEWS.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

"ALBANIA: THE RISE OF A KINGDOM."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I make some observations on your review of my book ("Albania: The Rise of a Kingdom")?

The quibble over my designation of the King of the Albanians as "Zogu, *tout court*" implies that I have written discourteously of that most able and courageous ruler. It is quite usual to refer to the principal character in one's narrative by his surname only, while those to whom less prominence is given retain their full designation; moreover, since I had referred to the King as Zogu throughout, it would have been trivial to alter his designation in the last three pages. With regard to the name of the late King of Montenegro, I understood that there were only two alternatives, namely Nikola, or its English equivalent Nicholas. It would be interesting to know how your reviewer arrives at the form Nicolas. About the part played by Montenegro in 1915 I have accepted no view—I have merely stated facts; and those facts I learnt, *in confidence, from a source which cannot be questioned.* Moreover, they were confirmed by other evidence.

From my paragraphs relating to the Albanian Orthodox Church, it would appear that I have contradicted myself; but it would be evident that this is not the case had not your reviewer omitted twelve vital words from the middle of the last paragraph quoted. A Congress at Berat in 1922 decided to form an Autocephalous Church, which was established in 1923. In 1926, while General Pangalos was in power in Greece (see the omitted words), an agreement for the regularisation of the Church's position was reached; but with the downfall of Pangalos, Greece reverted to her former policy, and, apparently at her instigation, the Patriarchate attempted to evade the fulfilment of the agreement. The latest act occurred in the spring of 1929 (a period beyond the scope of my book) when the Albanian Government, ignoring the Patriarchate, very rightly settled the matter on its own account. In consequence, the prelates of the Albanian Orthodox Church were excommunicated.

If my book is a "chronological compendium," I fail to see the point of lamenting the fact that it is not a series of essays on specific subjects; and an index is provided for those who wish to look up specific subjects. Being neither a veteran expert, nor, as yet, of any consequence, I was not so presumptuous as to assume that my estimation of the value of each piece of evidence was preferable to a full statement of facts; and it would have been quite impossible to find a publisher willing to accept a book large enough to include both. Moreover, I am convinced that contemporary affairs cannot be understood unless the past is very carefully studied. Where I have accepted, without comment, evidence from the huge mass which (contrary to your reviewer's belief) I have sifted, it should be inferred that I have reason to believe its accuracy.—I am, etc.,

J. SWIRE.

[Our reviewer writes: "From Mr. Swire's letter it might be inferred that the review in question was unfavourable to his book. This was far from being the case. It was unnecessary for the pages of THE NEAR EAST AND INDIA to epitomize the story of Albania as set out so comprehensively by the author in chronological sequence; the task devolving on the reviewer, therefore, seemed to be to examine the book from the point of view of a serious contribution to the history of Albania. Mr. Swire wrote in his Introduction: 'I was prompted to write the book by the complete absence of any satisfactory work upon the subject . . . and have done my best to provide one.' It seemed legitimate, therefore, for a reviewer, while giving full credit to the author for having accomplished what he set himself to achieve, to point out how as a history of Albania the book might, in the opinion of the reviewer, be improved. Such matters are, naturally, a matter of opinion. If Mr. Swire considers that it is suitable as well as 'quite usual' to refer to contemporary rulers or public men by their surname only, he will, no doubt, continue to do so. In the opinion of the reviewer this course constitutes a blemish—a minor one, certainly—in the book, and one which he would not look for outside daily journalism of the slap-dash style. With regard to the spelling of the late King Nicolas's name, there are, of course, two forms of the name in English, Nicolas and Nicholas, and presumably the former has been selected by most recent writers because it is the more accurate transcription of the vernacular.

"As for the references to the Albanian Orthodox Church, they were selected merely to illustrate the disadvantage of too slavish an adherence to the chronological method of writing history. The twelve words were omitted from the last quotation partly because they have no bearing on the relations between the Church and the Œcumenical Patriarch, and partly because the meaning was not clear. Mr. Swire wrote: 'A further cause of friction with Greece was the pressure which that country had brought to bear to prevent the Patriarchate from regularizing the position of the Albanian Orthodox Church created at the Congress of Berat in 1922, *the outcome of an unfriendly attitude only modified during General Pangalos's régime.*' It is not clear whether the words 'the outcome' were intended to refer to the friction, the pressure, the non-regularization of the Church's position or the Congress of Berat. In any case they do not affect the reviewer's contention that the subject is inadequately treated in the book and that the statement made on p. 398 that the Patriarch's consent to the foundation of the Church was 'readily given' is misleading, if not entirely inaccurate."]

WAR CEMETERIES IN MESOPOTAMIA.

The first official visit to the War cemeteries and battlefields of Mesopotamia has been organised by the honorary staff of the St. Barnabas Pilgrimages. The party will proceed overland to Marseilles on March 20, and the desert crossing from Beyrout to Baghdad will be made by car. A specially equipped river steamer has been chartered for the 500-mile journey to Basrah, by Ctesiphon, Kut, and Amara. Babylon and Ur of the Chaldees are included in the itinerary. Relatives and friends unable to accompany the pilgrimage who desire photographs of any of the graves or to arrange for the laying of wreaths should communicate with the hon. organiser, the Rev. M. Mullineux, at 7, Hobart Place, S.W.1, from whom all information is obtainable.

CAIRO-CAPE FLIGHT.

The personnel for the forthcoming Royal Air Force flight from Cairo to Cape Town will be provided by the 14th Bombing Squadron, stationed at Amman (Trans-Jordan). The flight will be under the command of Flight-Lieutenant C. B. Greet, who will be accompanied by Air-Commodore Board. A start will be made on January 11, Cape Town being reached on February 1. The South African Air Force will join in at Pretoria on February 10 on the return flight, and will accompany the R.A.F. 'planes to Cairo, where they will be due on February 24. On previous flights the South Africans only went as far as Khartoum.

Dr. Maniu, Roumanian Prime Minister, on January 1 tendered his congratulations to the Patriarch of Roumania upon the tenth anniversary of his election as head of the Roumanian Church.

The *Baghdad Times* of December 21 contained sixteen pages. This, it is claimed, is a "record" in Iraqi journalism, and this useful journal is to be heartily congratulated on its achievement, which, we hope, is the herald of an extension of its activities.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

British Capital in Yugoslavia.

The reconstruction of the Adriatic Shipbuilding Company at Kralyevitza by the Adriatic-Danubian Bank of Belgrade and Yarrow and Co., Ltd., of Glasgow, marks the latest development of the participation of British capital in the expansion of Yugoslavia's industrial enterprises. The shipbuilding yards at Kralyevitza were originally established under the Austro-Hungarian régime, but they have not flourished since their transfer to Yugoslav jurisdiction, and in 1928 the company went into liquidation. The association of such a firm as Messrs. Yarrow and Co., in the reconstruction scheme is an eminently sound move, and should enable the Yugoslav shipbuilding industry, hitherto restricted to sailing ships and very small steamers, to undertake vessels of larger tonnage. Other recent instances of the investment of British capital in Yugoslavia are provided by the formation last year of Chemical and Wood Industries, Ltd., and the promotion by the Selection Trust of four mining companies to develop important mining right in South Serbia and Macedonia. The meeting of the most important company of this group, the Trepca Mines, was reported in these columns last week. The other companies are still in the initial stage of their development. The progress of a mining industry in Yugoslavia will be greatly furthered by the expansion of the railway system which is now in progress, the railway line to the Adriatic being particularly important in this connexion.

The New Year Honours.

There is not very much to be said regarding the New Year Honours List. It contains, as usual, many very distinguished names, notable among which is that of Sir Charles Cheers Wakefield, who is created a baron. But it is also, and again I fear I must add as usual, notable for the absence of awards to the British trading community overseas. I have pointed out this strange omission on previous occasions, and refer to it because it is only by the constant reiteration of unpleasant facts that one can at length secure redress. Apart from the section in question, I also fail to notice any recognition of the work that famous firms of contractors have been doing in the past few years, in particular, in the Near East. One recognises, of course, that the civil and social services must loom prominently in any honours list, but they should not do so at the expense of the commercial community.

Foreign Investors and British Companies.

The proposal which is to be considered at the meeting next week of the Calcutta Electric Supply Corporation, that the holdings of foreign shareholders should be restricted to a maximum of 20 per cent. of the whole share capital is not a matter on which there is likely to be any general agreement in financial circles. But in present conditions companies have no option but to provide some safeguard against the possibility of the control of concerns passing into foreign hands. Loss of control, it must be borne in mind, is likely to carry with it loss of orders for British manufacturers, a contingency which would seem to outweigh the argument against any restrictions that London has been built up as a financial centre by a policy of monetary freedom.

Proposed Cyprus Exhibition.

No country derived more relative benefit from the British Empire Exhibition at Wembley than Cyprus, and it is no doubt with a view to following up the results obtained by its participation at that great undertaking and also to illustrate the extensive developments that have been taking place in the Island since then that the proposal is mooted to hold a Cyprus and Near East Agricultural and Industrial Exhibition in 1931. The Cyprus Legislative Council has adopted a resolution approving of such an exhibition and also of the contribution by the Government of Cyprus of a sum not exceeding £2,500. The great need of the Island is for larger outlets for its products, notably in Great Britain, and the pre-requisite to that end is an all-round improvement in methods of production in which direction an exhibition such as that proposed can be very helpful.

Associated Cotton Ginners of Egypt.

The report of the Associated Cotton Ginners of Egypt, which is given elsewhere in these columns, shows greatly improved results in the past year. There was a development in the scope of the company's operations, while there were a number of transactions in factories and lands. The quantity of cotton ginned showed a very substantial advance, the figures being 614,932.13 kantars as against 441,129.57 for 1927-28. There was a resumption of steam pressing which had not been done for several seasons. The financial results of the year showed a fair profit balance as against a loss for the previous period, and shareholders this time receive a distribution of one shilling per share.

B.I.F. Advance Catalogue.

A special advance overseas edition of the catalogue of the 1930 British Industries Fair is already available some seven weeks before the Fair is opened. It is being issued to 10,000 business men in Europe, North America, South Africa, and the eastern coast of South America, including all those buyers who have notified the Department of Overseas Trade that they propose to attend the Fair. This publishing feat will make it possible for buyers in the Near and Middle East, to say nothing of those as far away as Capetown, to receive copies of the catelogue before they begin their voyage to Great Britain. The catalogue contains descriptive entries of the exhibits of some 1,800 British manufacturers, a complete classification of the exhibits by trades, and indexes in nine languages, enabling foreign buyers to find without difficulty the goods in which they are particularly interested.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 7.

The volume of business passing in the Stock Exchange during the past week has been small, but, thanks to the distribution of year-end dividends and to the firmer tendency in Wall Street, the tone has been more cheerful, particularly in the investment sections. Some attention was attracted to Home Rails by the publication of the year's traffic returns, increased dividends on Great Western and London and North Eastern being regarded as a certainty. Industrials opened the week quietly but after the New Year's day holiday there was a considerable improvement and the tone was better all round, brewery, tobacco and textile shares making an improved showing, while "internationals" were also stronger. To what extent the week's general improvement may be due to the traditional optimism which prevails at the opening of of the New Year remains to be seen. Unfortunately, in the past this has often proved to be transient and unfounded. At the present time, however, the monetary outlook is better than it has been for some time past, and were it not for the coming Budget, which is already beginning to cast its shadow, there would be some justification for quiet optimism as to the outlook.

Discount Dividends.

The three London discount companies have already announced their dividends for 1929. In each case there are indications that these companies' business was again satisfactory last year, in spite of the difficulties with which the money market had to contend. High levels of short loan rates in relation to open market discount rates necessarily restricted profits at times, while the foreign demand for bills was also said to have interfered with the smooth running of the market. It is, therefore, a tribute to the strong positions of these concerns that the results for the whole year should, apparently, be so encouraging. In the case of the National Discount Company, the dividend of 10 per cent. on the "A" shares is maintained, while the distribution on the "B" shares is raised 1 per cent. to 24 per cent. After the usual allocations the carry forward is slightly lower at £212,000 against £215,643. Alexanders are repeating the 15 per cent. dividend and 5 per cent. bonus, while strengthening the carry forward. The third company—the Union—is paying 15 per cent. as last year, but on an enlarged capital, and the carry forward is raised by a larger amount than the reduction in allocation to premises account. Although not so well-known as the shares of the great banks, discount company shares have very similar virtues. The companies have built up very sound financial positions, and shareholders can regard their investments as of almost gilt-edged standing. Alexanders ordinary shares return £6 3s. per cent., National "B" shares, £6 4s. per cent. and Union Discount ordinary £5 12s. per cent.

High Yielding Foreigners.

With prospects of cheaper money in all the leading financial centres it is reasonable to look for an improvement in the market in foreign bonds as the year progresses. Primarily this market was depressed by the high level of call money rates ruling in New York during the Wall Street boom, other centres taking their tone from America. Although this particular cause has now well passed, the general lassitude in the Stock Markets has precluded any recovery. The investor in foreign bonds reasonably expects a fairly high return because of the risks he runs as compared with an investment in this country. There are, however, many fairly well-secured stocks on which a very satisfactory return is obtainable. The City of Budapest 4½ per cent. Loan, for example, returns £6 15s. per cent. on the basis of the 3⅜ interest at present being paid, while after next year, when the full 4½ per cent. is restored, the yield, on a present purchase, will become £8 15s. per cent. This Loan is first secured by the public utility revenues of the City, but if these are not equal to three times the service of the Loan the deficiency must be made good from other sources. The satisfactory return of £7 10s. per cent. is also obtainable on the Greek Government 6 per cent. Public Works Sterling Bonds issued about a year ago. This loan is very nearly the first charge on the revenues administered by or assigned to the International Commission. These revenues, which are increasing, afford ample security for the service of the bonds.

Industrial Debentures.

Investors in search of high yielding fixed interest bearing securities who do not wish to invest outside this country may well consider the debentures of sound industrial concerns. Where a company is prosperous and its finances are conservatively conducted its debentures may be regarded as very suitable for those desiring the minimum of risk consistent with a fairly generous return. The 6 per cent. First Mortgage Debentures of J. Sears and Co., return about £6 per cent. The interest was covered by the combined profits of the company and Freeman, Hardy and Willis, which it now controls, over six times in their last accounts. Capital too is also well secured, net assets being three times the amount of the debenture stock. The company holds a predominant position in the boot and shoe trade, and its revenue should steadily increase. The debentures may therefore be regarded as a high-class investment. A somewhat lower return—about £5 15s. per cent.—is obtained on a purchase of Hambledon Estates First Mortgage Debenture Stock, which also bears 6 per cent. interest. This company was formed to acquire the whole of the premises of W. H. Smith and Sons, the newsagents and it also holds £1,000,000 6 per cent. Debenture Stock of that company. These assets are sufficient to ensure a very safe position for the Hambledon debenture holders.

SUDAN GUM ARABIC MARKET.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended November 30:—

Old Crop.

There were no old crop arrivals during the month in Kordofan or other stations, whilst in November last year the old crop arrivals in Kordofan amounted to 132 tons. The total arrivals of Kordofan gum from the beginning of the season to date amounted to 10,980 tons as compared with 16,580 tons for the corresponding period in the 1927/1928 season, a shortage of about 5,600 tons or 33½ per cent. With the shortage of inferior Hashab estimated at about 2,000 tons the total shortage in Hashab gums as against last season would amount to 7,600 tons.

The exports of Hashab (including Bleached) from January to October were down to 6,670 tons, as against the exports for the same period in 1928. On the other hand, there was an increased export of Talha by 900 tons. There are no stocks of old crop gum in the country.

New Crop.

Arrivals in Kordofan stations (including Tendelti) amounted during the month to 253 tons, as against 132 tons in 1928, 42 tons in 1927, and 164 tons in 1926. November new crop arrivals have been the largest ever recorded, but it must be remembered that early large arrivals, up to say December, are not in themselves necessarily an indication of a large crop.

From the 10th, when arrivals were large enough to indicate a price, to the 12th prices at El Obeid were steady, but afterwards gradually fell until the total fall amounted to 4s. 6d. per cwt. by the 20th. Subsequently prices had a firm and slightly upward tendency to Thursday, the 28th, but when the market reopened on the Saturday, prices declined and actually closed at 3s. less. The total fall during the month amounted to 7s. 6d. per cwt. We would point out that c.i.f. quotations continue to be speculative and remain considerably below the El Obeid parity.

Demand has been relatively small, and we estimate the total quantity of orders placed with Sudan shippers to be much less than last year, and this notwithstanding the small exports of the past season.

Whilst it is possible that the prospects of consumption might be inferior to those of last year, we feel sure that the chief influence is the repeated decline in prices which has tended to delay overseas buyers placing their orders. The danger arising from this situation is that the consumption of meagre stocks abroad must sooner or later force purchasing on a considerable scale, and if these accumulating requirements tend to come on this market together we are likely to see a sharp reaction because present prices are not above what the principal consuming industries are paying. Expectations of falls in the price of gum no less than increases have already had a tendency to be greater than actualities, and unless we are to have an exceptional lack of demand in 1930 or vice versa an exceptionally large crop, we are not likely to see a return to the extremely low prices ruling from May, 1926, to the beginning of 1929, because these prices gave an extremely poor return to the native collector and were evidently not essential from the point of view of consumption.

THE IVORY MARKET IN 1929.

Messrs. Hale and Sons, in their annual ivory report for 1929, state:—

There has been a generally good demand throughout the year, but a quiet tone has prevailed, and with few exceptions there has been a small decline in prices at each sale. Prices for all descriptions are now moderate and stocks continue small. Ball ivory exceptionally has fully maintained its value, and in July showed an advance of £10 to £20 per cwt. The buying throughout the year has been general, American, the Continent, and Home trade competing. The quantities catalogued have been rather more than the preceding year, owing to increased imports from Zanzibar and East Africa. West Coast African and Congo were about the same and Abyssinian rather less. At present the fresh arrivals for the January auctions are small, and it is expected that only moderate quantities will be catalogued at these sales. We look forward to a good steady demand during the coming year, and the moderate prices now ruling should be maintained. The market is in a sound position.

Abyssinian.—11½ tons were offered during the year, but some quantity was bought in at each sale. For the quantity sold the variations were the same as in other soft descriptions.

Egyptian.—The quantity catalogued was smaller than at the preceding year, amounting to 13¼ tons. The principal exports have been of the soft descriptions. In January 5½ tons were offered. Soft large and medium tusks showed little alteration from previous rates. Hard, £2 to £4 per cwt. lower; soft scrivelloes, steady to £2 per cwt. lower; hard, unchanged; ball scrivelloes, rather lower; bangle tusks, steady to a little easier. In April 3¾ tons were offered. Soft large and medium tusks were steady to £2 to £3 per cwt. lower; hard, £2 to £3 per cwt. easier; soft and hard scrivelloes, steady; ball scrivelloes, firm; soft bangle tusks, rather easier. In these sales a parcel of Malta scrivelloes were offered and sold at about previous rates. In July 1¾ tons were offered. Soft and hard large medium tusks were steady to £2 to £3 per cwt. lower; scrivelloes, steady; ball scrivelloes, firm. In October 2¾ tons were catalogued. Soft large tusks were firm to £2 per cwt. higher; medium, steady to a little easier; hard, £2 to £4 per cwt. lower; ball scrivelloes, £4 to £6 per cwt. higher; scrivelloes, steady.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Steel Furniture.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of steel furniture required for the year 1930-1931. March 13.

Marine Diesel Engine.—The Director-General, Mechanical and Electrical Department, Ministry of Public Works, Cairo, invites tenders for the supply of marine Diesel engine 120 B.H.P. for the Seru Oil Tanker. March 1.

INDIA.

Water Pipes and Accessories.—The Indian Stores Department invites tenders for the supply of cast-iron, mild steel, or corrosion-resisting ingot iron piping, specials, and valves. January 21. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Glasgow, January 21; Manchester, January 28; Birkenhead, February 4). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Masirah for Calcutta (Birkenhead, January 11); s.s. Malakuta for Calcutta (Glasgow, January 13; Birkenhead, January 21).

Bibby Line.—S.s. Warwickshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, January 29).

British India Line.—S.s. Manora for Colombo, Madras, and Calcutta (London, January 11); s.s. Hatimura for Bombay (London, January 25).

Cunard Line.—S.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Corfu, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Gruz, and Ancona if sufficient inducement (Liverpool, January 18; Swansea, January 21); s.s. Bantria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, January 23; Swansea, January 24; Liverpool, January 25).

Johnston Line.—S.s. Jessmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 18); s.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (the first steamer of the season for the Danube) (Liverpool, February 1).

P. and O. Line.—S.s. Nankin for Calcutta (London, January 17); s.s. Viceroy of India for Bombay (London, January 17).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 18).

Ellerman and Papayanni Lines.—S.s. Mardinian for Gibraltar*, Algiers*, Oran*, Catacolo, Calamata, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, January 11; Swansea, January 11); s.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 18); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 25); s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Malta, Patras, Syra*, Smyrna, and Constantinople (Liverpool, February 1; Swansea*, February 1); s.s. Oporto for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, February 1; Swansea, February 6). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

¶‡BRITANNIA ... Jan. 10 ¶‡TUSCANIA ... Feb. 11
*†ELYSIA .. Feb. 4 *†CIRCASSIA ... Feb. 27

¶ Leave Marseilles January 18 and February 17.

*First class passengers only. Specially low fares. †Calls Port Sudan.
‡ First and Third class passengers.

T.S.S. TUSCANIA 17,000 tons leaves LIVERPOOL Feb. 11. MARSEILLES Feb. 17. Carrying FIRST Class and THIRD Cabin passengers.

ANCHOR LINE,

ECONOMIC CONDITIONS IN BULGARIA.

[*The following notes are taken from the bulletin of the British Bulgarian Chamber of Commerce of Sofia, dated December 31.*]

General Situation.

The sales of leaf tobacco, effected and pending, should relieve the monetary crisis somewhat. The situation generally continues to be serious, but there are no grounds for undue pessimism as to the solvency of the Bulgarian market as a whole. Winter sowings were accomplished under favourable conditions, and up to the present the weather has been propitious. A good harvest will bring about a substantial change for the better in most trades.

The supply of leather and cloth to the War Ministry and other Government Departments, for which adjudications will be held in January and February next, will no doubt relieve the congested state of the market in these articles.

Tenders are invited by the Railway Department for the supply of 30 locomotives, 600 switches and other appliances.

The figures of foreign trade for November show a deficit of 41 million leva which brings the total adverse balance for the 11 months of the year up to 1,950 million leva. There is a marked drop in the volume of imports, but the export trade is proceeding too slowly to admit of optimism as to an appreciable improvement in the foreign trade balance during December.

The attitude of the banks towards their debtors is gradually relenting; extensions are being more freely granted with a view to helping trade round the difficult corner. This policy should have a helpful effect generally and many good firms who have been almost strangled by the sudden restriction of credit will probably now be able to pull through. The calling in of loans has naturally increased the cash reserves of the banks to a large degree and a revival of lending will possibly be witnessed after January 1. It can, however, be taken for granted that the banks will now exercise infinitely greater care and discrimination than heretofore in granting fresh accommodation and in extending existing credits.

British exporters would do well to verify the status information now in their possession regarding their Bulgarian customers by obtaining fresh status reports.

Imports and Exports.

The trade balance during the month of November is down by 41,342,450 leva, while during October it showed a surplus of 21,098,530 leva. Imports during November totalled 48,073 tons for 683,472,977 leva and exports amounted to 42,994 tons for 642,130,527 leva, while in October imports were 48,116 tons for 648,571833 leva and exports were 42,912 tons for 669,670,363 leva. The trade balance during the first eleven months of the year is down by 1,923,833,290 leva.

The Woollen Textile industry.

In 1928 the National Bank of Bulgaria inquired into 29 large woollen textile undertakings, and according to the results obtained the capital invested in these enterprises on December 31, 1928, amounted to 20,044,801 gold leva and was distributed as follows: real estate 695,350 gold leva (3.47 per cent.), constructions 7,528,797 gold leva (37.55 per cent.), and machinery 11,820,654 gold leva (58.98 per cent.).

The power producing plants of the industry in 1928 numbered 75 with an effective h.p. of 5,005, of which 49 were steam boilers, locomobiles and turbines with an effective h.p. of 3,728; 12 Diesel engines with an effective h.p. of 857; 8 internal combustion engines with an effective h.p. of 353; and 6 water-wheels with an effective h.p. of 67. The electrical motors employed numbered 79 with an effective h.p. of 1,885. The number of the mechanical looms employed in 1928 were 765, self-factors 168, and 35,210 spindles.

The raw materials used were valued at 16,448,718 gold leva, of which 5,690,681 gold leva (34.61 per cent.) were paid for materials of local origin, and 10,753,037 gold leva (65,39 per cent.) for imported materials. The auxiliary materials used were valued at 923,656 gold leva, of which 95,418 gold leva (10.33 per cent.) were used for the supply of materials of local origin, and 828,238 gold leva (89.67) for imported materials. The fuel used was valued at 762,344 gold leva of which 723,140 gold leva (94.68 per cent.) worth was of local origin, and fuel worth 39,204 gold leva (5.14 per cent.) was imported. The total value of the materials used by these 29 undertakings totalled 18,129,718 gold leva, of which 6,509,239 gold leva (35.90 per cent.) for the supply of materials of local origin, and 11,620,479 gold leva (64.10 per cent.) for imported materials.

Miscellaneous.

Receipts of the State Treasury for November show a considerable decrease as compared with October, due mainly to a falling off in payment of direct taxation and revenue from State property. In November ordinary receipts amounted to 447,021,000 leva, and in October they were 642,433,799 leva, while in September they were 497,003,426 leva.

The wholesale commodity index number (on the basis of 1914 equals 100) for November, was 3,085 as compared with 3,174 for October and 3,111 for September, and 3,207 for November, 1928. The general level of wholesale prices has thus decreased by 2.9 per cent. against October, 1929, and by 4 per cent. as compared with November, 1928.

The quantity of notes in circulation from November 15 to December 7, again shows a steady level. On November 15 the notes in circulation amounted to 4,072,661,000 leva on November 23 to 3,906,209,000 leva, on November 30 to 3,900,280,000 leva, and on December 7 to 3,814,261,000 leva.

The International Trade Fair at Liubliana will this year be held from May 29 to June 9 inclusive.

The Palestinian Government has decided to give every opportunity to the culture of silkworms and the production of silk in Palestine.

Plans have been submitted to the Egyptian Minister of Communications for the construction of a new road from Port Said to Damietta.

Near East Markets

THE DRIED FRUIT MARKET IN 1929.

Messrs. J. C. Houghton and Co., of Liverpool, in their review of the dried fruit market in 1929, state:—

In reviewing the past season's trade we can only describe the period as one of great disappointment. Although we have escaped any industrial unrest in the way of strikes, the country has experienced a most disastrous state of affairs both commercially and industrially. As regards business in general, all trades are suffering from want of confidence, buyers being discouraged from operating beyond their absolute requirements by the great amount of distress and shortage of work, which has resulted in over a million people being unemployed and having to draw relief from the State. Another disturbing factor was the sharp rise in the Bank Rate, which helped to increase the unsatisfactory conditions by creating a feeling of uncertainty and uneasiness, inducing buyers to restrain their activities still further. Coupled with this, the financial strain caused by the Stock Exchange crises in this country and the heavy losses experienced in Wall Street speculations were restraining influences, and have had a far-reaching effect on the purchasing power of the consumer.

Currants.

The market continued in a normal state during the first six months of the year, buyers showing no disposition to carry stocks beyond immediate need. Very little change was noticeable in values until the arrival of new Australian fruit began to engage buyers' attention and prices eased to meet this competition. Offers of new crop fruit from Greece for September shipment came through on a lower range of values, and further concessions were made to clear the small remaining holdings before the new fruit made its appearance. Reports of adverse climatic conditions prevailing in Greece which were interfering with the drying process had a restraining effect, and this was further accentuated when overland samples came to hand. These showed the effect of the unfavourable weather and engendered in buyers a disinclination to make forward contracts. A little cleaned Pyrgos at 34s. 9d. and 35s. c.i.f. was sold. The 1929 season was inaugurated by the arrival of s.s. Bothnia on September 23, but very little interest was evinced. This may perhaps be attributable to the lack of that bright coloury attractive appearance usually associated with early arrivals, but no doubt a contributory factor was the increased interest shown in Australian fruit during the previous months. October showed no more life or interest than had been displayed at the opening, and evidently the disappointment felt at the out-turn of the first supplies was responsible for the absence of that seasonal demand which we usually experience. The lower grades were difficult to move, and concessions were granted by holders of Pyrgos selling at 38s. 6d. to 39s. Good Medium qualities met a steadier demand and prices were maintained, Amalias and Patras selling at 41s. to 44s. 6d., Gulf at 44s. to 47s., and Shade Dried at 54s. to 58s. Business in Vostizza growth was fully up to the usual standard, sales being made at 54s. to 60s., with fine and choice at 64s. to 70s. Towards the end of the month and during November, owing to pressure from Greece, Vostizza prices gave way and sales were effected at prices ranging from 53s. to 65s. December saw no material change in values, and only a moderate amount of business passing. Quotations are: Pyrgos, 38s. to 38s. 6d.; Amalias and Patras, 39s. to 45s.; Zante, 42s. to 43s.; Gulf, 44s. to 56s.; Vostizza, 53s. to 65s. A holiday feeling prevails at the close of the year, and resumption of business in any great volume is not looked for until well into the New Year. However, a hopeful feeling pervades the market, and it is highly probable that an improvement in demand will be experienced, as buyers must be carrying very small stocks, which will have to be replenished sooner or later.

Sultanas.

Smyrna.—Notwithstanding the strong news from Smyrna of the very little fruit for export and the small supplies available on the brokers' counters, the market showed a dropping tendency throughout the first months of the year, and where business was done prices were lower than the parity at which goods could be replaced if imported from abroad. Sales ranged, Medium 36s. to 40s., Good 43s. to 50s. Reports were that the new crop was progressing satisfactorily, and estimates indicated that it was likely to reach 55,000 tons, but offers of G.A.Q. for September shipment at 31s. c.i.f. failed to attract buyers. August saw the stocks exhausted, and with the new crop promising well lower prices were taken, viz., G.A.Q. 26s. to 27s. c.i.f. September. September opened with a dramatic change in the situation owing to the widespread damage from rainstorms. It was rumoured that out of a crop of about 50,000 to 60,000 tons 30,000 tons only were harvested, 5,000 tons being destroyed and 10,000 tons damaged. S.s. Siptah arrived with the first of the new harvest, and prices demanded by holders checked business. Sales were, good qualities 54s. to 55s. 6d., fine 60s. to 65s. Buyers failed to respond, and with the exception of fine coloury fruit at 60s. to 65s. the market came to a standstill, other grades being practically unsaleable. This state of affairs continued until the end of the year and values were reduced to 36s. to 40s. for Fair, 45s. to 55s. for Good, in order to make progress. Business was done in rain-damaged qualities at 21s. 6d. to 22s. 6d. c.i.f., falling to 19s. 6d. c.i.f., but the disappointing out-turn of the bulk of the parcels purchased to arrive discouraged further commitments.

Cretan.—The scarcity of fine Smyrna fruit had a stimulating effect on these, and business was done on a forward basis on overland samples at 52s. to 65s. c.i.f. for early shipment. Upon the arrival of s.s. Bothnia with c.i.f. purchases, quality of which was very satisfactory, further business was negotiated. Spot sales were made at 70s. to 90s., with coloury fruit well competed for.

Greeks.—In order to make progress with fruit carried over, some reduction in values had to be faced, Ordinary quality selling at 35s., Good at 45s., Better grades at 54s. to 60s. Further supplies came to hand in the spring months, and sales were effected at a slightly lower range, 32s. being accepted for the Ordinary grades, 44s. to 54s. for Good, and 58s. to 64s. for a few good lots. New crop met with a ready sale and first arrivals were quickly disposed of, Good qualities at 60s. to 68s., Fine 70s. to 75s. Fresh cargoes arrived in November, and business was done in Ordinary at 37s. to 38s., and Fine 74s. to 75s.

Figs.

The small remaining stock of Skeletons was cleared at 65s. to 70s., Natural Prima at 28s., and Genuine 31s. to 32s. New Crop Genuines were offered and sold in June at 22s. 6d. to 23s. c.i.f. for September shipment. S.s. Siptah brought the first new figs, and these were mostly disposed of before arrival at the following prices:—Large Boxes 56s. to 76s., Small Boxes 73s. 6d., Locoums 110s. Sales on the spot realised higher prices, viz., Large 65s. to 90s., Small Boxes 80s., Locoums 115s. Genuines afloat sold at 31s. to 32s. c.i.f. The market showed a persistently good undertone, and later arrivals met an active demand at advancing prices: Large Boxes 65s. to 90s., Small Boxes 80s. to 90s., Locoums 106s. to 125s., Fancy packing 145s., Genuine bags 40s. to 41s., Choicest bags 44s. to 45s. During November many of the arrivals showed a certain amount of unsoundness and necessitated a quick sale at reduced rates, which accounts for the big range in prices, which was from 58s. to 82s. 6d. for Large Boxes, 75s. to 90s. for Small Boxes, 115s. to 122s. 6d. for Locoums, and 34s. to 40s. for Genuines. December witnessed a heavy fall in values, owing to shipments arriving from America and the Continent in tender condition, which made an immediate sale essential. The prices realised were Large Boxes 30s. to 50s., Small Boxes 40s. to 60s., Locoums 90s. to 100s., Genuines 31s. 6d.

Engineering Topics

(By An Engineering Correspondent)

A Drying Plant.

One of the most efficient and compact plants for the drying of stone or other material for use in road or other construction work which I have seen for a long time, has just been brought to my notice. There are several types of machines on the market for the purpose, or perhaps, I should say, of that pattern as they are all much the same as regards working principles. Also, when I say compact, I am speaking relatively, and with regard to its capacity and output. Actually, the machine is a veritable giant.

It has been designed for the rapid drying and heating of the broken stone or other aggregate used in conjunction with tar, bitumen or other binding material for road construction work, although it can, of course, be used for drying materials for other purposes. It is said that comparative tests have shown conclusively that this machine will dry and heat much more material in a less time and with a less expenditure of fuel than would have seemed possible a short time ago for any machine to do.

The drying of the material is carried out in two concentric cylinders, of which the outer is about twice the diameter of the inner. In some sizes of machine three cylinders are used, two smaller drums being arranged side by side, or one on top of the other, in the outer drum. In operation the damp or wet broken stone and other aggregate is raised from the ground level by an elevator of the interrupted bucket type, so as to give a distinct and appreciable time lapse between the delivery to the drum of each bucketful of material. This material can be and generally is delivered to a shute by which it passes into the inner cylinder, or into either of the two inner cylinders as desired, regularly and at a predetermined speed.

As an integral part of the machine a coke or fuel furnace is fitted, and for use in countries where those fuels are scarce or expensive the furnace can be developed for burning wood. The hot gases from this furnace are drawn, by means of a fan, into the cylinder which is made to revolve slowly by means of gearing. The cylinder can be thrown out of the horizontal plane to any desired degree within reason, and this inclination causes the broken stone to work gradually to one end as it is tumbled in the cylinder. The speed of travel for the stone is variable and depends, naturally, on the water content in the material. A very quick traverse could be given to stone that was comparatively dry and, on the other hand, where the material was practically waterlogged the machine could be so slightly inclined as to give a long period of drying and treating to each particle of stone.

As soon as the stone, by that time partially dried and heated, reaches the opposite end of the cylinder along which it is travelling it passes through an opening and thence, by means of a chute, to the interior of the outer cylinder which also is being revolved in guide rollers on roller bearings. Here the almost dry stone is passed along to the opposite end, and, although it is not subjected during its journey to hot gases, it is dried still further by the radiant heat from the inner cylinder or cylinders. The last traces of moisture are thus evaporated away, and the stone reaches the other end of the drum in a suitable condition for mixing with the tar or other binder that has been selected for the job and, further, it reaches it at exactly the right temperature and with every trace of moisture extracted. No detail seems to have escaped attention on the part of the designers and makers of this machine, which, I have omitted to say, is provided with a storage tank in which an ample supply of binding material, also heated by waste gases, can be carried.

Low Temperature Carbonisation in London.

A number of weeks ago there was started up a standard 80 ton per 24 hours plant of one retort with complete by-product recovery installation at the Greenwich Works of the South Metropolitan Gas Works on the "K. S. G." system using good quality gas coal dust and smalls. The retort is on the usual design, being a large, rotary, slightly inclined, mechanically continuous, externally heated, steel cylinder, 72 feet long and 10 feet diameter, having an inner cylinder 85 feet long and 5 feet 6 inches diameter, which carries the load. The complete weight (empty) is about 160 tons, the outer drum being made in three sections, the two end sections being $\frac{7}{8}$ inches thick, and the middle section 1 inch thick, with all the seams hammer-welded under water-gas heating and annealed. Also each seam is re-inforced by means of outer steel bands 2 feet 9 inches wide and 13-16ths inch thick, rivetted and welded, while the inner drum is on the same lines but much heavier, made of 1 3-16ths inch plate.

It is to be noted that the small coal enters the retort at one end and travels along the inner cylinder during $1\frac{1}{2}$ hours, being raised to a temperature of 400-570 degrees F. (205-300 C.). Afterwards the charge falls out through small apertures into the outer cylinder, which at this point is the hottest zone (about 925-1025 degrees F.), and at the same time highly superheated steam at 850-950 degrees F. is blown through the charge at this point to the extent of about 100-200 lb. per ton of coal, so as to prevent undue expansion of the plastic charge. The low temperature carbonisation is completed in another 1-$1\frac{1}{4}$ hours travel in the outer cylinder, the temperature slowly declining to about 800-900 degrees F. (430-485 C.), while the speed is one revolution in 90 seconds.

If necessary a certain amount of the low temperature fuel dust and breeze, not over 10 per cent., is blended in with the raw coal to prevent the plastic charge sticking, while for heating the setting producer gas is burnt in a small fire-brick combustion chamber, and the very hot gases at 2370-3095 degrees F. (1300-1700 degrees C.), diluted not with air, but with about 50 per cent of the waste combustion gases re-circulated to give approximately 1100-1290 degrees F. (600-700 degrees C.) passed all round the retort.

A noticeable feature of this installation at Greenwich is the complete equipment of pyrometers and other instruments, while there is included a producer gas generator for providing the gas to heat the retort, the exit combustion products passing to a waste heat boiler, which provides sufficient steam for the complete process, including

Digitized by Google

auxiliary steam engines, all exhausting to the retort main, having superheaters integral with the setting, while also a gas engine is provided. The coal dust and smalls give hard smokeless fuel in large ball-shaped pieces and the details of the results obtained are awaited with great interest. As known, however, from extensive large scale commercial experience already obtained with the plants at Essen and New Jersey (U.S.A.) the average yield per ton from bituminous coal smalls is about 3500-3900 cubic feet of rich gas (800 B.Th.U. per cubic foot) 3-4 gallons crude light oil, 18-25 gallons tar, and 14-14¾ cwt. (70-73 per cent., solid smokeless fuel with 12 per cent. volatile matter. Naturally much depends upon the volatile content of the coal, whilst of course the use of external heating means a low yield of rich gas and consequently easy recovery of the maximum of light oil by scrubbing.

Protection of Water Pipe Lines.

In the field of water power, and reservoirs generally, it is necessary to adopt means for the protection of the large water mains against collapse due to vacuum within the pipe, which may be caused by the shutting of a valve, a sudden change in the load, the bursting of the pipe or one of the joints, or "racing" of the turbines, which break the water column. In this connexion of interest is a new design of anti-vacuum valve by Messrs. Glenfield and Kennedy, Ltd., of Kilmarnock (Scotland), of which some recent important installations in Great Britain are two 18 inch units for the Maentwrog Hydro-electric Power Scheme in North Wales, and four 18 inch valves to the order of the North British Aluminium Co., for their Lochaber Hydro-electric installation. These constitute also the largest anti-vacuum valves in the world.

Essentially the design, of the anti-freezing type with all moving parts enclosed, consists of a specially shaped body containing a large orifice, normally enclosed by an inverted mushroom shaped disc which is provided with bronze seats of a novel anti-freezing design. A lever pivotted in oilless bushes supports this disc, as well as a balanced counterweight which is adjustable to obtain any desired behaviour of the valve, while an oil dashpot directly connected to the disc prevents all possibility of oscillation of the suspended masses, and ensures that the motion is cushioned throughout its stroke. Free opening is permitted in the downward direction, but resistance is offered as the valve closes, thus ensuring a wider opening under the influence of air pulsations that may exist in the pipe.

The controlling mechanism can be of two types, the first of which is completely automatic with the valve balanced in a partially opened position, so as to be self-opening when the water recedes from below the valve disc, and self-closing to the predetermined point of equilibrium when allowed to swing freely from the fully open position. The second type of valve is semi-automatic, being balanced so that on the pressure below the disc being relieved, the valve opens to its fullest extent, closure being effected by the rising water in the penstock, designed for cases where the pipe line is not very robust as regards resisting excess external pressures—such as with large wood stave pipes, or very large thin steel pipes. An auxiliary air escape valve is also provided for, allowing the escape of air which has been temporarily trapped during the turbulence unavoidable when pipe filling, and which continues to rise after the main valve has been shut.

Company Meeting.

ASSOCIATED COTTON GINNERS OF EGYPT.

The following is the report of the directors, with statement of accounts as at August 31, 1929, submitted to the shareholders at the twenty-fourth ordinary general meeting held at Alexandria on December 20:

We have the honour to submit to you the balance-sheet for the twenty-fourth financial year of our company ending August 31, 1929, and the auditors' report thereon.

During the financial year 1928-1929 the quantity of cotton ginned in our factories rose to 614,932.28 kantars, as against 441,129.57 in 1927-1928.

We have steam pressed 10,166.13 kantars, the equivalent of 1,401 bales.

The situation as at August 31 is as follows:—

	£E	£E
Profit on factories		34,831
Repairs to factories		1,274
		33,557
Interest	1,087	
Profit on Insurance Department	903	1,990
		35,547
To be deducted:		
Management expenses, Alexandria	4,690	
Insurance	2,798	
General expenses	1,403	8,951
		26,596
As well as:		
Depreciation on buildings and machinery		6,013
		20,583
Less: Statutory Reserve 10 per cent.	2,058	
Statutory interest 6 per cent.	15,795	17,853
		2,730
Directors' allowances 10 per cent.		273
Leaving a balance of		2,457
There is therefore available for the shareholders:		
Statutory interest at 6 per cent.	15,795	
Balance as above	2,457	
Carried forward from 1927-28	5,892	24,144
Which sum your Board propose to allocate as follows:		
Payment of a dividend of one shilling per share, that is ...		17,550
and to carry forward		6,594

Your Board, having received an advantageous offer for the sale of the Mansourah factory, have accepted it, and have also sold a plot of land which is situated in the town of Mansourah and constituted the last of the property owned by the company in that town.

Your Board has also decided to exchange the site of the ex-Planta factory at Zagazig measuring 9,181 square metres, together with the buildings thereon, for the factory known as the ex-Choremi factory, which will probably result in the company being able to unite the clientele of the two competing factories. All the machinery of the ex-Planta factory remained the property of your company and has for the most part already been sold. Your company has thus acquired a factory of 73 gins with their accessories erected on a site of about 38,000 square metres. This exchange carried with it the payment by your society of £E18,000 on balance.

Your Board has also sold the site known as Ramieh, situated at Zagazig. The sites of the old ex-Planta factory at Kafr-Zayat, and that of the old ex-Choremi factory at Birket-El-Sab have been divided into lots, and in part sold on good terms. A portion of the ex-Planta site at Kafr-Zayat has been expropriated for public purposes.

Your company has also had to submit to the expropriation for public purposes of a strip of land, which it had put up for sale, and formed part of the ex-Carver factory at Mehalla-Kebir.

The Directors retiring in accordance with your Articles of Association are Messrs. C. J. Choremi and H. B. Carver, who had been nominated by the respective firms, in virtue of the contract in force between the original firms and your company. They having again been nominated by their respective firms to represent them on the Board, are, in view of the terms of the said contract, entitled to be re-elected, and you are therefore begged to confirm formally their re-election.

Your company's manager has received a letter from Mr. Christophe Catzeflis, giving notice of his intention to propose at their general meeting the candidature of Mr. Jules Klat as Director.

We therefore beg you, gentlemen, to approve the present report as well as the accounts and balance-sheet for the past financial year.

We also beg you to elect auditors for the financial year 1929-1930 and to fix their remuneration. Messrs. Russell and Co. offer themselves for re-election.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended December 28:—

Grain.—Unfavourable news from abroad, coupled with the Christmas holidays, have been responsible for the complete inactivity of the local grain market during the week just ended, although many shippers were eager to dispose of their stocks at low prices rather than risk being compelled to keep them over the winter. A few parcels have been shipped in fulfilment of old sales to complete spot steamers at about 17s. for the Continent. There has been no change in the situation at Constantza.

Timber.—Most of the steamers were despatched from the river before the holidays, and the activity in our port is now very reduced. A steamer of about 3,700 tons cargo has been fixed from the Danube at the lump sum of £3,000 for four ports Mediterranean, Spain included. There is an inquiry for French and Italian ports, Constantza loading, at about £8 per wagon South France and £7 Sicily. It is expected that the port of Constantza will show an increased activity after the reduced railway transport tariff comes into force as on January 1 for the winter season ending March 31. Early and abundant snowfalls are reported from the mountains, which will facilitate work in the forests. An increase in the production of beechwood steamed and unsteamed, is noticeable. Beech is expected to become an important feature of Roumanian exports.

Weather and crops.—The frost which set in last week steadily increased and reached 11 degrees Centigrade here on Monday the 23rd, but on Tuesday there was a slight thaw at midday. In general the temperature has varied from 1 to 5 degrees below zero Centigrade in the region of the lower Danube, the frost not being sufficient to cause ice to form in the stream, nor has there been a thaw of sufficient duration to bring down the ice formed in the tributaries and backwaters, so there is so far no impediment to navigation. The sky continues to be cloudy, but there have only been occasional light falls of snow. A report just published by the Union of Chambers of Agriculture gives the following results of this year's crops:—

	Tons.	Surplus.
Wheat ...	2,800,000 ...	240,000
Barley ...	3,000,000 ...	2,200,000
Maize	6,000,000 ...	2,500,000

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

or a surplus of at least 4,000,000 tons for export, even if the good yield should cause a larger home consumption than usual. The report reckons that the exports of barley so far amount to about 600,000 tons, leaving about 1,400,000 tons still to go out of the country, whilst practically the whole of the maize surplus remains to be exported.

Sulina.—Notwithstanding easterly gales and the dredgers only being able to work on two days, the Bar depth remains at 24 feet. River minimum depth unchanged at 24 feet.

Constantza.—This week about 8,000 tons of grain arrived from the interior, and the following quantities were shipped: 7,000 tons Liverpool-Glasgow; 6,500 tons Rotterdam, 1,300 tons Weser. Six vessels loaded about 17,000 tons petroleum products and five took oil fuel for bunkers.

Bulgarian Report.

Bourgas, December 21, Grain.—Owing to bad weather conditions causing delay to shipping, very little grain has been loaded this week. About 6,000 tons recently booked at Varna and Bourgas for Antwerp and Rotterdam at rates from 10s. 6d. to 11s. 6d. are awaiting the vessels named for lifting this cargo, which consists mostly of maize and barley. The continued low grain prices on consuming markets are rendering fresh transactions impossible, but old sales amounting, at Varna and Bourgas, to 1,500-1,600 tons, are available for Antwerp and Rotterdam January 1 to 10 loading.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson, in their report for the week ended December 31, state:—

Egyptian Futures.

Sakel Contract.—Whilst quite a steady volume of business has transpired during the majority of the sessions since our last circular, most of the operations have been of an evening-up character. As anticipated by us in our recent reports, values have been maintained and will probably continue to be maintained at a steady level for some little time. Probably the most interesting event that has latterly transpired has been furnished by a further announcement from the Egyptian Government to the effect that their stabilisation policy is to be extended to the March position, the basis price for which is to be 27.50 dollars. In adopting this principle, it appears evident that the authorities are definitely committing themselves to the possibilities of taking over large quantities of cotton, and it has to be determined to what extent the general position would be affected should this materialise. In the ordinary course of events, the taking out of the market of perhaps a substantial part of the visible supply would react sharply on the contract position, but under ruling conditions, for this to take place, one of two events would have to transpire: either a distinct improvement in the offtake for fine cottons, or an appreciable gain in the basis of staple outside varieties to the extent of attracting speculative attention to the possibilities of our contract. As neither of these contingencies is apparent at the moment, we look for values to fluctuate within a narrow range for the immediate future.

Upper Contract.—Very quiet conditions have prevailed in this market since our last report, but with values here running consistently below a shipping parity with Alexandria, very little fresh selling has been in evidence. As the Egyptian Government have decided to extend their intervention to the April position, increasing their basis for this option to 19.40 dollars, there appears little scope for any fall in values, either in Alexandria or here, for the time being. Latterly, the trade demand has fallen to very small proportions, the holidays and stock-taking interfering with the normal flow of

and FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

Digitized by Google

business. Comparatively, the Upper varieties appear to stand at a reasonable parity with other cottons, and this should result in a much improved offtake during the next few weeks.

Egyptian Spot.

Business has continued on very quiet lines, and for the nine market days covered by these notes the spot sales have scarcely averaged 150 bales a day. Of course, the period has been broken into by the holidays, and on such occasions business is almost invariably below normal. New Year optimism is generally a feature at this time, but even of that there would appear to be less than usual. In the meantime, the mills continue to receive cotton bought c.i.f. earlier in the season, and spinners have apparently found little need to purchase on the spot, in spite of the fact that much of the cotton here is undoubtedly attractive on basis.

Sakels have been in poor request, except for the low and inferior qualities. In the latter there has been a steady, if somewhat redundant, inquiry at from 7½d. to 12d. In the better qualities, the main feature has been a moderate and isolated inquiry for export.

Uppers.—The usual steady inquiry at from pass to 20 on has been in evidence, but on a restricted scale, and cotton from pass to 100 off has recently attracted more attention. The better qualities have received scant notice.

Pilion.—Some inquiry, up to 100 on January Upper, has been seen, but we believe sales have been negligible.

Nahda, Maarad, Fouadi, etc.—These have been, for the most part, entirely neglected.

Sudan Sakel.—A moderate business has taken place.

C.i.f. business has been intermittent, but, generally speaking, results have been poor.

Tokar Sakel has again suffered from neglect.

Forwardings.—Last week these were returned at 4,833 bales Egyptian and 710 bales Sudan.

Spot Sales.—These have been estimated at 1,300 bales Egyptian and 450 bales Sudan Sakel (nine days). Quotations of Sakel and Pilion show a net advance of 5 points. Uppers are 8 points higher. F.G.F. Sakel to-day, 14.15d. F.G.F. Upper to-day, 10.46d. F.G.F. Pilion to-day, 11.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company report as follows for the week ended December 26:—Since our last report the futures market has been open on three days only, on account of the Christmas holidays. The volume of business transacted has been of extremely modest proportions, but the tone has been slightly better. The week's summary of price movements is as follows:—Sakellaridis: January, 27.23 dollars, 0.12 dollars up; March, 27.85 dollars, 0.34 dollars up; May, 28.23 dollars, 0.45 dollars up; July, 28.58 dollars, 0.55 dollars up; November N.C., 28.40 dollars, 0.17 dollars up. Ashmouni: December, 19.00 dollars, unchanged; February, 19.27 dollars, 0.07 dollars up; April, 19.67 dollars, 0.26 dollars up; June, 19.85 dollars, 0.25 dollars up; August, 20.00 dollars, 0.27 dollars up; October N.C., 20.05 dollars, 0.12 dollars up.

Why not visit

The SUDAN

this Winter?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

Egypt's Speech from the Throne.

The new Egyptian Government has presented Parliament with a full programme, and, if the measures that will be submitted to the Chamber are examined with the knowledge and thoroughness that their importance calls for, a series of crowded sessions is in store for it. In the forefront of the Chamber's preoccupations will be the proposals for an Anglo-Egyptian treaty and the new Customs tariff. The Government, however, proposes to submit all measures enacted during the suspension of the parliamentary régime, as well as to formulate a law for safeguarding the Constitution against future suspension. Social and economic matters figure largely in the programme, and it is common ground that in both these spheres Egypt has much leeway to make up. Thus the work of Parliament would seem to call for a nice adjustment between political and economic or social measures, and the way in which the Government maps out its time-table will be noted with interest. The mere fact that no special hurry is shown to inaugurate treaty negotiations may be taken as a clear indication that any existing limitations on Egypt's independence lie lightly both on the new Government and on the people.

The Recovery of Afghanistan.

The arrival of Shah Wali Ali Khan, the new Afghan Minister to London, coincides with what would appear to be a definite stage in the recovery of Afghanistan from the effects of a year's civil war. It is only three months since Nadir Shah was acclaimed as King in Kabul, nine days after the capture of the city by Shah Wali Ali Khan himself. Within this short period practically all fighting has died down, and King Nadir Shah's authority is gradually being extended to the more remote portions of his kingdom. In view of the nature of the country and of the long spell of freedom from authority enjoyed by many of the tribes, this is a satisfactory achievement. Weather conditions have, not improbably, contributed to impose a cessation of fighting on the Afghans, but under the new régime an attempt is being made to bring the administration into harmony with Afghan predilections by appointing the higher officials to their own tribal districts. Such a system argues a belief on the part of the Sovereign that the country as a whole accepts his accession to the throne, and should simplify the task of government. Undoubtedly, the first step in the advancement of Afghanistan should be the inculcation of a feeling of solidarity among the people; thereafter it should be possible to promote the gradual introduction of reforms *pari passu* with the spread of education, which in Afghanistan need not be identified at first with books, but should connote an appreciation of the advantages of law and ordered government.

The Rebellion in Najd.

Details are scanty, but it appears quite clear that the drive of the loyal forces of the Wahhabi King against the rebel forces led by Shaikh Faisal al Duwish has been abundantly successful. This doughty old warrior of the Mutair has been captured, although it is typical of the career of a man who more than once has been definitely reported killed in battle that the particulars of his capture should not be precisely known yet. It is reported from Basrah that Faisal, together with Ibn Hithlain, of the Ajman, surrendered unconditionally to the Iraq authorities on January 10, that they were conveyed to Basrah in an R.A.F. bombing 'plane, and that later H.M.S. Crocus took them to an unknown destination. From Baghdad, on the other hand, comes the news that the leader of the Mutair was captured by a British force consisting of aeroplanes and armoured cars operating in the desert south-west of Basrah, and that he was then interned in the R.A.F. camp at Shaibah. Despite the record of newspaper services in Iraq in the recent past it is beyond doubt that Shaikh Faisal al Duwish is free no more to harry his King or his Iraqi and Kuwaiti neighbours. The flight into Iraq of the rebels against King Ibn Saoud will probably have presented many problems of extradition which, it is quaintly reported in *The Times* from Jidda, may shortly be discussed at Ubaid, near the frontier of Najd, between representatives of the Hijaz, Iraq, and "the British High Commissioner in Kuwait." The carelessness with which the parties in question are thus described is an unfortunate example of the indifference with which the public as a whole appears to regard this question of order in the desert.

Wahhabi Arabia.

It was, perhaps, an indication of the turmoil which is seldom long absent from the deserts of Arabia that at the celebrations in Mecca on January 8 in connexion with the fifth anniversary of the Wahhabi conquest of the Hijaz, the great King Ibn Saoud himself could not be present,

Digitized by Google

since he was required in the eastern section of his Kingdom, to deal with the recalcitrants headed by the now captured leaders of the Mutair and Ajman tribes. It is not, perhaps, always realised how desperate a battle the Wahhabi leader has been fighting, though the effects of a rebel victory would surely have had the widest repercussion on the whole of Arabia. But, the absence of King Ibn Saoud apart, there can be no doubt that these celebrations must have been impressive. The Wahhabi achievement in the Hijaz is already very considerable, and if, as is to be hoped, the last embers of revolt in the Najd have now flickered out, the star of the Saoudi dynasty should be certain of waxing even greater. No man can prophesy upon events in Central Arabia with much hope of carrying general conviction, but at least it can be said that the great task of developing the Hijaz and Najd on Islamic lines to which King Ibn Saoud has set his hand bears the marks of probable accomplishment. The more one studies the King's handling of this considerable revolt of erstwhile *Akhwan,* the more one is impressed with his ability to overcome or circumvent difficult crises, in which the very nature of the human material upon which he has to work is involved. To have got the religious heads of the Dual Kingdom upon his side in this problem, to have persuaded the weightier section of tribal opinion that the tribal right to raid, even with so plausible a pretext as the "forts" inside the Iraq frontier, was subject to wider considerations, and to have convinced the ignorant men of Najd that certain things of the West, such as motor-cars, aeroplanes, and so forth, were not inventions of the Devil but improvements of which the devout Muslim as well as foreign Nasrani could properly take advantage, is, indeed, a memorable achievement. King Ibn Saoud deserves from all concerned with the preservation of peace in Arabia the heartiest congratulations in ridding his Kingdom of undesirable elements, which were a danger not only to international relations but also to internal order. From the immediate point of view of the Hijaz, it is fortunate that the collapse of the insurgents in Eastern Najd should have been brought about in such time as to avoid harmful effects upon the Pilgrimage, for which, as our Jidda Correspondent has recently reminded us, the first Muslims, from the Far East, have already begun to arrive. Nothing could be better for the welfare of Islam in general and for the tranquillity of Arabia in particular than a long period of undisturbed and progressive rule by King Ibn Saoud in the Hijaz and Najd.

A Georgian "Plot."

It may be doubted whether, outside the criminal classes, any Briton would lend himself to the kind of plot which, directed against another State, is prepared to stick at nothing in an attempt to gain the end in view. Even Prince Carol suffered disillusionment when he looked for British sympathy in a mild effort to persuade his fellow-countrymen to change their minds and to allow him to change his own love-ridden one. Conditions in several countries at the present time have given rise to the enforced exile of a number of patriots, who have not unnaturally satisfied themselves that the interests of their native land call for the earliest possible elimination of those who now hold sway there. Relying on the Briton's hatred of injustice, they can generally count on a sympathetic hearing for the tale of their country's wrongs, but only to find that the Englishman's code of honour or sense of fair play prescribes a hard-and-fast set of rules for the challenging of established authority, however dictatorial. The Moscow Government must be supposed to realise that there are many nationals of the various republics included in Soviet Russia to-day who are feverishly awaiting its downfall; otherwise it would hardly find it necessary to exact a regulation such as the Lex Besedovsky, which, on the strength of a difference of opinion with a former official of the Soviet Embassy in Paris, lays down that persons who refuse to return to Soviet Russia when required are declared outlaws and are to be shot within twenty-four hours after their identification. Such an enactment conjures up a far more realistic insight into conditions in Soviet Russia than any number of personal descriptions. It is, therefore, not a matter for surprise that some of the nationals of the Trans-Caucasian republics should be anxious to rid their countries of the Moscow Government's interest in their affairs. A trial in Berlin has revealed the fact that two or more Georgians conceived the idea of striking a blow for the independence of Georgia, and as a preliminary step set about creating a well-filled treasury by forging Soviet Russian banknotes. When, on pleading guilty to this charge, they attempt to implicate responsible Englishmen in their "plot," it is to be hoped that they impose too great a strain on the credulity of even the meanest intelligence. It is just as likely that they would be able to enrol responsible Englishmen to carry out assassinations as that they could win their connivance of the circulation of forged notes in the country where the plotters are domiciled. If one thing is more certain than another in regard to the future of any peoples who claim to be dissatisfied with their present lot, it is that salvation must come from within, in the self-assertion of the popular will. No outside sympathy will avail them, and they will waste their time in trying to make Englishmen a party to their plots or movements.

INDIAN NOTES.

An Embryonic State.

We are grateful to Mr. Gandhi for outlining in the current issue of *Young India* his own impressions of the Lahore Congress and his plans for the future. Both are characteristic of the man and his work, if any individual whose actions and professions are so utterly inconsistent can be said to possess a definite character of his own. Thus we are told that, while he is anxious apparently to find a formula which will prevent a repetition of the dastardly outrage at Chauri Chaure during the 1922 progressive non-violent non-co-operation campaign, "it may be necessary to offer individual civil disobedience without the Congress' *imprimatur* and apart from it." In other words, Mr. Gandhi knows perfectly well that "to offer civil disobedience at this stage in the name of the Congress" would be merely to court disaster, but he is quite prepared to let his ignorant dupes—"impatient patriots" is his own term—sacrifice themselves for the cause, so long as they act entirely on their own responsibility. Meanwhile "everything," he says "is in an embryonic state," and there, all well-wishers of India will hope, may it long remain. The explanation in the same article of why the Congress resolution concerning independence does not rule out the idea of a Round Table Conference in every circumstance is in the same vein. After the interesting conversation reproduced by our Calcutta Correspondent in last week's issue, readers of THE NEAR EAST AND INDIA will have little difficulty in assessing these and other more recent declarations at their true value. At an interview which the writer had with Mr. Gandhi early in 1920, the latter dated his animosity against this country from his discovery during the early days of the Great War of the existence of certain secret treaties to which the British Government had been a party, but the nature of which remained a secret. Evidently he has changed little in the interval.

Primary Education in Bengal.

The prospects of the Bengal Primary Education Bill do not seem to us to be improving. About three months ago we mentioned in these columns that the new Bengal Legislative Council had decided to refer the Bill to a second Select Committee. This Committee—which consisted of no fewer than fifty-six members—reported recently, and we notice that it proposes to make certain material changes in the Bill. The first of these has reference to the provision of the required revenue. It was contemplated by the Government, when framing the measure, that the total revenue available would be

EGYPT AT THE CROSS-ROADS.

After an interval of eighteen months Parliament has reassembled in Cairo. If only for the fact that during the seven or eight years that have elapsed since the introduction of a parliamentary régime no Egyptian Chamber has sat for more than two sessions without being dissolved, the assembling of a new Parliament is in itself an event of some importance. In the present instance it may well prove to be a definite turning point in a long, chequered career. The Wafd returns to power with an overwhelming majority, and the country may be said to be for all intents and purposes a tablet of wax in its hands, waiting for the impression that its administrators and legislators are about to stamp upon it. At the moment of the Wafd's resumption of authority the auspices, there can be no doubt, are favourable. There could be no happier augury for the future than the emphatic reprimand which the Prime Minister and two members of his Cabinet have administered to the general body of Egyptian students, when an attempt was made by the latter to revive the practice of political demonstrations. One of the unsavoury features of Egyptian constitutionalism in the past was that it seemed to rest entirely on the intelligence and support of students and schoolboys. No action on the part of the Wafd was complete without its schoolboy chorus, and, where the electorate could not be relied upon, young hooligans were let loose among it to exercise the necessary pressure. Not the least service rendered to the country by the late régime was the prohibition of organised political activities on the part of students. On the first occasion when a student proposed to deliver an address of welcome at a public meeting to Mahmoud Pasha, the latter refused to allow him to speak and told him to return to his studies as the proper sphere of activity for a student. Moreover, in order to show that the Government realised that responsibility for an unsatisfactory state of affairs did not rest solely on the students themselves, the teachers were warned that, if they allowed their classes to absent themselves for political purposes, their further services would not be required by the State. An immediate effect of the Wafd's victory at the elections was to bring the students into the streets in the belief that the pre-Mahmoud days had returned. They were, however, quickly undeceived, and a first step has been taken to show that a Wafdist Government under the influence of satisfactory proposals for an Anglo-Egyptian treaty is to be different from any previous régime that regarded itself as fighting for independence. It is also of good augury that a prominent member of the Party, speaking in Paris, should have amplified the non-committal statement of the Wafd's official programme that it would endeavour "to reach an honourable, stable agreement with Great Britain," by declaring that the proposed terms fulfilled the required conditions, although various points open to doubt might have to be cleared up in direct negotiations before the treaty was accepted as a whole.

As the present British Government has staked so much on its belief that a policy based on a genuine desire for friendly and close co-operation would meet with an equally genuine response from Egypt as a whole, it is inevitable that the first moves on the part of the new Egyptian Ministry should be carefully noted. Co-operation between the two countries, however, does not rest solely on the frame of mind in which the negotiations for a formal treaty are approached. Even more important for all practical purposes, as far as the future is concerned, is the spirit which actuates the Government of Nahas Pasha, in particular with regard to the domestic policy of Egypt. It will not conduce to the smoothness of Anglo-Egyptian relations, if, for instance, the prospect of internal peace and of a common effort on the part of the people as a whole to concentrate on the material and moral development of the country is to be clouded by any attempt to divide Egyptians into two hostile and irreconcilable camps. Egypt has now an opportunity to look forward instead of looking back. The progress of a country depends in no small measure on the loyalty and efficiency of its officials. As the new Government counts on being served well by all who hold official posts, let it respect loyalty shown to the previous Administration where it was coupled with efficiency. No country is likely to keep a single party in power for ever. If the Wafd begins by introducing the spoils of office system and by persecuting those who rendered good service to its predecessors, it may be sure that in due course its own officials will be hounded out of their posts, and that a thoroughly undesirable precedent, prejudicial to the interests of Egypt, will become established. Let the new Government set its face resolutely towards reform, but not towards revenge, which is always double-edged. The Ministry of Adly Pasha, whose short term of office between the administrations of Mahmoud Pasha and Nahas Pasha may prove to have been more valuable to the cause of good government in Egypt than is at present appreciated, was content to follow the lines laid down by its predecessor for the conduct of public affairs, and no fault has been found with the interim Government on that account. Nahas Pasha may well hesitate to root up the seeds of efficient non-party administration merely because they were sown by a political opponent.

When once Egypt is in full enjoyment of her independence, it is certain that she will find other subjects of more interest and of more pressing importance than academic discussions as to which party contributed most to the winning of that independence. A whole gamut of urgent domestic questions, it will be found, have been thrust into the background by the concentration on the cause of independence; these will now press themselves upon the attention of the people and will not be denied. It rests with the new Government whether Egypt will approach them as a united nation, bringing the best of her intellect and experience to bear on their solution, or whether she will be content with makeshifts secured by the temporary scoring of one party over another. It may be that the problem of agrarian reform will dwarf all other matters, but that questions of social reform, education, irrigation and hygiene will also press themselves on the attention of a people who under fifty years of British guidance have just begun to appreciate the importance of such things in a modern State may be taken for granted. In the face of so many more weighty matters is it likely that Egypt will retain any deep interest in the personal merits of rival Prime Ministers? It can hardly be only a coincidence that the claims of the ex-Khedive on the good will of the Egyptian people are being urged upon them at this juncture. Somewhere or other the intention is being entertained of adding this particular apple of discord to Egypt's troubles. It calls for no profound knowledge of history to realise how liable any acute dynastic controversy would be to provoke just such a situation as might force the Egyptians to appeal for protection against themselves, on account of the foreigner in their midst. If for no other reason, then, a clear case can be made out for whole-hearted co-operation between Egypt and Great Britain; and any unit that goes to make up Egypt—be it found on the Throne, in the Government or among the people—may rest assured that it is helping to undermine its own particular interests by just so much as it falls short of a spirit of genuine co-operation with the other units concerned.

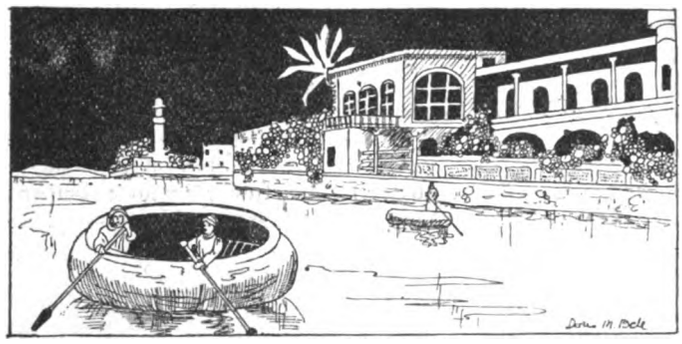
*The Near and Middle East

From Our Own Correspondents.



IRAQ.

Baghdad, December 29.

The High Commissioner.

The new High Commissioner arrived in Baghdad on December 10. His party flew from Cairo in three Vickers-Victoria aeroplanes, and was escorted for the last stage of the journey by six D.H.9A machines from 55 Squadron of the Royal Air Force. The aeroplanes, flying in perfect formation, were sighted at 2.55 p.m., and Sir Francis Humphrys landed on the aerodrome at precisely the scheduled time of 3 p.m. He was met as he alighted by the Crown Prince of Iraq, Amir Ghazi, representing King Faisal. He then inspected the three guards of honour drawn up before the hanger, one composed of Englishmen of the R.A.F., one of Iraqis in the service of King George, the Iraq Levies, and one of King Faisal's soldiers of the Iraq Army. The members of the High Commission staff in Baghdad were then presented to Sir Francis, and about two hundred other presentations were made—the members of the Iraq Cabinet, British and Iraqi officials and notables, the Presidents and members of both Houses of Parliament, foreign and diplomatic representatives, and members of the British and Iraqi Chambers of Commerce.

Before he left for the Residency, Sir Francis Humphrys made a point of saying goodbye to Squadron-Leader Maxwell, who had piloted his aeroplane from Cairo. The same officer was engaged last year at Kabul in the task of evacuating British and foreign residents by aeroplane from the city, and was, therefore, already known to Sir Francis. On the following day the High Commissioner, accompanied by the Counsellor, Mr. Hubert Young, paid an official visit to the King.

The Late Prime Minister.

A bill has been passed in the Chamber of Deputies granting a life pension of Rs.1,200 per month to the family of the late Sir Abdul Muhsin Beg as Saadun, plus a grant of Rs.50,000 for the purchase or building of a permanent residence. The pension is to be made payable unconditionally, but is to benefit the late Premier's wife and daughters only until they marry; any share of the pension which is thus forfeited is to be divided among the remaining beneficiaries.

Parliament.

A debate in the Chamber of Deputies on the liquidation of a number of bad debts due to the Government was attended by King Faisal. A Bill was passed authorising the Government to waive certain claims against debtors to the late Ottoman Government. The Minister of Finance, Yasin Pasha, then explained another draft law dealing with the liquidation of further bad debts. The Financial Committee of the House had recommended that the Government be asked to prepare a new Bill containing all the names of the debtors and details of the claims against them, and this course was pressed in Parliament. The Minister of Finance said that no complete records had been kept by the Turks, and to prepare a full list of the more recent debtors would take six years; he proposed, therefore, to have each case examined on its merits, and to fix special regulations for the waiving of bad debts.

Consular Appointments.

Kamal Effendi Gailani has been appointed Iraq Consul in Kermanshah, and a Consul is also to be sent to Muhammarah. Dr. Abdulla Beg Damlouji, formerly Foreign Secretary to King Ibn Saoud, is to become Director of Administration at the Foreign Office here.

The Governments of Persia and Iraq have reached an agreement by which a Frontier Commission is to be formed for the settling of tribal disputes. It will hold its first sittings in the Pusht-i-Kuh.

Iraq and Palestine.

The telegram sent by the Chamber of Deputies to the League of Nations protesting against the Balfour Declaration has elicited a somewhat crushing reply. The Director of Mandates Bureau replies that "the telegram has been duly submitted to the President of the Permanent (Mandates) Commission," but that it is "inconsistent with the terms of the Palestine Mandate, and, therefore does not call upon the Permanent Mandates Commission to take any action in the matter."

The President of the Nationalist Party requested that this reply be translated and circulated to the deputies, but the President of the Chamber replied that the reply was not a subject for discussion.

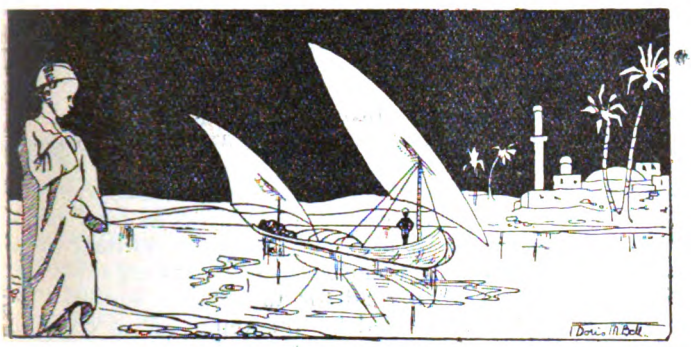
General News.

King Faisal spent a few days at Khanaqin and Abu Jisrah early in the month, to attend the Iraq Army manœuvres.

The Mesopotamia-Persia Corporation, Ltd., has promised to present an annual prize to the value of £10 to the Iraq Medical College, to be awarded to the best third-year student by competition.

Dr. Jordan, Director of the German Expedition excavating at Warka, lectured in Baghdad in English on December 26, on the results of his season's work.



EGYPT.

Cairo, January 4.

The New Cabinet.

The change of Cabinet took place with unusual celerity. Generally the minimum time between a resignation and the official constitution of a new Cabinet is three days. In this instance Adly Pasha presented his resignation at noon on the Tuesday, and by Wednesday evening not only had Nahas Pasha agreed to form the new Cabinet, but the decrees were also signed accepting the resignation of the Adly Cabinet and approving the formation of the new one, according to the list presented by the leader of the Wafd. To such an extent was the whole matter a foregone conclusion.

In the Press the composition of the new Cabinet has aroused little comment. But in all circles, Egyptian as well as non-Egyptian, the list has given rise to much talk. Speculation is particularly rife upon the elimination of Aly Pasha Shamsy, perhaps the most enlightened and experienced member of the Wafd, and certainly the one who has been most successful in the work that he has been called upon to do in previous Cabinets. The explanation put about by Wafdist circles is that Shamsy Pasha is reserved for important work abroad, *viz*, the Paris Legation and, it is hinted, the representation of Egypt on the League of Nations. But neither of these posts is at present vacant, and there would seem to have been no reason why Shamsy Pasha could not have started as member of the new Cabinet, and, later on, when the vacancies in question occurred, have been transferred, and his place in the Cabinet filled by someone else.

The new Cabinet's programme is already known both from the Wafd manifesto before the elections and from the letter to the King, when Nahas Pasha accepted office. In the forefront come proposals for strengthening the Constitution—which appears to mean legislation penalising any Egyptian who ventures to carry out anything like the *coup d'état* advised by Mohamed Mahmoud Pasha in the summer of 1928. Next in order are schemes of economic and social development and steps to assure the real independence of the country. Only in fourth place comes the question of the treaty proposals, and even there no definite reference is made to them, although it has been throughout understood that Parliament was being revived expressly for the purpose of considering the proposals for the treaty put forward by the British Government. All that is said is that efforts will be made to reach a loyal and lasting accord with Great Britain.

Copyright Congress.

The Congress of the International Literary and Artistic Association has now terminated its labours, and the great question is whether its views on the necessity for a copyright law in Egypt will have any effect on the Egyptian Government. The delegates are warm in their appreciation of the manner in which they have been looked after, and a very fitting conclusion to a most delightful fortnight in the country was afforded last night by a wonderful reception given by Mr. Oswald Finney in his house in Alexandria to bid God-Speed to the delegates before they embarked on their return to their homes.

The Black Birds.

One of the most enjoyable entertainments that has been seen in Cairo for a long time is now being given at the Kursaal by a negro troupe the "Black Birds," who, in the course of a musical play of plantation life, perform some excellent dancing and produce some most attractive harmonising effects.

THE HIJAZ.

Jidda, December 31.

A British Legation.

The most important item of news to record in this letter is the promotion of the British Agency and Consulate to the rank of a Legation with effect from December 22. This decision on the part of the British Government has given widespread satisfaction in the Hijaz as an outward and visible sign of the desire of the British Government to maintain cordial relations with Arabia. Mr. Bond, hitherto Agent and Consul, remains as Chargé d'Affaires pending the appointment of a Minister; and it is probable that he will present credentials in his new capacity in the near future.

Meanwhile M. Maigret, the French Chargé d'Affaires, is to present his credentials to the Amir Faisal on January 2, when the Amir will be visiting Jidda for a few days. I have already reported the decision of the Persian Government to establish a Legation here; and now I hear that a similar decision has been taken by the Soviet Government, while Turkey will certainly follow suit in the near future.

Anniversary Celebrations.

Great preparations are in hand for the suitable celebration of the anniversary of King Ibn Saoud's accession to the Throne of the Hijaz on January 8. The Amir Faisal will first attend a morning celebration of the occasion at Mecca, where there will be processions and a public reception. He will then proceed by car to Jidda, where he will entertain the whole community, including Europeans, to tea at the villa of Kandara. In the evening also at Kandara there will be a great banquet of a hundred or more covers, at which the Foreign Minister will make a speech, giving a résumé of the progress made in the country during the past four years under the régime of King Ibn Saoud and welcoming the guests, including the various representatives of foreign Powers; and it is probable that one or more of the latter will reply conveying their good wishes and those of their colleagues on the auspicious

occasion. Finally, on the following day, there will be a picnic lunch-party in one of the oases of Wadi Fatima, to which the foreign representatives will also be invited.

News from Najd.

The news from the interior is scanty but good so far as it goes, and sufficient to dispose of the wild rumours which mischief-makers have not been slow to concoct out of the official silence of the Najd authorities. The action of the British Government in declaring the frontiers of Iraq, Kuwait and Trans-Jordan closed to the rebels is exceedingly satisfactory and has not been slow to produce results. The rebel forces are now practically hemmed up against the neutral zone along the Iraq frontier near Riqai; and, with every loophole of escape closed to them, their capitulation is a matter of time. Indeed, Naif ibn Hithlain, chief of the Ajman tribe, has already sent his son to King Ibn Saoud to sue for pardon, after finding the Kuwait frontier barred to him; while Faisal al Duwish and his ally, Ibn Mashhur of the Ruwala, after a similarly unsuccessful attempt to seek refuge in Iraq territory, have also sent emissaries to the King. The latter will insist on an unconditional surrender in order that the rebels may be brought before the religious Courts for trial on the charge of treason, but it is improbable that extreme penalties will be exacted, though it is scarcely likely that Faisal al Duwish will be left at liberty to resume his treasonable practices a third time. The King's headquarters are at present at the wells of Safa in the eastern desert south-west of Kuwait.

Pilgrims.

The climate of the Hijaz continues very delightful, and the stream of pilgrims maintains its early promise. Up to the 27th ,when the figures were last published, there were 14,222 pilgrims in the country, as against only 12,859 at the corresponding period of last year. One batch of pilgrims during the last few days had an exciting experience in the shape of shipwreck on a reef some 20 miles out from Jidda. The ship conveying them appears to have struck a reef during the night and has not yet been able to get clear; but all the pilgrims on board have been safely brought off to Jidda without casualty in sailing-boats sent out to rescue them.

Christmas at Jidda.

I must not close this letter without some reference to the festivities which have marked the life of Jidda during the Christmas season. They began on Christmas Eve with a large tea and dinner party given by the Indian Vice-Consul at his charming villa at Kandara. On Christmas night itself the British Chargé d'Affaires entertained the whole British community (sixteen persons, including two officers of the Khedivial mail boat which arrived here that day) to dinner at the Legation. And to-night the old year will be seen out at a Fancy Dress Party given, as it has been every year within human memory, by the firm of Messrs. Gellatly, Hankey and Co. Jidda will then settle down again to its workaday life with a second break involved by the Accession Day ceremonies. And in a month's time we shall once more be in the throes of Ramadhan.

Two persons were killed and four injured by the explosion of a Royal Air Force bomb last week at Khiri, in Southern Kordofan, Anglo-Egyptian Sudan. Bimbashi E. H. Hall, of the Army Medical Corps, Mr. A. S. Oakley, Assistant District Commissioner of the Talodi, and Leading Aircraftsman Prust were among the injured.

TURKEY.

Istanbul, December 31.

Casualties by Sea, Air and Rail.

As the outcome of a succession of heavy northerly gales with calm intervals of thick, misty weather, with visibility so bad that local inter-suburban ferry-boat and tramway services have been seriously dislocated on several occasions, serious casualties have occurred at a moment when passengers are availing themselves of last sailings in order to join their families abroad for the festive season.

The black list is headed by the report of a collision which took place on Christmas Eve, in the Sea of Marmora, between the outward-bound Bulgarian mail packet Varna, from Bourgas, and the upward bound Greek steamer Chrissi with a full cargo of wheat. The Bulgarian vessel was cut down to below the water-line and foundered in a few minutes, with a loss of twenty-six souls—comprising part of the crew of 26 and five Bulgarian cattle-drovers in charge of 120 oxen consigned to the Piræus.

The Turkish Port and Judicial Authorities have held a preliminary inquiry into the circumstances attending the disaster, as a result of which the skipper of the Greek vessel has been confined to his cabin under preventive arrest.

Two days afterwards the Italian seaplane which carries out a bi-weekly passenger and mail service between Istanbul, Piræus and Brindisi, crashed, it is assumed, in the Northern Ægean with the loss of the crew of five and the air mail, no passengers, fortunately, being carried at the time. Greek destroyers and passing vessels which had intercepted the seaplane's "S.O.S." sailed hurriedly to the spot indicated in the message of distress, but failed to find any trace of the missing machine. Although Greek sloops and mosquito-craft have systematically scoured the area in which the accident presumably occurred, no vestige of wreckage has been found, and it is, therefore, feared that, after wirelessing its position, the craft nose-dived and went to the bottom of the sea.

And on December 27 the Simplon Orient Express left the rails between Sofia and Tzaribrod. In this instance, happily, no loss of life or limb occurred, though the mishap seriously disorganised railway traffic in that part of the Balkans for some time.

The Grand Rabbinate.

It has been an old custom for the wealthier Jews of the Istanbul community to make gifts, either in kind or in money, to the Grand Rabbinate at stated periods of the year in order to meet the needs of places of worship, hospitals, communal schools, soup kitchens, and so forth.

The fiscal authorities have latterly called upon the Grand Rabbi to acquit himself of his duty towards the State by paying Income Tax on all these charitable donations, which gifts, it is interesting to remember, are voluntary benefactions bestowed by the living and not bequests and legacies of the departed. The Rabbinate pleaded for delay on the score that, although there are a few fairly opulent Jews still remaining in the city, the community as a whole is a poor one, and that the calls for assistance and support are becoming more insistent. The Authorities thereupon ordered the furniture and other moveable property of the Rabbinate to be seized and put

Digitized by Google

up to public auction in proportionate value to the amount claimed by the State.

This order was duly carried out, and the furniture and other articles were bought in at the auction by the well-intentioned and more prosperous members of the Grand Rabbi's fold and were returned by them to their spiritual Head. Whether the proceeds brought in by the auction fell short of the sum claimed is not reported, but probably so, because the Inland Revenue, for the second time, had the belongings of the Rabbinate seized and sold, with the reserve that the articles forming the subject of distraint were not on this occasion to be disposed of to persons of the Jewish faith.

The matter was finally adjusted by the erstwhile purchasers making further monetary gifts to the Rabbinate which enabled the latter to render unto Cæsar what was due unto Cæsar, thereby staving off any further execution and the loss of its belongings.

The Case of Ali Jenani Bey.

Mystery appears to enshroud the circumstances in which Ali Jenani Bey, a Deputy in the present Parliament and a former Minister of Commerce, succeeded in wafting himself across the Franco-Turkish border near Aleppo carrying a respectable number of suit-cases lined with Treasury Notes. The Bey is alleged to have relieved certain Parliamentary colleagues associated with him in business of a sum of £T70,000, and he is further reported to be debtor to the Treasury of some 200,000 liras.

It is stated in the local Press that the absconding ex-Minister has succeeded in reaching Europe, and that the Judicial Authorities have called upon members of his family who have remained in Turkey to show cause why they should not disclose the whereabouts of the fugitive. These relations will, no doubt, select with the nicest discrimination some safe retreat in a country with which Turkey does not happen to have concluded a Treaty of Extradition, and where the culprit will, therefore, be sheltered from the long arm of the Law.

The Belgian Overseas Bank.

The Istanbul branch of the Belgian Overseas Bank, which is in course of being wound up, would appear, if newspaper reports are to be trusted, to be involved in a very serious predicament. The liquidators of this institution, accused by the Treasury in Angora of speculation on a large scale in sterling and dollars at a time when the Turkish lira was gyrating wildly and showing great weakness—charged, moreover, with having knowingly falsified the figures of their local balance-sheet—by which manœuvres the State is alleged to have been defrauded of considerable revenue—are reported to have had imposed upon them a fine of half a million Turkish pounds by the Fiscal authorities.

The late manager of the local branch of the "Banque Belge pour l'Etranger," in a Press interview, attributes the proceedings to a very regrettable misunderstanding, and he has stated that there has been gross exaggeration of the amount of the penalty inflicted, which has been fixed at 50,000 and not 500,000 liras.

The matter is not without its paradoxical aspect. In order to ward off distraint by the Treasury—although it is not easy to imagine what property could become the subject of execution—the Turkish Ministry have accepted from the Ish Bankassi, or Turkish Trade Bank, a letter of indemnity covering the Treasury against any eventual loss by default of the foreign establishment. The Branch Manager refutes the very grave and disconcerting accusation of a garbled balance-sheet which fails to disclose the true position of the local branch's assets and liabilities, and attributes the imputation of the Authorities to the incapacity of the local fiscal officials to grasp the details and the mechanism of a balance-sheet drawn up "on Belgian lines," whatever that may mean.

Whatever the outcome of the forthcoming inquiry, the gravity of the charge brought against the foreign establishment has caused very serious surprise and apprehension in financial and banking circles and in this city generally.

GREECE.

Athens, January 8.

Political Incidents.

Since my last letter the comparatively smooth course of political affairs has been interrupted by two incidents. The first was the resignation of the President of the Republic. It has long been known that he was anxious to lay down the burden of duties not altogether congenial, and the responsibilities of a position sufficiently arduous for a man of his years. A picturesque figure thus passes out of Greek public life, accompanied by universal affection and respect. In his extreme simplicity, absence of pomposity, and ardent patriotism, Admiral Koundouriotis is typical of his race, and one likes to think of him in his old age seated among the Hydriot sea-captains and cronies, the companions of his youth, and recalling the incidents of his adventurous life.

Very much the same qualities distinguish his successor, M. Zaïmis, of whose election there was never any serious doubt. Actually he received 257 votes out of 327. Some of the party leaders did, indeed, politely press M. Venizelos to offer his candidature, but the transparent attempt to relegate him to inactivity was not successful. He declined, giving as his reason "temperamental unsuitability." As he himself put it, "Either I or the Constitution would burst."

The second incident was provoked by a letter from General Kondylis, written from Nice to a journalist friend at Kavalla, and published in the local paper. In this letter the head of the National-Republican Party condemned the present Government, with which it is ostensibly co-operating, in such downright language that the two Ministers who are members of the party, MM. Argyropoulos and Pappas, felt obliged to hand in their resignations. Whether General Kondylis intends to follow up his letter by action of any kind is not yet known, but the letter has had the effect of depriving the Government of two capable and hard-working servants who will not easily be replaced.

The Refugee Commission.

M. Venizelos left hurriedly for The Hague on January 2. On the day before, he made a communication to the Press, reviewing the work of the past year and drawing a glowing picture of what may be expected in 1930. Though such optimism is no doubt justifiable, as far as some branches of the national economy are concerned, it is impossible not to feel misgivings when it is realised that no provision has been made to take over the various activities, institutions, etc., connected with the rural refugees which the Refugee Commission has now handed over to the State. The announcement, made as long ago as April last and frequently repeated, that this side of the Commission's activities would be wound up at the end of the year, was apparently not taken seriously. It is now discovered with astonishment that what was said was meant, and the New Year finds the State entirely unprepared to take over the 59 dispensaries, the model farms (at present self-paying) and numerous other establishments hitherto run by the Commission. These farms depend largely for their success on being able to obtain moderately large advances of money for purchase of seed and such like things at the moment when they are needed, and these advances they have been able to obtain from the Commission. It is notoriously difficult to extract money from any Governments anywhere, but it is quite certain that here such requests will be met neither to the required amount nor at the right time. The only hope is that some responsible, active, and influential person with a thorough knowledge of the work may be found who will be empowered to carry it on on the same lines as before, and be able to ensure financial advances without the interminable

Digitized by Google

delays which these transactions usually involve. Unless such a person is found, the work of the Commission will surely be undone, and that soon. Fortunately, the urban side of their activities will be controlled by the Commission for a further period of one year.

The Census.

Interesting comments on the results of the census of 1928 and on the comparison of those results with those of the census of 1920 are given by Mr. A. Pallis in the *Geographical Journal* for June, 1929. The increase in population between those years is 12 per cent., and that although the area of Greece has diminished within the period. The density of population per square kilometre has increased from 37 to 49. The increase in the urban population is 7 per cent., the proportion now being 33 per cent. urban, as compared with 26 per cent. in 1920. This is largely due to the fact that there was a high proportion of town-dwellers among the refugees from Turkey and Bulgaria. The population of Athens alone has increased, during the eight years between the two censuses, from 292,991 to 452,919, an increase of 54 per cent.

The Tourist Season.

As the tourist season approaches, the annual clamour arises over the best way in which tourists can be "exploited." To the better kind of Greeks this word is offensive, and they dread the inevitable cheapening and vulgarisation which "tourism" brings in its train. It is, indeed, time that Greece were recognised as, in a sense, sacred soil and a legacy which the Greeks hold for the entire world. Considerations of immediate profit must not be allowed to injure higher and more permanent interests. It is unquestionable that, if unwise exploitation is allowed to desecrate these hallowed spots, those whom it is most desirable to attract will be driven elsewhere, and since the vulgar herd follow in their wake, they, too, will ultimately seek pastures new. Thus, on purely material grounds, the organisation of "tourism" in Greece should be confined to providing cheap, simple, and above all, clean hotels in the neighbourhood of, but not actually on, the famous sites. Large, pretentious hotels of the cosmopolitan type should be avoided. Some slight improvements in the roads and railways are indicated, but not many, since the type of tourist desired does not mind, in fact, as a pilgrim, prefers the incidental hardships which give zest to his journey. Greece with perfect roads and railways would be a Greece spoilt, and incomparably poorer in all that matters than it is to-day. Happily, what is usually considered (and admitted by Greeks themselves) to be a national defect, viz., inability to organise, may in this case prove the country's salvation.

THE DORSET YEAR-BOOK, 1929.

The Dorset Year-Book has reached the twenty-fifth year of issue. It is a wonderfully attractive volume of over 280 pages, not the least striking of which are those devoted to the roll of Dorset men in all parts of the world who belong to the Society of Dorset Men in London. It is in the hope that this brief reference to the Year-Book will be the means of drawing the attention of other Dorset men to the Society and its annual publication that we bear witness to the high standard of interest maintained by the latter. It contains short stories, more serious articles, poems and lighter verse, and the illustrations are excellent. The Year-Book (2s. 6d., by post 3s.) can be obtained from the Hon. Secretary, 274, Gresham House, Old Broad Street, London, E.C.2. The Honorary Editor is Mr. Stanley I. Galpin.

THE "ASIATIC REVIEW."

The January issue of the *Asiatic Review*, which, by the way, contains an excellent illustrated supplement, is a very full number. Precedence is naturally given to Indian affairs, particularly to the views of the Princes on the Viceroy's announcement. But interesting articles also are published under the sections entitled "The Inner East" and "The Asian Circle." Articles on "The Turkestan-Siberian Railway" and "The Georgian Episode in International Politics" (by Mr. W. E. D. Allen) are well worth study, and equally instructive, in another sense, are those on "The Road to Isfahan" (by Sir Arnold T. Wilson) and "The Rôle of Georgia in the Art of the Middle Ages" (by Mr. T. Talbot Rice).

NEWS IN BRIEF.

The Queen of Yugoslavia celebrated the anniversary of her birthday on January 8.

The Italian Government has officially recognised Nadir Shah, the new King of Afghanistan.

M. Savkovitch, Yugoslav Minister of Public Works, died on January 12 in a Vienna sanatorium.

The first anniversary of the Yugoslav Dictatorship passed quietly in Belgrade on January 6, the Christmas Eve of the Greek Orthodox Church.

Messages from Miss Susan Lawrence, Colonel Wedgwood, and Mr. Lansbury were read at the recent conference at Tel-Aviv of the newly established Palestine Jewish Labour Party.

The Persian Minister in London has been authorised to sign on behalf of his Government the permanent Treaty of Friendship, Customs, and Commerce between Persia and Greece.

Walik Hamid Bey, of the Turkish Diplomatic Service, who was for many years first Secretary at the Paris Embassy, died last week in a nursing home at Nice.

Sixteen Athens students on strike who stoned the offices of a newspaper and the Law School have been sent to prison for terms ranging from three months to four days.

M. Matchek, head of the Croat Peasant Party, who has fallen ill while in prison in Zagreb in connexion with the alleged terrorist plot, was last week transferred to Belgrade.

Decrees were published in Cairo on January 16 dismissing eight provincial governors, whose places are being filled by supporters of the Wafd.

Mahmoud Nadim, former Governor of the Yaman, has been appointed Turkish diplomatic representative at the Imam's Court at Sanaa, and is on the way to take up his post.

The French Government has decided to grant the Beyrout Port Company £1,200,000 for the enlargement of the harbour. This action has been taken in view of the threatened competition from the projected Haifa harbour.

Two brigands have been captured at Meron, near Safed, Palestine, by the British police, acting in co-operation with the Trans-Jordan Defence Force. One of the men belonged to the gang which recently raided the Faradiah police post.

The death occurred last week from pneumonia of Judge Litt, President of the District Court at Haifa. He proceeded to Palestine with the British Army and had been on the Bench for more than ten years.

In reference to a recent Greek report of unrest in Albania, the Albanian Legation in London states that, on the contrary, all is quiet in that country. The report that King Zogu is suffering from illness is also contradicted.

The *Shafagh Sorkh* of Teheran has been publishing articles in favour of the adoption of the Latin characters in Persia—a movement which, it will be recalled, has been supported by the present Minister in London, Saiyid Hasan Taqizadeh.

A collision in the air took place between two Avro machines belonging to No. 4 Flying School at Abu Sueir on January 8, and all the occupants were killed. Their names are: Flight-Lieutenant Richard Samuel Greenslade, Flying Officer Charles Edson Galpin, 350134 Corporal William Henry Chilman, and 358853 Leading Aircraftsman Leonard Vincent Green.

M. Michalacopoulos, Greek Foreign Minister, who had proposed leaving for Geneva on January 10 to preside over the Greek delegation at the meeting of the Council of the League, cancelled his departure owing to the continuation of the Turco-Greek negotiations, as it would be easier for him to keep in touch with the Angora Legation from Athens.

General Dawes, United States Ambassador in London, has informed the State Department of his intention to sign a tripartite agreement between Great Britain, Iraq, and the United States. The agreement provides that United States citizens shall enjoy the same rights and benefits as are enjoyed by subjects of countries which are members of the League of Nations.

We are indebted to a correspondent for calling attention to an erroneous description of a Turkish stamp that appeared in a recent issue of THE NEAR EAST AND INDIA. The stamp depicts a male figure standing by a wolf; the latter is known in Turkish as Boz Kourt, or Grey Wolf, the standing figure representing a Turanian progenitor of the later Osmanlis and Turks. In Turkish as in Roman history the wolf plays a part as foster-mother in the early history of the race.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 26.

The Delhi Conversations.

The Delhi conversations have failed. They were to be between the Viceroy and five of the Indian leaders—Mr. Gandhi, Pandit Motilal Nehru, Sir Tej Bahadur Sapru, Mr. Jinnah, and Mr. Patel. That was the idea; but when the time came the proceedings were confined to a conversation between Mr. Gandhi, Pandit Motlal Nehru, and the Viceroy, the first two saying in concert that "unless previous assurances were given by His Majesty's Government that the purpose of the conference (i.e., the Round Table Conference) was to draft a scheme for Dominion Status, which His Majesty's Government would undertake to support, there would be grave difficulty about Congress participation." To which the Viceroy replied that "the conference was designed to elicit the greatest possible measure of agreement for the final proposals which it would be the duty of His Majesty's Government to submit to Parliament, and that it was impossible for him or for His Majesty's Government in any way to prejudge the action of the conference or to restrict the liberty of Parliament." The above account is from my newspaper report. Four words follow: "The conversation then concluded." In another part of the paper it is stated that Sir Tej Bahadur Sapru and Mr. Jinnah left Delhi on Christmas Eve, "disappointed at the sense of irresponsibility shown by the Congress leaders, who had kept their colleagues in the dark about their cards."

A Bad Press.

Sir Tej Bahadur Sapru and Mr. Jinnah, in expressing disappointment with the two Congress leaders over the line taken by them, if it is true that they did, may be said to have begun the bad press that that line has received, or that its authors have. The *Statesman*, after declaring that the blame for the breakdown of the conversations does not lie at the Viceroy's door, goes on to say: "If the declaration of Mahatma Gandhi and Pandit Motilal Nehru means what on the face of things it does mean, they are going to Lahore to ask Congress there to confirm the declaration of last year in favour of a movement for independence after the New Year. Of Mr. Gandhi we confess we had hoped better things; we had looked to him to control the situation, not to surrender himself to be led in chains by the younger and more excitable men. For he cannot with his experience deceive himself as to what the consequences will be. To talk of non-violent non-co-operation would be nonsense with the echoes of the Delhi explosion still in his ears. His remark, made before he saw Lord Irwin, but plainly when his mind was already made up, that the pails should be filled instead of being emptied, is not the observation of a man who is walking blindly into a dangerous situation." The *Englishman*, after a word or two about Pandit Motilal Nehru's "quite undistinguished record," and the "Himalayan blunders, miscalculations, and tragedies" packed into Mr. Gandhi's career, has: "Mad, however, as have been the actions of these two leaders in the past, they have hardly ever done anything from their point of view quite so monumentally stupid as they did on Monday last."

The "Eve" of the Conversations.

I should myself, had I been in an Editor's chair, have wished to give the two Congress leaders a good press, and the Viceroy, or those members of his Executive Council whose advice he followed, the bad one. What was the situation on the eve of the conversations? We had had the Viceroy's pronouncement of November 1, that the attainment by India of Dominion Status was the goal of British-Indian policy. Then only last week the Secretary of State for India said in the House of Commons, in his speech on Mr. Fenner Brockway's motion: "My Hon. Friend and I are in agreement, and in agreement with Indian opinion, on two things at least: First of all, we are working to one definite, ascertained and advertised goal; that is to say, that the difficult task of Government is not merely harsh, barren, negative—we have the comfort of an active and responsive policy. Secondly, neither we nor thoughtful Indian opinion desires this Government or any Government to weaken in the maintenance of peace. Especially at the present time, when constitutional changes of the greatest magnitude are being considered, it is essential that public order should be maintained." They are such words as those—those of the Viceroy two months ago, those of the Secretary of State a week ago—that have led Indians to say such things as Sir K. V. Reddi said the other day, on reaching Bombay on his return from South Africa: "My countrymen must fight to a finish and obtain a constitution which within a few years automatically works itself into Dominion status; for India can no longer remain in a position less than that of Dominion Status. I still hope to live . . . to see that constitution given to this country. It is a case of now or never." That is what Sir K. V. Reddi has just said, and he, mark you, is not a Congress leader, but a salaried official of the Government of India. What could the two Congress leaders do but say to the Viceroy: "It must be understood that the Round Table Conference shall have as its task to draft a constitution of Dominion Status?"

Muddling Through.

The *Statesman* had this also in the leader from which I have quoted: "Lord Irwin has met the Indian leaders at Delhi, and negotiations were made impossible at the very beginning by the declaration of Mahatma Gandhi, supported by Pandit Motilal Nehru, that unless the purpose of the Round Table Conference in London is to draft a scheme for Dominion Status, that scheme to be subsequently supported by the British Government, Congress would not support participation. Everybody knows, and has known from the moment that the Viceroy's statement was made, that this is not the purpose of the conference, and Lord Irwin very properly said so and ended the interview." It cannot be true that everybody knows, and has known from the beginning that to draft a constitution of Dominion Status is not to be the work of the Round Table Conference. If it were true, no man holding the position held by Sir K. V. Reddi could possibly have said what he has just said. What is the point, the Congress leaders may well ask the Viceroy and the *Statesman*, of the Viceroy's having declared that Dominion Status is the goal, and of the Secretary of State's speaking in the House of Commons of "constitutional changes of the greatest magnitude," if the Round Table Conference is not to try to draft a constitution for Dominion Status? Englishmen, it is well known, have a way of "muddling through"—in the Crimea, for instance, in Canada, in South Africa. You will hear old people say, as I often did in my own home as a boy, that England would somehow "muddle through." To "muddle through" means your first "muddling," and that, one cannot but think is what England is very busy doing at the moment in regard to India. We are getting into a muddle.

Terms of Reference.

The Secretary of State also said in the House of Commons debate, speaking of the Round Table Conference: "In this matter of procedure there has been a great and important change, which has been repeatedly asked for by leaders of Indian opinion in India, namely this Round Table Conference. . . . It is a very important conference. We are the servants—more particularly this Government—of the House of Commons, and of course the House of Commons will be told in time about the composition of the Conference, its terms of reference, and so on." I have seemed to see the origin of the muddle in the attitude of mind that dictated those words, especially

Digitized by Google

that phrase, "terms of reference." What Indian leaders desire, not merely Congressmen but others also, is the opportunity to meet and confer with the Prime Minister and some other members of the British Cabinet. They would accept it as right that the Indian States, as well as other schools of British Indian political opinion, should be represented at the Conference; but it would be intolerable to them that there should be any such terms of reference as would put it in the power of the President to rule that this or that could not be discussed. The Cabinet must be prepared to hear every word that even the Congress leaders wish to say. When they have heard it, and have considered it, they must say if they think it would be wise and safe, or that they do not think it would be wise and safe; and then the matter would have to be argued out. So much is due to Indian opinion generally. If a smaller opportunity is all that is given, the Congress leaders will think that the earlier talk of Dominion Status as the goal, and of "constitutional changes of great magnitude," was dishonest. The thing most to guard against is any appearance of dishonesty. I myself do not think that it would be safe to grant India any much larger measure of Dominion Status than she at present enjoys; it will not be safe to do that within the lifetime of any of us; but I should be prepared to argue the matter out with the Indians in London. Many of them would have come, already convinced that no great constitutional change *now* would be safe and wise.

INDIA AND THE NAVAL CONFERENCE.

It is officially announced that India will be represented at the forthcoming Naval Conference which meets in London on January 21, by Sir Atul C. Chatterjee, High Commissioner for India. Commander H. L. Davis, Royal Indian Marine, will act as expert adviser and Mr. K. Anderson as Secretary to the delegation.

The selection of Sir Atul Chatterjee is another instance of the progress made by India in the acquisition by stages of all the attributes of Dominion Status to which Mr. Wedgwood Ben referred in his speech in the House of Commons on December 18. Mr. Benn will himself be present at the Conference, not in his capacity as Secretary of State, but as one of the four representatives of the British Government. Hitherto on such occasions, as distinct from the meetings of the League of Nations and other ordinary international gatherings, some member of the Cabinet has been responsible for the representation of Indian interests, with or without assistance from an expert adviser.

REFUNDS OF INDIAN INCOME TAX.

The Government of India have decided, pending further examination of the legal position, to resume the grant of refunds under Section 48 of the Indian Income Tax Act, in respect of dividends payable only outside British India, i.e., by companies resident outside British India whose profits have been taxed in British India. The grant of refunds in such cases has been suspended since August 28, 1929, on the view that such dividends cannot be held to be income, profits or gains accruing as arising in British India. Claims that have been rejected on this ground will now be dealt with in Bombay as expeditiously as possible, and allowance for the interval of suspension will be made, if necessary, in reckoning the time limit in respect of fresh applications that have been delayed for this reason.

Forms of claim and printed instructions may be obtained by claimants on application to the High Commissioner for India (Accounts Department), 42, Grosvenor Gardens, London, S.W.1.

In a written reply to Sir George Jones, Mr. W. Wedgwood Benn, Secretary of State for India, states that he is aware that the Government of India have found it necessary to contract for the time being the large capital allotments made in recent Budgets for new railway projects. The Hon. Member, he adds, no doubt realises that the construction of new railways in India does not necessarily involve at once the expenditure of large capital sums in this country, the bulk of the outlay entailed being on labour and local materials.

THE ECONOMIC PROGRESS OF INDIA.

The Marquess of Reading presided at a meeting of the Indian Section of the Royal Society of Arts on January 10, when Sir Basil Blackett, late Finance Member of the Governor-General's Executive Council, read a paper on "The Economic Progress of India."

Sir Basil said that, if India were in a stage of development comparable to that of the nations of Europe or the United States of America, her vast unhampered home market in a land enjoying extraordinary climatic and geographical variations could not fail to place her in the forefront of economic wealth. Some observers were satisfied to find an explanation of the poverty of the masses in India in describing India as a case of arrested economic and political development, yet the poverty of the masses was no less striking in the time of the Moguls, when India was at a stage of development not very different from that of contemporary Europe.

"It is not necessary to quarrel with the view that both politically and economically India to-day bears evidence of arrested development, but the explanation of the extreme poverty of her masses must be sought in some other direction," he said. "The identity of the phenomenon to-day and in the times of the Moguls is a sufficient answer to those Indians who, conscious of the contrast between India and modern Europe, would attribute all that is amiss to British rule. British rule—or, more strictly speaking, the impact of the West upon India—has indeed faced her with many difficult problems. It is probable that if an India could be imagined which had remained until the present time untouched by Europe, her population would be less than half of what it is to-day, and she would not have had to cope with the task of assimilating an alien civilisation, which for the first time in India's history has been too strong for Hinduism's power of absorption.

"But the impact of the West would have been as powerful and perhaps more destructive but for the protection of British rule. The standard of living of her peoples would certainly have been even lower than it is and their poverty even more extreme. There can be no doubt as to this fundamental reason for the peculiar economic conditions of India. It is to be found in the Hindu social system, in the doctrine of Karma, in the absence of active effort for material progress, in the presence of the active determination of Brahmanism to maintain and perpetuate the age-old social outlook enshrined in the caste system."

The economic changes which had been taking place in India since 1900 were the deliberate outcome of the policy of the Government of India since the days of Lord Curzon's Viceroyalty.

"They have often been represented as being unpalatable to British opinion," said Sir Basil, "and there is no doubt that particular interests in this country have not infrequently looked askance on the development in India of industries which threaten the exports of the corresponding products of Great Britain. What has happened in regard to the Dominions. . . . It is necessary in the interests of the vast mass of the peoples in India that no plans should be spared in fostering and improving her agricultural production. Side by side with the industrial developments of the last thirty years, increasing attention has been paid to scientific research, pure and applied, in the field of agriculture. But in India, as in the United Kingdom, the problem of making the products of research acceptable to and accepted by the farmer is an intractable one."

After reviewing the outstanding changes during the period, each one of which had been in the direction of the growth of new industries, the lecturer said that even allowing for the growth of population which in India continually threatened to overtake the food supply and to trench upon the narrow margin of subsistence, the masses of India were better fed and had improved their standard

Digitized by Google

of comfort. Low as the latter remained, it was sensibly higher than a generation ago, and, in addition, thanks to irrigation and the great extension of means of communication, the dangers of really severe famine seemed to have been overcome.

"The industrialisation of India, however partial, is," he continued, "not without its evils, some of them similar to the evils of our own industrial revolution, and some peculiar to India. The problem of the industrial worker in Bombay, temporarily a townsman, but without desire to become an artisan, with his heart in his own industrial village, whither he constantly returns, must seem at times disheartening and even insoluble. . . . Yet the economic tendencies of the last thirty years are bound to continue, and no one who takes the long view of the interests of India would have it otherwise, whatever sentimental regrets may be felt at the disappearance of the medieval and romantic setting which still adds glamour to a Westerner's picture of India. It is useless to deplore the infatuation, as it may seem, of the politically minded Indian with what is called politics, and his absence of interest in the economic needs of India and the risks of economic deterioration due to unwise political action. These are the natural consequences of the paucity of practical economic outlets for the activities of the educated Indian. As economic opportunity grows, increased reality will be brought into politics."

The economic interests of this country and of the Empire were in no way divergent from those of India. The more progressive India became, the better for this country, both as a great trading nation and as the political centre of a great empire. The next few decades would in all probability see the rapid growth of a small number of large economic units; and there was no need to picture them as mutually hostile and antagonistic. Many minds were thinking of the creation of a single European economic unit; but this country could not merge itself in Europe, and if it was not to be left behind it must find its place in a great Imperial economic unit. Without India the idea of such a grouping suffered a grievous shrinkage, and partnership in such a unit not only offered India a proud place in the world but seemed indispensable to her growth and balance.

"True economic progress in India," Sir Basil concluded, "will not be fully realisable till India sloughs off its mediaeval abstractions. When Hinduism rejects its mediaeval abstractions the economic progress of India will at last deserve to be called revolutionary, and India will advance to a standard of living and comfort incredibly higher and happier, in the light of which the present poverty of her masses will be an evil nightmare of the past."

Lord Reading said that the subject must be occupying the minds of all of them at the present moment, especially in relation to the economic development of the Empire, which already held so prominent a position in their public affairs. "I would like to emphasise one aspect of industrial development which is not often appreciated and understood in this country," he added. "The industrial development is largely of thirty years' standing—since the beginning of this century. But as time has developed and industrialism has taken a greater part in India, there is no doubt that many are associated in the progress and the development of industry, some in technical capacities and in service, but, of course, a far greater number in investment in the country either in providing capital for the enterprise at the start or the purchase of shares, and therefore taking their part in the joint stock enterprise of the country."

He hoped that in the future agriculture—the most important industry in India—would be more productive. For the rest, development had been rapid considering all the difficulties. "I do not think there is any reason to despair," concluded Lord Reading, "and, indeed, there is considerable ground for hope and even for belief that in the future, as India continues to develop, she will improve and will be more prosperous. I believe myself that it is always to the advantage of both that there should be greater co-operation between British and Indian businesses, between both the employers and the employed. I would like to echo with all earnestness and sincerity the hope that was expressed by Sir Basil that in the future India may be more happy, more contented and more prosperous than in the past."

Sir Campbell Rhodes appealed to those who loved India not to join in efforts to discredit her standing in the Money Market. Those who indulged in these efforts, he said, had some strange bedfellows. A District Judge in India once told him that in that part of India there were people who would take away the character of anyone for a payment of four annas (4½d.). That was dear: for in London they could get the same thing for a penny. The truth would cost them twopence.

INDIAN NOTES.

(Continued from page 58.)

approximately Rs.143 lakhs yearly. This amount would be made up of (a) Rs.110 lakhs to be derived from a cess to be levied under the Bill; (b) Rs.24 lakhs now spent from provincial revenues on primary education; and (c) Rs.9 Lakhs now spent by the District Boards. The cess was to be a charge of 5 pice (1¼d.) per rupee on land rents. Of the 5 pice one was to be paid by the landlord, and four by the peasant. The first Select Committee thought that this was hard on the peasant. They accordingly proposed that the division should be 3 pice by the peasant and 2 pice by the landowner. The second Select Committee have reduced the cess to 4 pice payable in equal shares by landlord and peasant. This means, of course, that the revenue derived from the cess will be reduced by more than Rs.20 lakhs. According to the Select Committee the deficiency is to be made up by a yearly grant from the Government of about Rs32 lakhs being the amount already spent on primary education. But, as we understand the matter, this grant was to have been given in any case by the Government, as we have indicated above. If this is so then, the net result of what the Select Committee propose is that the available revenue is to be seriously curtailed. And what is still more strange about the report is the proposal, which is made in it, that compulsion is to be introduced within ten years. It is known that a compulsory system for boys and girls between six and eleven—the limits contemplated—would cost about Rs.240 lakhs yearly, in addition to heavy initial capital expenditure. How in the face of this the Select Committee think that their proposal is to be carried out it is difficult to understand. And it is still more difficult to see why, if they want primary education, they should seek to reduce the available revenue. The Bill as framed contemplated compulsion for boys only after seven years from the passing of the Act. For girls it did not propose to do more than to provide a voluntary system for about one million of the 3⅓ million girls in the province. Another important change which the Select Committee propose has reference to the administration of the Act. They recommend that it should be administered by a Board of twenty-seven members instead of by the Government as was contemplated in the Bill. The Government would be empowered to advise, but not to control, the Board. It will be interesting to learn how the Legislative Council regard this proposal, seeing that education is a transferred subject in the charge of a Minister responsible to the Council.

A meeting of the East India Association will be held on Monday, January 20, 1930, at 4.30 p.m., at the Caxton Hall, Westminster, S.W.1, when the Right Hon. Viscount Goschen, P.C., G.C.S.I., G.C.I.E., C.B.E. (late Acting Governor-General of India), will read a Paper on "The Working of the Reforms in Madras." The Rt. Hon. Lord Lamington, G.C.M.G., G.C.I.E., will preside. A discussion will follow the reading of the paper.

EGYPT: ITS TRADITIONS AND RENAISSANCE.

By GEORGES CATTAUI.

III.

If I had to choose a name among the precursors of the spiritual renaissance of Egypt, it would be that of Shaikh Muhammad Abdu, Grand Mufti of Egypt at the end of last century. He was the disciple of Gamal-ed-Din Afghani, and the teacher of Mustapha Kamel, of Kaser Amin, and of Saad Zaghloul.

I have not time to speak to you of all the reforms or of all the illustrations of a fruitful epoch. Let me only say that, for a half century, we are witnessing a veritable Spring in all branches of thought. For a long time silent, the strings of the Arabian lute have been plucked by the fingers of Baroudi, Sabrey, Shawky, Hafez Ibrahim, and Moutran, with as beautiful melody as they gave forth, in the time of the Abbasids, when sounded by Ibn-al-Farid, poet of mystical love. Shawky Bey, prince of poets in Egypt, is generally considered as the most pure scion of the great masters of the Classic Age. His art is made up wholly of rhythm, of cadence, and of concordance with the laws of harmony. He knows the music of words and the mysterious science which draws from the unexpected effects so rare and prolonged. I should like to quote from him, who is so subtle and concise a poet, this tale of love in one single verse: "A look—a smile—a greeting—a word—a promise—a meeting."

Hostile critics say that the poems of Shawky depend more on the form than on the thought contained in them; but is this not a vain quarrel, since, in Flaubert's words, "in the form of assembling, the rarity of the elements, and the harmony of the *ensemble,* lies a kind of divine force, something eternal like a principle."

Among the poets of the young generation, one ought to mention Accad and Rami, whose inspiration is found chiefly in the poets of England and France.

In the field of didactic literature, I will cite at random Taha Hussein, author of a thesis on Ibn Khaldun—he was, in the autumn of 1928, a delegate at the Oxford Congress of Orientalists; Lutfy As Sayid, formerly Rector of our University and translator of Aristotle; Mustapha and Ali Abdul Razek, Sabry, Mansur Fahmy, and others, without counting the writers who have preferred to express themselves in English or in French, such as Shafik Ghorbal, author of a work that is highly considered, "The Rise of Mohamed Ali and the Beginning of the Egyptian Question," Daif, joint author with Bonjean, of the novels "Mansour" and "Alazhar," Sarwat Pasha and Wassif Ghali Pasha, who have given us anthologies of Arabic poetry, or Prince Haidar Fazil, a charming poet who has just died.

Greater difficulties are encountered in the domain of dramatic literature. Drama is in effect an unknown thing among Arabs, whose poetry embraced only satire, the elegy, and the epic. In the whole Muslim world, only in Persia is there to be found the seed of religious mystery, the "passion of Karbala." In Egypt, a new tradition had to be inaugurated. The literary language of Egypt, moreover, differs considerably from the spoken language. If one wishes to write in the learned dialect, one will be understood only by the élite; and if, addressing oneself to the crowd, one writes in the vulgar tongue, the refined will make a wry face. Our young authors are hesitating as between these two ways. Shawky Bey has this year written a Cleopatra in verse; Moutran has translated Shakespeare's Othello into classic verse. Over half a century ago Osman Galad, under the name of Shaikh Matlap, published an adaptation of Molière's Tartuffe. Certain of our writers produce short stories and essays, inspired by Dumas fils, Ibsen, and Bernard Shaw. In the front rank of such writers was Muhammad Taimur, whose name I mention reverently, for he has been too soon taken from us.

Finally, in a wholly different way, troops of comedians have played popular pieces, inspired by the spirit of the soil. As Shakespeare with Falstaff, Molière with Scagnarelle and Dandin, or rather, as the authors of farces, moralities, and satires, did at the end of the sixteenth century, they have created truculent and joker popular types, the clownish Kish Kish Bey and the savage robber Ali Kassar.

As for music, difficulties of another kind present themselves. Western instruments are unlike those used in Arab music, which remains purely melodic, untranslatable into European notation. Under the auspices of our King, we have founded a Conservatoire which proposes to discover an adequate musical notation, to enrich Arab music with new instruments, to collect all the old folk-songs, and the themes and rhythms of traditional melodies. This Conservatoire intends to convoke, in two years' time, a Congress at Cairo in which all the musicographers of the East will take part. In this connexion I must mention Baron Rudolphe D'Erlanger, who, at Tunis, is devoting his time and his knowledge to the writing of a great work upon Eastern Music.

Of painting, I will say but one word. It is generally thought that in the Arab world there has been neither painting nor sculpture owing to the religious prohibition of representing the human person. Sir Thomas Arnold has refuted this error in a remarkable work on "Painting in Islam." The Fatimid Sultan, it appears, decorated the walls of their Palaces with frescoes. Wood and stone, moreover, were decorated with figures of dancers, musicians, and fantastic animals. It was only under the Ayoubites that decoration was confined to inanimate geometrical forms. That is why there remains to us scarcely any evidence of Muslim painting in Egypt, and our young painters, if they wish to be inspired by a national tradition, must go back to the mural paintings of the Pharaonic epoch, or at least to the astonishing Coptic frescoes of the fifth and sixth centuries. This is what certain of them are doing, while other prefer to follow the French Impressionist or Cubist School. The problem is a difficult one, and each of them replies to it differently. Their best replies are the works of the painters Naghi and Said and of the sculptor Moukhtar.

(Concluded.)

THE CENTRAL ASIAN "JOURNAL."

The *Journal* of the Central Asian Society (Vol. XVII., Part I.) is particularly notable for its inclusion of topical matter. There are no fewer than three articles upon Palestine, one from the Arab point of view, by Capt. E. N. Bennett, one by Dr. Chaim Weizmann, President of the Zionist Organisation, and yet another by the Arab spokesman now in this country, Jamal Beg Husaini. There is, further, an instructive article upon the question of the Iraq-Najd frontier, which, if not so burning as perhaps it was some months ago, is still an unsolved problem as between Iraq and Najd. Other notable articles are:—"Contrasts of the Indian and Malayan Countryside," by Mr. C. F. Strickland; "Ideas and Ideals of Modern Islam," by Professor D. S. Margoliouth; and "The Place of India in Imperial Defence," by Brig.-General Rowan Robinson. The Review section is up to its usual strong standard.

Sir Gilbert Falkingham Clayton, of The Residency, Baghdad, who died on September 11, aged, 54, left unsettled property in England of the gross value of £1,805, with net personalty £1,130.

About three years ago some postage stamps of a primitive character purporting to emanate from the Yaman, Arabia, were seen in England. They were printed at Sanaa, the capital, in a crude design of two Turkish daggers, crossed with the Arabic inscription, "Government of Yaman by the will of Allah." The two values, namely, 5 bucksha black on orange, and 10 bucksha black on white, were said to be available for inland postage only. Now that the Yaman has been admitted to membership of the Universal Postal Union a general stamp issue of a more ambitious character, says *The Times,* may be looked for at an early date.

PERSONAL AND GENERAL

TO-DAY

January 16, 1930 (New Style).
January 3, 1930 (Old Style).
Shaaban 15, 1348 A.H., of the Muslim Calendar.
Tebet 16, 5690, of the Jekish Calendar.

Princess Cantacuzene left the Ritz Hotel last week for America.

Mr. and Mrs. Rudyard Kipling will leave England on February 6 for Jamaica.

Mr. and Mrs. Robert Mond have left for Egypt, where they will stay about a month.

Lord and Lady Melchett left Southampton on January 10 for South Africa in the Windsor Castle.

Field-Marshal Viscount Allenby and Viscountess Allenby will return to 24, Wetherby Gardens at the beginning of March from India.

Viscount Younger and the Hon. Edward Younger left London on January 9 to join the Morea at Marseilles, on their way to India.

Mr. Kenelm Preedy, who has been representing the Palestine Government before the Commission of Inquiry, returned to London from Jerusalem on January 8.

Lady de L'Isle and Dudley has arrange to leave for Port Sudan this month. She will travel in the P. and O. s.s. Mongolia, which will sail from Tilbury on January 24.

Sir Arthur and Lady Crosfield have left London for the South of France and Greece, and expect to be abroad until March.

Ex-King George of Greece, who left London recently for France, spent a few days in Paris last week before leaving for Florence.

Mr. Peake, the new British Vice-Consul at Port Said, arrived there from Constantinople at the beginning of the New Year, and has taken up his duties.

Sir Alexander and Lady Roger have returned to England after a three months' tour of India, Ceylon, and Egypt.

Lieutenant-Colonel and the Hon. Mrs. Spender-Clay and Miss Spender-Clay have left for Egypt, and will be away for six weeks.

Sir Algernon and Lady Firth will leave 88, St. James's Street to-morrow (Friday), for Port Said. They will sail in the P. and O. s.s. Viceroy of India from Tilbury, and will be away for two months.

Sir Bradford Leslie, Lady Eckstein and Miss Herminie Eckstein were among the passengers in the liner Orduna, which left Liverpool on January 6 for a cruise around South America. They will be away nearly three months.

Dr. Rushbrook Wiliams left London on January 10 to embark in the Morea at Marseilles the following day for Bombay, in order to attend the ensuing session of the Indian Chamber of Princes at Delhi. He expects to be back in London on March 23.

The new Afghan Minister to the Court of St. James, Shah Wali Ali Khan, brother of King Nadir Shah, arrived in London on January 10. Mr. R. R. Maconachie, British Minister-designate to Kabul, a representative of the Foreign Office, members of the Legation staff, and a few personal friends went to Victoria Station to meet the new Minister.

Sir Ian Malcolm will leave London on January 24 for Egypt.

Midhat Yeghen Pasha, the late Egyptian Minister for Foreign Affairs, had the honour of being received at Abdin Palace on New Year's Day, when King Fuad invested him with the Order of Imtiaz.

Sir Robert Vansittart took over on January 7 the post of Permanent Under-Secretary at the Foreign Office, which has been vacated by Sir Ronald Lindsay on his appointment as British Ambassador in Washington.

Jamal Beg al Husaini will speak to the Near and Middle East Association, on January 22, at 8.30 p.m., upon "The Present Position in Palestine." The meeting will be held, by kind permission of Mrs. Arthur McGrath, at 28, Great Cumberland Place, W.1., and Dr. E. H. Griffin will preside.

It is understood that Lewa Russell Pasha, Commandant of the Cairo City Police and head of the Egyptian Drugs Bureau, will represent Egypt at the meeting of the Advisory Commission on Traffic in Opium and Illicit Drugs which is to be held at the Secretariat of the League of Nations on January 20.

In the discussion which followed Mr. H. A. R. Gibb's lecture to the Royal Asiatic Society on "The Origins of Arabic Poetry," on January 9, Professor D. S. Margoliouth, of Oxford, Sir Denison Ross, of the School of Oriental Studies in London, and Professor R. A. Nicholson, of Cambridge, took part.

Az-Zaim Taha Beg al Hashimi, Director-General of Education in Iraq, has been appointed Chief of Staff, Iraq Army, in succession to Raouf Beg al Jaibachi. Taha Beg, who is a brother of Yasin Pasha al Hashimi, the present Minister of Finance, has, according to the *Baghdad Times*, recently completed a useful geography of Iraq for the secondary schools.

Among the public lectures to be delivered at University College, University of London, are some of peculiar interest to students of the East. Yesterday (January 11) Mr. Justice Gad Frumkin, of the Supreme Court of Palestine, lectured on "The Law of Palestine, Past and Present." To-day (Thursday) at 2.30 p.m., an introductory lecture is being given by Miss Margaret A. Murray on "Egyptian History." On January 21, at 5 p.m. the first of a series of four lectures on "An Idealist Philosophy of Life" will be given by Professor S. Radhakrishnan, of Calcutta.

Where to stay in the East

Write for particulars of attractive offer for Advertising Hotels on this page.

BUCHAREST—The Grand Hotel.
CAIRO—The National Hotel.

THE WEEK AT HOME

London, Tuesday Morning.

The Arcadians.

The public has been accustomed to the idea of rivalry existing between the papers of Lord Rothermere and of Lord Beaverbrook: it felt, for instance, that the fight between the *Mail* and the *Express* was a real fight, that the two papers stood for different things, that, in short, competition between the two was genuine. In the last week or so, however, it has seen, either with gratitude or dismay (the real attitude is so difficult to distinguish that it may even be one of amused indifference), these two great newspaper Lords fall on each other's necks. "Empire Free Trade!" says Lord Rothermere to Lord Beaverbrook, "*Et tu in Arcadia vixisti?* Nay, but I myself advocate Protection!" In any case, they make such identification of their respective fiscal policies as enables Lord Rothermere to issue the fiat—perhaps *ukase* or *firman* were the better word, for there appears to be something of Oriental autocracy in the way in which the Rothermere papers are run—that Lord Beaverbrook shall be supported as future Prime Minister of England.

This extraordinary campaign involves, if it does not find its source in the desire for, the utter defeat of the present leader of the Conservative Party, Mr. Stanley Baldwin. Against this unfortunate but singularly unperturbed man the twin "independent" Press is raging furiously, Lord Rothermere employing direct shock tactics, Lord Beaverbrook relying rather on implication. Between them these two magnates are said to control the voice of one third of the English electorate. What, therefore, will happen?

It is obviously impossible to say. Those who are equally opposed to Mr. Baldwin and to the popular ex-Conservative Press profess to regard the activities of the two newspaper supermen as the antics of rustics—*Arcades ambo*. Others state dogmatically that the ideal of Empire Free Trade or of insular Protection is so utterly impossible of realisation that the chance of these papers affecting anything concrete is quite negligible. And yet others feel, while fascinated by the ideals set forth in the newspapers of Imperial development and prosperity, that the campaign could have been and should have been kept free of a personal vendetta.

Naturally, it is all very embarrassing to the Conservative Party. The Labour Party and the Liberal Party (the latter as something distinct from Mr. Lloyd George, by the way) can afford to look on at this campaign from Olympian heights, feeling that, whatever the issue, it is of little immediate interest to them. For the Conservatives, however, it is a heartrending matter. It is notorious that they are disunited on fiscal questions, that many advocate Protection (as Mr. Baldwin advocated it, in 1923, with results disastrous to his Party) that some few are attracted to Lord Beaverbrook's Empire Free Trade Crusade, and that some still hold to the present system of Free Trade plus a little safeguarding as pragmatically the best. It is not for outsiders to offer the Conservatives advice: they alone can resolve their difficulty. Suffice it now to say that, if they were to throw Mr. Baldwin over in favour of hydra-headed monomaniacs, History would not spare them a thousand satires on the lines of "The Lost Leader."

The Cup Ties.

There is not, so far as I know, in any country evidence of such national excitement as that which possesses England between January and April, when the fight for the F. A. Cup is going on. The third round—the round at which the fight really begins—started on Saturday, and there was the usual list of surprises with well-known professional teams being beaten by lesser brethren. Cup-tie football is notoriously unlike other football, so that the ardent local patriot can "back his fancy" without feeling that there is any overwhelming body of expert opinion against him.

This F. A. Cup is, of course, to all intents and purposes a professional affair. Only one amateur side remains in the competition: the Corinthians. But how fine a side! They are incomparably a better team than they were last year against West Ham. Against Millwall on Saturday they showed that age cannot wither nor custom stale their infinite variety. In conditions (fierce rain and a hostile snowstorm) all against their style of play, they played, though opposed to men who fought splendidly, skilfully, and above all, be it noted, sportingly (for "kicking-out tactics," when professional sides are leading, is normal though, of course, abominable practice), a consistently artistic game. If only youth were on their side, if their inside men were a second quicker in shooting, I think they might go far in this Cup, for their skill in making openings is scarcely to be excelled.

I am told that the strongest teams left in the Cup are Aston Villa, Blackburn Rovers, Everton, Derby County, Sheffield United, Sheffield Wednesday, and West Ham: it would be a wonderful achievement and spectacle if the Corinthians were to win their replay with Millwall tomorrow and fight through to meet one of these sides.

The Definition of a Gentleman.

At this season of the year everyone has been in conference—which at least gives the ordinary man reading the reports of conferences the chance to get away from the hodiernal and to get some glimpse of wider horizons. It has fallen to Dean Inge, a man of wide but by no means limitless horizons, to have suggested the topic most eagerly discussed.

He was discussing the characteristics of the English gentleman, and he mentioned in particular as being necessary the moral qualities of "truthfulness, courage, justice, and fair play." This is not a bad survey, though one is quite certain that most people would call many men "gentle" to whom Dean Inge, whose fondest friends would scarcely acquit him of the charge of an impersonal snobbery, would refuse the name.

The truth is that a code of manners, possession of which is often but quite erroneously held to be the hall-mark of a "gentleman," has nothing to do with the matter. "Gentlemen" exist in thousands among those working-classes whom the Dean of St. Paul's in his writings often appears to view with suspicion. Conversely, among those completely possessed of the habit of "correct form" are to be found not an inconsiderable number of disingenuous "cads." The whole thing is a matter of instinct, not one of formulæ.

Book Reviews

PORTUGUESE DOINGS IN MALABAR.

"MALABAR AND THE PORTUGUESE." By K. M. Pannikar, D.B. (Bombay: Taraporevala Sons and Co., Rs. 6, or 12s. 6d.)

Mr. Pannikar is, no doubt, already known to many of our readers as the author of a thoughtful and able book on "The Relations Between the Government of India and the Indian States," which we had recently the pleasure of reviewing in these columns. In that book the author showed that he was a careful student of history and that he had had an eminently fair judgment. Here we find the same qualities displayed, except for a curious unwillingness to allow of an element of greatness in Vasco da Gama.

It is not a pretty story that Mr. Pannikar has to tell when once he has stripped it of the romantic veil to which, as he has no difficulty in showing, it was never entitled. It is a story of greed, cruelty, faithlessness, corruption and indiscipline, the only virtue which remains fairly constant being courage, while the sister virtue of piety became degraded to an extent hardly credible. Nor was the virtue of courage shown on one side only, as our author's account of the exploits of the great Kunjali sea warriors well brings out. On the other hand, most of the vices of the intruders were plentifully evident in the relations between one another of the innumerable princelets of Malabar.

We cannot but feel that Mr. Pannikar would have done himself greater justice and would have produced a picture of even greater interest if he had not confined himself strictly to the relations between the Portuguese and Malabar, but had extended his horizon to the whole of their doings in India. Had he done so, we should have had a clearer view of Portuguese aims and accomplishments. We should also have been better able to appreciate the greatness of some of the individuals who served their country in these parts. He has a real understanding of the stature of Alfonso de Albuquerque and of Duarte Pacheco, but there were others, too, who are omitted because they do not come much into the limited area of his picture, among them the great St. Francis Xavier. It seems to us a defect in an otherwise impartial book that so low a view is taken of the talents of Vasco da Gama. We cannot share Mr. Pannikar's view that he has small claim to credit for his expedition which led to the first Portuguese landing in Malabar, nor do we think that justice is done to his wise intentions with regard to administration when he was sent out, as an old man, to govern—intentions which were unhappily never carried out owing to his death soon after arrival. Apart from this minor criticism, we have no hesitation in saying that Mr. Pannikar has produced a valuable and scholarly book on a subject of great interest.

It is a pity that the publishers' price in England should be almost 50 per cent. more than that charged in India.

C. S-W.

THE NORTH-WEST FRONTIER OF INDIA.

"AFGHAN AND PATHAN." By George B. Scott. (London: The Mitre Press. 8s. net.)

Mr. Scott has written an agreeable and readable book on the tribes of Afghanistan and the North-West Frontier, their geographical distribution, the nature of the lands they inhabit, and their individual tribal characteristics. In doing so, he tells much of their history in relation to ourselves, but the plan of the work results in this history being told in so patchy and discontinuous a manner and with so many repetitions and back-references that the reader is not as much enlightened as he would wish. Particularly is the book deficient in the history of events of the last thirty years or so, the Durand Line being only mentioned *en passant*, and Lord Curzon's far-reaching measures being scarcely treated at all.

Mr. Scott, however, does not claim more for his book than that it is a "sketch." It is the publisher who is to blame for calling it an "authoritative" book by "the greatest living authority on Afghanistan." This is not the only disservice which the publisher has done to the author. The book costs eight shillings. It runs to only 176 pages and is got up in the shape, size, and binding of a cheap reprint of a detective novel. A work of this kind is of no use for reference without an index, but the reader is disgusted to find that the last page of text runs, without the usual end-papers, right on to the cheap board of the inadequate cloth casing. Mr. Scott resigned from the Survey of India in 1891, after a service of 38 years. His great age makes the feat of writing a book of this nature a very creditable achievement. But surely the publisher might have realised that, with a man of his age, it was necessary that every assistance should be given in the troublesome matter of proof-reading. Yet the value of the book is very materially reduced and its meaning constantly obscured by the incredible number of printing errors which are numerous, and often serious, on every page. And it ought to have been simple for the publisher to have the frequent and glaring grammatical errors detected and corrected. We had marked for quotation several very bad instances of this neglect, but it would not be fair to Mr. Scott to reproduce them. Finally, we must protest against the badly printed little sketch map which is all that the reader is given as help, and against the two absurdly badly produced photographs which accompany the text.

Mr. Scott deserved better treatment, and those who care to face the difficulties so needlessly thrown in their way by the producers will find much that is of interest told by a man who clearly knows every inch of the country he describes and is thoroughly acquainted with its inhabitants.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

Palestine's Currency.

An economic landmark in the history of Palestine since the War was the introduction of the new currency early in 1928. A step of this nature in any country must be an operation fraught with some anxiety, and the general conditions made this development something of an experiment. The report of the Palestine Currency Board for the year ended March 31, 1929, covering the first complete year of the working of the new currency, shows that its introduction was marked by complete success. The report testifies to the fact that the currency is now well established, commands complete confidence, and is readily accepted in Palestine and in neighbouring territories. A feature of special interest in the introduction of the currency was the discovery that notes were much preferred to coin. Thus out of a total amount of currency in circulation on March 31, 1929, of £P1,787,664, notes accounted for £P1,585,916. The Board had been prepared for a larger demand for coin, and the consequence of this unforeseen development was that there was a larger reserve of coin in hand than was necessary. It became clear during the year under review that this reserve was too large, and, with a view to avoiding the loss of income on the value of stocks lying idle, consignments of coin were returned to England to be melted down and sold. Of the total thus remitted, £P150,000 was in silver, so that even in Palestine this ill-fated metal has failed to find the outlet that was to be expected. On the other hand, the demand for notes necessitated further supplies. This popularity of a paper currency speaks volumes as to the confidence felt in Palestine in the Administration and the future of the country.

Growing Use of Telephones.

Interesting details are given in the January issue of the *Telegraph and Telephone Journal* of the number of telephones in use in the various countries of the world as at December 31, 1928. As regards the countries of the Near and Middle East, there was in general a fair increase as compared with the figures for the previous year. Thus for Bulgaria the total was 17,091 telephones, as against 15,359; for Greece, 10,186, as against 8,000; for Roumania, 58,398, as against 56,024; for Yugoslavia, 40,000 (estimated), as against 32,801; and for Turkey, 13,927, as against 11,389. The proportion of telephones in Bulgaria is one for every 322 inhabitants, in Greece one for 686, in Roumania one for 291, in Yugoslavia one for 320, and in Turkey one for 167. For the other countries in the regions in question the totals vary considerably. Thus Egypt's figures are estimated at 41,000 as against 39,054, India's total is no more than 53,689 as against 51,925, Iraq's is 1,134 as against 1,087, while Palestine has 3,299 telephones as against 2,945 and Persia 3,827 as against 3,449. The bulk of these telephones are, of course, in the large cities. Thus for Egypt, Cairo's figures are 15,555 and Alexandria's 11,125, in India there are 15,557 telephones in Calcutta and 11,722 in Bombay, while in Roumania Bucharest has 16,355 telephones, and 11,927 of the Turkish telephones are in Constantinople. Compared with the use of the telephone in other countries, the Near and Middle East is as yet a very modest user of this instrument, but it is probable that when the figures for the past year are available they will show a further considerable advance in all or most of the countries mentioned.

The New Egyptian Tariff.

The text of the draft law of the new Egyptian tariff which is to come into operation on February 17, on which date the various commercial conventions which have been denounced will expire, has now been published. As it is understood that January 17 is the last day on which the Egyptian Government is prepared to receive representations as to the desirability of modifying any of the provisions, it is clear that there has not been much time for the various Chambers of Commerce in Egypt to obtain and present any comments from their respective countries. It is believed, however, that this will be met by a declaration that the tariff is only provisional, and that it is subject to such modifications as may be found to be desirable. Under the existing tariff, it may be noted that with few exceptions import duties are levied on an *ad valorem* basis at a general rate of 8 per cent., a lower rate being imposed on firewood and kerosene and a higher rate on timber, refined sugar, benzine, and mineral lubricating oils. The new tariff is partly on a specific and partly on an *ad valorem* basis, *ad valorem* duties being retained in over 400 out of the 897 items comprising the new tariff. Broadly speaking, the *ad valorem* rate is 15 per cent., the specific rate being generally on an equivalent basis. The new tariff will naturally be a more important revenue producer than the old, while, as I have already pointed out, it is also designed to encourage home industries. One definite measure to this end is the provision that export duties should only be levied on eggs, cotton seed, raw cotton, and raw hides and skins, as against the present duty of 1 per cent. *ad valorem* on all exports. One point on which uncertainty still exists is the position with regard to the Sudan in view of the provisions of the Anglo-Egyption Convention of 1899. It is provided under this Convention that the Sudan may not impose higher duties than those levied in Egypt, and if, as is probable, the Sudan does not raise its import duties, that would bring about the possibility that certain goods might enter Egypt through the Sudan at lower prices than through the Egyptian ports, unless a customs barrier is established along the Egypt-Sudan frontier for all goods of foreign origin.

Offer to Nizam's State Railways.

Details have now been issued of the terms of the offer

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathen."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Correspondents all over the World.

The BANK OF ATHENS specialises in the development of Trade between GREECE and the UNITED STATES and GREAT BRITAIN, and in General Banking Business.

London Branch:

22, Fenchurch Street, London, E.C.3

Affiliated Institutions in the United States:

NEW YORK: The Bank of Athens Trust Company, 205, West 33rd
BOSTON: The Athens Bankers' Corporation, 15 Knevland St.

Digitized by Google

made by the Nizam's Government to purchase the lines of H.E.H. the Nizam's Guaranteed State Railways Company on April 1 next instead of January 1, 1934, the expropriation date. The total amount involved is £8,300,000, which it is estimated will give the capital stockholders about £300. As regards the terms of payment, it is proposed that approximately £4,000,000 shall be satisfied by the issue at par by the Government of H.E.H. the Nizam of Five and a-Half per Cent. Debenture stock repayable at par by April 1, 1933, by three equal annual payments charged upon such amount of India Government rupee loans. The effect of this proposal is that holders of the capital stock will receive £100 in cash and £200 in short term debenture stock. The market appears to have viewed the terms favourably, for yesterday the capital stock moved up three points to 280. It may be added that, coming at the present juncture, the offer suggests that an encouraging view is taken as to the ultimate outcome of developments in India, and the confidence thus displayed is likely to communicate itself to the holders of other Indian stocks which have of late come to yield unusually high rates of interest for trustee securities.

Banking Results.

Though the past year has not been a favourable one for trade, the banks are again able to report satisfactory results. Thus the net profit of the Westminster Bank is £2,160,384, as against £2,148,408 for 1928 and £2,132,816 for 1927, the available total being £2,712,580, as against £2,683,471 for 1928 and £2,641,338 for 1927. It is proposed to maintain the dividend at 20 per cent. on the £4 shares and 12½ per cent. on the £1 shares. The bank premises account receives £250,000, against £275,000 last year; £400,000 is placed to the contingent fund, as against £200,000; the officers' pension fund receives £200,000 as before; leaving the carry forward at £506,304, as against £552,195. Lloyds Bank also shows an increase in the net profit, the total being £2,542,084, as against £2,528,143 for 1928 and £2,475,674 for 1927, the available total being £3,032,121, as against £3,013,923 for 1928 and £3,009,666 for 1927. The dividends are maintained at 16⅔ per cent. on the "A" shares and at 5 per cent. on the "B" shares, £300,000 is again allocated to the staff superannuation fund, while £250,000 is again placed to premises account, leaving £508,235 to be carried forward, as against £490,037.

COMMENTATOR.

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

ECONOMIC CONDITIONS IN GREECE.

The report of Hambros Bank Ltd., for the week ended January 10, gives the following details of economic developments in Greece:—

The Roumanian Government has notified the Greek Government that the Commerical Treaty between the two countries of March 28, 1924, which after extensions comes to an end on March 1, 1930, must be considered after that date as terminated. It is hoped that the negotiations which are now proceeding between the two countries for a new Commercial Treaty will have been satisfactorily concluded by that time so as to enable a new Commercial Treaty to be signed before March 1.

As a result of negotiations between the Government and the Association of Limited Liability Companies of Greece, the former has introduced into the Chamber of Deputies a Bill reducing by 20 per cent. taxation on the net profits of limited liability companies, and from 9 per cent. to 5 per cent. taxes on dividends paid on Debentures. This measure has been considered necessary owing to the difficult conditions which the Greek industries are experiencing, and in order to encourage the influx of Greek capital which lies abroad. It is expected that considerable advantages will result to the joint stock companies from the above measures. The Government is contemplating the introduction of company legislation with a view to offering more adequate guarantees to the shareholders as regards their investments in limited liability companies. If this measure passes, it is expected that balance-sheets will appear in a uniform manner.

The silk cocoons produced during 1929 were 2,526,685 kilos of the value of 126,334,250 drs., as against 2,604,882 kilos produced during 1928.

From the figures so far ascertained, exports of currants to the United Kingdom as regards the 1929-30 season which started in September last are 2,035 tons behind the figures for the corresponding period of the previous year. Exports, on the other hand, to the U.S.A., Holland, and Germany show an increase of 372 tons, 2,469 tons, and 192 tons respectively.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended December 20 amounted to £E11,855, making the total from April 1 £E251,618, as compared with £E235,752 for the same period of the previous twelve months.

Mr. J. Allingham Taylor, of Fort Dunlop, has just been appointed regional sales manager for the Irish Free State by the Dunlop Rubber Co. (Ireland), Ltd. Mr. Taylor has had a long and varied experience with other Dunlop companies in India, the North of England, and the Midlands.

The production of crude oil in Roumania in Novcember amounted to 417,205 metric tons, as against 435,050 metric tons in the previous month and 393,032 metric tons in November, 1928. The output of the principal producing districts in November was as follows (in metric tons):—Prahova, 309,484; Dambovitza, 93,915; Buzau, 6,790; Bacau, 7,017.

The area under tobacco in Roumania at present averages between 70,000 and 75,000 acres, and the yield some 16 to 20 million kilograms. In the pre-War period of 1911-1914 the area did not average more than 25,000 acres. While before the War the exports averaged 1,100,000 kilograms per annum, of the value of about £52,000, the exports have now grown to about 1,500,000 kilograms, valued at £125,000

IMPROVING POSITION IN YUGOSLAVIA.

The Tripartite Wheat Agreement.

BY JOE MANTUANI.

The autumn of 1929 saw three factors introduced into the Yugoslav commercial world, viz., the creation of an Institute for Foreign Trade, the wheat trade agreement, and the stabilisation of the dinar. All three events are of first-class importance for the home and foreign trade of Yugoslavia, and are typical of the progress of consolidation within the State.

The Institute for Foreign Trade is of the greatest value not only to our export firms, but by virtue of the scope of its activities—which are precisely indicated by law—it is also, in fact, the most important trade office within the State as far as importers are concerned. It will constitute the chief office in the country for the collection and compilation of statistics, and it is its business to study from a national standpoint the relations existing between Yugoslav industry and foreign countries.

The Institute will obtain its information from the local Chambers of Commerce and other commercial corporations within the State, from diplomatic and consular representatives abroad, from the Customs and revenue authorities, and from all institutions dealing with traffic and trade. It will issue reports gratis, furnish printed matter and propagandist material, and act as an intermediary for the establishment of business relations abroad. The Institute is planned on thoroughly up-to-date lines, and in its foreign propaganda it will make use not only of printed matter and posters, but also of films, broadcasting, and the other latest aids to advertisement. It will have a Press-cutting department for collecting notices, articles and booklets published at home or abroad dealing with trade and commerce.

Yugoslavia's exports are very important; their value is almost equal to that of the imports. In view of the fact that there is scarcely one industry fully developed in Yugoslavia this is conclusive proof of the exceptional wealth of a country which has to import all its machinery. Yugoslavia's chief export commodities are corn and cereal products, fresh and dried fruits, various kinds of seeds, tobacco, timber, minerals in the raw and semi-finished state, wool, and silk.

Among Yugoslavia's neighbours, Italy is her best customer (cereals, coal, timber, minerals); next comes Austria, then Czechoslovakia, Hungary, and then other countries for smaller amounts. As I have pointed out in a former article, there is a large margin for an increase in Yugoslavia's productive capacity, and great efforts are being made to enlarge her output. The Agrarian Bank, the simplification of the administration, and direct State subsidies are all helping to raise the standard of farming and cattle-breeding, and are having a good influence upon the mineral and provision industries. For an increase in output it is necessary to develop foreign markets, and this is where the Institute for Foreign Trade comes in. It goes without saying that the Institute will also play a large part in Yugoslavia's import trade, and that foreign dealers will obtain the necessary information and contact more easily through the Institute than through private connections as heretofore.

Bound up with Yugoslavia's foreign trade in general is the second factor I mentioned, viz., the wheat agreement between Yugoslavia, Hungary, and Roumania. This, too, is a sign of the times. By a simple agreement, a wheat trust has been established at Budapest in the interests of the three countries in Europe which are the richest in wheat. By the Peace Treaties the Banat, Bachka, and Baranya were divided between the three States after the War. Now, after ten years, we see the first signs of serious co-operation. The wheat producers have combined, and have established a joint trust—an earnest of consolidation and a sincere desire on the part of business men to co-operate in the peaceful development of trade. The mischievous and wasteful competition between Novi Sad, Budapest and Bucharest is at last ended, and the three countries which are geographically and economically linked have combined in a united front. This was bound to come, yet it was scarcely to be expected so soon.

The third factor I referred to is the stabilisation of the dinar. As a matter of fact, the dinar is, and has been for some time, one of the most stable currencies on the European Exchange, not to be compared with the currencies which experienced inflation. It really stabilised itself, thanks to the almost unvarying output of a State which was not obliged to struggle for large loans or against foreign currencies. Yugoslavia's output is not industrial, and therefore is far more independent of labour than that of an industrial country. Of course one felt that money was scarce, and it is still scarce, for that matter. In other words, really large profits are hard to come by. On the other hand, the unemployment problem practically does not exist, and the question of banks and bank subsidies is almost unknown. That a few banks should have failed through speculation is only natural, and a consequence of the world-wide crisis on the money market since the War. These speculations were made in foreign currencies; the dinar stood at a low, but steady, rate. Its stabilisation is an act which in this case confirms the existing state of affairs—an official notice that the dinar is stable. That it really is so we realise on the exchange and from the fact that Yugoslav merchants can get equally long and favourable credits for payments in dinars as for payments in dollars or sterling.

If we regard these three new factors from a strictly practical point of view, we obtain the following picture. The State is beginning to back up business with the object of increasing productivity and output and bringing about

EGYPTIAN STATE RAILWAYS

A pleasure trip to Egypt, the Land of Eternal Sunshine, is now within the reach of nearly everybody.

Combined Steamship, Railway, Sleeping, Restaurant and Pullman Car Tickets, from Marseilles to Assuan and return, including accommodation at the Leading Hotels, are available from 1st November, 1929, to 31st January 1930, as under :—

1st Class throughout.
A. 10 days sea-passage & 18 days stay in Egypt...L. Stg.: 72.10.
B. 10 days sea-passage & 25 days stay in Egypt...L. Stg.: 81.10.

Digitized by Google

a definitely favourable trade balance. The influence exercised by this State support is already making itself felt among business men who are concluding contracts and joining trusts abroad. During the autumn of 1929 much was done for the commercial progress and economic consolidation of the Balkans. We note that the British syndicates which own mines in Yugoslavia are increasing their capital. So perhaps we shall see a still closer contact between Great Britain and the largest of the Balkan States.

CEMENT FACTORIES IN DALMATIA.

Dalmatia possesses five cement factories, some of which have an annual capacity of 20,000 truckloads (says the *Belgrade Economic Review*). All of them are well situated. Right behind them lie large deposits of first-class cement marl, which needs simply to be conveyed to the factory and there baked and ground to be a finished product. In front of each of them stretches the sea coast, so that the transport of the cement is both simple and cheap. They do not require railways at all, except for the cement which goes to the interior of the country.

Being thus situated, the Dalmatian factories export the greater part of their cement to other countries, naturally by sea, to all the states of the Mediterranean, the whole of Africa, a large part of Asia, while a large quantity goes also to America. Two years ago Dalmatia exported three million cwt. of cement, and last year four millions. It seems likely that this year's output will be almost five millions. All the factories are working at full capacity. Some of them are hardly able to execute all their orders. Orders for a few truckloads can be delivered only in the course of some months, because all the machinery is working for export orders.

With such favourable conditions all of the factories have undertaken extension work, and to such an extent that by next year their capacity will be double the present amount. In addition there are projects for the erection of new factories. Thus there is every likelihood that in the near future Dalmatia may export as much as ten million metric cwt. of cement. With the doubling or even tripling of the output of cement some of the surplus labour in Dalmatia will find employment. The greater output of cement should be seen as early as next year, since some of the factories have already ensured the sale of their increase.

An agreement has been signed between the Turkish Government and the Deutsche Lufthansa for an air-mail service between Berlin and Angora. The concession is for twenty years, and the service is to be opened in the spring.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Dried and Condensed Milk.—The Egyptian Department of Public Health invites tenders for the supply of 885 kilos. of dried milk for infants, and 8,000 kilos. of unsweetened condensed milk. March 15. (D.O.T.)

Bridge over Nile at Kasr-el-Nil. Cairo.—The date for the opening of tenders has been postponed from February 1 to March 1.

Miscellaneous Equipment.—The Egyptian Department of Public Health invites tenders for the supply of miscellaneous equipment required for the Central Stores, Cairo, during the year 1930-1931. The schedule of stores covers a wide range of goods, and includes enamelled ware, earthenware and glassware; knives, forks, spoons, and shaving accessories; kitchen utensils (aluminium hollow-ware, etc.), hardware (including iron steam piping, fire extinguishers, etc.), brushes and brooms; soap and miscellaneous consumable stores, e.g., matches, candles, bathbricks, metal polish, blue for washing, indiarubber and canvas hose, etc. March 6. (D.O.T.)

Construction of Swing Bridge.—The Ministry of Communications, Main Roads and Bridges Department, invites tenders for the construction of a swing bridge over the canal El Wadi at Zagazig. February 3.

INDIA.

Mild Steel Bars.—The Indian Stores Department, New Delhi, invites tenders for the supply and delivery of mild steel bars for concrete reinforcement of gate and road bridge arches. January 21. (D.O.T.)

Distribution Piping, etc.—The Indian Stores Department invites tenders for the supply of distribution piping, specials, valves, and accessories for the Water Supply Scheme at Jaipur. January 22. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Glasgow, January 21; Manchester, January 28; Birkenhead, February 4); s.s. Tuscania for Bombay (Glasgow, January 31; Birkenhead, February 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Calcutta (Birkenhead, January 21); s.s. Malakand for Calcutta (Birkenhead, January 30).

Bibby Line.—S.s. Warwickshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, January 29).

British India Line.—S.s. Mulbera for Colombo, Madras, and Calcutta (London, January 25); s.s. Hatimura for Bombay (London, January 25).

Cunard Line.—S.s. Bosnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Corfu, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Gruz, and Ancona if sufficient inducement (Liverpool, January 18; Swansea, January 21) s.s. Brescia for Gibraltar, Melilla, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, January 23; Swansea, January 24; Liverpool, January 25); s.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, February 15; Swansea, February 18).

Johnston Line.—S.s. Jessmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, January 18); s.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (the first steamer of the season for the Danube) (Liverpool, February 1).

P. and O. Line.—S.s. Nagoya for Calcutta (London, January 31); s.s. Kaisar-i-Hind for Bombay, (London, January 31).

Prince Line.—S.s. Egyptian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, January 18); s.s. Stuart Prince for Malta, Alexandria, Jaffa, Haifa, Bevrout, Tripoli, Limassol, Larnaca, Famagusta, Mersin, and Alexandretta (London, January 23).

Ellerman and Papayanni Lines.—S.s. Andalusian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 18); s.s. Destro for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, January 25); s.s. Lisbon for Gibraltar*, Algiers*, Oran*, Malta, Patras, Syra*, Smyrna, and Constantinople (Liverpool, February 1; Swansea*, February 1); s.s. Oporto for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, February 1; Swansea, February 6; A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, February 13; s.s. Lesbian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, February 15; Swansea*, February 15). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 14.

The Stock Exchange has passed a much brighter week, having made up its mind in the early part that the Bank Rate would be reduced to 4½ per cent. on Thursday. Business showed signs of expansion and the general tone was more hopeful than for some time past, and when "no change" was announced there was only a slight easing in prices, the general opinion being, in view of the monetary situation, that the reduction was only postponed until the following Thursday. The week's activity has mainly centred upon stocks in the investment list, but Home Rails were bought on dividend prospects and various industrial shares were in demand. There was also an appreciable improvement in prices in the Kaffir Circus, a subject to which further reference is made below.

Kaffirs Revive.

A much-improved tone is noticeable in the South African gold mining share market, although business has not yet shown any great increase. Kaffirs have been quiet for some time past and it is not unlikely that the depression has been carried too far. Investment in any mining concern is speculative, but compared with, say, tin or copper, the demand for gold is practically stable, and making allowance for the natural depreciation of a mine, dividends are better assured than in almost any other branch of mining. Kaffirs, therefore, have attractions as a somewhat speculative investment. Shareholders must, however, remember that a mine is a depreciating asset and set aside a portion of the dividends they may receive to build up a fund to replace the capital loss they will one day have to face. At the same time, too, dividends will decline as the mine approaches exhaustion.

The estimated "life" is some guide to the allowances which should be made for this depreciation, but these estimates must be considered more or less tentative, Among mines with a fairly long estimated life, Sub Nigel (estimated life 34 years) returns £12 per cent. and Springs (30 years) the same. The speculativeness of a gold mining investment is lessened, of course, in the case of the securities of the leading finance companies, whose eggs are not all in one basket. Rand Selection ordinary return £9 per cent., and Union Corporation, which has important interests outside this industry, £7 17s. per cent.

Nitrate Prospects.

One of the important industries whose products play a large part in international trade and which is still struggling to adjust itself to post-War conditions is the natural nitrate industry of Chile. Like so many other industries it is suffering from the effects of over-production, but unlike many other industries it is making big efforts to restore equilibrium, efforts now meeting with a fair amount of success. The world cannot consume all the nitrogen fertilizers, natural or synthetic, now being produced, and the natural mineral kind, coming almost entirely from Chile, is faced with two difficulties. In the first place and immediately, it is up against the competition of synthetic feritilizers, and secondly, and in the long run, it is up against the fact that no matter how cheap may be the fertilizers offered to the farmers they do not want more than a certain amount.

The net result is that prices have declined considerably, and many works in South America which were only just paying their way are now in difficulty, hence the nitrate crisis. Both as to production and as to sales the problem is being tackled by restriction. At the selling end, sales agreements are being made between Chilean natural and the European synthetic producers in order to limit competition. In Chile itself, largely under government guidance, the non-profit making officinas are being shut down. Such a step is also occurring with the fusion of Lagunas Nitrate, to be liquidated, with Lagunas Syndicate. While such fusions may not always be agreeable to all shareholders, on some basis or another they are essential if any shareholders are to benefit from a recovery in the course of time.

Linoleum Profits.

Despite the advent of new flooring materials, linoleum still holds the ground in most English homes. One of the largest firms in the linoleum industry is Michael Nair and Greenwich, which has almost £2½ million invested in subsidiary companies. It is mainly from these concerns which it controls that the parent company derives its profits, amounting from this source to about £231,000 for the year ended December 31, 1929. There is this year £275,866 available for distribution as against £264,559 twelve months ago, and the ordinary dividend for the whole year is maintained at 12½ per cent., and £56,037 is carried forward as against £44,730 brought in.

Another important firm in the linoleum business is Barry Ostlere and Shepherd which has a capital of £350,000 in 6 per cent. cumulative preference shares of £10 and £650,000 in ordinary £1 shares and there is about £252,000 in 4½ per cent. debentures outstanding. The company has works in Scotland and also controls an important French linoleum company. The profits have been fairly well maintained and for the last four years an ordinary dividend of 25 per cent. has been paid. Last year's balance-sheet shows liquid assets of about £900,000 and the reserve fund is £630,000. A merger which is being contemplated should add to the attractiveness of the company's ordinary shares which now yield about £5 18s. per cent.

P. AND O. AND TANGIER.

The P. and O. Company has received advices from Messrs. M. H. Bland and Co., of Gibraltar, that although some contraction in the Bland Line sailings will, until further notice, occur, the passenger services to and from Tangier connecting at Gibraltar with the outward and homeward P. and O. mail steamers on Tuesdays and Fridays respectively will be maintained as heretofore.

It is understood that the South Indian Railway Company is considering an important programme of extensions to the east coast system, involving the construction of nearly 300 miles of new railway lines on the metre-gauge system.

Modern Water Purification.

Notable in the field of the filtration and general purification of towns' water supply on the very large scale is the new pumping station at Kempton Park of the Metropolitan Water Board, officially opened by the Minister of Health on October 24 last. This has cost £164,000, and consists of two very large, vertical, triple-expansion, high-lift, steam pumping engines, each of which develops 1,000 pump horse power, supplied by Messrs. Worthington-Simpson, Ltd., and the largest installation of the rapid gravity filters in Great Britain by the Paterson Engineering Company, Ltd., consisting of 24 units for primary filtration, each with a standard maximum capacity of 2,000,000 gallons per 24 hours, that is 48,000,000 gallons for the complete installation.

These filters are now used as "primary" units allowing the stationary sand filters to be operated at about four times the former throughput as secondary filters, since the water is already almost entirely clear from the primary filters. The two "Worthington-Simpson" triple expansion, single acting pumps are of the high-lift type, with 29 in. diameter high-pressure cylinders, 54 in. intermediate pressure cylinders, and 86 in. low pressure cylinders, with two flywheels each 17 ft. diameter and weighing 32 tons. Also the height from the base of the pump to the top of the valve bonnet is 62 ft., and there is included a modern boiler plant of 6 water tube boilers, operating at 200 lb. per square inch pressure.

This equipment will either pump 12,000,000 gallons per day to the Fortis Green or Bishops Wood Reservoirs against a head of 400 ft. or 16,000,000 gallons at 300 ft., the head varying according to the conditions. Secondly, it is available for pumping instead 19,000,000 gallons of water per day against a head of 200 ft. to the Cricklewood Reservoirs.

Each of the 24 units for rapid gravity filtration supplied by the Paterson Engineering Company, Ltd., as stated, consists of a reinforced concrete tank 26 ft. by 16 ft. by 11 ft. 9 in. deep, with a filtration area of 416 square feet composed of a 27 in. bed of Leighton Buzzard sand, the filtering speed being 100-200 gallons per square foot per hour, corresponding to a maximum of about 2,000,000 gallons per day per unit. Also the whole plant is arranged in four batteries of six units each, equipped with automatic inlet control, while there is further provided beneath the primary filters four sedimentation tanks for treating the wash water on the most effective principles, this being returned to the plant, one for each group of six filters.

The system of cleaning by compressed air as used on this installation at Kempton Park is, of course, well-known, being in use for large filtration plants all over the world, the same sand lasting for years, but noteworthy also is the method used of compressing the air for operating the filters, which has been invented by Mr. Andrew Marshall of the Metropolitan Water Board. Essentially the principle consists in the use of a very large overhead tank, 66 ft. from the ground, holding 120,000 gallons of filtered water, while 24 ft. below this are two steel plate cylinders 60 ft. long and 7 ft. diameter, each dealing with 12 filter units. The air is then compressed as required by allowing water from the tank to flow into one of the cylinders, giving a pressure of about 7 lb. per square inch in the pipe lines leading to the filters.

ATTWATER & SONS, PRESTON, England

LARGER CYPRUS IMPORTS.

The report on Cyprus trade for November shows that, compared with November, 1928, there was an increase of £32,931 in the value of imports, the total being £178,120, and of £4,447 in the value of exports, which totalled £116,188. Imports were £37,278 in excess of the five years' average for the month, but exports were £1,644 less. For the eleven months January-November the following are the values of imports and exports, as compared with the same period last year.

	Imports.	Exports.
1929	£1,864,532 ...	£1,516,296
1928	£1,634,076 ...	£1,321,100
Increase ...	£230,456 ...	£195,196

The principal increases in imports were :—Cotton goods, by £1,805; iron and steel goods, by £5,620; machinery, by £10,702; petrol, by £4,666; and timber, by £10,309. There were decreases in the import of flour, sacks, soap, and sugar.

Exports showing an increased value were asbestos, £7,121; pyrites, £6,105; cotton, £4,120; mules and oxen, £1,422; and wool, £4,783. There was a decrease of £12,296 in the value of carobs. Other decreases were: Potatoes, by £2,948; raisins, by £2,919; and tobacco, by £1,476.

During the month 26 steamers called at Larnaca, 31 at Limassol, and 22 at Famagusta, as against an average of 27, 28, and 20 respectively.

The Egyptian State Railways have given contracts for turret lathes to S. W. Ward and Co., Ltd., Sheffield; for a milling machine to J. Archdale and Co., Birmingham; for automatic lathes to A. Herbert and Co., Ltd., Coventry; for boring machines to G. Richards and Co., Broadheath, near Manchester; and for slotting machines to Wm. Muir and Co., Ltd., Manchester.

The textile industry is becoming of increasing importance in Greece (says an American Consular report). The area devoted to cotton during 1928 amounted to about 38,000 acres, with a yield of 11,000 metric tons of seed cotton. Washed wool produced during 1928 amounted to 3,000 metric tons. Textile enterprises in Greece in 1920 numbered 463, with a total of 14,247 workers, which increased to 552 in 1928, employing 35,029 persons, with a total capital investment of about £4,620,000. Production of the woollen and cotton mills in 1928 reached a value of about £4,852,000, a gain of 149 per cent. over the value of £1,942,200 in 1903.

M. Rist, the financial adviser to the Bank of Roumania, in his report dealing with the third quarter of 1929, says that the Treasury receipts marked an increase on those for the corresponding quarter of 1928, and for the first half of the year were 1,544 million lei in excess of the revenue for the first six months of 1928. This improvement was due largely to the excellent harvest which had likewise contributed to increasing the exchange reserves of the National Bank by 45 million dollars. The bank note circulation had been augmented by 3,500 million lei, thus facilitating commercial transactions. A favourable turn had taken place in respect of foreign trade.

Motors and Motoring.

(By Our Motoring Correspondent)

The Motor in the Middle East.

The development of motor transport and the use of motors generally in Syria, Iraq and Persia has been much more rapid than is, perhaps realised by the ordinary public, and the United States are turning their attention with renewed energy to those markets with a view to seeing how great an opening for trade they may present. The track across the Syrian Desert between the Mediterranean and Baghdad and thence to Teheran is now largely used by motors, and about 3,000 passenger-carrying vehicles per annum leave Baghdad on the average, either westward to the sea or eastward to Teheran. About a quarter of that number leave Teheran for the westward trip. Only a small proportion of the traffic takes the route between Aleppo and Baghdad by way of Deir-ez-Zor; in 1927 over 100 motors used that route, but in 1928 the number had fallen to about 50. This road follows the Euphrates, by way of Fellujah, Ramadi, Hit, Abu Kamal and Deir-ez-Zor, and there are some very bad patches of road by the river. The journey takes some four days, even with a fast car, and there are no hotels available. The main route is, of course, from Ramadi to Damascus *via* the Rutbah Wells, where there is accommodation for travellers.

Recently obtained statistics show that over 1,400 motors used this route in 1927 and about 1,700 in 1928, somewhere between 8,000 and 10,000 travellers per annum being carried. At first a number of Muhammadan pilgrims used the route, but later their number fell off to some extent. Of course, the air route between Basrah and Egypt, run by Imperial Airways, has had a marked effect on the motor services.

There have been a few modifications and improvements in the route and the road surfaces of late, and now the vehicles using the Baghdad-Damascus route cross the Euphrates at Fellujah and go thence along the bank to Ramadi, where the Royal Air Force have an important station. Here any spares or supplies needed can be taken in, after which the vehicles drive due west acros open desert land for 300 miles to the oasis at Rutbah Wells. In view of the danger which any interference with the wells would bring about, a fort has been built there, together with a rest-house for travellers. The station is in wireless communication with the coast at Syria and also with Iraq; steps have been taken to improve and conserve the water supply and the considered opinion of Europeans and Americans who have visited the post is that it compares favourably as regards comforts with the average hotel.

Between the river and Rutbah Wells the desert surface is far better for motoring than would be expected; it is as hard in many places as a macadam road, though here and there it is very much broken up. One who has recently completed the journey tells me that the worst places are where dried-up watercourses cross the line, as these are sometimes steep and invariably are rough. But on this (the western) side of the Rutbah oasis the going is quite good; the surface is smooth and hard, and medium-powered cars can proceed at any pace they please, whilst even six-wheelers can maintain a steady 40 to 45 m.p.h. for hours. Unfortunately this ideal surface is only available in the late spring and summer; in winter the ground is apt to be wet and cut up. To safeguard mail travellers against possible molestation, a police, or rather military, escort is provided for the zone 150 miles out from Damascus. As regards the time taken for the journey it is only necessary to say that the six-wheel vehicles of the Nairn Eastern Transport Service, which are Safeways, fitted with 100 h.p. engines, make the crossing in 26 hours, except when the road conditions are unfavourable.

From Baghdad to various destinations in Persia about 750 vehicles only are running regularly per annum as yet, and this total has shown a slight decrease of late. Probably the decrease is due to the new train service between Baghdad and Khanakin which enables certain customs obstacles to be overcome. The prospects for the motor trade in these parts of the Middle East are good, as can be seen when it is pointed out that goods can be taken by vessel and motor from England to Baghdad in from 8 to 10 days as against over five weeks by the old route via Bombay.

The Cost of Motoring.

Will motoring cost more during 1930 than it did last year? is a question that a good many users of light cars are asking themselves, according to a journal which caters specially for their interests. Personally, I am inclined to think that there will be little if any change, except so far as fuel costs are concerned. Petrol will almost certainly be cheaper from now until about March, but after that date it will most likely rise again. There will be no change, or at any rate not an appreciable one, in the price of sundries as oil, tyres, accessories, spares, and so on, but there seems no doubt that the insurance rates will have to rise, simply through the bad and careless driving of many motorists, and if the compulsory third party risk insurance is passed the insurance rates will be certain to rise appreciably. Driving may also be dearer from another reason: the penalties for dangerous driving are to be enormously enhanced, and it is as yet somewhat of a moot point as to what constitutes dangerous driving. Some motorists appear to think that "driving dangerously" means zigzagging about the pavement and dashing round generally. As a matter of fact, so far from that being the case, a number of drivers to-day do things which, after the new Act passes, will render them liable to very heavy

fines. It is dangerous driving, for instance, to pass a tram on the inside when people might—they do not have to be doing it—be alighting; it is dangerous driving when, seeing a pedestrian about to step into the road, one gives a hoot and keeps on without slowing up. In fact, the new Act will have to be treated very seriously indeed by the motorist. One or two of the motoring papers and organisations are trying to work up an agitation to ensure that all charges of dangerous driving shall be heard before a jury. There is no chance of that being made part of the law; trial before a magistrate is cheaper for the country and quite as satisfactory to the motorist. Heaven help the poor motorist tried for dangerous driving before a jury if in the district one of our gay, blythe and carefree drivers has recently run over someone and lightly gone his way without stopping. Of course, the idea is that on a jury nowadays there are certain to be a few motorists who might be induced to stick up for the accused motorist. But in view of the rapid increase in street accidents the safest thing will surely be for all motoring charges to be tried before a magistrate.

Outlook for Light Cars.

From a trade point of view, the outlook for light cars for 1930 is, I hear, promising. Within the past few weeks two new makes of light car have been introduced, and there are at present well-substantiated stories of other light cars coming on the market. As far as I can see there is no likelihood of the light car losing, proportionately, its popularity. There is going to be a gradual falling-off in manufacture; motoring is at the moment losing its popularity, and whether it will regain it depends largely on the way in which motorists use the road; at present the behaviour of many is driving other would-be road users back to the railways. But there are no grounds for assuming that the light car industry will slump more than any other; the heavy powered "luxury" car will probably feel the draught first.

Motor Cycle Speeds.

In the Road Traffic Bill at present before Parliament, and which will probably be passed much as it stands, is a clause which, if passed, will stop all trials of speed between motor cycles except in private grounds. "It would seem that this term is sufficiently flexible to forbid trials' organisers from having timed sections or stopping and re-starting tests on hills. It would be difficult to argue," says *Motor Cycling*, "that such tests are not a trial of speed between motor vehicles, and it is most sincerely to be hoped that the clause will be the subject of amendment before the Act is passed."

We do not agree with our contemporary in this matter. There is no reason why any trials of the kind mentioned should take place on public roads. The whole thing is a matter for motor cycle makers, and why should the general public assist those makers by providing grounds for them on which they may make their trials? There is no single ground on which the practice of holding manufacturers' trials on public roads can be justified, and if it be argued that these trials are "private" trials, the answer is simply this: In that case, whom do they benefit? Is it to the owner's interest to know that his machine will not climb Kop or Arms Hills or the Old Wych cutting, or is it to the manufacturer's? Who is it who, as an immediate result of the failure, improves this or that part so that there will be no similar failure at the next trial? Who is it advises the public to buy such and such a machine because it "Was first, second, and fourth in the Big Hill climb"? Is it the owner, or is it the maker? The latter, of course. Very well, then; let him pay for his own testing grounds.

Still Room on British Roads.

Mr. S. F. Edge has just comfirmed in print a view I have long held, that on our main roads there is still plenty of room for motorists. I have always felt, and have repeated in and out of season, that our motorists cause traffic congestion by the curiously unthinking way in which they drive. No sooner does a driver catch sight of someone in front of him than he begins to speed up in order to catch him, and, as soon as the first man realises he is being chased, he quickens up also. If the two pass or are sighted by another car, that one also speeds up and possibly a fourth joins in the exciting race, every driver determined to show the others what his car will do. The three or four, or it may be five or six, tear along in each other's dust for miles, and each driver is prepared to swear on oath that the road was crowded with cars. As a matter of fact, after the contestants have passed, a quarter or half an hour might elapse before another car came along. Mr. Edge says that during a West of England tour he found ample room on the roads, and he enumerates the number of cars he met: from Salisbury to Exeter he met six, from Winchester to Salisbury three, and so on. Yes, there is plenty of room on English roads; the trouble is that a small majority of motorists do not know how to use the roads they have got, and so make them more or less dangerous for other people.

ADVERTISING IN
"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

CYPRUS AGRICULTURE.

The report on Cyprus crops for December gives the following particulars:—

Towards the end of November and during the first fortnight of December abundant rains fell in all areas. In many places the wetness of the soil has delayed planting wheat, but farmers, however, are not neglecting an opportunity, and many are planting on the lighter soils until conditions improve for working on the heavier land. The market is rather poor and shows no sign of improvement. Prices are 5s. to 6s. per bushel.

Sowing of barley is practically over. The market is still poor. Prices are 2s. to 2s. 4d. per bushel. The planting of oats just beginning.

The harvesting of the new crop of potatoes is completed. The production was not up to expectation. A certain amount of damage has been done by the recent heavy rains. Prices are £6 to £6 10s. per ton.

Cotton ginning is in full progress. The market is stagnant.

In spite of heavy rains the prospects for the orange crop are good. Over 300,000 oranges have already been shipped from Famagusta, mainly to Greece and Egypt, 74,600 going to England, 10,000 to Austria, and 4,528 to France. Prices are 30s. to 35s. per 1,000.

Shipments of lemons are chiefly to the United Kingdom. Prices are 16s. to 17s. per 1,000.

The tobacco trade is rather slow, and there is no improvement of prices.

The gathering of olives is now over. There has been a good crop. The market price of olive oil is falling.

Near East Markets

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended January 4.

Grain.—There has been no movement on the market during the week under review, as, apart from the interruption of business by the holidays, the interest shown by consuming markets has been negligible, and prices offered from abroad have ruled accordingly. Stocks are beginning to accumulate in appreciable quantities at Sulina, where there are now lighters containing over 100,000 tons of grain, a good proportion of which has been sent down in order to meet forward sales effected some time back, and for which the shippers concerned have taken a good part of the necessary tonnage to carry their January shipments. Very few parcels have come on the market, but such as were available have been placed at from 11s. 6d. to 12s. for usual Continental destinations; a parcel, 600 tons, to complete a steamer in Sulina Roads has been booked at 11s. Some interest is shown for Danish ports; a 4,000 tonner has been fixed for three ports, Denmark from Sulina at 18s. full terms, and further tonnage required. Other fixtures from Sulina for second half January include two Roumanian steamers, the Siretul, 6,200 tons for Avonmouth at 12s. net, and the Jiul 5,500 tons for U.K. at a rate not yet ascertained. The position at Constantza has been rather quiet, but there is some demand for space for U.K., shipment January. Rates for the Continent are nominally about 9s. 6d. to 10s. Tonnage fixed recently from Constantza and/or Bulgaria for the Continent has obtained from 12s. 1½d. to 12s. 6d. full terms with the option of Sulina at 1s. over these rates.

Timber.—No fresh business is in view at present, and the season may be regarded as practically closed. A revival of business from the Danube before the spring will depend on weather conditions, and if it is seen that the Danube remains free of ice for a considerable period no doubt shipments will gradually be resumed.

Weather and Crops.—The weather has continued to be calm, mild and misty. In the lower Danube region the temperature has oscillated between freezing point and 3 or 4 degrees above, and elsewhere the variations have not been much greater. Fog on the Danube was very persistent during the greater part of the week and considerably interfered with navigation, but conditions in this respect have been much better since Thursday midday. There is no sign of ice danger so far, but the present low level of the water and reduced current in the river would favour quick formation of ice in case a severe frost should set in.

A summary of the results of the last harvest may be opportune at the turn of the year. The final Government statistics are not yet to hand but the following figures, quoted from the *Argus* of January 1, are from an authoritative source:—

	Hectares cultivated	Yield in tons	Kgs. per hectare	SURPLUS over home consumption Tons	Value £
Wheat ...	2,644,000	2,800,000	1050	240,000	1,680,000,000
Barley ...	2,000,000	3,040,000	1520	2,280,000	9,576,000,000
Oats ...	1,200,000	1,360,000	1134	560,000	2,128,000,000
Rye ...	310,000	340,000	1097	130,000	780,000,000
Maize ...	4,790,000	6,080,000	1270	2,680,000	13,400,000,000
	10,944,000	13,620,000		5,890,000	27,564,000,000

The surplus may of course be somewhat reduced owing to low prices encouraging home consumption in the shape of cattle and poultry feed.

Sulina.—The Bar depth remains at 24 feet, although no dredging was possible during the past week. The river minimum also remains 24 feet up to Braila although the water level up-river has fallen considerably.

Constantza.—This week about 8,500 tons of grain arrived from the interior, and about 15,500 tons were shipped for Hamburg-Weser. Sixteen vessels loaded about 52,915 tons petroleum products and two took oil fuel for bunkers.

Bulgarian Report.

Bourgas, December 28; Grain.—This week about 6,000 tons of cereals were shipped, mostly for Antwerp and Rotterdam. Owing to continued weakness of grain markets, very few fresh transactions have been concluded and there are only about 1,800-2,000 tons in the market for Antwerp and Rotterdam, first half January shipment. There was frost on Sunday and Monday, the lowest temperature registered having been 4 degrees Centigrade below zero, though in the northern part of the country lower temperatures have been reported. It has since turned mild all over the country, and the weather in general has been overcast and moist. The condition of the autmn sowings continues to be excellent.

JAFFA ORANGE SHIPMENTS.

The Empire Marketing Board reports that the arrivals of Jaffa oranges in this country for the week ended January 4 were the heaviest in one week since the commencement of the present season and totalled over 140,000 boxes divided between London (16,140), Liverpool (27,580), Manchester (29,600), Glasgow (28,770), and Cardiff (11,700). It was expected that during the past week arrivals at United Kingdom ports would total some 96,000 boxes. The Board's correspondents at Jaffa reported, under date December 26, that the supply of tonnage was still short of the demand and that shippers were having their quantities reduced. The Liners' January schedule was however being augmented, which, it was considered, would relieve the situation.

Total direct shipments to the United Kindom up to January 4, amounted to approximately 570,000 boxes as compared with 438,000 boxes at the corresponding date last year. Total direct shipments to the Continent amounted to about 115,000 boxes, as compared with about 100,000 boxes shipped up to the corresponding date last year. Transhipments to the United Kingdom via Port Said up to December 28 totalled some 88,750 boxes, as compared with about 57,500 boxes at the corresponding date last season.

The traffic receipts of the Suez Canal for 1929 are estimated by the company as 1,115,920,000 francs, as compared with 1,086,440,000 francs in 1928.

The Burma Railways are to undertake the building of the first bridge across the River Irrawaddy, from Sagaing to Amarapura. The bridge, which is to be completed in 1933, will be 4,000 ft. long and consist of nine spans of 350 ft., one of 250 ft., and six spans of 60 ft.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 8:—

Egyptian Futures.

Sakel Contract.—Steady markets with a slightly hardening tendency have been the general experience during the past week, a fair number of small speculative buying orders, influenced no doubt by reports of a curtailed Sakel acreage for next season, readily absorbing the rather restricted quantity of contracts on offer. The first January tender in Alexandria was 97,500 kantars, hardly as large as anticipated, which cotton has presumably been taken by the Government. January and March in the overseas market have recently widened to around 1 dollar per kantar, and this may have the effect of inducing holders to transfer. The chief obstacle to a sustained rise in values continues to be found in the local trade situation; producers of fine counts are finding difficulty in placing even their present restricted output, and this is reflected in the retail character of their purchases of actual. Another factor that is having a "bearish" effect on sentiment is the approaching marketing period of the Sudan Sakel crop. The prospective supply from this quarter, when added to existing stocks of fine cottons both here and in Egypt, makes a very heavy statistical position, and this is bound to keep values down to the neighbourhood of the Government's limits until general trading conditions become more satisfactory. In the meantime, our market will probably continue to show moderate fluctuations in the neighbourhood of the ruling level, and on this account does not appear to offer any special inducements as a speculative medium.

Upper Contract.—We have experienced a series of quiet markets in this contract during the past week, and no particular fresh features have developed. Switching of hedges from near to more distant positions has resulted in the current month closing in to 13 points, and some belated shorts, rather than pay this, have tendered their cotton. Trade interests are apparently accepting the dockets, which appear a reasonable proposition when compared with overseas values. The demand from local spinners has again been moderate, and, disappointed by this, some holders have shown an inclination to ease their basis. We still consider that the shorter-stapled Egyptian cottons are not unreasonably priced, and on this account they should participate freely when the trade demand revives.

Egyptian Spot.

Conditions on the spot have remained quiet, and although, under the surface, there appears to be a fair amount of inquiry going on, results have been discouraging. Sales have averaged 200 bales daily, and quotations, particularly of Sakel, have displayed a slight hardening tendency.

Sakels have been in poor request; even the lower and inferior qualities have been neglected. Offers of the better types (Good and above) received from Egypt have appeared to be on an attractive basis, and it is surprising that more headway has not been made with cotton for forward delivery.

Uppers.—The inquiry for the pass to 25 on cotton has not been so marked, but at from 50 to 70 on spinners have shown more interest. There appears to be a general tendency to raise qualities.

Pilion has been in very moderate request, chiefly at about 100 to 125 on January Upper. Results have been negligible.

Nahda, Maarad, Fouadi, etc.—More interest has been shown in these "outside" growths, but sales have been on a very limited scale. When the general inquiry improves it is probable that these growths will meet with a better offtake.

Sudan Sakel has, this week, suffered from neglect.

Tokar Sakel.—Some inquiry has been noted here and there, but results have been nil.

C.i.f. business has been very quiet in spite of attractive offers from Egypt.

Forwardings.—Last week these were returned as 4,833 bales Egyptian and 710 bales Sudan.

Spot Sales.—These have been estimated at 1,200 bales Egyptian and 100 bales Sudan Sakel. Quotations of Sakel have been advanced 20 points; those of Upper 6 points. Pilion is unchanged. F.G.F. Sakel to-day, 14.35d. F.G.F. Upper to-day, 10.52d. F.G.F. Pilion to-day, 11.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 2, state:—During the week under review the futures market has been open on four days only, on account of the New Year holidays; business has been more active and the tone slightly better. The week's summary of price movements is as follows:—Sakellaridis: January, 27.02 dollars, 0.21 dollars down; March, 27.99 dollars, 0.14 dollars up; May, 28.60 dollars, 0.37 dollars up; July, 28.82 dollars, 0.24 dollars up; November N.C., 29.05 dollars, 0.65 dollars up. Ashmouni: February, 19.34 dollars, 0.0 dollars up; April, 19.84 dollars, 0.17 dollars up; June, 20.17 dollars, 0.32 dollars up; August, 20.27 dollars, 0.27 dollars up; October N.C., 20.55 dollars, 0.50 dollars up.

Sakel.—A slightly firmer tone has prevailed, due to an advance of a few points in New York and to a somewhat more active demand from consuming centres. To-morrow is the first tender day of January, and the market is expecting a considerable quantity to be delivered, despite the fact that the discount of January under March amounted to almost 1 dollar at to-day's session. Supplies, both in Alexandria and up-country, are still very ample; industrial conditions abroad do not show any sign of an early improvement, and under these circumstances it seems to us difficult at present to see hope for a change in the actual trend of the market.

The Sakel/Uppers straddle (January/February) this week stands at 768 points, against 796 points last week and 1,458 points at this time last year.

Uppers.—We have had more active days and the tone has been steadier. Lancashire and the Continent have placed some orders, and this has created a better impression in the market. October new crop has been in favour with the speculative element, as has November new crop Sakel, and for the same reasons as mentioned above. We are of the opinion that our market will continue to move round about present levels until there is an improvement in American, for, as we stated in one of our recent reports, our market of itself is at present incapable of initiating any bullish movement on account of the heaviness of the statistical position.

The Ashmouni/American straddle (February/January) this week stands at 228 points, against 226 points last week and 306 points at this time last year.

The week's receipts amount to 178,717 kantars, against exports 147,671 kantars; the stock in Alexandria stands at 3,253,944 kantars.

The official figures of arrivals and exports for the period September 1 to December 25 are as follows:—Arrivals: Sakellaridis, 1,399,816 kantars; Ashmouni and Zagora, 2,807,713 kantars; Pilion, 211,511 kantars; Various, 328,624 kantars; Scarto, 33,026 kantars; total, 4,780,690 kantars. Exports: Sakellaridis, 843,288 kantars; Ashmouni and Zagora, 1,650,409 kantars; Pilion, 108,374 kantars; Various, 122,560 kantars; total, 2,724,631 kantars.

Spot.—Owing to the Christmas and New Year holidays, we have only had four sessions during the week under review. The total turnover amounts to about 12,300 bales, of which we estimate 5,600 bales Sakellaridis, 5,800 bales Ashmouni and Zagora, 300 bales Pilion, and 600 bales other varieties.

Sakellaridis.—There has been some inquiry for the better grades, but premiums offered are by no means high. The medium grades still constitute the bulk of the turnover. Spot diffeences show a rather easier tendency all round.

Ashmouni and Zagora.—Rather more business has been done in these varieties, and for the medium grades spot differences show a slightly harder tendency. Good style in the top grades is not too easy to find, and full premiums have to be paid.

Pilion.—Only a small business done.

Other Varieties.—Maarad has been most in favour. Some business has been registered in Nahda and Fouadi.

Up-country.—There is absolutely no business passing; the factories are all well stocked with cotton, but there is little encouragement to hasten ginning, in view of the poor demand on the spot market at Minet el Bassal.

Net new life business completed by the Royal Exchange Assurance during 1929 amounted to £2,277,646.

The announcement is made by the Greek Government of an adjudication, to take effect on March 15, for the building of two colonies near Athens, called New Smyrna and New Kallipoli.

NEWS FROM ALL SOURCES.

The production of crude oil by the British Burmah Petroleum Company for December amounted to 38,627 barrels.

For the third year in succession the Dunlop ball has been officially chosen for the challenge round of the Davis Cup.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for December was 70,150 tons.

Mr. Philip Arthur Birley has been elected a director of the Manchester Ship Canal Company, to fill the vacancy caused by the death of Mr. Ernest Latimer.

It is reported that estimates totalling 50,000,000 roubles have been examined and passed by the Mining and Fuel Bureau of the U.S.S.R. for the construction of a third pipe line from Baku to Batoum.

W. H. Allen, Sons, and Co., of Bedford, have received a contract for ten steam turbines and condensing plants for driving hot oil centrifugal pumps for the new oil cracking plant for the Anglo-Persian Oil Company, Ltd., at Abadan.

The traffic receipts of the South Indian Railway Company for the week ended December 14 amounted to Rs.12,93,854, making the total from April 1 Rs.4,72,25,066, as compared with Rs. 4,34,17,462 for the corresponding period of the previous year.

Why not visit

The SUDAN

this Winter?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

The Cyprus Memorial.

The reply of the Secretary of State for the Colonies to the Memorial presented by the Greek elected members of the Legislative Council of Cyprus, and pressed by a Delegation to this country last December, leaves little to be desired from the point of view of thoroughness. The various matters raised by the memorialists are dealt with, and the opportunity is utilized to set out—more convincingly, perhaps, than previously—the British side of the question. As the Greek elected members counted upon a careful and patient consideration of their case, it is to be hoped that they will extend the same courtesy to Lord Passfield's reply. It is well that there should have been this exchange of views. Until a Labour Government had passed judgment on the subject, no Cypriot could persuade himself to believe that a change in the British attitude towards Cyprus was out of the question. It is now seen that political changes in Great Britain make no difference in British policy on this subject. "My answer on this point," writes Lord Passfield, "can be only the same as that which successive Secretaries of State have in the past returned to similar demands, namely, that His Majesty's Government are unable to accede to it. This subject, in their view, is definitely closed and cannot profitably be further discussed." In the face of this unequivocal reply, what is to be the future policy of those who have constituted themselves the leaders in Cyprus of the agitation for union with Greece? Will they continue their past tactics by subordinating all other considerations to the demand for union, or will they accept the responsibilities of their position and enter upon a stage of co-operation with the Cyprus Government for the advancement of the Island's interests?

Great Britain and Cyprus.

In addition to urging the request for union with Greece the Cypriot memorialists, "in order that it might not be wrongly assumed that the Island is in other respects prosperous," undertook "to acquaint the Imperial Government with the fact that Cyprus has been neglected and that its present position is far from satisfactory." It is to the various points raised in this part of the Memorial that the Secretary of State for the Colonies directs his reply, which deserves careful consideration in the Island. On the subject of responsible government, the conclusion arrived at, "not without regret"— it will be very generally recognised why such an expression, used by the present Government, is sincere—is that the time has not yet come when it would be to the general advantage of the people of Cyprus to make a trial of a constitutional experiment in this direction. One reason given is that "those institutions already established in the Island which are subject in varying degrees to popular control cannot be said to have attained that reasonable measure of efficiency which should be looked for before any extension of the principle is approved." If they wish, the memorialists are well able to supply concrete instances of practices to which the Reply refers in general terms. On other points the Secretary of State is more definite. Not only does he enter into a spirited defence of the Cyprus Tribute, which has had few champions in the past, but he also shrewdly reminds the people of Cyprus that union with Greece would saddle the Island with the payment of an annual sum substantially more than the gross amount of Tribute as its share of the Ottoman Public Debt on the same basis as the other territories detached from Turkey as a result of the War. Far from accepting the contention that British officials have been paid too highly ("exorbitant salaries" was the expression in the Memorial), he accuses the members of the Legislative Council of a policy of false economy in refusing to pay adequate salaries for the type of man that the interests of the Island require. Nor does he think that the picture of Cyprus drawn by the memorialists was a fair one, and he proceeds to enumerate some of the improvements that Cyprus has experienced under fifty years of British rule. It is, however, common ground that, whether more might have been done in the past or not, a great deal remains to be accomplished now. To this end co-operation between the people of the Island and the Government is essential; but so far such co-operation as there may have been has been largely stultified by the action of those who have subordinated the material improvement of the Island to political ends.

The Wailing Wall.

The hesitation of the Permanent Mandates Commission over the proposal by the British Government for the establishment of a special international Commission for the

Digitized by Google

purpose of giving a definite ruling upon what is and what is not permissible at the Wailing Wall in Jerusalem, may be forgotten now that the Council of the League has accepted this proposal. Last week the Council agreed that three members (all non-British) of unquestioned impartiality should be appointed to "decide and determine the respective rights and claims of Jews and Muslims at the Wailing Wall": these members are to be chosen by Great Britain, and they have, of course, to be approved by the Council. It is worth noting that the resolution received the assent of everyone but the Muslim delegate. Mirza Muhammad Ali Khan Faroughi explained that he could neither give nor withhold the Persian Government's support, but he did not wish to stand in the way of an early settlement of this difficulty. A solution may not be easy to arrive at, and it is certain that, whatever decision is reached, firm administration will be necessary to enforce it. For this affair of the Wailing Wall has been magnified out of all proportion. The claims of the respective parties are well enough known, as, indeed, are the legal rights. Incidentally, the use of the word "rights" is to be deplored, for nothing is a right, for practical purposes, that is not accepted or acquiesced in by all parties concerned. It may even be that "rights," in the juridical sense, are opposed to common-sense, that they even contradict the proprieties of the situation. What is to be hoped, however, is that the Report of the Commission of Inquiry will so assuage acerbities that the authoritative decision on the Wailing Wall will be accepted with better grace. After all, the Wall was made so much of because of its symbolism: it came to signify racial prestige more than anything else. The Inquiry Commission's Report, by setting the whole Palestine problem, and particularly the respective hopes of Arabs and Jews in Palestine, in proper perspective, should help also to reduce the matter of the Wailing Wall to its correct religious dimensions.

An Arab Delegation to London.

That the attitude of the Arab population of Palestine has become more conciliatory as a result of the conduct of the Inquiry Commission in Palestine has been very obvious, and it is largely owing to the hopes inspired of a Report favourable to the Arabs that it has been decided to send to London an Arab deputation, to arrive about the time of the publication of the Report. That this buoyant attitude of the Arabs has had its counterpart in the comparative depression of the Zionists need scarcely be said. Without attempting to anticipate any of the findings of the Inquiry Commission, one may reflect, with certain Zionists, whether it was good policy so to have attacked the Administration of Palestine as, willy-nilly, to drive the Administration and the Arabs more closely together. What has been done, however, cannot be undone. Yet it may be remarked that, strong as the Arabs may think their case before the Commission to have been made out, they are revealing a lamentable weakness in the internal quarrels now being made public over the *personnel* of the delegation to London. So long as any hint exists of the putting of "local" interests before "national" interests, so long as there is evidence of the continuance of family jealousy, though the "national" cause be at stake, the Arabs lay themselves open to discomfiture by strategists well versed in the science of keeping sores open. If the Arabs of Palestine were to take a leaf out of the book of King Ibn Saoud and King Faisal, who are, in the higher interests of peace in Arabia, putting aside memories of rivalry, family disputes, and so forth, they would be in a considerably stronger position. Not half the attention will be given by the British public to an Arab delegation, if it be thought to have been composed as the result of bargaining or intrigue, which would be given to one known to be fully representative of what is best in the Arab life of Palestine. The British public is sick and tired of political manœuvrings, wire-pullings, and jerrymandering in Palestine: give it the broad issue of major justice in Palestine and it will give a broad answer. Petty squabbles hold no interest for it, but tend, rather, to make it think the squabblers unworthy.

Education in Abyssinia.

The report that discussions are once more taking place at Addis Ababa on the subject of the construction of a dam at Lake Tana supplies a further indication that gradually, at a pace dictated by the peculiar circumstances of the country, King Taffari is making headway with his policy for the advancement of Abyssinia. Aeroplanes have already reached the capital, and three Belgian officers have been engaged to train the nucleus of an Abyssinian army. As in the case of other countries, these and similar improvements can acquire little national significance until the general standard of intelligence in the country has been raised to the level necessary to enable the people as a whole to profit by them. For this reason more importance attaches, from a practical point of view, to the steps now being taken by King Taffari to introduce an organised system of education into Abyssinia. In no other sphere is it so essential to work out a comprehensive scheme calculated to meet the needs of the people, and to carry it into practice consistently. Abyssinia is fortunate in having the experience of the whole world to draw upon, and could easily evolve an educational system that could be relied upon to attain the best results in the shortest time. The first step has to be to train suitable teachers and it must be presumed that King Taffari had this aim in view in opening schools in the capital and securing foreign instructors. One of the handicaps from which Abyssinia suffers is suspicion of foreign countries, and it tries to get over this difficulty by distributing its favours among a number of them, for fear, apparently, that too much reliance on one might introduce complications with others. This method may work well in the case of concessions, but is not to be recommended for every sphere of public activities. Thus, it is just as unwise to try to introduce half-a-dozen educational systems into the country as it would be to have the army trained simultaneously by officers of half-a-dozen different European nationalities. All the Great Powers may be supposed to have evolved in each case the system of education that suits the genius of the nation. It would, therefore, be much better for the Abyssinians to decide which system they consider to be best suited to their own national genius and to adopt that one, than to expose their scholars to the conflicting rivalries of teachers of different nationalities in one and the same school, as is being done at present.

Michail Strezoff, who at one time took a prominent part in the work of the Macedonian Revolutionary Committee, was murdered in a café in Sofia on January 14.

THURSDAY, JANUARY 23, 1930.

PEACE IN ARABIA?

To talk of peace in Arabia may make cynics smile, and it must be admitted that even a slight acquaintance with the history of "the Arab race" must include a knowledge of its fissiparous tendencies. The individualistic nature of the Arab is, indeed, at once one of his virtues and one of his vices. Even the Prophet Muhammad could but temporarily subdue the tribal instincts of the men of Arabia. Yet everything is comparative, and in welcoming the announcement of a meeting, in the neutral zone between Iraq and Najd, of King Ibn Saoud with King Faisal, as a possible harbinger of real peace in Northern Arabia, we need not banish recollection of recent dynastic rivalries and of tribal ebullitions in Arabia. For it is a remarkable and most gratifying development of a situation which was at best problematical that these two monarchs of the Sharifian and Saoudi Houses should be coming together in friendly contact: it implies a degree of statesmanship, of forbearance, and of genuine good will which must hearten even those who are impressed more by manifestations of division among the Arabs than of unity. That the unruly elements in Najd are now finally conquered appears, happily, to be certain, and there is every indication that, so long as King Ibn Saoud lives, at any rate, the tribes of Najd and of the Hijaz will be under control. It is supremely fortunate that the highest authorities in Iraq should so quickly be recognising the changed facts of the case, and in particular the fact that King Ibn Saoud's carefully prepared and executed campaign against the marauders under Faisal al Duwish was almost as much an Iraqi interest as it was in the interests of the Wahhabi Government. Realism has obviously pervaded political circles in Baghdad; memories of old scores have been put aside in favour of the all-important issue of the establishment of peace between Najd and Iraq, and, as a probable consequence, between the Wahhabi State and Trans-Jordan also. We repeat, both Arab monarchs are to be congratulated on their sagacity.

Let us turn back for a moment to see with what means King Ibn Saoud has accomplished the discomfiture of the rebel elements. It appears to have been very cleverly done, not only in the military but also in the political sense. Towards the end of last year the Wahhabi leader collected his loyal forces from all quarters, so that the victorious troops were not certain picked tribes acting against dissident tribes, but a representative "national" army marching in the name of their King on a band of discredited marauders who had incurred righteous wrath, both religiously and politically. Given correct conduct by the neighbouring States of Iraq and Kuwait, the dispersion of the dissidents was an inevitability. Fate, which had more than once unexpectedly relieved them from condign punishment, now left no loop-hole. The part played by non-Wahhabi forces which were as much concerned as King Ibn Saoud in the capture of Faisal al Duwish and his followers is as yet not clear, but it seems certain that they acted, so far as they properly could, in loyal co-operation with the forces representing law and order in Najd. One fact in this campaign is peculiarly noteworthy. It was organisation alone which defeated the rebels. So far as is known, no modern weapons, except, perhaps, motor cars, were employed against the recalcitrant *Badawin*. In view of the widely entertained belief that the simmering movement against the central authority in Najd could never be finally scotched until King Ibn Saoud availed himself of aeroplanes and armoured cars, and of the assumption that he recently engaged the services of British airmen and aeroplanes mainly for the purpose of restoring order in his eastern dominions, it is particularly interesting to note the fact that these "inventions of Shaitan," as they would have seemed to the rebels, were not necessary for the purposes of victory. This being so, it should be all the easier for King Ibn Saoud, whose authority in his State must now be fully restored, to maintain order in future. It may be argued, admittedly, that but for the use of armoured cars and aeroplanes on the Iraq side of the frontier, Faisal al Duwish and his band might have avoided capture, and no one would dream of denying that the mechanical vehicle has immense advantages over the immemorial camel for controlling desert areas. Still, the fact remains that the Wahhabi King for his part appears to have achieved his main purpose without the help of modern science. Now is to come the settling up.

It is, of course, far too early to speculate upon the results of this royal Iraqi-Wahhabi conference. In all probability points will have arisen which may require very delicate handling before differences of outlook are overcome. One problem in particular presents itself as a possible source of dispute, namely, the presence in Iraq of large numbers of men who once inhabited, or were subject to Najd. So far as is known, King Ibn Saoud has never renounced, for example, his claim over the refugee Shammar in Iraq: whether to this claim there will now be added another one concerning the rebel Najdis who recently took refuge in Iraq in fear of his advancing might has not yet been made public. The problem turns, presumably, on whether the rebels were guilty of a political or a criminal offence. It seems at least possible, again, that the vexed question of the police posts at Busaiya and Sulman, which provided ostensibly the origin of the dispute between the Najdi recalcitrants and King Ibn Saoud, may come again into prominence. Of late, this particular question has tended more and more to drop out of the limelight, in proportion to the growth of the Wahhabi King's determination not to allow anyone else than himself to make State decisions. Its re-emergence, however, need cause no despair of an amicable settlement between the two Kings. With both the monarchs on or near the actual spot about which so much ink has been shed, it may be that a much saner, truer, and altogether less excited view of this "forts problem" will be entertained. Speculation on the Wahhabi leader's first-hand estimate of the construction of posts in the desert is obviously useless, but at least he may become convinced that it was in no spirit of hostility to the Najd State that they were erected, but rather with a view to preserving the peace of the desert—an aim identical with that with which the two monarchs are coming together. In this matter alone the forthcoming conference can be productive of untold good. That the desert must be controlled will surely be an axiom equally entertained by the two Kings; on one side one method of control may be preferred, on another side, another; but so long as the intention remains constant no lasting friction should result. In fine, a unique occasion presents itself for the ordinary Arab—for the ordinary Briton also—to rid himself of a Sharifian view or of a Wahhabi view of things. Peace is the one thing needful in Arabia, and the hope of all right-minded men must be that moderate counsels will prevail as between two men whose friendship Great Britain is happy enough to possess. It will be an historic meeting, this royal encounter in the desert, and, we trust, will produce historic results.

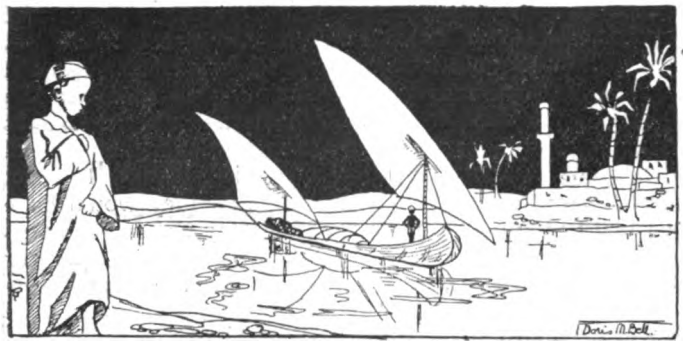
*The Near and Middle East

From Our Own Correspondents.



EGYPT.

Cairo, January 11.

The Residency.

The High Commissioner and Lady Loraine returned to Cairo on January 8. Their trip to the Sudan lasted exactly eighteen days. Sir Percy did much of his travelling by air.

Parliament.

Egypt has resumed parliamentary life after a cessation of just eighteen months. The ceremony of reopening Parliament was performed this morning by King Fuad, who, escorted by his picturesque bodyguard and accompanied by the Prime Minister, Mustapha Nahas Pasha, drove in state from Abdin Palace through the city. There was, in addition to the members of the two Houses, a representative gathering in the Chamber of Deputies where the inauguration took place. The High Commissioner, accompanied by Mr. and Mrs. Hoare and by his staff, occupied the usual special box; near by was the Diplomatic Corps, headed by the *doyen*, M. Gaillard. The proceedings, both in the streets and within the Chamber, presented all the attractive characteristics associated with official and State ceremonies in this country. The day passed off without any incident, if one excepts a small demonstration outside the offices of *Al Ahram*, and was celebrated by all and sundry as a holiday.

The Speech from the Throne.

The Speech from the Throne, prepared by the Nahas Cabinet, was considerably longer than usual, and there was very little in it that was really new to those who were at all in touch with Wafd thought, for it records in the main the intention to proceed with economic and social development schemes which have already been mooted, and some of which have been partly put into execution.

It confirms that legislation will be introduced to protect the Constitution, i.e., make it more difficult for another *coup d'état* like that of July 1928, and it contains a direct reference to the treaty proposals— the first occasion that, in any official document associated with it, the Wafd has recognised that such a thing existed. It is noteworthy that, perhaps not unnaturally, no reference is made to the channel through which these proposals have reached the present Cabinet, and that they are dealt with at the end of the Speech which, in spite of the pious wishes expressed on the desirability of an accord with Great Britain, still leaves open the attitude of the Wafd towards these particular proposals.

Of the other matters mentioned in the speech the only notable ones are the re-arming of the Egyptian Army, which, as this is provided for in the proposed treaty, will presumably be effected in direct consultation with the British authorities, if the question is undertaken before the negotiations contemplated are concluded; the irrigation programme, in which it is significant to note that, although the Nag Hamadi barrage and the heightening of the Aswan Dam are mentioned, there is no reference whatever to works in the Sudan, and particularly to the Gebel Aulia dam, which was postponed by the Adly Cabinet for the express purpose of giving Parliament an opportunity of considering the project anew; the creation of a Court of Cassation in the native Tribunals, and legislation to reorganise the Provincial Councils.

In the matter of economic reform there is the creation of an Agricultural Bank, in which the Government will presumably place some of its Agricultural Reserves, and the protection of small landowners against expropriation, though exactly what is intended is not quite clear. The programme the Wafd has traced for itself is an ambitious one, even more so than that of its predecessor, and the manner in which it tackles the gigantic task before it will be followed with great, and in the case of real development work sympathetic, interest.

New Year Honours.

That Mr. Cecil Campbell would receive some honour was generally anticipated in view of the part he had played in the negotiations which resulted in the treaty proposals handed to Mohamed Mahmoud Pasha last summer. The C.B.E., which the Consul-General in Alexandria, Mr. Heathcote Smith, has received, is a thoroughly well earned recognition of valuable work done not only in the general cause of the British community but also in that of British education in Egypt. It is, indeed, a recognised fact that but for his energy and personality Alexandria would never have secured the funds for the new Boys' School which is already filling such a want, nor would the School itself, once the funds had been obtained, have been started so rapidly or so successfully had it not been for Mr. Heathcote Smith's perserverance, tact and patience.

Absent Guest Dinner.

For the seventh year in succession the Absent Guest Dinner has been held here at the Y.M.C.A. It consisted as usual of lentil soup, bread and cheese and water, the balance of the proceeds being devoted to giving a meal simultaneously to some 350 destitute men in London. It was an interesting fact that Lord Lloyd, who had presided during the past three years at the Cairo meal this year presided at its London counterpart. The Chair here was taken by Brigadier-General Dobbie, in the unavoidable absence in the Sudan of the High Commissioner, and a representative gathering, including the American and Swedish Ministers, assembled around him. Speeches were made by the Chairman, Mr. Hume, the President of the Committee of Management, Mr. R. C. Martin and the Hon. Cecil Campbell. The dinner ended with an excellent amateur concert.

CYPRUS.

Nicosia, January 7.

Return of the Governor.

Sir Ronald Storrs has returned and resumed his duties, having been on leave from December 12 to January 1. Lady Storrs has been to Palestine to visit a daughter, and will return shortly. The Colonial Secretary, Mr. Heniker Heaton, has acted for the Governor during his absence. Great discontent continues to be expressed by the Greek community over a recent law which, passed by the Greek Members of Council, transfers to the Governor —for very good reasons—powers, including the appointment of teachers, which were hitherto exercised by native committees, subject to approval of a Board of Education —all Cypriots.

Rats and Locusts.

Locusts should be hatching out shortly, and it is presumed that the principal method of destruction will be, as last year, by spraying the young insects with a solution of arsenite of soda. While Palestine and Trans-Jordan are in some dread of renewed trouble, it is hoped that the pest will have diminished further in the island.

In regard to the scourge of rats, which is held to be increasing, the Agricultural Department appears to have come to the following conclusions, with expert advice. The purchase of rats' tails to be discontinued. The pest to be fought by means of poisoned foods; an energetic campaign to be undertaken under the direct control of the Agricultural Department. The assistance of the whole community would be required, and it may be necessary to make this assistance obligatory, as in some countries, including—to some extent—England. The Supplement to the *Cyprus Gazette* of December 27 gives a very interesting note on the subject. In the last ten years the number of rats' tails purchased by the Government has been nearly 1,608,677, or an average of about 160,867 a year. The cost has been rather above £1,000 a month—a considerable time must elapse before results of any value can be obtained, having regard to local conditions.

A Near East Exhibition.

It has been definitely decided that "a Cyprus and Near East Exhibition," of agricultural and industrial produce, shall be held at Nicosia in 1931, and that the Cyprus Government shall contribute a sum not exceeding £2,500 towards the cost. The proposal was unanimously agreed to by the Legislative Council.

The Bishop of Papho.

Jacobus, Bishop of Papho, died suddenly of syncope on Christmas Day. He came to Cyprus in 1910, and with him came Meletios as Bishop of Kition, who afterwards during a distinguished career, became for a time Œcumenical Patriarch at Constantinople, Metropolitan of Athens, and Chief of the Greek Orthodox Church in the United States, and is now Patriarch of Alexandria. Many of all classes were present at the funeral, including Mr. Gunnis, A.D.C. to the Governor. The Archbishop has, through the Press, expressed his appreciation, and

Cyprus Trade.

Returns show an increase for October 1929 over 1928 for imports of £7,003; while exports decreased by £14,306. For ten months, January to October, the returns were:—

	1928 £		1929 £
Imports ...	1,488,887	...	1,400,108
Exports ...	1,686,412	...	1,209,359
Surplus ...	197,525	Deficit	190,749

General News.

Mr. H. H. Trusted, Attorney-General, has been made a member of the Executive Council.

Football is played energetically on many parts of the island. There are now many Greek clubs.

The Agricultural outlook is good in general; if all goes well, the carob crop should be very abundant.

Another Greek, Mr. Skoufarides, of Nicosia, has been called to the Bar in London.

YUGOSLAVIA

Belgrade, January 16.

At the Turn of the Year.

The people of Belgrade, always willing to take every possible opportunity for celebrations, have now made a definite custom of celebrating two New Years, as well as two Christmases. This year the so-called Catholic New Year was most enthusiastically kept, every café was packed, and special programmes were everywhere arranged. But the Orthodox New Year Eve, January 13, was even more boisterously celebrated and few were the Belgradians who got to bed before five or six in the morning. The most impressive of all the many functions of this holiday season was the Court Ball, held on the anniversary of Queen Mary's birthday, January 9, which is also celebrated as St. Stephen's *Slava* and the third day of the Orthodox Christmas. There were over 1,600 guests, including all the members of the Diplomatic Corps, and of the Government, and many representatives of the Services and of Belgrade society. It was noticed that King Alexander, who led the first kolo, the Serbian national dance, with the Queen, was looking very much better than he did a year ago.

Provincial Deputations.

From December 17, the anniversary of the King's birthday, until the 11th of this month, Belgrade was disturbed every few days by the arrival of deputations from the various Banovine, come to pay homage to the King. The first to arrive were those from the Savska (Croatian) and Primorska (Maritime) Banovine. These were followed on December 25 by delegations from the Zetska (Montenegrin), Vrbaska, and Drinska Banovine. Most striking of all the visitors were the Montenegrins, tall, handsome men in magnificent national costumes. Some of the peasants from the Danubian Banovina, who arrived on January 13, were also very picturesque in the embroidered leather dress of the Banat and Batchka districts. All the delegations were received by the King himself in the Old Palace, and it was astonishing how many of them were personally known to him from the War and from his many journeys through the south of the country.

The Resignation of a Ban.

It became known to-day that M. Daka Popovitch, the Danubian Ban, has handed his resignation to General Pera Zhivkovitch with the explanation that he finds himself unable to agree with the competent authorities on certain matters of extreme importance to the Danubian Banovina. In his letter M. Popovitch assured the King and Government of his continued support of the régime. His resignation has been accepted. It is believed in some quarters that this is a first step in the direction of changing those Bans who have not achieved the progress expected of them, and that it will be followed soon by extensive changes in the Cabinet on the occasion of the filling of the post left vacant by the death of M. Stepan Savkovitch, Minister of Public Works, which occurred a few days ago in a sanatorium in Vienna. It is rumoured that two Croats, well-known members of the party formerly led by M. Trumbitch, will be invited to join the Government.

This evening it is announced that M. Radoslav Dunyitch, a lawyer from Kraguyevatz, well known for having the largest library in the interior of pre-War Serbia and for his abstention from active intervention in political life, has been appointed Ban of the Danubian Banovina. It is to be feared that the appointment of a Shumadian in place of a man from Novi Sad as Danubian Ban will not please the people of the district. The question on which M. Popovitch failed to agree with the responsible Ministers is said to have been that of the Pozorevatz Railway. The Pozorevatz district concluded a loan in America on the guarantee of its own district alone. But the district having now been merged in the Banovina, this obligation must be taken over by the Banovina or the scheme must be dropped. It is said that the contract for the loan was thoroughly bad and therefore M. Popovitch refused to take it over.

Italo-Yugoslav Relations.

Prince Paul and Princess Olga of Serbia, accompanied by M. Boshko Yeftchitch, Minister of the Court and Assistant Minister of Foreign Affairs, represented King Alexander at the wedding of the Crown Prince of Italy. During their visit they were well received everywhere and for the first time for many years relations were renewed between the Queen of Italy, daughter of the old Montenegrin King, and her relatives of the present Yugoslav Royal Family. It is stated that M. Yeftchitch was received by the Italian Foreign Minister and that conversations took place on various matters outstanding between the two countries. This suggests a better outlook for Italo-Yugoslav relations.

On the other hand, the Belgrade *Politika* was allowed to print a well-authenticated story of how two Belgrade business men, M. Milorad Dimitriyevitch and M. Milan Doitchinovitch, when returning by the Orient Express from Paris to Belgrade, were taken from the train by Italian police at Domodossola and kept six days in an underground prison before being escorted by the police to the Yugoslav frontier. They were refused the right to employ an Italian legal adviser or to communicate with their friends, and had it not been for the fact that M. Dimitriyevitch managed to send off a telegram by a fellow-passenger on the express to his brother in Belgrade before being taken to prison they might not yet have been free. While in prison, they heard stories of a Yugoslav student who had been imprisoned there some days before; but nothing can be ascertained as to whether he is still in Italy or what has happened to him. They suggest that he might easily have died of cold or starvation in the horrid dungeons in which they were imprisoned, where they had to share the food that they were finally allowed to purchase, after two days' starvation, with the many rats which infested the place. As it was, the German firm of engineers whose Yugoslav manager M. Dimitriye-

Digitized by Google

vitch is took steps in Rome which ended in the prisoners' release, but no explanation of their imprisonment has been given. As they were travelling with passports properly endorsed with Italian visas, their allegations are very important to Yugoslav citizens who contemplate passing through Italy.

Non-German Reparations.

The Yugoslav Government has once again made it clear that it cannot accept any reduction in the total sum of reparations which it is to receive from ex-enemy countries. Serbia lost more than any other of the Allied countries and has a more real claim to reparation payments than most. In reply to the Bulgarian plea that the Government cannot pay, the Editor of the official organ, *La Yougoslavie*, points out that, while taxation in Yugoslavia amounts to 1,132,700,000 gold francs for a population of about 13,000,000, in Bulgaria it is only 250,000,000 for a population of 5,500,000. From an economic point of view there is no great difference between the position of Yugoslavia and Bulgaria. Both are peasant countries with little developed industry; and, if there is anything more in favour of one than of another in this development or in the fertility of the soil and the organisation of agriculture, it may be said to be in favour of Bulgaria. On the other hand, comparisons of this character inevitably invite retorts, and Bulgaria may reply that statistics might show a different picture, if a third of the Yugoslav Budget were not devoted to "Defence."

THE HIJAZ.

Jidda, January 3.

Frontier Operations.

News has now been received here that on or about December 30 an attack on the rebel position in Shaib Auja, a tributary of the Batin valley near Riqai, was led by Muhsin al Firm, of the Harb tribe, Ajami ibn Suwait, of the Dhafir, and Ibn Tawala of the Shammar; all acting under the supreme command of Ibn Musaid. The action appears to have been a complete success for King Ibn Saoud's forces, though its effect was minimised by an unaccountable breakdown of the arrangements made by the British authorities to prevent the rebels crossing the frontier. In any case it seems that Ibn Lami and his following of Mutair tribesmen succeeded in making off into Kuwait territory, while—more serious still—Ibn Mashhur, one of the leading spirits of the rebellion, crossed with 600 men into Iraq territory and in due course arrived at Busaiya. Here they were disarmed, it seems, though it is uncertain whether they are to be handed over to King Ibn Saoud or merely detained in Iraq, where they are bound to form a centre of intrigue. The Hijaz-Najd Government has accordingly preferred a formal demand to the British Chargé d'Affaires here for their immediate extradition, on the ground that Ibn Mashhur and others are offenders against the common law of Najd, besides having committed crimes against Trans-Jordan and Iraq. It remains to be seen what will be the outcome of this claim, but in any case the British Government, having given guarantees against the crossing of the frontier by the rebels, can scarcely disclaim responsibility for their future conduct, if it does not place them at the disposal of King Ibn Saoud forthwith. It is not known here whether Shaikh Faisal al Duwish was present on this occasion, or, if so, what his fate was; but it is established beyond any doubt that Khalid ibn Muhammad, the King's nephew, who was recently reported killed in certain English papers, is alive and well—as also is Ibn Rubaian, the Ataiba chief whom he was reported as having killed before meeting his own death in an ambush organised by way of revenge. Such tales received by way of Amman and Jerusalem seldom have even any semblance of truth.

Legations at Jidda.

The Amir Faisal came down to Jidda on January 1 and is leaving again to-day. Yesterday on behalf of the King he received M. Maigret, the French Chargé d'Affaires, who thus had the long-awaited opportunity of presenting his credentials in connexion with the creation of a French Minister, Fuad Hamda, entertained the French Chargé d'Affaires will be able to present his credentials in the near future, while the Russian representative will present his credentials in a similar capacity some time this month. I have also good reason to believe that the creation of an Italian Legation is imminent. Last night the Foreign Minister, Fuad Hamza, entertained the French Chargé d'Affaires to dinner to celebrate the completion of the arrangements for the creation of a French Legation.

Accession Day.

Preparations are being pushed forward rapidly for the celebration of Accession Day on the 8th. An Egyptian delegation, consisting of a dozen Pressmen and Notables, is arriving by the next Khedivial Mail boat to attend the ceremonies, for which the Amir Faisal will again visit Jidda.

General News.

The four aeroplanes recently ordered through the British Government by the King have duly arrived at Darin Island, near Qatif, but it would seem that they have come just too late to take part in the operations against Faisal al Duwish and his rebel followers. British pilots have been engaged to operate the machines, and it is to be presumed that they also have arrived.

A Rotterdam Lloyd boat bringing pilgrims from Java recently ran on a reef some twenty miles out from Jidda. A relief expedition of *Sanbuks* (sailing boats) was immediately sent out to bring off the pilgrims and their baggage; and the whole operation was carried out most expeditiously and without any casualties. The ship itself was in due course floated off the reef, and arrived safely in Jidda harbour, where temporary repairs will be done to enable it to continue the voyage to Europe.

NEWS IN BRIEF.

Mr. Wright, an American citizen, formerly a lawyer in Paris, has been appointed a Judge of the Mixed Courts in Egypt.

Several officials have been arrested recently following the discovery of extensive frauds on the Persian Government.

Rabbi Jacob Meir, chief Sephardic Rabbi of Palestine, has annulled the engagement of a thirteen-year-old girl to an old man. The annulment establishes a precedent in the controversy on child marriage, which is still practised by native Jewish communities in Palestine.

A concession has been granted for the supply of electricity within a radius of 14 miles of Jerusalem. According to the agreement between the Palestine Government and the Power Securities Corporation, which has acquired the rights from the Greek pre-War concessionnaire, the concession will be tenable for 44 years, and will give the company the sole right to supply electricity in the Jerusalem district, while allowing suppliers outside the Jerusalem area to erect transmission poles.

The bust of the late Miss Gertrude Bell, which has been subscribed for by her admirers all the world over, was unveiled in Baghdad on January 18 in the Iraq Museum, which she herself founded. The High Commissioner, Sir Francis Humphrys, who presided over the ceremony, asked King Faisal to accept the statue on behalf of his nation. King Faisal, who was among the subscribers to the Memorial Fund, paid a tribute to Miss Bell's great work for Iraq as an official of the Civil Administration and subsequently as the first Director of Iraq Antiquities. The ceremony was attended by a representative gathering of British and Arab residents.

A redistribution of the sloops on foreign stations has been approved on the forthcoming completion of the four new ships of this type authorised in 1928. The Hastings is to relieve the Cyclamen in the Persian Gulf Division, East Indies Station, and the Cyclamen will then go to the Africa Station to relieve the Wallflower, which is to be scrapped. The Penzance is to relieve the Lupin in the Persian Gulf, and the Lupin will then replace the Clematis in the Red Sea, the Clematis being scrapped. Early in November the Folkestone is to go to the Persian Gulf to relieve the Crocus, which will be scrapped.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 2.

Politics.

There has been more talk of politics this week in India than there can ever have been since the world began. "What do you think is going to happen?" is a question that has been addressed to me by persons whom I had never before heard speak a word about politics. "Have you read the speeches at Lahore, and what do you think of them?" is another question people have asked. They have asked it all as one question, not waiting for an answer to the first part, though it is a question by itself. I have read the Lahore speeches, or the summaries of them that we have been given, and I have also felt that I must read the speeches at Madras. The Indian National Congress has been in session at Lahore, and the National Liberal Federation has been in session at Madras. The mere resolutions moved by speakers attending these sessions, with the amendments to them proposed by others—they alone would fill a page of THE NEAR EAST AND INDIA. The principal resolutions will have been cabled to your side, but they are part of the story, and I must give them here. I shall have to leave it for another week to indicate the positions now held by the various contending paliticians, and the amount of public favour bestowed upon each political creed.

The Indian National Congress.

The latest news to hand from Lahore (but there will be later before I put this in the post) is that Mr. Gandhi's resolution has been carried by the Congress in open session. I will give the terms of it in a moment. First to say that Pandit Madan Mohan Malaviya's motion for a postponement of the main question until April was "summarily lost," while Mr. Subash Chunder Bose's amendment for setting up a parallel Government was lost by an overwhelming majority. Mr. Gandhi's long resolution was as follows:—"This Congress, while endorsing the action of the Working Committee in connexion with the manifesto signed by Party leaders, including Congressmen, in connexion with the Viceregal pronouncement of October 31, relating to Dominion Status, and appreciating the efforts of H.E. the Viceroy towards a peaceful settlement of the national movement for Swaraj, and having considered the results of the meeting between the Viceroy and Pandit Motilal Nehru and other leaders, is of opinion that nothing is to be gained in the existing circumstances by the Congress being represented at the proposed Round Table Conference, and, in pursuance of the resolution passed at the Calcutta Congress last year, this Congress now declares that Swaraj in the Congress creed shall mean complete independence, and therefore further declares the Nehru scheme of Dominion Status to have lapsed, and hopes that all parties in the Congress will devote their exclusive attention to the attainment of complete independence, and hopes also that those whom the tentative solution of the communal problem suggested in the Nehru constitution has prevented from joining the Congress or actuated them to abstain from it, will now join or rejoin the Congress, and seriously prosecute the common goal. As a preliminary step towards organising the campaign for independence, and in order to make the Congress policy consistent with the change of creed, this Congress declares a complete boycott of the Central and Provincial Legislatures, and calls upon Congressmen to abstain from participating, directly or indirectly, in future elections, and upon the present members of the legislatures to tender their resignations, and calls upon the nation to concentrate its attention upon the constructive programme of the Congress, and authorises the All-India Congress Committee, whenever it deems fit, to launch upon a programme of civil disobedience, including non-payment of taxes, whether in selected areas or otherwise, and under such safeguards as it may consider necessary."

That was the main resolution passed at the forty-fourth session of the Indian National Congress. Many Indians wish there might never be another session of the body. One Indian, a man in no way connected with the Government either, said to me yesterday: "I loathe all those men," and he really meant it. He looked as if he loathed them.

The National Liberal Federation.

The twelfth session of the National Liberal Federation has been held at Madras. The main resolution there was moved by Sir Tej Bahadur Sapru, and was as follows: "The National Liberal Federation cordially welcomes the announcement made on October 31 by the Viceroy, as it authoritatively confirms the view that Dominion Status for India was what was intended by the Declaration of 1917, as it definitely recognises that British and Indian States should together form a Great United India, and as it concedes India's claim to the right to confer, on a footing of equality, with the British Cabinet on the form of the future constitution of India. The Federation further resolves that the Liberal Party do participate in the deliberations of the conference contemplated in the announcement, and strongly urges that the Round Table Conference should be held as early as possible in 1930, and that the progressive element in the country should have the preponderant representation."

A thing worth calling attention to in Indian politics, for it is an indication of a pervading weakness of character, is that, the Congress having passed such or such a resolution, the political body holding the views nearest to its views, will word its resolution so that it shall sound almost the same thing; that is, so far as it is possible. If the Congress is not to participate in some Round Table Conference, it will say so, even seeking to gain something by spelling the name "round-table conference." If the National Liberal Federation is for participation, there is a bridge that cannot be gulfed; but if at some earlier date the Congress played with the intention of participating, and then held out for a preponderant representation of Congressmen, or those of Congress "mentality," the National Liberal Federation will have something in its resolution like those words you have read: "that the progressive element in the country should have the preponderant representation." It is to say in effect: "You see we roar almost as loudly as those fellows do."

Dominion Status.

Another resolution passed by the National Liberal Federation was moved by Sir Srinivasa Sastri, the late Agent of the Government of India in South Africa. It is of even greater importance, perhaps, than the main resolution: "This Federation urges upon all parties in India which accept the recent announcement of the Viceroy wholeheartedly and are prepared to secure its complete immediate realisation, to combine for the purpose of securing a constitution based on Dominion Status, with such safeguards and reservations as may be necessary for the period of transition."

Practical Politics.

By leaving out many other, but minor, resolutions, I have after all secured space in which to indicate briefly what the best and most level-headed men in India think of the whole matter. It is that the British and the Indian Governments will have to ignore Mr. Gandhi, Pandit Motilal Nehru, and Pandit Jawaharlal Nehru for a season. The Governments must ignore them, but not so the police. The Governments must now deal with Sir Tej Bahadur Sapru, Sir Srinivasa Sastri, and the other Liberal leaders, and with the Muslim leaders. The new constitution must be based on some form of Dominion Status; but there must be those safeguards and reservations spoken of in the last of the resolutions I have given. There must be these for the period of transition, and not a word must be said by any responsible British statesman, in England or in India, of the probable length of that period. The safe-

Digitized by Google

guards must be the presence of a British army and the presence of many British officials in India, and the reservations must be of many more things than foreign affairs and defence. There must be a strong and stable government continuously in India, and the sooner it is established as a settled government, the better. Talk of "constitutional changes of great magnitude" is too unsettling. Those Indian leaders who are open to persuasion must be conferred with soon, face to face: they must be convinced that the safeguards and reservations agreed to are for the good of the country. That is the general opinion held by those whose judgment I myself respect.

THE PROBLEM OF MINORITIES.

Appreciative reference has been made on many occasions in these columns to the enterprise and foresight displayed by those responsible for the publication in its present form of the monthly organ of the European Association. The new and more distinctive cover, which makes its first appearance with the current (December) issue, is a great improvement upon its predecessor, while the general tone and standard of *Review of India* is fully maintained. The greatest task which confronts those who may be summoned to represent Indian political parties at the forthcoming "Round Table Conference" is undoubtedly, as Sir Tej Bahadu Sapru has said, the necessity of "settling our differences with minorities in a just, generous and broad-minded manner."

Particular interest therefore attaches to the leading article on "Minorities" which appears over the signature of Mr. F. E. James. After outlining the history of minorities from the early days of civilisation down to their treatment under the Covenant of the League of Nations, the article emphasises, in the first place, that the question has become one of the burning topics of the day and "Muhammadans, Christians, Anglo-Indians and Europeans must realise this and help to clarify the issue by determining in their own minds where they need special protection. In the second place, the principle is now accepted that this protection is to be part of the fundamental law of the country; no law, regulation or official action can prevail over or conflict with it. In the third place, the right of an external guarantee for these stipulations is now an accepted fact in International Law. This is a curious result of the growth of the principle of self-determination.

"Modern nationalism, in its over-emphasis on democracy, tends to disregard minorities, and may need full protection against its excesses. Nowhere is this truer than in India. This protection must be laid down in unmistakable terms in the fundamental law of the land. Who should guarantee that protection? It is not difficult to answer that question. Britain stands in a special relationship to India. There are minorities in Indian States as well as in British India. Britain's declared policy is to assist India to develop into a great self-governing dominion; the numerous minorities in this country have a right to look to her as the guarantor and protector of their rights. How that protection and guarantee are to be effected is a difficult question. It might be desirable to have a resident Minorities Commissioner in India, representing the British Government directly, or through the Viceroy. But whatever the agency, it is clear that minorities should be given some appeal against discrimination and injustice to an independent body or person. This would be a 'just, generous and broad-minded' arrangement, not inconsistent with national autonomy and essential to national harmony."

The King has approved the appointment of Mr. Henry Dauncey Cornish, barrister-at-law, to be a Puisne Judge of the High Court of Judicature at Madras, in the vacancy created by the retirement of Mr. Justice Odgers on January 16.

INDIA'S ECONOMIC DEVELOPMENT.*

Mrs. Anstey has chosen a subject, and has worked on it with characteristic labour and thoroughness. Naturally her study is stronger on some points than on others, and best on subjects such as industrial life in Bombay of which she has some personal experience. On agriculture she is not so certain: and, as is natural, she does not always distinguish between the values of her numerous authorities. But she makes clear two essential points: the first, the great improvement under British administration, an improvement especially marked in the last thirty years, in spite of political obstruction; and secondly, the absolute need for social reform before India can undergo the industrial revolution, which is necessary to support its claim to rank with Western nations.

Among the recent benefits of British rule may be numbered the abolition of famine, the spread of irrigation, the establishment of the railways on a paying basis, and the improvement of the banking system. To British administrators must be assigned the initial credit of the co-operative movement; in the opinion of many the most hopeful weapon for the regeneration of India, though it cannot be, without social reform, a panacea for such evils as the subdivision and fragmentation of agricultural land. Mrs. Anstey's main conclusion, however, agrees with Sir Basil Blackett's dictum, when speaking on the same subject, that "the economic progress in India will not be fully realisable till India sloughs off its mediæval abstractions."

It cannot be said that Mrs. Anstey's views, though she rightly stresses such efforts as have been made by Indians for social service, afford much hope for improvement. The most disquieting feature, perhaps, is the widespread corruption. It would be incorrect to say that corruption is a new feature in India; but its wider opportunities seem too powerful for the checks that are at present imposed by public opinion. Mrs. Anstey refers to the mismanagement that has occurred among co-operative unions, which is at least party responsible for the slowing up of progress, though some retardation was, as she says, desirable for consolidation. She also mentions the peculations which have given so evil a name to Labour Unions; while as regards the cotton industry in Bombay she states that "with even moderately efficient and honest management, the industry could be made very profitable to the shareholders. To this might be added the great increase in fraud in the conduct of Municipalities and Local Boards, to which the annual reports of Provincial Governments bear witness. In Bombay matters, moreover, it is notorious that several of the most promising institutions in Bombay have been ruined or endangered by jealousy and selfishness.

Like many others, Mrs. Anstey stresses the necessity for a greater balance between agriculture and industry. She indicates the path of progress, but points out that a fundamental and social reorganisation is required before industrialism is possible. It is true that a self-governing people, or collection of peoples, can alone impose the required taxation, and sweep away the hampering social abuses; but self-government so far as it has gone, has shown no signs of imposing the necessary sacrifices. Mrs. Anstey has compiled an excellent work of reference which can hardly be disregarded by any student of Indian economics.

* "The Economic Development of India." By Vera Anstey. (Longmans. 25s.)

The Bombay, Baroda and Central India Railway Annual for 1930, printed at the Times of India Press, Bombay, contains a number of articles on sport and travel by well-known writers.

Rai Bahadur Jai Lal has been appointed to the judgeship made vacant by the addition of one Puisne Judge to the permanent strength of the High Court of Judicature at Lahore.

INDIAN NOTES.

A Great Opportunity.

There has been no striking nor important change in the Indian situation during the past week. But the Congress Party, led by Mr. Gandhi and Pandit Motilal Nehru, have given notice that they will inaugurate their campaign of civil disobedience by the celebration of "Independence Day" on January 26. They will make, on that day, a declaration to the effect that complete independence is now the policy of the Congress. According to the Pandit the idea of the celebration is to enable the Party to test how far the country is prepared to take the stronger steps which are bound to follow. This means, it may be presumed, that, under the guise of "non-violent non-co-operation," measures will be taken which must result in violence. The duty of the Government of India is, therefore, plain. For, as Sir Charles Innes, Governor of Burma, said in Rangoon last week, the campaign of civil disobedience is a challenge to authority that no Government can afford to let pass. The maintenance of law and order is the first duty of the Government; and it must use all the means at its disposal to put down a movement which is directed against its very existence. There is no reason to think that the Government will fail in this elementary duty. On the contrary, the action taken in Bengal in respect of an attempt at civil disobedience suggests that it is alive to the needs of the situation. There would also appear to be ground for thinking that the Liberals are at last really waking up to their duties and responsibilities. They are beginning, it may be hoped, to realise that Mr. Gandhi and his associates are heading straight for confusion and anarchy. And they are trying to unite all parties in support of the Round Table Conference, with Dominion Status as the not far distant goal. Whether they will succeed in this endeavour remains to be seen, but it is satisfactory to know that they are at least trying. As we have previously pointed out, their weakness is, and has always been, their lack of organisation. They are now very wisely seeking to remedy this defect by re-organising the Liberal party; and they also propose to adopt bolder tactics and to hold more public meetings. Far too little has been seen and heard of the Liberal party in the past; and it is fully time for them to come out into the open and to take up a bolder attitude than they have hitherto assumed. They have now before them an unrivalled opportunity of showing that the real intelligence of the country will have nothing to do with the forces of disorder and disruption.

British Capital in India.

The importance of our financial state in India is vaguely recognised by many who have no real conception of either its magnitude or its ramifications. That India constitutes the greatest market in the world for British manufacturers and that the employment of large numbers of workers in this country is dependent on the maintenance of our commercial relations is realised by merchants, bankers and manufacturers, but they would probably be at a loss to arrive at even an approximate estimate of the actual amount of capital which the trade and services represent. External funds enter India in such devious ways that in any case all such calculations must be largely guesswork. According to a writer in a financial daily contemporary the total capital invested by the British public in India in various forms is not far short of £600 million, of which more than half, or over £400,000,000, is represented by Government and other public loans and guaranteed railway debt, while the balance is invested in various forms of commercial and industrial enterprise, such as cotton, jute, iron and steel, banking and ordinary mercantile activities. The apportionment of the total between the four or five main channels through which the money has entered, or operates in India is interesting, namely: Government sterling debt, £261,000,000; guaranteed railway debt £120,000,000; balance of India's contribution towards the 5 per cent. War Loan, £17,000,000; Municipal and Port Trust sterling borrowings, £10,000,000; investments in companies registered in India, £75,000,000; investments in companies overating in India but domiciled outside, £100,000,000. If the resources of other concerns not coming within any of the foregoing classifications, and profits accruing in the country and reinvested there, are included, a minimum figure of £700,000,000, it is suggested, would probably prove to be not very wide of the mark. Nor is any account taken of the many companies which have failed to reach the profit-earning stage, although India retains not only the value of the assets left in the country but also enjoys the benefit of the often valuable, if costly, experience gained through the failures.

THE NEW INDIA HOUSE.

Although the official opening ceremony of the new India House in Aldwych is not likely to take place until the summer, the construction of the building which, when finished, will be in every respect worthy of India, is already far advanced. It is expected that the High Commissioner will be able to transfer his quarters from Grosvenor Gardens to his new official residence within the next two months. The position is that the interior is well on the way to completion and only detail work on the exterior remains to be finished. The area covered by the whole edifice is approximately 12,400 square feet and the frontage in Aldwych extends over 130 feet. The building, which has been in course of construction for the past two years, was designed by Sir Herbert Baker, and the structural and mechanical engineering services have been supervised by Dr. Oscar Faber. The House is of ten floors, and the originally estimated cost was £324,000, this sum including furniture, fittings, etc.

The line of the façade follows the curve of Aldwych, and the height of India House is the same as that of the adjacent building, Bush House. Restrained but definite ornamentation is a feature of both the interior and exterior design. On either side of the main entrance is a slender pillar surmounted by a seated tiger, sculptured in stone, and above it is the Star of India.

As much as practicable of the material used in the ornamentation and construction of the building has been brought over from India. Delhi redstone has been employed in the interior to a considerable extent; a pierced balustrade around a well on the first floor is of marble worked in India, and embodies features from the arms of the various Indian Provinces, while the whole of the timber used in the panelling has been imported from India. The lighting arrangements, both natural and artificial, have been tastefully and excellently planned. In most rooms the windows extend to the ceilings.

The basement will contain a large office for the sale of Indian Government publications. On the ground floor there will be the offices of the Indian railways, and the west wing will house the pay and pensions department. The second floor will be given over to the offices of the High Commissioner and his personal staff, the Official Secretary, Indian Trade Commissioner, and other departmental chiefs, while the rest of the building will consist of geenral offices.

The Government of India's new security press at Nasik, near Bombay, has just produced a new series of pictorial stamps for Sorouth, one of the native feudatory States, which still uses distinctive stamps, as it has done since 1864. The new stamps, which are in striking contrast to the productions of the local Junagadh State Press, are the first postage stamps printed at Nasik apart from the Imperial Indian issues. There are four designs, three of horizontal oblong form with views, and a fourth of the same size, but with the long dimension vertical. One design depicts the Kathi Horse; Soruth is one of the States of the Kathiwar peninsula, famous for its horses and, especially among sportsmen, for its polo-ponies.

PERSONAL AND GENERAL

TO-DAY

January 23, 1930 (New Style).
January 10, 1930 (Old Style).
Shaaban 22, 1348 A.H., of the Muslim Calendar.
Tebet 21, 5690 of the Jewish Calendar.

Sir Philip Hartog, member of the Indian Public Services Commission, arrived in London last week on short leave.

Sir Hugh and Lady Bell returned last week to 95, Sloane Street from Mount Grace Priory, Northallerton.

Sir Archibald and Lady Weigall returned to 39, Hill Street on January 20 from Petwood, Woodhall Spa.

Lady Evelyn Cobbold left 9, Carlos Place on January 21 for Egypt, and will be away for about two months.

The Bishop of Norwich and Mrs. Pollock returned to England last week from Palestine.

Sir Ahmed Hassanein Bey, Chamberlain to King Fuad of Egypt, left London by air on January 20. He is making a solo flight to Egypt.

Captain the Hon. William and Lady Beatrice Ormsby-Gore returned to 5, Mansfield Street on January 20 from Bedford.

Lady Verney and Miss Verney sailed from Tilbury on January 17 for India. They will be away until the late summer.

Lord and Lady Forester sailed for Egypt on January 18 in the R.M.S. Orford, and will be away until the end of March.

Lord Rathdonnell, accompanied by his son, the Hon. William McClintock Bunbury, arrived at Plymouth last Thursday on his return from Egypt.

Mr. and Mrs. Robert Mond left London last week for Egypt, where they will be making a stay of about one month.

Sir Ian Malcolm left London on January 20 for Egypt, joining the P. and O. s.s. Viceroy of India at Marseilles. He expects to be abroad until the second week in March.

The Hon. Robert and Mrs. Devereux sailed from Tilbury on January 17 in the P. and O. s.s. Viceroy of India for Port Said. The Hon. Lady Cooper was among the passengers for Bombay.

Mr. and Mrs. William Talbot left London at the beginning of this week for Genoa on their way to Egypt, where they intend to spend the winter months. They will return to 2, Queen's Gate Place early in May.

Captain and Mrs. Duncan McCallum have left Cheyne Walk for Cairo. They are motoring to Trieste, where they will embark for Alexandria. Captain and Mrs. McCallum expect to be away from England for some considerable time.

Dr. Hamed Mahmoud has been appointed Counsellor to the Egyptian Legation in London. Dr. Mahmoud is a graduate of Edinburgh University and has done much political work in London for the Wafd during the past 10 years.

Lady Wormald joined the P. and O. s.s. Naldera at Marseilles on January 18 for Port Said. Also embarking in the Naldera at Marseilles were Dame Nellie Melba and Sir John Smiley for Port Said, and Sir Andrew and Lady Lewis for Colombo.

The Rt. Hon. H. A. L. Fisher and Mr. E. L. Woodward, who have been visiting Egypt in order to consult the documents in the archives of Abdin Palace concerning the reign of the Khedive Ismail, on which subject King Fuad has requested Mr. Fisher to write a history, left Cairo on January 4 on their return to Oxford.

Lewa Russell Pasha, Commandant of the Cairo City Police, left Cairo on January 18 for Geneva, to represent Egypt at the International Commission for the Suppression of the Traffic in Drugs, which opened there two days later, at the headquarters of the League of Nations. Russell Pasha expects to remain in Geneva until January 31, when he will return to Cairo.

Mr. Leonard Stein has resigned his appointment as Political Secretary of the Zionist Organisation (now the Jewish Agency for Palestine). Mr. Stein took up this appointment in 1920, and relinquished it on his completion of his work in Palestine as one of the representatives of the Jewish Agency before the Commission of Inquiry. It is understood that Mr. Stein is entering the publishing business in London.

Mr. W. A. Stewart, late director and inspector of Arts and Crafts to the Ministry of Education and now attached to the Harvard-Boston archæological Expedition at the Pyramids, has been appointed Supervisor of Technical Education to the Government of Palestine, with headquarters at Jerusalem. The Colonial Office has decided to create this post as a result of the report on Palestine education that was drawn up by Mr. Stewart in June last after his tour of the country with the Director of Education. The new post is in Grade 1 of the senior service for foreign officials, with salary and allowances, including expatriation pay, in the class from £E900 to £E1,100 per annum. Mr. and Mrs. Stewart will be leaving for Jerusalem about the end of February.

YUGOSLAV ART EXHIBITION.

An exhibition of Yugoslav Art is to be opened at the Tate Gallery on April 3. The exhibition is being arranged by the Yugoslav Society of Great Britain and a special committee in Yugoslavia, which were jointly responsible for the Exhibition of British Art last year in Liubliana, Zagreb and Belgrade. Among the exhibits at the Tate Gallery will be a number of the works of M. Mestrovitch, the Yugoslav sculptor.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

The Liberal Fissure.

It was not merely Socialist glee nor Conservative chuckle that induced the papers to give such prominence to the dignified attack last week by Lord Grey upon Mr. Lloyd George; nor can the thousands of Liberals who support the leader of the Party in the House of Commons adequately pooh-pooh the matter by asserting that Lord Grey's views on Mr. Lloyd George have always been known, and are in any case of no consequence. No: the only explanation is that the pretence, made during the recent General Election, that all Liberals were just one happy family party, and in particular that this filial joy derived largely from unswerving paternal conduct on eternal Liberal principles, could no longer be tolerated. Lord Grey, a man of principle if ever there were one, simply had to say what he thought of Mr. Lloyd George's political conduct since the Election, and of the ineffable "Lloyd George Fund." There are times when silence is more than cowardice, when it becomes dishonesty.

But why? ask the young Liberals, aghast at this resurrection of old sores which, in their view, were far best forgotten. Have we Liberals not a national duty? Is there any other man as capable as Mr. Lloyd George of leading us? In any case, what definite evidence is there that Mr. Lloyd George is what his "Liberal" opponents say he is? Why not let bygones be bygones?

For answer, these urgent young men, who have been won over by the glamour and by the undoubted opportunist ability of Mr. Lloyd George, might be referred to a leader in *The Times*, of all papers, last week, in which the issue was stated simply: Lord Grey stands for Liberal principles. What does Mr. Lloyd George stand for? Does he stand for traditional Liberalism in foreign policy—in regard to India, for example? Is he absolutely sound on the unchangeable Liberal principles of retrenchment and reform? Does his adherence to Free Trade absolutely preclude his adoption at some future time of the dogmas of such experts as Lord Beaverbrook or Lord Rothermere? In a sense, indeed, Lord Grey is far nearer to the more principled section of the Conservative Party than to Mr. Lloyd George's following of Liberals.

There is no unity in the Liberal Party: none. Quite obviously, I should say, this historic organisation will remain divided till death removes those who knew intimately Mr. Asquith and Mr. Lloyd George. If the Party can survive that interval there may yet be hope for it, because all the present talk of a return to the two-party system is fathered by the wish for it. No political house, whether Socialist, Conservative, or Liberal, is so well ordered at the moment as to make immediate the prospects of ruin crashing about the Liberals' edifice.

The present fissure in the Party is perhaps like the Dead Sea. East of it, in the desert, roam the unadulterated sons of Liberalism, limited in numbers, perhaps, but at least uncontaminated by admixture with non-Liberals; and West of it lies the greater, more modern, and more opportunist following of Mr. Lloyd George. And who will more freely exploit the fissure (for five and a half million votes for election are not to be despised): the Socialists or the Conservatives? One thing at least can be said: there will be no monopoly.

County Cricket.

Students of county cricket are rarely free from a grouse of some kind. For a long time it was the system of scoring points in the Championship that was inveighed against; now it is the fixture list which is causing an immense amount of grumbling.

As usual, London wakes up to grievances only when London is affected. Last year, for example, the system came into force of each county playing twenty-eight matches: which meant that, since there are seventeen first-class counties, two counties were left out of the championship programme of each county. As a matter of fact, in 1929 Somerset were without Championship games against such very old opponents as Yorkshire and Lancashire, and Nottinghamshire did not meet either Essex or Hampshire.

But this year, when it has been arranged that Surrey shall meet neither Hampshire nor Middlesex, a rare pother is being raised. Quite rightly, of course. Why on earth should Surrey and Middlesex, who have striven for each other's wickets every year since 1865 (but for the War years) now have to play only "friendly" matches? It is, indeed, absurd.

The only change that one can think of it is to reduce the number of first-class counties from seventeen to fifteen, so that each county could play the other. It would, admittedly, be very rough on somebody—probably Glamorgan and Worcestershire. But they could come up again by displacing whoever was at the bottom of the Championship Table. This would involve practical difficulties, but the interests of higher justice and historic sentiment would be served.

England's Rugger.

Welsh Rugger has been reviving with a vengeance recently; so much so, indeed, that for the fifteen to play against England last Saturday the Welsh selectors were faced with an *embarras de richesse*. For England, on the other hand, so few players could, so to speak, pick themselves, that the very bold expedient was indulged in of dropping the experienced pilots and letting Youth face the storm at Cardiff.

The policy answered magnificently, for the Welsh were squarely beaten by eleven points to three. Apparently the young English pack, stiffened with J. S. Tucker, did marvels, and the cleverer Welsh backs had not the chances which they might reasonably have expected. It is, of course, becoming increasingly obvious that modern Rugger, particularly in the scrum, demands the elasticity and freshness of youth. Even so, there will be hosts of Rugger enthusiasts who apologised mentally on Saturday evening to the English Selection Committee for having had their doubts on the policy so strikingly vindicated.

Now for Scotland and Ireland!

ALTER EGO.

The Ethiopian Government has asked for the help of a Belgian Military Mission in training the troops and organising the army of the Negus Taffari. The mission, which is engaged for three years, consists of a major and two lieutenants. They embarked for Jibouti at Marseilles on January 17.

THE SITUATION IN THE MIDDLE EAST.

By Sir Denison Ross.

[*The following is the text of a lecture delivered before the Royal United Service Institution on December 11 by Sir Denison Ross, Director of the School of Oriental Studies in London, with Sir Percy Cox in the Chair.*—Ed.]

I felt some hesitation as a civilian in accepting the flattering invitation to come and lecture to this Institution. For in addition to the obvious fact that I could not, to any purpose, speak to you on matters of a purely technical nature, I felt that things were moving so rapidly in the Near East that the impressions gathered during a three months' tour made at the beginning of this year were already out of date. Indeed, it is impossible to say from moment to moment what the actual situation is. It is at any rate certain that during the six months which have elapsed since my return from the Near East and Persia the political situation has much changed and consequently many of the conclusions I arrived at had to be considerably modified. In view of these considerations I have determined to touch somewhat lightly on the present situation in the Near East and devote more time to abstract thoughts on the relations of the East with the West.

As you are all aware, the deliberations of the Allies during the War, and especially after the War, have contributed very largely to the wholesale alteration of the map of the Near East. I say "very largely" because some of these deliberations could not be carried into effect; notably the policy of establishing in Western Arabia an Arab Kingdom under the Hashimite ruler. The failure of this scheme, however, left untouched the general policy of dismembering the Ottoman Empire—the event which has contributed in the largest measure to the change in the map

But apart from the new kingdoms and new frontiers which have thereby been introduced, there are important roadways, railways and airways to be noted. It was the Great War itself rather than any planning of the Allies which created such a remarkable revolution in the ways and communications of the Near East, and it is interesting to reflect that Syria, Palestine and Iraq passed, without the long period of transitional development experienced in Europe, as it were with one bound from the caravan to the most modern means of transport and locomotion. During the present century mechanical invention has moved fast enough to upset our moral equilibrium, and it has often been said that our mentality is unable to keep pace with these rapid material developments; how much more must this be true of the people inhabiting those countries where in 1914 roads were few, railways non-existent and aeroplanes undreamed of.

The Principal Changes.

The countries of the Near East—Egypt, Syria, Iraq, Arabia—were, as you know, part of the Turkish Empire, as was also Egypt in a restricted sense. With the dismemberment of the Turkish Empire rulers and forms of government had to be found for all these countries, and thus came into being the various kingdoms and mandated territories. The same policy had been adopted in principle in the dismemberment of Austria-Hungary and the gospel that was preached most loudly by the Allies was that of self-determination. But when theory passed into practice self-determination was granted to the Balkan States but was denied to the Arabs who had formerly made part of the Turkish Empire. In order, however, to help these newly-formed States along a road leading to ultimate self-government, Syria was placed under the care of France, and Palestine and Iraq under the care of Great Britain. Egypt became more or less independent and Western Arabia ultimately entirely so.

Turkey.

Of Turkey, which I have not, unfortunately, visited since the War, it is unnecessary for me to speak. She perhaps, more than any other country, has been able to put into practice self-determination, and she has done so most whole-heartedly. Mustapha Kemal has, thanks to his great prestige and remarkable personality, been able not only to carry out the ideas of Enver and Talaat, but to go much further. He has attempted to change the whole aspect of Turkey, both socially and religiously, and, without any regard for the past or for the present generations, is establishing a new order of things for the next. In introducing the Swiss code and the Latin alphabet he has attacked the foundations of Islam and one wonders how deep the religious sentiment of the Turks really lies. (The lecturer parenthetically explained his belief that great religions do not perish, and mentioned that Manichæism was the one instance of a great faith that had gone under).

Arabia.

It is interesting to turn from Turkey to the new Wahhabi Kingdom of Arabia, where exactly the opposite spirit is at work. For here we see a strong reaction in the direction of puritan, orthodox Islam. Ibn Saoud, one of the greatest figures in Islamic history, is, however, free from prejudices against such modern institutions as do not run counter to the tenets of his faith. This is sufficiently illustrated by the fact that he allows pilgrims to use motor-cars for the journey to Mecca. He is also doing much to improve the education of his people. He is at present faced with very great difficulties, especially in the north.

Iraq.

Iraq, like Arabia, has been for 400 years ruled from Constantinople, but, like Arabia, it is a country of Arabs, but while the present kingdom of Arabia is actually only an extension westwards of the Wahhabi Kingdom of Najd, Iraq must be regarded as a newly-founded State, which gives us the rare opportunity of watching a new nation in the making. Iraq owes much to the Great War economically, quite apart from the independence she has gained by the Great Peace. A State so recently established is naturally ill provided with capable and experienced officials, and on the administrative side she has required the aid of British advisers. On the military side, the integrity of the country may be said to depend at present almost entirely on the splendid Air Force with its headquarters at Hinaidi, which is able at a moment's notice to cope with any threatening attack. Armoured cars also play an important part in this connexion. Internal order is preserved by a most efficient gendarmerie, largely recruited from the disbanded Assyrian Battalions, who patrol the country far and wide. Nothing impressed me more, when travelling in the desert, than the sudden appearance on the horizon of these smart, well-mounted men, who generally move about in pairs. Iraq has made such good progress in setting her house in order that she is shortly to be admitted to the League of Nations, but I take it that when the British Mandate has been withdrawn those who govern Iraq will still desire our help as individuals, but the Englishmen she employs will be the servants of the Iraq State and not officers and officials deputed by the British Government. I must not omit to mention King Faisal, who has shouldered his responsible duties with royal dignity and is in fact, both in appearance and in behaviour, "every inch a king."

Palestine.

The situation in Palestine hardly bears discussion at this stage. When I was in Jerusalem "all seemed for the best in the best of possible worlds"—indeed, Palestine appeared to have benefited more by the Great War than any country in the Near East. The roads and communications were excellent and Jerusalem itself seemed all peace and order. One could not help observing the absence of the military element, and it was then considered possible to rule the country without soldiers. Recent events have, however, shown that everything depended on the good behaviour of the Jews and Arabs towards each other.

Syria.

The rivalry between nations and religions is even more acute in Syria than in Palestine. Each group has, in

Digitized by Google

turn, risen in revolt, and the French have had to maintain an army of many thousands in order to preserve the peace. Not until the various elements of the population unite in accepting the guidance and control of the French officials can we hope to see a Constitutional Assembly established in Damascus and good order in Syria.

Egypt.

Of Egypt it is difficult to speak, as the situation changes from day to day. During the visit of King Fuad to this country, a more or less unexpected crisis occurred which altered the whole complexion of the situation: which led not only to the resignation of Lord Lloyd, but also to the curtailment of his Majesty's visit. It would take me too deeply into politics to describe in detail this crisis. We can only hope that the newly-appointed British representative will have the full support of our Foreign Office in carrying out his difficult task.

Mahmoud Pasha as Prime Minister had been working without a Constitution, and in this capacity had done a great deal for Egypt. But the extreme politicians of that country, naturally ambitious for office, were chafing under what they called a "dictatorship." The new draft treaty with Mr. Henderson meant the re-establishment of the Constitution and the calling of a Parliament, involving the resignation of Mahmoud Pasha. The Parliament when elected will presumably proceed at once to consider the new treaty, the terms of which are so liberal that I think it hardly likely that it will be rejected.

I cannot refrain from saying a few words regarding King Fuad, whose position is difficult and delicate. I am convinced that he is and has been determined to adopt a most friendly attitude towards England, and while Mahmoud Pasha was in power this was a simple matter. But with the change of Prime Minister he is placed in a quandary, for while he is bound to support the Constitution, he cannot disavow his real sentiments, and there remains nothing but strict neutrality open to him.

The great crux of the Egyptian question is, as you all know, the presence of a British garrison in Cairo. If we place ourselves for a moment in the position of an Egyptian we shall readily understand that he does not particularly enjoy the sight of foreign troops parading the streets, and of enormous barracks occupying one of the finest positions in the city. It is not, however, for me as a mere civilian to discuss the strategic importance of maintaining a British garrrison in Egypt.

If the only goal were peace and order and the prosperity resulting therefrom, these can best be attained by a strong garrison at the bridge-head of the Qasr-in-Nil. Can the Egyptians supply such a garrison of reliable troops? If, on the other hand, the chief aim be the gratification of nationalistic ambitions, these can only be satisfied by the withdrawal of all foreign troops and advisers. It has not yet been shown that Egypt can herself supply all that is required either in the realm of law and order or of economics. It is many centuries since Egypt walked alone; and her new status as an independent kingdom has only so far given her time to develop her national instincts; as a modern Muslim State she is young and inexperienced; the plant has been forced and if the protecting glass is suddenly removed the plant may wither in the open air. I would, however, like to stress the fact that there is no lack in Egypt to-day of capable and efficient men, including King Fuad himself, who have the interests of their country at heart—but there is lacking a responsible middle class capable of realising that neither the pyramids nor any other enduring structures were built in a day. How Egypt is governed and by whom could not possibly concern us did the high road to India still run round the Cape; but seeing that three quarters of the British Empire uses the gates of Suez for its commerce, its travel and its correspondence, the Suez Canal is tremendously our concern, and the crux of the whole Egyptian question is how to guarantee this short-cut through the desert without hurting the susceptibilities of the Egyptian people.

Persia.

Of New Persia I should have more to tell you than of any other country that I have visited, because it is the country in which I am the most interested—but I fear I must on this occasion confine myself to very few remarks.

Thirty years had elapsed since I last visited that country, and the changes that had taken place in the interval filled me with astonishment. Most of these changes, however, are comparatively recent and came about either during or since the Great War.

The greatest change was in the mode of locomotion. Thirty years ago there was already a road, built by the Russians, along the flat country between Qazwin and Teheran, but that was the only road I saw. Nowadays one can travel by car between all the chief towns of Persia; while the Junkers planes will take one almost anywhere. In the people themselves I found very little change, except in their clothes. But internal changes are taking place in the preservation of law and order and in the suppression of the fanatic clergy. The present Shah is a strong ruler and his ambition is to bring about moral reforms and economic progress without the interference of foreign powers. The Persians have always retained their national character and independence; and, thanks in some measure of the rivalry of Great Britain and Russia, Persia alone of the country engaged in the Great War has retained her pre-War frontiers. Great strides are being made in education, in the improvement of the towns and in the protection of the highways; and it is important to remember that if Persia moves slowly, she is working out her own salvation.

Great Britain's Role in the East.

I cannot, of course, here enter into the history of commercial intercourse between the East and West, but all who would wish to understand the rôle of Great Britain in the East and especially in India should have a clear idea of three facts:—

(1) How the carrying of Eastern commodities to Europe passed into the hands of Western nations.

(2) How these commodities, which formerly comprised only luxuries such as silk and spices, came to include the necessities of life.

(3) How in turn the East became dependent on necessities imported from the West.

Origin of our Commitments.

The merchandise of the East down to the beginning of the XVIth century was carried to Mediterranean ports by the merchants of the East, and thence by sea in European vessels. However great this traffic was, the European traders had no interest in the countries where they shipped the goods, or whence the goods came, beyond the establishment of warehouses at the sea ports. Nor was there any exchange of commodities. The silk came from China and the spices from India. With the discovery by the Portuguese of the all sea-route to India the spice trade at once assumed a new aspect. It was no longer sufficient to have merely a factory or depot on the Indian coast. Forts had to be built to protect the factories, and men-of-war to be sent to fight the Arab traders who had hitherto enjoyed a monopoly of the spice trade from India to Egypt. It was thus that a European nation first became interested in Oriental poltics. In the course of the following century the Dutch and the English followed in the wake of the Portuguese pioneers and, later on, the French.

It was the establishment of factories by the English merchants which led to the ultimate foundation of British India. It seemed inevitable that some Power with a fleet should gain a predominant interest in India, and that the Power which did so should gradually acquire territorial rights beyond the mere occupation of sea ports.

The West's Excuse.

Having thus established herself as the predominant power in India, and having practically destroyed French influence in that country, it became the obvious business of England to protect her high-road thither. It was with the landing of Napoleon in Egypt in 1798 that that country first came into contact with modern Europe. It was Napoleon's Egyptian campaign, whose ultimate object was India, which long before the Suez Canal was built led England to realise that in order to protect India she could brook no European rival in Egypt. And thus began our concern in the destinies of that country, a concern which increased a thousandfold after the building of the Suez Canal. I am not proposing to give a history of Egypt during the nineteenth century, but I merely wish to indicate how the necessity arose for our interference in her affairs; and this gives rise to the great problem as to the morality of exercising control in one country in order to safeguard one's interest in another.

The main reason why the European Powers cannot to-day regard with indifference the form of government prevailing in various Eastern countries is a paramount necessity of maintaining a free flow of commerce between East and West. For any breakdown of the existing system would inevitably lead to an economic catastrophe affecting the whole world. Such must be the excuse which the West offers to the East, and it is for the East to learn gradually to do for herself what Europe feels constrained to do for her at the present time. It is quite natural that the intelligentsia of the East should entertain feelings of bitterness, resentment, and even of hatred towards the man from the West who wishes to dictate the manner of his government. I think it is not only racial pride which inspires this dislike; there is also a subconscious element of jealousy. For however proud the Oriental may be of his own history, religion, and institutions, the intelligentsia have perforce to admit to themselves that during the last 500 years at any rate the people of Europe have been singularly blessed in things material and physical—advantages which may in a very great measure be attributed to the climate. I do not wish to claim that there are no good climates east of Suez. Turkey is a notable example of a good climate; but as a whole the climate of the Near and Middle East and of India offers many serious drawbacks and discomforts never experienced in Europe. And climate is the one thing you cannot change.

Islam and Science.

I should like, in conclusion, to attempt to explain how the East, who started so much earlier in the race than the West, came to a standstill in scientific and material progress, and the causes to which this arrestation may be attributed. Muslim civilisation, the result of a blending of Badawin stock with the cultured people of Persia and Syria (to which was super-added the science of Greece and India), reached its apogee under the early Caliphs of Baghdad in the ninth century. Since then there has been little progress in Muslim literature and no advancement in science. Relying on his own books, the Muslim of to-day possesses nothing by way of science or economics which was not accessible to his co-religionists in the ninth century. Only in the arts was progress made—in architecture and painting, and so forth—but there was no advancement of learning. Of course, I do not mean to suggest that Islam produced no learned men. I only mean that their learning, though often profound, was confined within narrow limits.

The Arabs and the Persians were great travellers (and we must not forget that the compass came to us through the Arabs), but their knowledge of geography was for ever based on the traditional sub-division of the world into seven climes. The builders of the Mosque of Omar and of the Alhambra were unable to draw an intelligible map; and so with all the sciences. In mathematics, medicine, and botany they reached a certain point and then stood still. How are we to account for this strange phenomenon? To my mind it is to be easily explained by the reverence in which the Scripture and the Traditions were held. All Muslims were bound down by accepted theories which were so sacrosanct that it never occurred to the man of science to shake off the fetters of the past and to set out as a free man and investigate fundamentals for himself.

The colossal conflict between the greatest civilised Powers of the West undoubtedly changed the attitude of the East towards our so-called civilisation. The extension of the War over half the habitable globe brought all men down to a common level. What did the vaunted progress of the West stand for if a four years' struggle were possible at the beginning of the twentieth century? "Surely we can manage our affairs as well as that?" we can imagine the Oriental saying. Such thoughts, while diminishing the respect which, however grudgingly, the East felt for the West, did not affect his attitude of mind toward European methods of administration, but rather made the Oriental feel that he was fit and ready to imitate them.

These sentiments meant, in a word, the downfall of despotism and the desire to replace it by constitutional and representative government. The history of the East has hitherto been the story of despotic power, and I am sufficiently conservative to believe that, in the East at any rate, government by a good despot is the best form of rule; but the East has been stirred to its foundations by new ideals, and it now desires Western institutions, if possible without Western guidance.

They hope to find freedom and salvation by copying the, to them, totally foreign, system of government painfully evolved over centuries of struggle and debate, as practised by the masters of whom they would be rid. To them the system is artificial, and the new situation is apt to bring to the front two types of individuals; one clinging to national tradition and abominating all that is Western, the other throwing tradition to the winds and hating only the Westerner, whose methods he would adopt. Many of the second type, of course, desire to reduce the "distance" which has hitherto been so strongly felt between Asia and Europe. It is, however, precisely such elements of the population who must easily lose their respect for European culture and are most ready to adopt only those features of that culture which they can employ against the European.

THE IRAQ MINISTER IN LONDON.

Jaafar Pasha al Askari, Iraq Minister in London, has successfully passed the Finals of the examinations for the English Bar, and will be called to the Bar on January 27. This represents a very considerable achievement, particularly in view of the difficulties of language, and the popular Arab Minister deserves to be very heartily congratulated on a remarkable performance.

EGYPT EXPLORATION SOCIETY.

The second lecture of the series arranged this winter by the Egypt Exploration Society will be given on Wednesday, February 5, at 5.30 p.m., by Miss D. A. E. Garrod, M.A., the subject being "Cave Excavation in Palestine, 1928-1929."

The lecture, which will be illustrated by lantern slides, will be held in the Meeting Room of the Royal Society, Burlington House, by kind permission of the Council.

A few tickets are still available to the public free, on application being made to the Secretary, 13, Tavistock Square, W.C.1.

Locusts appeared in the neighbourhood of Gaza, Palestine, on January 14, but immediately disappeared in a north-westerly direction. The Agricultural Department in Jerusalem states that isolated swarms are expected, but are not likely to cause damage.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

Egypt's Cotton Policy.

The cotton policy pursued by the present Egyptian Government is now the subject of considerable discussion and criticism in the local Press. When it was first decided to purchase cotton on the market it was intended purely as a temporary expedient to meet the needs of the moment, and the late Government, that of Mohammed Mahmoud Pasha, took the wise course last year of disposing of large amounts of the cotton which was being held. The Wafd Administration has decided on giving further support to the market, and it is understood that so far the purchases far exceed the sales under the late Government. As I have pointed out previously, a policy of restriction, whether of acreage or of world supplies, cannot be successful in the long run unless the country concerned has a virtual monopoly of the market, and that is not now the case as regards Egypt. Where it is not so, the only effect can be to restrict consumption. The real solution of Egypt's cotton problem is in the revival of the world trade in cotton goods, and Egypt's most useful contribution to that end is the provision of adequate supplies of good and moderately priced cotton. There has been some evidence of late that, apart from the question of price, Egyptian Sakellaridis has been losing in favour, and it is imperative that the Egyptian authorities should investigate the reason for this and see to it that a remedy is found. It has been made abundantly clear that Lancashire, given a revival of trade, can take all the cotton that Egypt can produce; and Egypt's obvious policy lies in the production of supplies of good cotton at the lowest possible price.

The Phœnix Oil Interim.

At the annual general meeting of the Phœnix Oil and Transport Company it was pointed out that there were very favourable prospects of a larger return to the shareholders in the early future. Last week's announcement of an interim dividend, while not therefore coming into the category of unexpected happenings, will no doubt be regarded by the shareholders as being as early a foretaste as could be anticipated of any expectations which may have been entertained in view of this statement. The Board of the Phœnix Oil and Transport Company has throughout pursued a most conservative policy, and the declaration of an interim dividend is particularly encouraging when viewed in this light. The rate of distribution is 6d. per share on the £1 shares, the same payment that has been made for the whole of the two previous years. The directors, it may be noted, indicate that they hope to recommend a final dividend of a similar amount at the general meeting next June.

Sudan Trade Progress.

With the figures for the trade of the Sudan for the first ten months of the past year available it is now clear that, allowing for normal vicissitudes in the last two months, 1929 has marked a further pronounced advance in the country's progress. For the ten months the value of the total trade via the Red Sea ports and Wadi Halfa was £E11,994,761, an increase of £E1,140,540 on the corresponding figures for 1928. It is satisfactory to know that in addition to the inevitable expansion of exports, due mainly, of course, to cotton, which is largely responsible for the increase in the total trade—exports are £E870,931 up at £E6,205,787 —there is also a substantial rise in imports which is wholly due to the expansion in public imports which are £E210,770 up at £E3,615,664. This points plainly to the fact that the purchasing power of the country is now on the upgrade, a feature which is bound to become more pronounced, as the staple industry, cotton growing, progresses. The steady development of the Sudan in recent years and especially since the War, is an object lesson to the Empire and to the world, as to what British Administration can can accomplish in unpromising circumstances. But the work of securing the economic advance of the Sudan is still only at the beginning, and the solution of the problem depends principally on the expansion of communications and the provision of the necessary transport which will enable the outlying provinces to keep pace with the advance made in the regions flanking the Nile. Each issue of the Monthly Report of the Central Economic Board contain details of the unwearying work that is going on in the development of an adequate road system, and the latest report, it may be mentioned, gives particulars, in addition of the progress in the construction of aerodromes at two centres in each of the Upper Nile, Mongalla, and the Red Sea Provinces.

World Oil Production.

Last year witnessed a further substantial expansion in the world's oil production, the estimated figures being 203,213,000 tons as against 181,426,000 tons. As against this increase it is estimated that the world consumption amounted to 170,000,000 tons as compared with 150,400,000, so that the difference between the supply and demand was slightly greater than in 1928. The increase in production was due almost entirely to the output in the United States, which totalled 137,500,000 tons as against 121,941,000, and it is obvious that the price level for the commodity must be dependent on the policy

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address : "Bancathen."

96 Branches in GREECE ; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms
The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfers on all its Branches, at the exchange of the day.
The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

Digitized by Google

pursued in that country. As oil is a wasting asset, in the sense that it cannot be replaced, it is obviously the soundest policy to leave it in the ground until it is required and not to produce more than the market can absorb. Happily for the industry as a whole there is reason to believe that United States production this year will not be on an increasing scale.

The Nizam's Railway Offer.

At yesterday's extraordinary general meeting of the Nizam's Guaranteed State Railways the stockholders unanimously approved the terms of a provisional offer for State purchase of the line as on April 1 next, and authorised the Board to continue the negotiations with the Nizam's Government. The scheme was explained by Colonel Huddleston, the Chairman, who amplified the details contained in the circular convening the meeting. The purchase price of £8,300,000 offered for an immediate sale was compared with the amount stockholders might receive if they waited until January, 1934, which he estimated at less than £7,000,000, which would give stockholders under £260 per £100 of stock though it was true that in the intervening years they would in all likelihood be receiving handsome dividends. In the Board's circular it was stated that the distribution to stockholders in cash and debenture stock would be not less than £300 for every £100 of capital stock held. Closer estimates, Colonel Huddleston stated, now indicate a distribution of not less than £310 per cent.

A Cyprus Pest.

It may come as news to some people that for very many years Cyprus has suffered seriously from the depredations of rats. Actually as long ago as 1913 the Agricultural Department began to purchase rats' tails as the simplest means of putting down this pest which was damaging carob trees and also affecting grain and carobs in store and foodstuffs generally. For the first three years the casualties were heavy, and to judge from the figures for the six succeeding years the remedy seemed to be fairly efficacious. But the figures for the number of tails purchased from 1922 onwards show that the menace is growing more serious, and it is pointed out in an article in a Supplement to the *Cyprus Gazette* that if things are allowed to continue as they are for a few years, "there is grave danger that the rats will get completely out of hand and cause far more serious damage than they do at present." It may serve to illustrate the position if it is pointed out that the damage to carob trees in the Limassol district alone is estimated at not less than £10,000 a year.

COMMENTATOR.

For the half-year ended December 31, the Imperial Bank of India reports net profits totalling Rs.40,99,700, as against Rs.40,41,100 for the corresponding period of 1928. It is proposed to maintain the dividend at 16 per cent. per annum, tax free, to transfer Rs.5,00,000 to reserve as before, to allocate to the pension fund Rs.3,57,000, as against Rs.3,42,000, the balance to be carried forward being Rs.15,26,200, or Rs.12,57,300 below the amount brought in.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 21.

There has been less activity in the Stock Markets during the past week, and a little profit taking has followed the moderate gains of the previous week, while the harder tendency in monetary conditions has been reflected in a slight weakening in the gilt-edged section. The absence of a change in Bank rate caused little surprise, but a further reduction in the not distant future is generally anticipated, a view which is confirmed by this week's strong Bank Return. Home rails were much less active, but Underground issues were an exception on anticipation of a higher dividend on the ordinary stock of the holding company and the possibility of London traffic developments. The industrial markets lacked interest, and attention centred on the definite progress made in the arrangements for the "Hatry" settlement, the publication of the terms on Wednesday being regarded as indicating their acceptability to all concerned. The arrangements are such as will ensure the public's freedom from loss through unfulfilled contracts, and the sooner the settlement is held the sooner will internal confidence in the Stock Exchange be restored and the way paved for a revival of business, which has for so long been impeded by a general lack of confidence.

Banking Profits.

The Big Five banks have now all announced their profits for the year 1929, and in each case they are shown to be higher than for the preceding year. This is a little surprising in view of the losses which the banks are known to have suffered in connexion with the various collapses, and also because of the restricted financial activity which persisted almost throughout last year. In order to have overcome these setbacks and to have made an increased profit the banks must have had a very good year in some directions, despite the woes of many of their clients. The advance in profits, although not sufficient to justify increased dividends to shareholders, of course, enables the dividends to be maintained as for last year. Barclays' profit for 1929 was £2,331,580, as against £2,301,285 the year before, and dividends are maintained at 10 per cent. and 14 per cent. on the different classes of shares. The Midland, which is also issuing new shares on bonus terms, reports a profit of £2,665,042, as against £2,656,650, and the dividend is 18 per cent., as is also the dividend of the National Provincial, whose profit amounted to £2,189,704, compared with £2,108,664 for 1928. The Westminster's profit was £2,160,384, as against £2,148,408, and the two dividends are again 20 per cent. and 12½ per cent. respectively. Lloyds reported earnings of £2,542,084, against £2,528,143, the dividends being 16⅔ per cent. on the "A" shares and 5 per cent. on the "B" shares. In the provinces, the District and also Martins both increased their profits, while the profit of Williams, Deacons was slightly lower

this year. In all three cases dividends were unchanged. Among popular fully-paid shares of small denomination Barclays £1 "B" shares yield about £5 4s. per cent., and Williams Deacon's £1 shares yield about £5 2s. per cent.

Activity in Swedisn Issues.

Some activity was seen last week in the shares of Swedish industrial concerns. Of these the leader, the Swedish Match Company, is well known over here, but three others, Separator, Swedish Ball-Bearing (S.K.F.), and Elektrolux, also have characteristics which make their shares attractive to the investor. All four are amongst the world's most important organisations in their own branches of industry, and have world-wide connexions. All are efficiently managed, and have enjoyed expanding profits in recent years, and all take pains by such means as the publication of their accounts in several languages to make their shares especially attractive to foreign investors. The Swedish Match Company controls plants in 35 countries, its British interests including Bryant and May, and with the exception of half the Belgian exports, is responsible for practically the whole of the international trade in matches. In conjunction with Kreuger and Toll, the finance company, it has acquired many Government match monopolies. Profits rose from Kr.32,326,462 in 1926 to Kr.48,961,568 in 1928, and a further advance in 1929 is expected to be disclosed. A rise in the dividend on the "B" shares from 15 per cent. to 17 per cent. is also looked for. While the immediate return is low, the shares contain very favourable prospects. Separator's financial results, the managing director has stated, will be about the same as last year. If the 9 per cent. dividend is maintained the shares will return about £6 5s. per cent.

Industrial Profits.

The *Economist* statistics of industrial profits declared during the fourth quarter of last year and based on the reports of 420 companies, appear to show welcome evidence of a check to the declining tendency of the figures available during the second and third quarters. Only a minority of the industrial groups showed a decline in net profits, while the total as compared with the corresponding period of 1928 rose by 1.4 per cent. But for a net loss of £2,063,682 in the last accounts of British Cement Products and Finance, which hardly reflects the general trend of industrial earnings, this rise would have been as much as 8.5 per cent. The textile group, with a falling off of 19.3 per cent., does not include sufficient companies to give its results a truly representative character. Recoveries were marked in "depressed" trades, but their position as regards earning power still leaves much to be desired. Nevertheless, the signs of an advance in home industries, as opposed to those trading abroad, are again visible.

Published net profits during the last quarter totalled £33,404,493, of which 66 per cent. was distributed as ordinary dividend, and 16 per cent. as preference dividend, while 18 per cent. was put to reserves or carried forward. Thus the reports of the whole year would appear to show a tendency for the percentage of earnings distributed in dividends to rise, the proportion "left in the business" being 19 per cent. in 1929, as compared with 22.3 per cent. in 1928. The proportions naturally vary from industry to industry; thus, the accounts published during the last quarter of the year show, for example, only 8.9 per cent. of profits "left in the business" of textiles, 40.9 per cent. in the case of iron, coal, and steel, 38.8 per cent. for tramways, and as much as 93.3 per cent. in the case of the nitrate industry.

BULGARIA'S ECONOMIC POSITION IN 1929.

Serious Credit Crisis.

(From Our Own Correspondent.)

Sofia, January 15.

For Bulgaria the past year was a period of great expectations and bitter disappointments, a year of expanding hope and of terrible depression, in short a year of crisis. The stabilisation loan, following the refugees loan, bringing about the repayment to the National Bank of a large part of the floating debt of the Treasury, promoted at the outset an exaggerated optimism in business circles, where, because of the excellent prospects presented by the crops in the spring, the deceptive appearance of the outlook was not appreciated until the bad harvest of 1929 followed the two mediocre crops of 1928 and 1927.

Actually the harvest of 1929 was 5 per cent. below that of 1928, and there was a particularly pronounced falling off in respect of wheat and barley (32.6 per cent. and 31 per cent. respectively as compared with the previous year), while maize, which scarcely figured in the 1928 harvest, showed an increase of 78 per cent. The reduction in the harvest was more marked because, owing to unfavourable atmospheric conditions, it was not possible to plant colza, of which the exports by the end of the previous year totalled 500,000 leva, and because in addition the sale of tobacco, of which the yield was thirty million kilogrammes, as against fifteen million in 1928, was surrounded by almost insurmountable difficulties as a result of the fall in price which retarded the export of this commodity of vital importance for the country and seriously affected traders, who were obliged to sell at a loss. The result of this has been that the country has seen its exports reduced in a manner as disquieting as the increase in the imports, which have included cereals bought from Yugoslavia at a cheaper rate than that at which they could be procured in Bulgaria. To restrict these undesired imports —more than three thousand wagons of Yugoslav wheat have been imported in a few months—the Government has had to raise by twelve points the customs duties payable on this commodity.

Imports received considerable encouragement from the delusive promises at the beginning of the year. It was necessary after the War to renew the agricultural and economic resources of the country, exhausted by eight years of sanguinary and fruitless struggles for the realisation of its national unity. This step was rendered necessary first to guard against the growing impoverishment of the population, and then to place Bulgaria in a position to develop her national production and to attempt to regain her lost markets, and could not be carried out without the aid of foreign capital. Foreign capital, which has come through the private banks, of which the number has increased considerably, in furthering the useful work of adapting Bulgaria's national economy to post-War needs and in helping the rapid development of the economic life of the country, has had the effect also of giving manufacturers and merchants banking credits which have been freely accorded at very remunerative rates—the interest demanded by the banks being at present from 14 to 15 per cent. At the same time, as the result of the apparent overproduction in industrial countries seeking to find an opening for their commodities in Bulgaria, merchants found themselves abundantly provided with commercial credits, and were not too inclined to take into account the retailers. The natural consequence of such a large distribution of banking and commercial credits was an immediate increase in industrial and commercial enterprises, large and small, which multiplied without taking account of the resources and the purchasing capacity of the country, which were far from increasing in the same manner.

After the realisation of the stabilisation loan, which enabled the Treasury to repay a large part of the advances due, the National Bank believed it could best utilise its resources by granting credits to the business world through the medium of the private banks, the requirements of its statutes prohibiting direct loans except in cases strictly determined. And the private banks on their part encouraged their clients to extend their enterprises or to initiate new ones, simply seeking where to place their money, as they were convinced that the economic crisis had passed its zenith and that they were entering on a period of assured prosperity, the more so as in the spring and the early summer the land promised a magnificent harvest, which seemed to promise the definite consolidation of the economic and financial stabilisation. Meanwhile orders were placed abroad and imports increased, including extravagant luxury articles. It was evident that through these excessive imports Bulgaria would possess foreign merchandise sufficient for several years.

In the circumstances the trade balance was bound to be heavily adverse. By the end of December the imports totalled 8,115,000,000 leva and the exports 6,042,000,000, or an adverse balance of 2,073,000,000 leva. For 1928 the respective totals were 7,192,000,000 leva, 6,379,000,000 leva, and 813,000,000 leva. Given that the country cannot export capital, it follows that the balance of payments is also very adverse, and that it has swallowed up already the greatest part of the resources which the stabilisation loan procured for the National Bank, whose reserve of foreign exchange in cash or in the various foreign banks of issue with which it is associated amounted on December 31, 1929, to only 1,018,000,000 leva.

The banks realised their error when it was evident that the yield of the crops would be insufficient, and they then tried, a little too rapidly, to restrict their credits and to obtain repayment from their clients, a measure which placed merchants and manufacturers in a serious position. The transition from high optimism to an undue pessimism has been followed by a number of bankruptcies, and, what is more serious, has aroused panic among the public and consequently has brought about a reduction in deposits. The withdrawal of funds has seriously affected the operations of the private banks, and some of them have been considerably weakened. Now the business world finds itself in a state of complete insecurity which, in view of the very defective organisation of credit in Bulgaria, threatens to cause irreparable losses to the country, since the crisis particularly affects Bulgarian houses, foreign establishments or affiliations of foreign establishments having behind them solid support which will enable them

to surmount their difficulties and even to profit by monopolising business and production.

The difficult position with regard to credit is the crux of the situation. The rate of discount of the National Bank which was at first 10 per cent., and fell in June to 9 per cent., was raised in August to 10 per cent. The rate of interest demanded by the banks is at present from 14 to 15 per cent. for large loans and from 16 per cent. for small advances. The total of the deposits in the private banks has seriously decreased as a result of the anxiety prevailing among the public. The nine most important banks showed at the end of September deposits totalling 4,400,000,000 leva as against 4,660,000,000 at the corresponding date in 1928, and this tendency has been continued. As regards two State banks (excepting the National Bank, which may no longer receive deposits) the Agricultural Bank, although having increased its deposits and reserves notably as a result of the stabilisation loan, has been unfavourably affected by the marked impoverishment of its peasant debtors though the bad crops of the past three years, which has greatly reduced the purchasing power of the agricultural population. Then the Central Co-operative Bank, though it has also benefited by the stabilisation loan, has been involved in such difficulties as a result of the crisis as to necessitate the support of the National Bank.

It is superfluous to add that the general position has had repercusions on the Budget. Up to the end of the summer the taxes came in very easily, and showed an increase on the Budget forecasts, but from September the estimates have not been reached, and the receipts are far below the Budget totals. This tendency persists, and it becomes certain that the Budget will close with a deficit which will be covered by the surplus realised the previous year. If despite all this Bulgaria's currency has not suffered it is due especially to the progressive reduction of the fiduciary circulation by the National Bank. The covering for bank notes is at present 40.50 per cent., or slightly over the required minimum.

Renewal of the coupon sheets of Founders' shares of the Crédit Foncier Egyptien will be effected after payment of Coupon No. 32, due February 1, 1930. Bonds must be lodged with the Crédit Lyonnaise, 40, Lombard Street, E.C.3.

Barclays Bank (Dominion, Colonial, and Overseas) announce that they have received the following cable from their Cairo office:—The Statistical Department of the Ministry of Finance announces that the total imports into Egypt for the month ended December 31, 1929, are £E5,106,149, against £E4,884,822 for the corresponding month in 1928, and exports £E5,124,378, against £E6,028,536 for December, 1928. Cotton exports amounted to £E4,206,280, against £E4,877,825.

INNOVATIONS AT BIRMINGHAM FAIR.

Intimations now being received daily by the Birmingham Chamber of Commerce (Inc.) from business houses abroad make it clear that the numbers of foreign visitors to the Heavy Section of the British Industries Fair opening in Birmingham on February 17 will be largely in excess of those in any previous year. Since it was recently decided to issue, in 1930 for the first occasion in Birmingham, an advance catalogue enabling overseas users of machinery and distributors of heavy and hardware goods to visualise the scope of this enormous section, some hundreds of applications were made for copies while it was still in the press. Birmingham, as itself one of the greatest centres of British manufacture, has always been fortunate in attracting a considerable proportion of Dominion and foreign buyers, many of whom find it of practical value to maintain personal touch with the manufacturers of machinery, apparatus, and tools, which are often specific in character, and sometimes of intricate design and workmanship.

In earlier years, before the importance of the Fair was so widely recognised, there was a tendency on the part of firms in the more distant countries to issue their instructions through buying agents, and hundreds of visitors who actually represented overseas houses were thus classed in the records as home buyers. A welcome increase in direct visits from abroad first became noticeable in 1924, when, in order that it should coincide with the British Empire Exhibition, the Fair was held in May. The added inducement to visit the historic centre of England at a season when this beautiful countryside is at its best, proved the means of bringing to the Birmingham Section many newcomers from abroad who, notwithstanding the subsequent reversion to early spring, have since improved their acquaintance, year by year, with this national display of heavy goods. Sufficient time has not yet elapsed to receive from distant parts the acceptances to the official invitations of the British Government accompanying the advance catalogues. Until these arrive, it is not practicable to form any definite estimate of the numbers of overseas visitors to be expected, but the replies already to hand from Continental countries provide in the meantime a highly satisfactory indication.

One of the difficulties of preparing a buyers' guide, in adequate form, some time before the opening of the Fair, is that exhibitors of machinery and metal goods in general make this the opportunity to introduce new designs, apparatus, and devices for a market which extends throughout the year. Such products are invariably subject to repeated experiment, and it is often the case that the manufacturers themselves are not in a position to determine the exact character of some of their principal exhibits until final tests have established the efficiency and suitability of the improved mechanism or tool for the purpose in view. It is this patient research work and tests prior to exhibiting, combined with the world-wide recognition of British quality in material and workmanship, which have created for the Birmingham Fair its immense value as an international centre for the demonstration of progressive ideas and the display of modern plant for every kind of industry.

"Some hundred thousand regular trade visitors to the Birmingham Fair realise this," said Mr. C. Elliott, B.Sc., the general manager, to a Press representative, "but it is astonishing to think, after all these years, that numbers of business men still find it difficult to get away from the mistaken idea that the Birmingham Section is no more than a concurrent display of manufacturers within, say, a radius of 50 miles round the Midland capital. There is nothing whatever of geographical circumstance or limit in the Heavy Section, though, as may be supposed, the great firms in the city and towns adjacent take a considerable part in the display. This is due not only to the pride which the city and its neighbours have in a national organisation located in their midst, and their whole-hearted support of it, but also, of course, to the fact that the schedule of exhibits in this Section comprises numerous kinds of products which, though also made in other centres—Glasgow, Manchester, London, and Leeds, for example—are particularly associated with Midland industry.

"That constitutes the principal reason why this Section of the Fair comes to be held in Birmingham, which, quickly accessible from all parts of Britain, and having an 11-acre building available, is recognised as the most convenient and practicable of any one centre as the annual trade rendezvous of the hardware and heavy goods industries. This year at least three thousand entirely new British products, of interest, collectively, to every trade in the country, will be seen in the Birmingham Section."

The Anglo-Persian Oil Company, Ltd., has placed orders with British shipbuilding yards for six new oil-carrying vessels representing approximately 60,000 tons. These ships are for the company's shipping organisation, the British Tanker Company, Ltd., and will be employed in carrying oil products of the Anglo-Persian Oil Company. Three of the vessels will be constructed by Palmer's Shipbuilding and Iron Company, Ltd., of Hebburn-on-Tyne, and are for Doxford-engined ships. The orders for the three remaining ships have been placed with builders on the Clyde. Lithgows, Ltd., will build two at their Kingston Shipbuilding Yard, Port Glasgow, while the third will be built by the Greenock Dockyard Company, Ltd., of Greenock. These orders are additional to two placed a month ago by the Anglo-Persian Oil Company with Lithgows, Ltd., which are now under construction. In addition to these contracts the Anglo-Persian Oil Company have been, and are, placing large orders for refinery and oil works equipment, drilling material, tanks, boilers, transport, and general engineering material.

Road Making.

There is as yet little sign of the big increase in work which was promised as a relief to unemployment, and there is no doubt that, as the schemes as yet put in hand are of so small a character, it will be necessary, before long, for a fairly general forward move to be made in road making work. One of the difficulties in connexion with that kind of occupation is that in bad weather it is not only difficult for men to work, but the effect of frost upon many road making materials, especially upon concrete, is such as to reduce its value, or prevent its use. With concrete in particular, the effect of frost is serious, and concrete which has been frozen before it has set will be utterly useless for road purposes where heavy duty has to be done. It is crumbling and friable, and no doubt in the early days of concrete road making, before the properties and characteristics of concrete were well known, many a failure of a concrete road or structure was put down to bad concrete or bad workmanship when it was really due to the effect of frost on the wet material.

In order that a concrete road should reach its maximum of hardness it is necessary that the mixture should be kept damp during setting; that is the reason why, in mild or warm weather, setting concrete is covered with wet earth, damp burlay, wet sand, or is painted with a bituminous solution to prevent the water content from evaporating. Attention is now being again directed to the advisability of adding calcium chloride or sodium chloride to the mixing water, in order that the concrete may be hygroscopic and so, by attracting water from the atmosphere, keep the surface of the setting concrete moist during the chemical action of hardening. In a somewhat similar way, either of these substances seems to have the property of preventing the effect of comparatively slight frosts, such as we are likely to experience in this country during an ordinary winter. Of course, with a really heavy frost, such as is met with in Canada or in parts of Scandinavia, the use of chloride of calcium would be of very little, if any, value. Investigations recently made into the effects of adding either of the chlorides mentioned to the water with which concrete is mixed show that such an addition affords protection against a limited degree of frost during the setting and hardening periods. The suggestion has been made that this peculiar effect may be due to the power of the salt to lower the freezing point of the wet mixture, to increase the rate of evolution of heat during setting, and so to delay the freezing action until sufficient strength has been attained to resist the disruptive action of frost and/or to hasten the hardening and setting processes of the mortar or concrete and so enable sufficient strength to be developed rapidly to resist the effect of frost, which is disruptive. That seems after all to be the most likely effect.

The Question of Strength.

The whole question is whether the addition of either sodium or calcium chlorides reduces the strength of the concrete to a figure that nullifies the advantage of the resistance to frost. It may as well be said here that whilst there are engineers who deny very stoutly that the addition of either of these chlorides weakens the concrete, there is no doubt but that it has some sort of detrimental action although that is only very slight.

One of the most objectionable features about the addition of chloride is that it will set up efflorescence upon the surface of the concrete, an efflorescence which may be easily wiped away but which is certain to re-appear. Another objection is that if sufficient of the salt is used to have a beneficial result so far as counteracting the effect of frost during setting is concerned, there is a marked tendency towards permanent dampness which has a corrosive effect upon any iron or steel work used for reinforcement. This corrosion would, when once set up, be greatly quickened by the chemical action of the wet salt itself.

In certain circumstances either calcium or sodium chlorides might be of actual benefit in that their hygroscopic character might prevent "drying-out," shrinking stresses, and cracks during hardening. If concrete is allowed to dry at all unevenly, i.e., with some portions fairly wet and others dry, cracks are certain to occur and the effect of the chlorides in preventing these is of great value. Of course, sodium chloride is not definitely hygroscopic, whatever the ordinary man may think, whilst calcium chloride is. The great trouble with calcium chloride is that its use in adequate quantities in the concrete is almost certain to result in bad discoloration. Even under the best conditions it seems to set up staining, but so far as road work is concerned, neither staining nor discoloration is any disadvantage.

When referring to the effect of a salt water content on the steel reinforcement, mention should also have been made of its tendency to set up electrolytic action, and in the event of there being any stray earth currents knocking about, this electrolytic action might easily lead to premature failure of the reinforcement. But again, that is not likely to be of any great importance in concrete road work, as the life of a concrete road, provided it be in such a situation as to render the provision of a concrete road necessary in order to carry the traffic, is not likely to be as long as that of its reinforcement, no matter how intensely that be attacked by either corrosion or electrolytic action. The question is not as to whether the reinforcement of a road will ultimately corrode to failing

point, as under the most favourable circumstances the road surface would have disintegrated long before that point were reached, but whether, by the use of calcium chloride, we can build roads during winter time that will not be utterly ruined should they have to withstand a few degrees of frost before they have quite set and hardened. There seems, judging by the results of recent tests, and giving full value to the opinions of those road engineers and public works' contractors who have tried the compound, to be no doubt as to the value of the addition of calcium chloride to the mixing water in order to enable the concrete thus made to resist the effect of frost.

The question then arises as to the amount of the salt to be used, and it appears that the best results in every way are obtained with from 2 to 4 per cent. of the anhydrous salt per weight of concrete. Some experimentalists claim to have had good results with as little as 1 per cent., whilst apparently others have used up to 10 per cent. with good results. One of the chief things in connexion with which care should be taken is as to the quality of the chloride. Some commercial supplies are badly contaminated with bleaching powder, and in this, as in most other things, it pays in the long run to buy the best material. Note should be taken of the fact that neither of the chlorides mentioned have any effect upon the action of aluminous cements or cements of the quick-setting type made with bauxite. Such cements are best used as the makers direct, and any attempt to add this, that, or the other material to them to bring about certain desired results is almost certain to result in disaster.

A Five Day Week.

The weekly publication of the Trades Union Congress says that in the United States about one million workpeople have a full day's holiday every Saturday, all the year round. According to the results of a kind of census taken by one of the industrial organisations of that country, about 270 factories were working five-day weeks in 1928, with a total of about 218,000 workpeople. The latter figures thus show how rapidly the movement is extending in that part of the globe. A questionnaire sent out shows, so it is said, that the shorter week has had no effect upon output, quite as much being producing during the five days as was previously produced during the six. A somewhat curious result is reported from 20 per cent. of the firms who have granted the whole day holiday on Saturday, as their returns show that output has actually increased.

The one thing that emerges from this is that if it can be shown that production can be either maintained at the same level or is actually increased by granting the five-day week, there is no possible reason for continuing with a six-day week any longer. We are all agreed as to the benefit on a worker's health of a long week-end, and no employer will grudge any of his employees obtaining such benefit. There is also another point to be looked at, which is that if the works can be shut down for two days out of the seven instead of one and a-half as at present, the wear and tear on machinery is reduced accordingly and the item for repairs and renewals will be less. At the same time the standing charges, looked at from the point of view of working hours, will be increased; so far as that is concerned, however, most accountants would probably look at them from the point of view of output, in which case the reduced hours working would make no difference.

Output of Nickel.

The market for nickel is steadily improving with the increasing use of the metal. In 1921 the world's output was only 7,500 tons, a figure which had increased to over 40,000 tons by the end of 1926. What the actual production is to-day is not easy to ascertain, but it is probably considerably in excess of that figure. At the present time, although a fairly large amount is still obtained from the French settlement in New Caledonia, about 90 per cent. of the total nickel used comes from Canadian sources, the chief producing centre being Sudbury, Ontario.

TANKER CHARTERING.

Messrs. John I. Jacobs and Co., in their report on tanker chartering for the second half of 1929, state:—

The position during the last six months has in many ways been analogous to that of 1926, although rates have not risen to such high levels as in that year. Nevertheless, the higher level of freights reached has had the effect, as on the previous occasion, of producing a flood of building orders both from the producing and marketing companies and from private owners. Norwegian owners are in the van with building contracts, mostly on credit terms, amounting to some 750,000 tons dead-weight. The new tonnage contracted is practically entirely to be propelled by internal combustion engines.

It is interesting to note that of tanker tonnage of all kinds, Lloyds Register Book in July, 1914, recorded 1,478,088 tons gross, whilst in July, 1919, this amount has been more than doubled, being 2,929,113 tons gross, and ten years later, in July, 1929, the corresponding figure was 7,071,015 tons gross. According to figures given by the *Motor Ship*, there are building or on order, 351 motor vessels of 2,280,000 tons gross, of which 127 of 925,000 tons gross are tankers. That the fluctuations in the world building programme are great may be seen from the fact that the addition to the world's tanker fleet in 1927 was about 250,000 tons gross, whereas in 1928 it was about 700,000 tons gross, and in 1929 about 220,000 tons gross. The last-named figure is likely to be trebled in 1930.

In spite of artificial restriction oil production has been greater than last year, and in excess of refinery requirements. At numerous international conferences the watchwords have been conservation of production and uniformity of distributing interests. We venture the opinion that rates are likely to be maintained during the greater part of the year 1930, but despite the continuous expansion of the petroleum trade, the amount of tonnage building appears certain to cause a reaction in freight rates in 1931.

Time Charter.—Paradoxically, steam tonnage has in this market done better comparatively than Diesel tonnage. As high as 8s. 6d. on d.w. was paid for the former, compared with 9s. 3d. for the latter, whereas in our last report the coresponding figures were 6s. 1½d. and 8s. 6d. The number of fixtures has been some 50 per cent. in excess of the previous six months. The demand for tonnage on 10 years charter has been limited, and such fixtures have been few.

During the later part of the year, a fair amount of tonnage was chartered from Abadan to U.K. Continent at rates varying from 39s. 6d. to 35s. for single voyages, and at somewhat lower rates for consecutive voyages.

JAFFA ORANGE SHIPMENTS.

The Empire Marketing Board's correspondents at Jaffa report, under date January 2, that the weather was fine and that with an increased supply of tonnage, shipments were going forward more rapidly. Tonnage was, however, still inadequate for the demand.

Total direct shipments to the United Kingdom up to January 4 amounted to approximately 580,000 boxes, as compared with 438,000 boxes at the corresponding date last year. Total direct shipments to the Continent amounted to about 150,000 boxes, as compared with about 100,000 boxes shipped up to the corresponding date last year. Transhipments to the United Kingdom via Port Said up to December 28 totalled some 88,750 boxes, as compared with about 57,500 boxes at the corresponding date last season.

Company Meetings.

H.E.H. THE NIZAM'S GUARANTEED STATE RAILWAYS.

Board Authorised to Continue Negotiations.

An extraordinary general meeting of His Exalted Highness the Nizam's Guaranteed State Railways Company, Ltd., was held on January 20 at Winchester House, Old Broad Street, E.C., for the purpose of considering and, if thought fit, passing a resolution authorising the board to continue negotiations with the Government of H.E.H. the Nizam for the sale of the railways and, if able to bring them to a satisfactory conclusion, to enter into and carry out an agreement for sale.

Lt.-Col. Geo. Huddleston, C.I.E., V.D., the chairman, who presided, in the course of his speech said:—

We are here to-day to come to a momentous decision. After carefully weighing the circumstances I am about to place before you, I am satisfied in my own mind that you will have no hesitation in deciding that the offer to purchase your property is one that cannot be lightly set aside.

Some of you may remember the time, about twenty years ago, when a dividend exceeding 5 per cent. seemed doubtful, and when the amount accumulated in our reserve funds was negligible. Others may remember a still later date, as recently as 1921, when the price of your stock was quoted on the London market at less than 60 per cent. But I am afraid that the past does not help us materially in arriving at a decision on the question now before you.

Ladies and gentlemen, if it is futile to look back, it is certainly unnecessary to recount the history of the company's past management. Let us, therefore, examine at once the offer before you, and in doing so let us clear our minds of details which may only tend to complicate the issue.

The purchase price offered is £8,300,000, and we are asked to accept this in full settlement of all claims. Let us first consider how this offer compares with the sum we might receive under the terms of our contracts if we waited until January 1, 1934. I estimate that the payment His Exalted Highness's Government would then have to make would amount to less than 7 millions. This, with the estimated value of our reserves at that time, would give you under £260 per £100 of stock, a sum below what you are now being offered, though it is true that during the intervening years you would in all likelihood be receiving handsome dividends.

In the Board's circular of the 11th instant, it is said that the distribution to the stockholders in cash and Debenture stock will be not less than £300 for every £100 of capital stock held. Closer estimates show that if all goes as your Board hope and expect the final distribution should not be less than £310 per cent. (Hear, hear.)

I am afraid I must ask your attention a little longer. Some of you will want to know why payment of the £8,300,000 is not being made in cash, why practically half this sum is to be met by what I will call short-term Debenture stock. I can only say that almost up to the close of negotiations it was the firm intention of His Exalted Highness's Government to pay the whole of the purchase money in cash, but their funds were in Government of India rupee securities, and their realisation might embarrass the Government of India. Therefore, although His Exalted Highness's Government desired to pay us in cash, there were difficulties in the way. It is not for me to criticise the political and financial position in India; I will only say that His Exalted Highness's Government found it necessary either to defer their offer to purchase the company's lines or to make an offer in a form other than cash payment. This explains as briefly as I can why His Exalted Highness's Government have proposed to make part payment in Debenture stock. In round figures, the offer before you is one-third in cash and two-thirds in Debenture stock bearing interest at 5½ per cent. per annum, to be paid half yearly, the capital being redeemed in three equal annual instalments.

You might hesitate to accept such an offer unless ample security was lodged to cover the credit portion. The Board have given this question their most serious consideration, and I am able to tell you that against that part of the purchase price which will be temporarily left unpaid we shall have not only the promise of His Exalted Highness's Government, but there will be lodged in the hands of trustees securities in the form of Government of India stocks, having a margin which is estimated to-day to be equal to 33 per cent. in excess of the par value of the debenture stock it is proposed to issue. (Hear, hear.) The Board are of opinion that such security will be as much as any reasonable man could expect, and they recommend you to accept it. It is referred to in the circular letter as adequate, and I believe you will agree. The whole of the securities are in Government of India Five per Cent. Loans, and the present market value of these is at current rate of exchange more than one million pounds above the value of the new Debenture stock issue.

In the same circular you are told that the purchase price, £8,300,000, includes compensation payments, to which I will now invite your attention. The sum the Board ask you to vote as compensation to themselves, their agent and staff in India and at home, is £100,000. I do not think you will consider the Board's request extravagant. Our staff in India have served you loyally and well; they have not been overpaid, and now that they are ceasing to be the servants of the company I am sure you will agree that they deserve generous treatment. (Hear, hear.)

I need not tell you that your Board are ordinarily averse to making distinctions between various grades and classes of employees, especially when it is hard to say that any particular group is more loyal or more deserving than another, but they have come to the conclusion that some of those who hold appointments of the greatest responsibility must be treated differently from others. It must, I think, be left to the Board to deal with details, and I will only add that I am confident you would be the last to allow the staff to leave the company's employment unrewarded. (Hear, hear.) I believe also that it would not be in the interests of His Exalted Highness's Government to take over employees who went to them with a feeling that they had not received from the company the consideration they might expect.

Replying to questions as to the position of the staff and employees in India, both Eurasian and domiciled Europeans, the Chairman said that they had obtained from H.E.H.'s Government an assurance that none of the company's staff would be placed in a worse position by going over to the State: that was a promise, and as far as they could the Board would ensure fair treatment to the staff in the agreement which would be the next step. The compensation of £25,000 to the directors was based on loss of office.

The resolution was carried unanimously, with the cordial understanding of the meeting that the precise amount of compensation to the staff and employees should be left to the discretion of the directors.

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS).

Increased Profit and Dividend.

Conditions in the Near East.

The fourth ordinary general meeting of the shareholders of Barclays Bank (Dominion, Colonial and Overseas) was held on January 21 at the Cannon Street Hotel, London, E.C.

Mr. Frederick Craufurd Goodenough (the Chairman) presided.

The Chairman: In accordance with our usual procedure I will refer first to changes which have taken place in the personnel of the bank during the past year. The Directors desire to record their deep regret at the death of Mr. John Edward Mounsey and Mr. James Tuke, who were members of the Board, and of Mr. Edmond Wodehouse Lucie Smith, who was a Local Director of the bank in Jamaica. The Directors have much pleasure in informing you that Sir Ernest Oppenheimer, M.L.A. (Union of South Africa), has been elected to a seat on the Board, and this meeting will be asked in due course to confirm his election, in accordance with the articles of association. The election of Sir Ernest Oppenheimer will serve to strengthen our representation from South Africa, where a considerable proportion of our business is transacted. We regret to announce that Mr. Ernest Hyslop Bell has resigned his membership of the Colonial Bank Local Board on account of ill-health. Mr. Gerald Robert Macintyre has been appointed a Local Director in New York, where he was formerly our agent.

Balance-sheet.

If you will refer to the balance-sheet and profit and loss account for the year ended September 30, 1929, you will find that the total figures at that date exceeded £73,000,000.

Current, deposit, and other accounts amounted to £61,043,262, being an increase on the previous year of £1,367,606.

Cash in hand and at bankers and gold bullion amounted to £11,649,106, showing an increase of nearly £900,000. Bills dis-

counted were £12,564,919, which is nearly £5,000,000 less than the corresponding figure of a year ago. On the other hand, advances to customers amounted to £28,690,099, or an increase of more than £5,000,000.

Profit and Loss Account.

The net profit for the year ended September 30, 1929, after making full provision for bad and doubtful debts, amounted to the sum of £516,593, which compares with £494,822 last year. An interim dividend on the "A" and "B" shares at the rate of 4 per cent. per annum was paid in July last, and it is proposed to pay a final dividend on these shares at the rate of 5 per cent. per annum, making 4½ per cent. per annum for the year, against 4 per cent. for the previous year. The reserve fund has been further increased by £150,000, and has therefore reached the figure of £1,550,000, whilst the carry forward has been increased from £130,709 to £137,981.

The bank has not suffered any loss arising out of the troubles in connexion with what is known as the Hatry group.

As the shareholders are aware, the dividend has been gradually increased from 3 per cent. to 4½ per cent. per annum, but they should not assume that increases will be continuous, because, as has been stated on previous occasions, the policy of the Directors is that of adding in each year a substantial amount to reserves, which, as already mentioned, will include the writing down of the premises account.

Barclays Bank (Canada).

The application for a Charter for the conduct of banking business in Canada was granted, and Barclays Bank (Canada) was opened for business in Montreal on September 2 last. Barclays Bank (Dominion, Colonial and Overseas) has subscribed for part of the capital, in conjunction with Barclays Bank Ltd. The Directors are confident that the link which thus has been established in Canada will prove of great advantage to many of our customers and to this bank.

Staff.

I am glad to state that the bank continues to make satisfactory progress, and also that shareholders and customers who have travelled overseas pay tribute to the courtesy and efficiency of our staff in all our territories. Many of the members come to this country on leave or on temporary duty from time to time, and the shareholders will be interested to learn that in the Gracechurch Street offices a large room has been set apart for the use of the members of our overseas staff, where they are always welcome when they visit London. A considerable number of our staff are sent out of England on various duties connected with the bank. We also recruit members from the staff of Barclays Bank who enter our service with the same object. They speak with much appreciation of the cordial way in which they are received wherever their duties call them, and I think I may say that a feeling of cohesion and common understanding is growing up amongst the staff over our widespread areas, which is of undoubted value to the interests of the bank.

A summary of conditions in the various areas in which the bank is established will be circulated for the information of shareholders, together with a copy of the report of proceedings at this meeting. There will be circulated also a copy of the address to the shareholders of Barclays Bank, Ltd., at the annual meeting, which has taken place to-day.

I now beg to move:—"That the report of the Directors, produced, together with the annexed statement of the company's accounts as at September 30, 1929, duly audited, be received, approved, and adopted, and that a final dividend at the rate of 8 per cent. per annum on the cumulative preference shares, less income tax at the rate of 2s. 7d. in the £, and at the rate of 5 per cent. per annum on the "A" and "B" shares, less income tax at the rate of 2s. 8.7d. in the £, making, with the interim dividend paid on July 18 last, 4½ per cent. for the year on the "A" and "B" shares, be declared payable on January 22, 1930, to the shareholders registered in the books of the company on December 31 last."

Mr. R. H. Foa seconded the resolution, which was carried unanimously.

On the motion of the Chairman, seconded by Mr. R. H. Foa, the retiring directors, Sir Ernest Oppenheimer, M.L.A., Sir William Edgar Nicholls, Sir Harold Edward Snagge, K.B.E., and Mr. Emil Pusch, were re-elected.

The auditors, Messrs. Deloitte, Plender, Griffiths and Co., Messrs. Price, Waterhouse and Co., Messrs. Peat, Markwick, Mitchell and Co., and Messrs. Cooper Brothers and Co., were reappointed on the proposition of Mr. G. Addison Scott, seconded by Mr. H. Hamel Smith.

The Rt. Hon. Lord Lugard, G.C.M.G., C.B., D.S.O., proposing a vote of thanks to the staff, said that the best criterion of the energy, zeal, and ability which the general manager, assistant general managers, and staff brought to bear upon their work was the enlarged business and continued prosperity of the bank, and he thought that there was ample and satisfactory evidence of that in the report and accounts which had been presented to the meeting. He wished particularly to refer to the services of those members of the staff who carried on their duties in the trying climate of the tropics. They knew that they could look to them with confidence to maintain the high traditions of the bank. (Hear, hear.)

Mr. Charles F. Wood, in seconding the vote, said that he knew that the general manager would agree that from the senior staff officers down to the newest recruit he had an army of workers who were second to none in keenness, efficiency, and loyalty. (Hear, hear.)

The vote was unanimously accorded.

Mr. John Caulcutt (General Manager), acknowledging the compliment, said that he was satisfied that during the year there had been good and increasing team work among the staff—which numbered more than 5,000—and that the growing co-operation between the staff of Barclays Bank and their own was reacting to the benefit of both institutions.

Mr. Allan Hepworth proposed a cordial vote of thanks to the Chairman and Directors for their efficient services in the administration of the affairs of the bank. They all believed, he said, that the bank was destined to become an important factor in the development of trade and industry in the Empire.

The Chairman, in response, said that the bank was undoubtedly performing valuable services to the country by bringing together various parts of the Empire into one common field of active co-operation in industry and trade.

The proceedings then terminated.

Summary of Conditions.

The following is a summary of the chairman's references to the conditions in the Near Eastern countries:—

Egypt.

In August last, Sir Percy Lyham Loraine, Bart., K.C.M.G., was appointed H.M. High Commissioner for Egypt and the Sudan.

The cotton season has been a very indifferent one. Prices ranged from 37.95 dollars per kantar in December, 1928, to 32.20 dollars in July, 1929, or an average of 35.20 dollars over the year. As a result of lower cotton prices, the import trade of the country has suffered severely during the whole period.

The Nag Hamadi Barrage and the irrigation works in connexion with it are progressing well. The contract for the heightening of the Assuan Dam has been definitely placed. The doubling of the railway line to Upper Egypt and from Tantah to Mansourah is progressing rapidly. Drainage stations to the north of the Delta are being established gradually, and the whole problem of irrigation and drainage is having careful attention.

The Sudan.

The general situation during the year under review has been moderately satisfactory. The rains on the average have been good and the prospect of approaching harvest should cause an increase in activity and a general improvement in conditions.

The cotton crop, from all reports, is well up to standard. High prices have been realised for gum arabic, and at the end of the season only about 11,000 tons, as compared with 16,000 tons for the corresponding period of the previous year, had come forward. Allowing for the further serious shortage in inferior gums, the total reduction approaches 7,500 tons.

Motor transport, coupled with the systematic making of roads, have placed the Sudan in a stronger position to-day to contend with the results of any partial failure of the food crops.

Prosperity in the Gezira is reasonably secure, as approximately £E1,000,000 is received in a normal year by the tenants as their share of the value of the cotton crop, with a consequent stimulus to internal trade.

The Gebel Aulia Dam, if the arrangements for its construction are finally completed, will undoubtedly prove to be of considerable benefit to all classes of the community.

Palestine.

The period under review has, on the whole, witnessed a progressive movement both in agriculture and industry. Although the year commenced rather unpropitiously owing to an almost complete failure of the cereal and olive crops, the abundant winter rains and favourable climatic conditions gave rise to hopes of more favourable results the following season, which have been fully realised.

The orange season did not fulfil expectations owing to a short crop and to somewhat unsatisfactory prices. This, however, has caused no curtailment in the planting out of new areas, which is going on steadily, and the new crop is expected to yield approximately 3,000,000 cases, as against 2,500,000 last year, and to provide an export of approximately 2,250,000 cases, as compared with 1,626,000 cases last year.

In industrial enterprise progress has been steady.

The various development projects which are calculated to have an important bearing upon the future of the country are well in hand, particularly the hydro-electric installation on the Jordan, which will be completed next year, and the Haifa Harbour project, on which work has already begun.

The year, therefore, from a business point of view, has been encouraging; the events of August last have, however, cast a shadow over the immediate future, but the country hopes for a satisfactory solution of the present difficulties.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended January 11:—

Grain.—The continued low level of prices on consuming markets precludes any fresh business from being done, and the recent sales at cut-throat prices of the parcels—particularly barley—which were shipped unsold towards the end of the Danube season, have had a further weakening effect on the market. Consequently, in spite of the fair quantities of grain ready for shipment from Sulina and of space being offered at 11s., no bookings of note appear to have been effected. Tonnage, mainly fixed by the larger exporters to fulfil their old contracts, is now beginning to arrive. At Constantza the position is unchanged. The only fixture reported during the week was at 11s. 10½d. full terms Constantza with the option of Sulina at 1s. extra.

Timber,—As the weather has continued to be mild, a small Greek vessel has ventured to come up the Danube. Business, however, has practically ceased, as shippers are at present directing their timber to Constantza although business is also restricted there, and so far only a few freight engagements have been closed, mostly for Continent and North Africa. The following rates are quoted for prompt loading at Constantza. Antwerp/Rotterdam, £9 10s. per wagon; Rouen, £10 10s.; Italy, £8; Syria/Palestine, £7 10s.; Greece, £7 10s.; North Africa £9 10s. It is expected that if fine weather continues, shippers will shortly resume railing timber to Galatz instead of Constantza. Spring business is being negotiated from the Danube, a steamer of about 7,000 tons having been fixed for a full cargo of timber for South America, April loading, whilst a similar shipment is being treated for the same destination.

Weather.—There has been little change in the long spell of mild weather with a completely overcast sky. There was no rain or snow during the week, and the atmosphere has been drier and less foggy till this morning, when there was an almost imperceptible drizzle condensing from a light mist. The temperature fell towards the middle of the week to a few degrees below zero, but then rose to plus 6 or 7 degrees, remaining well above freezing point even at night. The slow current and falling water level in the Lower Danube will militate against danger from ice which might be broken up in the frozen tributaries and backwaters should the thaw continue; but these same factors, added to the fact that the temperature of the Danube is now closed to freezing point, would favour the formation of ice in the main stream in case of severe weather setting in, as is not unlikely during the next few weeks, the period from the second week in January to the middle of February being that which usually brings the lowest temperatures. It is reported that a certain amount of ice, which has apparently been released by the thaw from the tributary river Jiul, is running in the Upper Danube between Bechet and Corabia where the water level has been rising.

Sulina.—Bar depth 24 feet officially, and it is believed that there is a margin against bad weather. River depth. —The minimum is still 24 feet.

Constantza.—This week about 8,000 tons of grain have arrived from the interior, and about 15,000 tons were exported to the Weser, besides a few hundred tons to Antwerp and Trieste. Seven vessels loaded over 22,000 tons petroleum products, and four took oil fuel for bunkers.

Bulgarian Report.

Bourgas, January 4.—Grain markets continued very quiet and very few shipments have been effected; freights ruling for Antwerp and Rotterdam are about 10s. 6d. Tobacco exports during the week amounted to about 400 tons. The weather was generally dull and moist with occasional slight frosts at night time. Reports on autumn sowings continue to be favourable.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 15:—

Egyptian Futures.

Sakel Contract.—Trading in this market has shown a slightly broadening tendency during the past week, but on balance very little alteration in prices has to be recorded. Very moderate trade support and heavy stocks continually act as a brake whenever near positions reach the 14d. level; on the other hand, the effects of the Government intervention are to be noted as soon as prices fall 25 to 35 points below the above figure. Some active spot house covering of near positions immediately after our last report resulted in a gradual advance of about 20 points, and, at the same time, closed the January/March difference to 10 points. Once this buying was satisfied, values started to fall back slowly to their previous level, the speculative offtake being insufficient to counteract a moderate amount of hedge selling. Trade reports show a slight improvement on those of recent weeks, and export figures have latterly been more satisfactory. Values in Alexandria, however, keep close to the 27 dollar limit; the second January tender only amounted to 7,250 kantars. It now remains to be seen if the final tender appreciably augments the Government's holding; if it does, a temporary speculative buying movement might be encouraged on the assumption that the cotton taken up ceases to operate as a market factor for some time ahead. We still consider that the market will continue to show moderate fluctuations round the ruling level, and see little object in advising commitments until either trade or new crop developments are of such character to lead to a more definite view.

Upper Contract.—Conditions in this market remain similar to those ruling at the time of our last report; trading throughout the week has been featureless, and with fluctuations confined to a few points daily, very little change in the level has to be recorded. Further tenders have been made and spinner interests are still taking cotton from this source. Trade reports show a slightly

healthier undertone, and in some cases an improved demand for shipment cotton is reported. Taking a long view, we would advise purchases on any decline from the ruling level, as anticipations of a broadening demand are not unreasonable in view of the fact that the Upper varieties are at a comparative basis with outside cottons.

Egyptian Spot.

The inquiry during the past week for cotton out of the local stock has shown some slight improvement, but the average daily sales continue to run well below the normal turnover generally experienced at this period of the season. Sakels continue to meet with a retail offtake, and the bulk of the business recorded has been in F.G.F. to Good qualities. The lower grades appear to have gone out of favour for the time being and are probably being replaced by outside staple varieties, which appear relatively cheaper in basis. Premiums of the top grades are attractive and we recommend "on call" purchases. It is some seasons since the fine Sakel qualities have stood at such a narrow difference over contracts. Uppers have constituted the greater part of the moderate sales reported, the demand being spread over most of the tenderable grades. The basis has a hardening tendency, although in some cases cheap sellers are to be met with. Pilion has only been reasonably demanded, at prices ranging from 75 to 125 on. Nahda, Maarad, Fouadi, etc., have not aroused much interest and only odd lots have been placed. Sudan Sakel has been in improved request and a larger business in this variety apears probable during the next few weeks. Tokar Sakel has been neglected.

C.i.f. business shows some improvement, more orders being booked in both Sakel and Uppers than recent weeks. Forwardings amounted to 7,134 bales and 2,657 bales of Egyptian and Sudans respectively. Spot sales are estimated at 1,100 bales Egyptian and 150 bales Sudan Sakel. Quotations of Sakel have been raised 10 to 15 points, those of Upper and Pilion reduced 1 and 10 points respectively. F.G.F. Sakel to-day, 14.45d. F.G.F. Upper to-day, 10.51d. F.G.F. Pilion to-day, 11.15d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 9, state:—

Since our last report the futures market has been fairly active, but fluctuations have not been very wide. The week's summary of price movements is as follows:—Sakellaridis: January, 27.13 dollars, 0.11 dollars up; March, 28.04 dollars, 0.05 dollars up; May, 28.50 dollars, 0.10 dollars down; July, 28.81 dollars, 0.01 dollars down; November N.C., 28.96 dollars, 0.09 dollars down. Ashmouni: February, 19.25 dollars, 0.09 dollars down; April, 19.74 dollars, 0.10 dollars down; June, 20.05 dollars, 0.12 dollars down; August, 20.20 dollars, 0.07 dollars down; October N.C., 20.41 dollars, 0.14 dollars down.

The Egyptian State Railways have placed orders for drilling machine with W. Asquith (1919), Ltd., Halifax; for a boring lathe with Cunliffe and Croom, Ltd., Manchester; and for a milling and grinding machine combined with Kendall and Gent (1920), Ltd., Manchester.

Notes of the Week.

Egypt and Great Britain.

The spectacle of an Anglo-Egyptian combination in the person of Russell Pasha dominating the situation at the League Advisory Committee on traffic in opium and other dangerous drugs in Geneva may well be regarded as a happy augury for the future of Anglo-Egyptian co-operation. Russell Pasha is Commandant of the Cairo City Police and Director of the Egyptian Central Narcotics Intelligence Bureau. In the course of his address to the League Committee it transpired that the Egyptian Government had given him a free hand, placed a sum of ten thousand pounds unreservedly at his disposal and bidden him cope as best he could with a grave evil. Russell Pasha spoke, accordingly, on behalf of Egypt, and it is a fair summary of the Committee's proceedings last Monday to say that he had the representatives of the European Powers sitting at his feet. The illicit drug traffic has become a serious matter for Egypt, but it is also a scourge for the world at large. It may be doubted whether any responsible Egyptian would contend that, left entirely to herself, Egypt could cope with the evil, or, at least could have produced the driving force, authority and efficiency in coping with it that it has produced under the lead of Russell Pasha. Is it not legitimate to infer that in other spheres, constructive as well as negative, the same combination will procure for Egypt a position in the world that single-handed she could never hope to attain?

The Reparations Settlement.

The theoretical value of the agreement reached at The Hague regarding the payment of Eastern Reparations, that is to say, the amounts due to the Allied Powers from Austria, Hungary and Bulgaria, is obvious, and it will cause no surprise if the practical results mark a turning-point in Near Eastern history. Already there are signs that the Yugoslav Government is minded to follow up the removal of a constant bone of contention between itself and Bulgaria by a policy of friendly overture, which, it is to be hoped, the Bulgarians will reciprocate without reminding their neighbours or themselves of past history. In a statement to the Press the Yugoslav Foreign Minister lamented that Bulgaria had not fared at The Hague as well as Austria and Hungary, and he sought the reason in the diminution of interest shown by the Western Powers in international affairs as their distance from them increased. In other words, M. Marinkovitch holds that the Western Powers take more interest in Austria and Hungary than they do in Bulgaria. If this is the case, it may be the outcome of the charges levelled against them for so many years of seeking to favour Bulgaria at the expense of her neighbours by supporting Bulgarian claims for a fair assessment of reparations. More probably the Western Powers had made up their minds that the payment of ten million francs annually by Bulgaria was a fair compromise between the rival demands for vindictive penalties on the one hand and the general interests of Europe in the speeding-up of reconstruction. The Bulgarian Prime Minister does not support the charge that the Western Powers failed Bulgaria at a critical moment. The justice of his Government's contention that Bulgaria could not at present pay more than she is paying for reparations has been endorsed, and Bulgaria has nothing to gain by any fresh laments on the subject. It is much more to the point that M. Liaptcheff should urge the Balkan States to strengthen their economic position by a political *rapprochement*. The need of the moment is rationalisation all round. Elsewhere in this issue it is pointed out how such rationalisation might be applied in the sphere of Near Eastern communications. Yugoslavia and Bulgaria appear to be on the eve of applying it in the political sphere by means of an agreement over the problem of divided properties along the frontier.

The Opposition in Roumania.

The Prime Ministers of neighbouring countries must envy General Zhivkovitch his complete freedom from criticism. The Yugoslav Government carries out its pre-ordained programme without challenge, with the result that progress in administrative reform proceeds at an almost dizzy rate, with the Yugoslav people accepting each new ordinance in an exemplary spirit. In Roumania, on the other hand, in spite of an overwhelming majority in the Chamber, M. Maniu finds much of his time taken up in defending himself against the organised assaults of a past master in political strategy. M. Bratianu, who would seem to think that his influence with the Council of

Digitized by Google

Regency ought to be as great as it was in the days when he was Prime Minister, has again appealed to the Council to protect the country against M. Maniu's Government. This time the trouble is over the *Voïnitchi*, a League of Youth, who, being all members of the National-Peasant Party, are, according to the evidence of the spokesmen of the Opposition, arrogating to themselves the functions of a political police force. So seriously does the Liberal Party view the situation that in the event of the Council of Regency's failing to take satisfactory steps in the matter, the Party will have to appeal to the country and take upon itself the defence of the State's interests, so gravely imperilled. The Prime Minister has issued a spirited reply to his political opponents, in particular criticising the "audacity" of their threat to take over the functions of the Crown in the defence of State interests. The League of Youth, he declares, is merely a political organisation, and there is no truth at all in the accusation that the Government is countenancing the use of brute force. The implication of the Liberal Party is that the free expression of the popular will is being hindered by the League of Youth. As the charge against M. Bratianu's Government was that the same object was accomplished by the intervention of uniformed police and State officials, the substitution of voluntary workers ought to commend itself to such a shrewd economist as the late Prime Minister.

Greek Rods in Pickle.

Writing from France in December to a friend in Greece, General Kondylis, leader of the National Republicans, who were represented in the Cabinet, passed some severe strictures on M. Venizelos and the Greek Government's policy. The letter found its way into print, and the representatives of the National Republicans in the Government, the Minister of the Interior and the Under-Secretary for Health, although dissociating themselves from their leader's criticisms and, indeed, withdrawing on the strength of them from the party, felt obliged to resign their posts. M. Venizelos at once reconstructed his Ministry, and showed so little concern for General Kondylis' strictures that he left Greece shortly afterwards for The Hague. General Kondylis, who was responsible for the overthrow of the Pangalos Dictatorship and became Prime Minister himself for a few months, has since returned to Greece and has elaborated his indictment of the Government. He criticises its action in the domain of national economy, and is particularly severe on its fiscal measures; but his main attack is directed against its naval policy, which, he declares, threatens to lose for Greece naval supremacy in the Eastern Mediterranean which she has held since 1850. Whether this beating of the patriotic drum will cause the Greek people to shake off its resolve to let things remain as they are and to avoid political alarms and excursions remains to be seen. General Kondylis's attack has been reinforced by M. Kaphandaris, also a Republican, who succeeded to the leadership of the main section of the Liberal Party when M. Venizelos retired from politics in 1924. It was the financial policy of M. Zaimis's Government, for which M. Kaphandaris was responsible as Minister of Finance, that M. Venizelos challenged in 1928, and in so doing found himself obliged to resume his political mantle, replace M. Kaphandaris as head of the Liberal Party and become Prime Minister once more. To-day the rôles are changed. M. Venizelos is again transacting his country's business abroad, and his critics have chosen their time for attack shrewdly, as there can be little doubt that the Prime Minister's frequent absences from the country are a worry to the Greek people, although loyalty to M. Venizelos may prevent them from expressing their view too pointedly. Now, as before, both Government and country are inclined to leave every decision to the Prime Minister, who finds himself on his return called upon to decide numerous points at issue. It is more than probable that M. Venizelos's political opponents find opportunity to pick holes in a system that imposes such a heavy burden on one man. Important as are her foreign relations, the primary need of Greece at this time would seem to be progress in internal reorganisation, and it is unfortunate that the country has to rely on the one man only to look after the routine work of both spheres at once.

"New Smyrna."

The question has been raised of the wisdom or expediency of the system which Greece seems to be inclined to adopt of naming some of her new towns and villages after the places which the refugee inhabitants were forced to abandon in Asia Minor. The subject involves a delicate question of psychology. It used to be the point of view of the French, before the League of Nations came into existence, that, if ever they sacked Berlin, they would leave the Column of Victory commemorating the Franco-German War standing, as they regarded it as a greater disgrace (from the æsthetic and artistic point of view) to Germany than to France. If the subject of the nomenclature of new towns and villages in Greece had been raised at Lausanne in 1923, it is conceivable that the Turkish delegation might have insisted on their being given the names of Turkish places, as a lasting memorial to the Turkish elimination of Greek influence from Asia Minor. To-day, it may be supposed, the Turk is quite indifferent whether a town in Greece is called "New Smyrna" or "New New York"; for in the first place, he calls his own Smyrna Izmir, and secondly his confidence in the future of Turkey is too strong to allow him to worry over a not unnatural indulgence in sentiment common to Greeks and to migrants of all nationalities, as the existence of several hundred place-names embodying the word "New" indicates.

Public Order in Palestine.

The times are still anxious in Palestine, but it is at least a gratifying sign of them that Jewish families should have returned to Hebron, from which they have been absent since the disturbances last August. This return to a place of tragic memories is perhaps a more patent sign of the re-establishment of public order in the Holy Land than anything else could be. It is obvious, however, that the Government has done its utmost to ensure the future protection of Jewish Colonists. Dr. Drummond Shiels, Under-Secretary for the Colonies, announced in the House of Commons last week that measures of immediate urgency were being concerted for the defence of these colonies. The High Commissioner had authorised a Government grant towards the cost of providing roads to give access to outlying colonies, an additional two hundred British police have been recruited, and Mr. H. L. Dowbiggin, Inspector-General of Police in Ceylon, has arrived in Palestine to advise on police organisation. What can be done, in short, to lessen fears by administrative methods, is being done, promptly and efficiently. But what must be not lost sight of is that administrative tightening of machinery must be backed by psychological change: a change which shall assuage sentiment and ensure, not a compulsory, but a voluntary act of reconciliation and co-operation between the parties concerned. This naturally cannot be achieved until the Report of the Inquiry Commission has been published and acted upon. To discover who was immediately to blame for the August disturbances is important, but infinitely more important is the discovery of a method which shall ensure their non-recurrence. Such a method must necessarily mean the formulation of a definite policy in Palestine, for this unhappy country has in effect lacked a definite policy ever since the War. In other words, the British Government must resolutely address themselves to a problem which hitherto it has been vaguely hoped that time would solve. Time, it is true, does solve certain problems, not by concrete solution, but by means of their dying of inanition; but if one thing can be prophesied with assurance about Palestine, it is that the questions now agitating the minds of Arab and Zionist will never cease to exist through inanition. A clear lead, based on the real practicalities of the situation, must be given to the peoples of Palestine.

Zionists in Conflict.

It is no duty of the outsider to suggest how best the Zionists may resolve their internal quarrels, yet no one interested in the future of Palestine can fail to give close attention to the dispute, now distracting the ranks of Jewry, upon the question of co-operating with the Arabs in Palestine. Every Zionist, of course, pays lip service to the ideal of collaboration with the Arabs of Palestine, but the suggestion of Dr. Magnes, of the Hebrew University, which appears to have recommended itself to the "Liberals" of America, and particularly to a "non-Zionist" section of the Jewish Agency, that the main political demands of the Arabs should now be freely granted, has aroused indignation, if not dismay, among the more orthodox Zionists. Mr. Maurice Samuel, for instance, writing in the *New Palestine* of January 10, refers, as a reaction of America to the August disturbances, to "a collapse of liberal support for Zionism and a consequent intellectual panic among the Jews." No doubt the cleavage of thought between the official Zionists and those whom they call the "Defeatists" is a deep one, but it cannot be believed that the Zionists, howsoever they may be distraught by this unwelcome appearance of internal division, will voluntarily abandon their implied, and, indeed, openly acknowledged hope of a Jewish majority in Palestine, and their consequent fears that the establishment in the near future of a National Government in Palestine would gravely prejudice the prospects of a "Jewish National Home." Circumstances may alter cases; it would appear probable, for example, that one of these two programmes, the official Zionist or the "Defeatist," may be modified when the Report of the Inquiry Commission has been published and the British Government has shown indisputably how it intends that the future of Palestine should be shaped. In the meantime it is instructive to watch the process of this discussion (which is, in effect, upon whether peace in Palestine shall or shall not depend upon the strength of the Mandatory arm, or, as it may appear to both Arab and Jew, a foreign arm) in the world of Jewry.

Economics and Politics.

What one would like to see, however, in addition to this question of the possibility of Arab-Jewish political collaboration, is more emphasis laid, more attention devoted to, the desirability and ways and means of Arab-Jewish collaboration in the economic sphere. After all, economics are always infinitely more important than politics. An economic grievance weighs with the British public, with any discerning public, for that matter, far more than any political grievance; and an impartial observer could think of no way more effective for the Zionists, if they wish to retain their ideals as a concrete possibility, than the adoption of a more deliberate policy for the economic redemption of the Arabs. We should be far from denying that imaginary grievances can be real grievances, though whether they can be dissolved through a political medium is an arguable point. A Parliament for Palestine, which is clamoured for for purposes perhaps as much of negation as of construction, might or might not be a blessing to the people. It is, however, beyond all doubt that that spirit of economic collaboration between Arabs and Jews which originally inhabited the minds of Zionists (and of certain influential Arabs) has been departed from. What the Jews have done for the Arabs in Palestine has been done, in the main, as a by-product, or willy-nilly. There is little credit in killing mosquitoes for one's own ends and then proclaiming that one has saved Arabs also from malaria. No: there is, it seems to us, ample room for a change of outlook in this sphere of economically helping the Arab. Too narrowly have the Zionists envisaged this problem of colonisation; too often have they been content to point out that the Arabs have no legal cause for grumbling. Debating points are nothing when the daily existence of peoples is at stake, and it is to be hoped that the Zionists, instead of relating at length to the world the benefits which the advent of the immigrants has brought to Palestine, should in future see that the Arabs are helped, not incidentally nor accidentally, but as a matter of high policy. That difficulties would be encountered in devoting Jewish money to Arab causes is obvious, but at least that possibility was entertained just after the War; and, if the "Jewish National Home" is to retain any meaning as an historic fact, a return must be made to that early spirit. A chain is as strong as its weakest link, and Palestine may be judged by its most depressed *fallahin*. If the August disturbances have the effect of rediverting the Zionist movement into its early channels, which are at once humaner and more sensible, it is almost possible to say that they will not have been in vain.

INDIAN NOTES.

The Viceroy's Appeal.

If in his address to the Legislative Assembly on Saturday the Viceroy did little more than reaffirm his earlier statement, the speech was no less impressive on that account. After emphasising that he stood by every word of the declaration made on his return to India at the end of October, Lord Irwin proceeded nonetheless to make two important pronouncements, which the trend of developments during the intervening period had made imperatively necessary and which gained importance from the fact that the speech was delivered on the eve of "Independence Day" itself. The first was a solemn warning that the generous construction placed by the Government on the definition of seditious speech had its limits, and that in future its powers would be exercised not only in the repression of violence or other defiance of established authority, but also against those guilty of incitement to such acts, with whom there could be "no composition and no truce." The second was a timely reminder that the Round Table Conference would be held and that the refusal of some to take part only threw greater responsibility on, and gave a wider opportunity to, those who were prepared to face the indisputable difficulties in a generous and constructive spirit. At the same time the Viceroy's carefully weighed words were clearly intended to serve not merely as a warning to the authors of Sunday's demonstration, which incidentally failed so signally of its purpose, but also, and more particularly, as an encouragement to all who look forward with Lord Irwin to a future India filling "a position of full equality with the other self-governing units of the British Commonwealth." For all such, and they constituted the vast majority of an audience extending far beyond the confines of the Council Chamber at New Delhi, the most important and significant passages, as Sir Tej Bahadur Sapru and Mr. Jinnah have rightly recognised, were, first, that those attending the Conference would be free to advocate any proposals for the realisation of a common goal and, secondly, that the well-being of India and the rate of her political progress depended far more profoundly upon whether public men could succeed in welding into a true unity the element that composed her being than upon anything the British Government or anybody else could do.

The Reforms in Madras.

It is generally accepted in India that the reformed system of government has worked more satisfactorily in Madras than in almost any other of the Indian provinces. Lord Goschen, in the paper which he read before the East India Association last week, confirmed this view. Nevertheless he stated very clearly that, in his opinion, dyarchy as a system of government has failed. "Its purpose was," he said, "to teach the people responsibility: its actual effect has been to teach them irresponsibility."

THURSDAY, JANUARY 30, 1930.

REPARATIONS AND COMMUNICATIONS IN THE BALKANS.

The settlement of the vexed question of Eastern reparations will have the effect, it is to be hoped, of establishing a *détente* in the relations between the various States of South-Eastern Europe. So long as the question remained open, it provided a fruitful source of bickering under the mistaken belief that the Press or public platforms afforded the best medium for reaching the solution that each party to the dispute desired. Yet the only result achieved was to bring the representatives of the States concerned to The Hague committed to so many untenable positions that longer time was required to create an atmosphere in which negotiations could lead to a practical conclusion. The final word on the Hungarian reparations will be spoken in Paris, but, as far as the interests of the Balkan Peninsula are engaged, the main consideration is that a settlement has been reached in regard to Bulgarian reparations which is accepted by Bulgaria herself and by her immediate neighbours. Her payments for the next ten years will continue to be at the present rate of ten million francs a year, and will not reach the figure of the reduced demand put forward by the creditor Powers—twelve million five hundred thousand francs—for twenty years. The full extent of each country's financial commitments is now known, and it remains only to adjust the State finances to sound economic principles where this has not already been done, in order that more headway may be made in the work of reconstruction.

With the settlement of the Reparations question the ground is cleared for the paying of closer attention to the economic inter-relation of the different States. One of the most important aspects of this problem is that of communications, and it is satisfactory to note that renewed interest is already being taken in projects for improving communications between Roumania and Bulgaria and between Bulgaria and Greece. The subject has a wider concern than that of the districts that are likely to be immediately affected. Railway communication for Poland and Roumania with Bulgaria, Turkey and the Ægean Sea is interrupted by the Danube, which separates Roumania from Bulgaria over a distance of nearly two hundred and fifty miles. Yet the close connexion between the two countries is clearly indicated by the fact that throughout this length the chief towns on either side have sprung up opposite one another—Calafat and Vidin, Turnu Magurele and Nikopol, Zimnitzlea and Sistova, Giurgiu and Rustchuk. In one instance only, at Corabia, does a Roumanian railway line terminate on the Danube without finding a town of some importance across the river on the Bulgarian side, and it is, perhaps, unfortunate that this particular spot should commend itself as a likely site for a bridge over the Danube. There is much to be said, from the point of view of all the countries involved, for a north and south line from Poland and the Baltic States through Roumania and Bulgaria to the Ægean Sea. At present a passenger from Bucharest to Sofia breaks his journey at Giurgiu to cross the Danube at that point by means of a small steam-tug for Rustchuk. To continue his journey from Sofia to Salonika, either he must enter Yugoslavia, proceeding *via* Nish, or he must take a journey of some six hundred miles to a destination less than two hundred miles away by direct route. The links missing are a bridge or train-ferry across the Danube, and a line connecting the Bulgarian railway system at Petritch with the Greek system at Demir-Hissar. The project of a ferry-boat has been examined, and, although it would entail less expenditure at the outset, it is understood to have been rejected by competent authorities on various grounds, including the cost of upkeep, and the inevitable interruption of the service when the river is frozen. Against a bridge can be urged only the handicap of expense. The distance between Petritch and Demir-Hissar requiring to be linked by a railway line is a matter of little more than twenty miles, but the Petritch railway for a distance of over a hundred miles is of narrow gauge, and, if this section is to serve international communications, it will have to be relaid for standard gauge, an expensive undertaking. Accordingly, with her share in the construction of a bridge over the Danube and the cost of converting the Petritch line to standard gauge, Bulgaria would be called upon to incur an expenditure that she could not legitimately contemplate in the present state of her finances. That she stands to benefit materially from through north-and-south railway communication goes without saying; at the same time, so do Poland and Roumania, and, above all, Greece, if, as is intended, the terminus of the line is to be Salonika, which would thus be brought into immediate touch with a wide hinterland at present closed to it.

A solution of the difficulty, it is probable, could be found in connexion with Bulgaria's reparation payments. A portion of the annual charges is paid to Greece and Roumania, and it would be in the interests of both these countries that these payments should be utilised for the purpose of defraying the cost of establishing through communication between Bucharest and Salonika instead of being merged in the annual revenues of Roumania and Greece. A part of the total outlay might, possibly, be defrayed by Poland, more *ex gratia* than because she stands to gain above and beyond what she will subsequently have to pay for in railway rates. Warsaw already has its Mediterranean outlet at Trieste, and only the southern part of Poland will benefit directly from through communication to the Ægean Sea. The interests of Roumania, Bulgaria and Greece are paramount, and it should not be difficult for the three Governments to arrange a joint conference to examine the question in all its bearings. If Corabia should be selected as the site for the bridge, Bulgaria will have to build a short railway from the river to connect with the line from Plevna to Sofia, and this extra expenditure must be set against any saving effected by means of a bridge at a narrower part of the river than between Rustchuk and Giurgiu. The main point is that the whole question should be examined dispassionately by experts, rather than by politicians, to determine whether the advantages that the various countries stand to gain are worth the outlay entailed. When once a start has been made in these joint conferences for non-political purposes, the field for economic co-operation between the various States is likely to be found a large one.

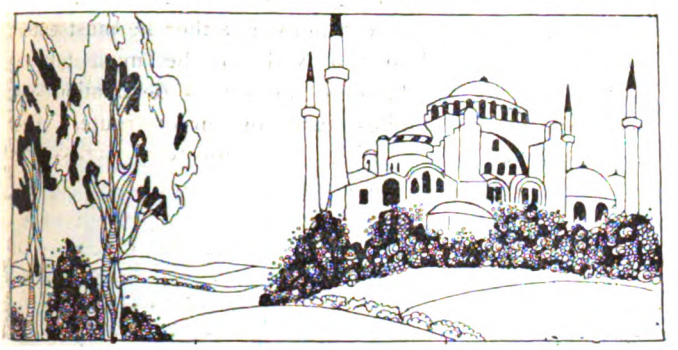
*The Near and Middle East

From Our Own Correspondents.



TURKEY.

Istanboul, January 14.

The Ford Factory's First Car.

The christening took place a day or two ago of the first native-born car to see the light of day in the old Capital of the former Turkish Empire. The sponsors of the infant, which received the name of "Henry Ford," were the American senior officials of the Ford Motor Car Factory, situated at Tophane on the shores of the Bosphorus. The output of this branch establishment is destined, in time, to supply the requirements of the whole of the Near East in the matter of moderately-priced motor vehicles—in so far, at all events, as the keen competition set up by Italian and French rivals may permit. The British manufacturer, unfortunately, has not been very successful in making any headway on this market. His sterling price-quotations and the readiness with which his Continental competitors grant long-term credit facilities are both serious handicaps to the extension of sales.

It is interesting to record, as an indication of the conditions ruling in the local labour market, that the staff of the local Ford factory—which is not yet completed, nor fully equipped—consists at present of about 40 clerks and 350 workmen—the latter mainly Turks, whereas the number of applications for employment at the factory is reported to have exceeded 20,000. The installation, when completed, will be capable of turning out 80 cars a day, but, for the moment, the daily production is to be restricted to 20 vehicles.

In order that the local concern may eventually become a paying proposition, Mr. Collins, the local Manager, is reported to have said that yearly sales must approximate to 50,000 cars, but for the moment, owing to the necessity of training native artisans and workmen, the annual output is scarcely likely to exceed 20,000 vehicles of all types. The markets which the Constantinople Ford establishment is setting out to capture include Turkey, Bulgaria, Greece, Palestine, Syria, Arabia, Persia, Afghanistan, Somaliland, the littoral of the Persian Gulf, Egypt and Abyssinia. For the time being a 4-cylinder motor only is to be assembled and placed on the Near Eastern markets, but a 6-cylinder vehicle may follow in course of time.

A noticeable feature at the christening ceremony alluded to above was the number of placards displayed both inside and outside of the building bearing the following inscription: "Staff requirements fully met. No further applications for employment will be entertained." These notices will probably be taken down when the workshops are equipped and organised to turn out their estimated maximum annual production.

An Alleged Attempt at Murder.

A stir was caused yesterday in Stamboul official and social circles by the report of an attempt to assassinate Hakki Tarik Bey, a Deputy in the present Parliament and Chief Editor of the *Vakit* (Times). Bedi Bey, the assailant, a College Professor and an old friend of the victim, has been placed under arrest. It would seem that the aggressor was actuated by trivial considerations—unless, of course, there be more beneath than appears on the surface. Hakki Tarik Bey visited a few days ago, in the company of his assailant, a building which he proposed leasing on behalf of the Press Association, of which he is the President and for which premises he eventually signed a contract. The Professor called next day on the Deputy in the latter's editorial office and claimed a brokerage of 25 liras or fifty shillings on the lease. This brokerage Tarik Bey declined to pay, whereupon Bedi Bey drew a revolver and discharged four shots at the Deputy, who closed with his aggressor, whereby three shots were deflected, but the fourth pierced Hakki Tarik Bey's cheek. Much sympathy is felt for the victim who is very popular among a large circle of friends. The middle-aged Professor is said to have been out of employment for a couple of years, and it is thought that his mind may possibly have become unhinged by distress and anxiety. The Editor of the *Vakit* is happily out of danger, but will not be allowed to converse for a fortnight or so.

The National Savings Campaign.

If there be any criticism which might be levelled at the Turkish Ministry in connexion with the vigorous campaign now being waged in favour of the limitation of the consumption of foreign goods, the encouragement of local industries and the lowering, until the clouds have rolled away, of the general standard of living, it is that these sweeping and far-reaching measures ought to have been adopted at least five years ago. Whilst official circles are inveighing against the exodus of national wealth by the importation of expensive perfumes, champagnes, ladies' dress materials—to mention only a few items on the official black-list—it is no more than fair to say that national savings have also found their way to foreign countries as a result of the Government's own policy.

Although, in fairness to the Republican régime, one must recognise the crying necessity for transportation facilities in certain regions of Western and Northern Anatolia, it would be idle to deny that railways are being laid down in sparsely inhabited and, therefore, potentially poor agricultural districts in Eastern Asia Minor. Years must elapse, crop-growing, stock-breeding, mining and other national activities will have to be, not spasmodically, but intensively developed, before some of these railways can become remunerative propositions, making a fair return on invested capital. The material for the whole of these railways down to the smallest bolt or nut has to be imported from abroad. Much, it is true, is now being done to develop local resources. The canning industry of fruit, vegetables, fish, potted meats—ham and bacon not excepted—is progressing by leaps and bounds; it is

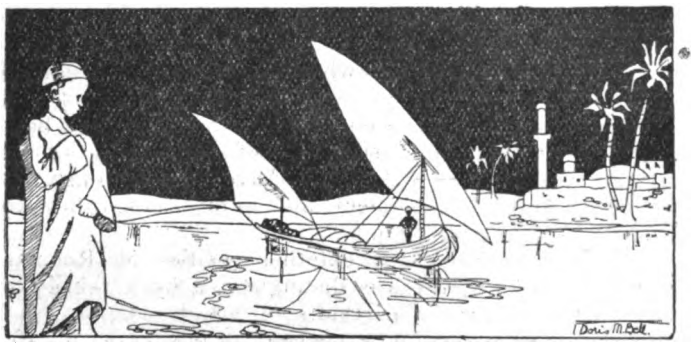
now possible to purchase on the local market a very fair imitation of an English attaché-case, the fittings, such as nickelled locks and keys, of course, being imported from the Continent. Certain Turkish silk products are admirable in design, texture and colour. Woollen dress fabrics are cleverly patterned on Western fashions. Boots and shoes are being turned out which few Europeans would disdain to wear. But—and this "but" is indeed a serious one—the domestic consumption of these various commodities is a relatively limited one. It is confined mainly to the more opulent classes in the towns, as the peasant, particularly after the crop failures of the past few years, is too poor to purchase anything but the barest necessities.

In order to strike at the very root of the economic evil in this country—that is to say, the restriction of foreign imports coupled with the expansion of domestic exports—overseas markets for the locally manufactured goods must be sought for, fought for and captured rapidly. Turkish commercial travellers not only do not exist, but when found, will also have to be put through an intensive course of technical training and salesmanship. As against this, it is only necessary to meander down what is called "Bank Street" in Galata or through the business quarters of Stamboul to hear bagmen conversing in the German, French, Italian, Polish, or Czechoslovak languages. The good old Cockney, Yorkshireman or Scot with his box of samples is unfortunately a *rara avis* in these much shot-over preserves.



EGYPT.

Cairo, January 18.

The Treaty.

The decision to second Mr. Cecil Campbell from the Financial Adviser's office to the Residency with rank of Acting Secretary is generally considered as indicating that the discussions between the British and Egyptian Governments with regard to the Henderson-Mahmoud proposals will take place in Cairo, though, if they reach a satisfactory conclusion, it is certain that the Wafd will want a delegation to go to London to carry out the final formalities before the documents are submitted to the two Parliaments for ratification. The deputies have had a short holiday since the inauguration on the 11th, for, beyond the nomination of the various committees, no work had been prepared for submission to the Chamber owing to the short interval that elapsed between the advent to office of the Nahas Cabinet and the opening of the session. Nahas Pasha has been indisposed for the past few days, but it is expected that he will be able to attend to business next week, when the order of work will be decided and it will be known whether the treaty proposals are to come at an early date before Parliament. There is another pressing question which will vie with them for the place of honour, and that is the new Customs régime, in regard to which the Speech from the Throne said that the view of Parliament would be sought before it is introduced on February 17 next. The Ramadhan fast, which starts in about ten days' time, may somewhat interfere with progress.

On the eve of the opening of Parliament, a series of decrees was published retiring various high administrative officials, among them several of the more prominent Mudirs. It may, of course, have seemed difficult to the Wafd to have to work through provincial officials who had been identified with the régime which suspended parliamentary life. But such sweeping changes in the higher hierachy of the administration cannot make for efficiency or confidence, particularly where men of experience are replaced, as in this instance, by men most of whom have little knowledge of the work which they will be called upon to do. It is felt that the Wafd would have done better to wait awhile before removing from the service men of whom they might not approve on political grounds but against whom nothing could be said from the administrative point of view—particularly as Egypt to-day lacks good administrators. It is interesting to note that among the men appointed to provincial governorships is the Mamur of Zifta, who on the outbreak of the 1919 disorders declared that town to be a Republic with himself as President!

Police Administration.

Particularly is it regrettable that the new Cabinet should have shown a tendency to interfere with the police administration. The dismissal of the head of the Nizam, which controls the *ghaffir* and police force of the provinces, on the ground that, when a police officer, he prevented a Wafd deputation from entering the precincts of Abdin Palace, is calculated to affect discipline very materially. This officer merely obeyed the orders of his superior officer, the Commandant of the Cairo City Police, and the new Cabinet's action may make the officers of this excellent force hesitate in the future to obey instructions in similar emergency for fear that thereby they may compromise their future. As foreign interests are so intimately bound up with the question of public security, the Cabinet might have been better advised to stay its hand in regard to retaliatory action on the members of the police force or executive officials connected therewith.

What has happened in regard to the Mudirs merely serves to emphasise the point often put forward that the administrative service should be made a closed career, where the men would work up to the top by sheer merit, instead of depending, as at present, on political considerations for their promotion, and so being exposed to their career's being suddenly terminated owing to the whim of those who happen to come to power. Were this plan followed, it would be possible to maintain officials irrespective of the Government in office, and so ensure continuity in administrative policy—which at present cannot be secured and from the absence of which the progress of the country suffers. The present system is in fact in the interest of no one.

The Anti-Narcotic Campaign.

Russell Pasha and his lieutenant, Baker Bey, are cordially to be congratulated on the account of the first year's working of the Central Narcotic Intelligence Bureau which has just been made public. It is an admirable document showing clearly, by the results already achieved, how necessary some such organisation is and, by what it tells of the state of affairs in the country in respect of drug-taking, the urgent need for even more strenuous efforts to combat and to suppress this nefarious traffic which threatens to undermine the health of the whole country. The publication of the report is well-

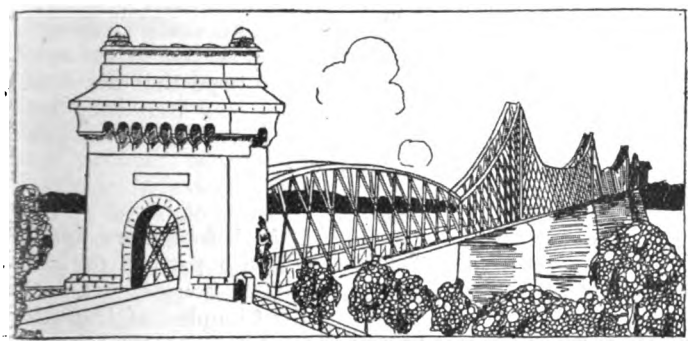
timed, for it is the eve of the annual meeting at Geneva of the Opium Advisory Commission of the League of Nations. It is to be hoped that the revelations, which it contains in regard to what is going on in the matter of noxious drug manufacture and export to the East under the very shadow, so to speak, of the body appointed to devise means for eradicating the traffic, will have due effect, and that steps will be taken to reduce the output to the scientific needs of the world.



ROUMANIA.

Bucharest, January 16.

The Past Year.

The year 1929 ended under fairly good conditions, and the ship of State was safely moored in spite of tempests and rough weather. The year 1930 has begun under favourable auspices.

The stabilisation of the currency was one of the most important events of the past year, and it has exercised a notable influence on the whole financial and economic life of the country and on the new State Budget. The period succeeding the stabilisation was an anxious one, and the drawing up of the Budget was fraught with many difficulties, but thanks to certain important restrictions of expenditure and careful economies it was at last satisfactorily balanced. One of the unforeseen expenses which caused considerable anxiety was that involved by the necessity of providing supplies both of food and seed corn for the regions threatened with famine in the spring, owing to the unusual severity of the winter, which had caused the destruction of all the autumn sown crops. As a consequence the harvest was less abundant than usual (except for maize), and agriculture suffered a further set-back from the fall in the world prices for grain. The timely measures taken by M. Mihalache, Minister for Agriculture, happily staved off any really disastrous consequences, and the new laws just passed affecting agriculture give every reason to hope for better results this year, especially as farmers predict a good harvest, if the present temperature is maintained. At the International Agricultural Congress and the Meeting of the Beetroot Growers of Roumania held during the summer important questions were raised and decisions taken.

The Economic Situation.

From the financial point of view, apart from the stabilisation and the various Laws passed by M. Mihai Popovici and M. Madgearu during their tenures of office at the Ministry of Finance, the revised Mining Law had an excellent effect in so far as it encouraged an influx of foreign capital to the mining industries, which the former Law had restricted by its nationalistic tendencies.

The revised Law for the Commercialisation of State Enterprises and the establishment of the autonomy of the Railway Administration and of the Postal, Telegraphic and Telephone Service, the Civil Maritime Transport Service, the State Fisheries and Forests, and the Matches Monopoly were events of the greatest importance and a happy augury for the future.

The modfication of the Customs Tariff also showed an encouraging rationalisation of the protectionist principle for the national industries and had an excellent influence on the flow of imports and exports.

In order to arrive at the new economic era prescribed in the programme of the National-Peasant Party on its coming into power, it was necessary to have recourse to very severe and almost vexatious measures of taxation, and in spite of certain improvements, the year 1929 must, on the whole, be regarded as one of transition. The year 1930 will be one of practical realisation of the advantages carefully and painfully prepared.

A Political Review.

From the political point of view also the aims pursued by the present Government have differed from those of its predecessors, and the whole tone of economic administration in Roumania has been changed. During the last fortnight there have been meetings held by large bodies of the teaching profession and of public functionaries. The motions passed by them have been seriously considered by the Government, and in most cases they were given every satisfaction.

A few words on the external politics of Roumania during 1929. They are distinguished by a febrile and welcome activity, the results of which cannot yet be appreciated except by a general appreciation of Roumania's foreign relations; but we have at last abandoned the passive continuity of policy pursued up to the present and have had several real diplomatic successes.

The Little Entente has been cemented by frequent meetings of the representatives of the three Powers concerned. The relations with Poland have been established on a firmer footing by important agreements, and Roumania and Poland together have signed an Arbitration Agreement with Soviet Russia.

The question of the Optants is still an open one, but it is hoped that a good step forward will be made at the present Council Meeting at The Hague towards the

regulation of the debts of the Eastern countries. Roumania has given proof of her conciliatory attitude and good intentions in spite of the uncompromising attitude of the Hungarians.

The Administration Law.

The most important of current events has been the application of the new Administration Law. This Law is destined to revolutionise completely the administrative system of Roumania by means of decentralisation. The seven regional Directorates of Mutenia, Moldavia, Banat, Ardeal (Transylvania), Bukovina, Bessarabia and Dobruja created under the Law are intended to form centres for dealing with all local questions. The Ministries will be represented in each of these regions in such a way that all local questions can be settled directly without the intervention of the Capital. It is principally in regard to Finance and to the various interests of Education, Agriculture and everything in connexion with the relations of public servants to their respective authorities that this Law brings about a formidable evolution. Its main object is to avoid the appalling congestion of business in the Capital which formerly caused such enervating delays, and to facilitate the activities of all the new centres of the country.

To the objections raised by the Opposition, who claim that this Law is prejudicial to the national interests, the National-Peasant Party reply that even before the War over-centralisation had brought about the complete paralysis of Moldavia, which was a disaster, and that since the War it has plunged the new provinces into a state of chaos; for, the administrative machine being already inadequate to deal with the Old Kingdom, it was out of the question that it should be able to cope with all the provinces of Greater Roumania. The method of procedure for settling the smallest question was so lengthy and so intricate that the whole economic life of these provinces had been practically suspended.

Parliament.

Parliament reopens on January 20 after the Christmas vacation.

IRAQ.

Baghdad, January 12.

Parliamentary Questions.

The question of conscription came up again in Parliament last week, in connexion with the Military Pensions Bill. Hikmat Beg Sulaiman, ex-Minister of Justice, said that this question was by far the most important one which the Chamber had to discuss, if the Government wished to assume responsibility both for the defence of Iraq's frontiers and also for maintaining internal order. He insisted that the draft conscription law should be presented to the House during the present session. The Prime Minister replied that the original draft law had been withdrawn from Parliament, and was now the subject of careful study on the part of a special committee composed of the Ministers of Defence, Finance, Communications and Works, and the Inspector-General of the Iraq Army. It would then have to be approved by the Cabinet before being presented to Parliament.

Shaikh Ahmad al Daud asked why, when the original draft text of the Bill had been submitted to the members so that they might discuss its terms with their electors, the views of the electorate on the subject had not been asked. Had the Government forgotten to do this? The Prime Minister replied that as Shaikh Ahmad had been a member of the Cabinet which arranged the referendum, he should be in a position to know its results.

Questions were asked in Parliament about a report to the effect that the League of Nations would request the British Government, when concluding their proposed new treaty with Iraq, to maintain their Mandate over the Mosul region for a period of 25 years. The Premier and Foreign Minister replied that in the opinion of the Government the report was entirely unfounded. The British Government had declared that it would recommend the candidature of Iraq to the League of Nations "without restriction or proviso." The President of the Nationalist Party (Jaafar Chalabi Abul Timman), in reply, remarked that he could not rely entirely upon British declarations, and begged the Government to be more careful about giving credence to such statements.

Iraq and Palestine.

The following telegram has been received by the Prime Minister from the Arab Executive Council in Palestine:—

"The Arabs of Palestine have held a mass meeting at which they have expressed their deep sorrow at the death of Abdul Muhsin as Saadun. They hope that the Arabs will attain their national demands, now that they have offered numerous sacrifices and have exercised great efforts."

Iraq Property in Persia.

The new Persian decree by which all foreigners, including Iraqis, are ordered to sell within a year all their immovable properties except dwelling-houses, was the subject of heated discussion in the Chamber of Deputies. The Prime Minister said that the decree had been the subject of much correspondence between the Governments of Persia and Iraq, the Persian Government repeatedly pointing out that the decree affected all foreigners, and not only Iraqis, and was based on a new law forbidding them to own any property except dwelling-houses. The member for Diyala suggested that to the many Persian land-holders in Iraq should be meted out the same treatment, but the Premier replied that property was subject in Persia to special laws, and promised that the Iraq Government, when negotiating the new pact with Persia, should make a point of securing equal privileges for Iraqis and Persians.

The Southern Desert.

Rumour has been rife of late over the Southern Desert, where a number of rebel tribes have been fleeing from Najd, pursued by the forces of King Ibn Saoud, who was reported to be conducting the operations in person. These tribes have been crossing the Iraq frontier and that of Kuwait in search of refuge. It is now announced that Shaikh Faisal al Dawish, the leader of the Mutair tribe, and Shaikh Hithlain of the Ajman, made unconditional surrender a few days ago to a British force of armoured cars and aeroplanes. They are reported to have been brought to Basrah and put on board a British ship in which —it is said—they are to be taken to an unknown destination. But further and more accurate news of events on the Najd frontier is eagerly awaited here.

General News.

Unusually heavy rains fell in the Baghdad area during the first week in January.

The festival of *Al Nadha*, in celebration of King Husain's raising the standard of Arab national independence against the Turks, was celebrated in Baghdad by an official holiday on January 9.

An Iraqi named Daniel has just flown unaccompanied from London to Baghdad in a Moth aeroplane. This feat, which is the first of its kind to be accomplished by an Iraqi, appears to have aroused very little interest among the airman's compatriots.

The new Turkish Envoy Extraordinary and Minister Plenipotentiary, His Excellency Lufti Beg, has arrived in Baghdad and has presented his credentials to the King.

At Croydon, on January 23, news was received that the first of two Fairey (Napier) survey 'planes, which are being flown from London to the Sudan, had reached its base at Juba. The machines will survey 120,000 square miles of swamp in the Nile Valley, in connexion with a scheme to use Lake Albert as a reservoir for the irrigation of the Sudan and Egypt. It is hoped that by using aeroplanes the survey will be completed in 18 months, as against ten to fifteen years in the ordinary way.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calculla, January 9.

The Liberal Appeal.

If my letter last week could have been longer, I would have spoken of the Liberal appeal. It is the work of the National Liberal Federation. "The march of events," they say, "during the last two months, particularly during the last few days, makes it imperative that the Liberal Federation should make an appeal to those in the country who have hitherto pinned their faith to the achievement by India of Dominion status as an integral member of the British Commonwealth of Nations. . . . As we read the situation, the essential condition for the success of the Round Table Conference is that there should be a maximum amount of agreement among ourselves in India. If we can be assured of such agreement, our representatives at the Round Table Conference will be able to press, with every hope of success, for complete Dominion status being established, subject to such safeguards and reservations, including protection of the interests and rights of minorities, as might be necessary in the present condition of India for the period of transition."

"A Favourable Atmosphere."

Writing on November 21 about the movement then on foot to secure a general amnesty to political prisoners and persons under trial on political charges, I said: "The matter is complicated by that tendency that I have remarked on for the Indian to be swayed by a phrase. The phrase operative at the moment is 'to secure a favourable atmosphere for the Round Table Conference.' No political amnesty now granted would make any difference to its deliberations after, say, the first half-hour; but you will find men here moving heaven and earth 'to secure a favourable atmosphere' for it. The words will be as dry as so many old bones long before they cease to recur daily in almost every newspaper. Some will be cheering on the attempt to secure the atmosphere, others will be jeering at the attempt."

The appeal of the National Liberal Federation that I have been quoting went on with: "We have always been anxious that in order to produce a favourable atmosphere the Government of India should implement the new policy by action calculated to remove all causes of irritation and produce calm and good will."

Those words, mark you, were given India to read on December 31: that is, after it was known throughout the country what the main resolution of the Indian National Congress was to be: after it was known that the Union Jack had been lowered, and the Indian national flag run up by the President of the Congress amid shouts and cries of "Long live revolution."

The National Liberal Federation have appointed Sir Tej Bahadur Sapru, Sir Phiroze Sethna, Mrs. Besant, Sir Chimanlal Setalvad, Sir Ramaswami Iyer, and four others as a committee "to collect material and prepare a case for Dominion status." What they none of them see, apparently, is that the best "case" for Dominion status would be their showing themseves strong statesmen, knowing when it was a time to talk of the Government of India "implementing the new policy by action calculated to remove all causes of irritation," and when it was no time to use any such language. How can the Government of India remove all causes of irritation, when the Congress leaders are busy, day and night, throwing thorns on to the fire?

A Practical Policy.

The attitude that one would urge the Liberal leaders to adopt, the attitude their friends in Great Britain should hold up as proper for them, is the one that the *Manchester Guardian* is cabled as commending. "The Congress having decided," the *Manchester Guardian* says, "to base its policy on emotions and ideals, and to ignore facts, Indian moderates have a chance of regaining control of India's course. If they mean to do this, they must organise their Party with a severely practical policy evidently likely to yield practical results. Such a policy must take into account not only the aspirations of India but also the British view of what is immediately practicable. There is no future for a Party which merely demands to-day what the extremists demanded yesterday." That is to say in more dignified language what I had in my mind when I drew attention last week to the appearance the Liberals had of wanting to show that they "roar almost as loudly as the other fellows."

"The Enemy."

Those leaders will talk, as through limitless wrappings of cotton-wool, of the Government of India removing all causes of irritation; they will do that at a time when the language of Mr. Gandhi, the most powerful political leader in the country by far, is such as:—"Some day or other you shall have to meet in conference even the enemy, and before that you will not be able to establish independence. That phrase is a good enough hint for you and for the nation and for the whole world. It presupposes that your representatives cannot go to a Conference to discuss Dominion status but only to a Conference where independence is the matter for consideration." In my newspaper those words and the appeal of the National Liberal Federation bear the same date.

Pandit Malaviya's Appeal.

Under the date of the following day there appeared the text of another appeal, one commonly thought of as Pandit Malaviya's, but it actually appeared over five signatures: those of Pandit Malaviya, Mr. Kelkar, Mr. Aney, Mr. Mitra, and Dr. Moonji, all members of the Legislative Assembly. It reads as follows:—"We make this public appeal to Congressmen who are members of the Central Legislature to suspend their action with reference to the resolution of the Congress about the boycott of legislatures, and not to resign their seats until January 18, when it is proposed to hold a meeting of the Congress and Nationalist Parties in the Assembly for considering the whole situation."

Mr. Jinnah.

Mr. Jinnah is the man whom my own friends among the Muslims regard as the most authoritative leader of their community of the day. His opinion of recent events was expressed in an interview with a Press representative, and begins as follows:—"I have read the accounts of the proceedings of the Congress with extreme pain and disappointment. I think that Pandit Motilal Nehru and Mr. Gandhi have taken on themselves the gravest responsibility in taking the decisions which they did in breaking up pourparlers with the Viceroy and thereafter in getting the Congress to adopt the independence resolution, which is, in my opinion, most misleading, unpractical, unsound and unwise. They are calculated to do enormous harm to the interests of India."

Words, Words, Words.

I have called attention before this to the fact that India is a country in which words have only a fraction of their meanings, and in which any leader may show himself as thinking he settles ugly questions, when he wraps them up in fine-sounding words. It is not a proof exactly of that "extraordinary capacity" that Mr. Lloyd George recently showed himself prepared to credit to the Indians. Dr. Moonji is reported to have said: "The Hindu Mahasabha will judge the proposal of a Round Table Conference and also the Congress resolution of independence and boycott of legislatures on their merits, and will formulate its attitude towards them as it may think fit in the best interest of the country and without being carried off its feet by the boomings of either. As for the scrapping of the Nehru Report, I welcome it, for now both the Hindus and Sikhs on one side and the Muslims on the other have a clean slate to write upon. All are agreed upon the proposal of immediate Dominion status, and it has been made suf-

Digitized by Google

ficiently evident by now that on the basis of facts and agreements there is no chance of any unanimity or unity on details, particularly concerning what are known as communal differences. Let us all then agree to bury communalism fathoms deep beneath the soil of our common motherland, and make up our mind to present a united front to the British Parliament, standing on the platform of true unalloyed nationalism."

That is to say in other words: "Let us go before the British Parliament and say that there is not and never has been a communal question. Our slates are clean; our hands are clean; our hearts are clean. There is only the common motherland!!!" How can men with so little sense of what words mean have any sense of things?

LORD IRWIN ON THE ROUND TABLE CONFERENCE.

The constitutional issue, and particularly the position in regard to the forthcoming Round Table Conference, occupied the whole of the Viceroy's address to the members of the Legislative Assembly at the formal opening of the Delhi session on January 25. After declaring that he stood by every word of the statement he made on his return from England last autumn, Lord Irwin said that he would have felt he had failed in his duty both to India and to Great Britain if he had tendered any different advice to his Majesty's Government. When enjoined by the latter to make an announcement on their behalf he could have chosen no different language in which to make the statement, the salient points of which he carefully recapitulated.

"I have never sought to delude Indian opinion," the Viceroy proceeded "into the belief that definition of a purpose, however plainly stated, would of itself, by the enunciation of phrase, provide a solution for the problems which have to be solved before that purpose is fully realised. The assertion of a goal, however precise its terms, is of necessity a different thing from the attainment of the goal . . . but it is an assurance of direction, and in this case I believe it to be something of tangible value to India that those who demand full equality with other self-governing units of the British Commonwealth on her behalf should know that Great Britain, on her side, also desires to lend her assistance to India in attaining that position." Although it was true that India already possessed several of the attributes of Dominion Status, their practical exercise was for the most part subject to the control or concurrence of his Majesty's Government. The demand of Indian public opinion was based upon the general claim to be free from that control, more especially in those fields that are regarded as of predominantly domestic interest, and there, as was generally recognised, there were real difficulties internal to India and peculiar to her circumstances and world position that had to be faced, and in regard to which there might be sharp variation of opinion both in India and in Great Britain. Their existence could not be disputed and the whole object of the Conference was to afford an opportunity to his Majesty's Government of examining in free consultation with the Indian leaders how they might best, most rapidly, and most surely, be surmounted.

While the Conference would not meet the demands of those who claimed that a majority vote should fashion the constitution which should therefore be accepted unchanged by Parliament its task would be the hardly less important one of elucidating and harmonising opinion and so affording guidance to H.M. Government, on whom the responsibility must subsequently devolve of drafting proposals for the consideration of Parliament.

"It is thus evident," Lord Irwin added, "that the intrinsic soundness of any particular proposals made, and the manner in which the argument for them is presented, will be more important factors in this Conference than the exact numerical representation enjoyed by any of the different sections of opinion that will participate in the proceedings." So far he had tendered no advice to the British Government about the composition of the Conference, nor had it been possible to decide upon the date, which must depend upon certain factors at present still indefinite, but it was the Government's intention that it be held as early as possible, probably in the autumn. After outlining the reasons governing his decision therefore to hold the ensuing elections before the next Delhi Session Lord Irwin went on to explain that the only desire of H.M. Government was that the Conference, over which he hoped the Prime Minister would be able personally to preside, should be honestly and fairly representative of all sections of opinion in India, composed of men of wide vision and strong judgment and imbued with the single desire of utilizing the occasion for the common good of the Indian people. For in his considered belief "the future well-being of India, as also the rate of her political progress, depends far more profoundly upon what her public men can achieve for her in the welding into true unity of the different elements that composed her being and represent the sum of her political thought, than upon anything that H.M. Government or anybody else outside India may be able to do."

The last part of the speech was devoted to a solemn warning to those who instead made repudiation of allegiance to the British Crown their goal and who contemplated resort to unconstitutional and unlawful methods of civil disobedience, in full knowledge, but with reckless disregard, of the consequences of such a programme. Between such persons and all who believe in ordered society based upon the sanctity of life and respect for property and other lawful rights and interests there could be no composition and no truce. While it remained his firm desire, as it was that of the British Government and the House of Commons, to do everything possible for reconciliation it was no less incumbent upon him to make it plain that he would discharge to the full his responsibility for effectively maintaining law and preserving peace and order. In any case the Conference would be formed and the fact that some declined to take part only threw a greater responsibility upon, and incidentally gave a wider opportunity to those who were prepared to face and solve difficulties in a constructive spirit. Lord Irwin concluded with an eloquent appeal to the leaders to realize that no duty could transcend the call for unity, and to train their followers' ears to hear it.

INDIAN AIR MAIL.

It is understood that owing to the breakdown of the reciprocal agreement between Italy and Imperial Airways, the England-India air mail will in future follow the overland route to Athens. During the suspension of the Mediterranean link from Genoa to Alexandria the service has run overland to Athens, and the change of route, which will now become a permanent arrangement, has been necessitated, it is stated, by the unduly onerous terms imposed by the Italian Government on a renewal of the agreement by which Imperial Airways were able to work a flying-boat service along the Italian coast to Greece.

On the other hand, while the alteration has not been sought by Imperial Airways, it is by no means without compensating advantages to that company. The overland route is some 100 miles shorter than the Italian sea route, and accordingly offers considerable possibilities of speeding up the time-table, a point of increasing importance in view of the proposed extension of the Indian end of the service.

Colonel Sir Thomas Hungerford Holditch, K.C.M.G., K.C.I.E., C.B., R.E., of Parklands, Merrow, Surrey, geographer, who died on November 2, left £8,336, with net personalty £8,175.

A big eighteen-seater, all-metal Short Jupiter flying-boat, piloted by Captain D. Drew, of Imperial Airways, left Rochester on January 15 to fly to Egypt, where it is to replace the Supermarine Napier flying-boat, lent by the Air Ministry, which is at present carrying the Indian air mail across the Mediterranean. As the Supermarine Napier is a military machine, and has no accommodation for passengers, the passenger service between London and Egypt has not been operating, but it is hoped to resume a full service from London to Delhi when the new flying-boat is put into commission.

SIR FREDERICK DUMAYNE.

(From a Correspondent.)

The death last week of Sir Frederick Dumayne calls to mind the great and successful reorganisation of the port of Calcutta, for which he was mainly responsible, in the early years of the present century. In the "eighties" of last century it became evident that the rapidly developing trade of Calcutta necessitated extended port accommodation. This was provided by the construction of docks at Kidderpore. But for a good many years these docks, which had cost a great deal of money, were not fully utilised, and were consequently becoming a financial burden on the port. Kidderpore is at some distance from the Calcutta jetties where the work of discharging and loading cargoes was then chiefly concentrated. The trade was conservative, and was disinclined to move part of its business to the new and distant docks. And when, in the "nineties," the Commissioners pressed forward a definite scheme for transferring the export trade to Kidderpore a storm of opposition was aroused. Complaints of inefficiency and bad management were brought against the Commissioners, who were told by one influential mercantile association that their administration of the port had "not been carried on upon such strict business principles, and with such due regard to economy as to command that financial soundness and efficiency of working which are essential for the successful conduct of the affairs of a great port."

Obviously the Government of Bengal could not sit down and do nothing in the face of such charges; and in 1900 they appointed, at the instance of the Bengal Chamber of Commerce, a strong Committee of Inquiry. Of this Committee one of the members was Mr. F. G. Dumayne, who was at that time Secretary to the Bombay Port Trust. The Committee reported in due course, and, although they did not by any means endorse all the hard things that had been said about the Commissioners, they recommended a considerable number of important changes. One of these was that the offices of Vice-Chairman and Chief Engineer, which up to that time had been held jointly by one officer, should be separated. This recommendation proved to be of signal advantage to the port; for, on the invitation of the Government of Bengal, Mr. Dumayne accepted the office of Vice-Chairman and, with his appointment a complete reorganisation of the administration of the port was begun.

Dumayne brought to his new post the accumulated experience of many years of hard, practical work in Bombay. He began his service with the Bombay Port Trust in a relatively unimportant capacity and gradually worked his way up to the Secretaryship. He had thus gained precisely that knowledge and experience that were so badly wanted in the administration of the port of Calcutta at the time. And to this knowledge and experience he united extraordinary energy and a positive passion for work. He had vision and foresight also, and he clearly foresaw that the port facilities and accommodation would need to be enormously extended to enable the quickly growing trade of the port to be efficiently handled. He boldly tackled this problem, and, at his instance, the Commissioners inaugurated, in 1906, a big scheme of extensions to make provision for the expansion of trade, and for the increase in the size and draft of vessels.

Meanwhile the value of Dumayne's work had come to be generally recognised. Before his time the Commissioners had not been too popular with the merchants as we have seen. But his vigour and energy and accessibility overcame all obstacles and prejudices; and the business community soon realised that the port was being run on essentially business principles, and that facilities for any increased volume of traffic could and would be if necessary readily provided. It only remains to add that, at the time of Dumayne's retirement, in 1913, another Committee of Inquiry examined the affairs of the port, and that it confirmed the general policy of development which, at his instance, the Commissioners were pursuing, and approved of the scheme of extensions mentioned above. The great new docks at Kidderpore, which have been since constructed, and were opened recently, are the outcome of his schemes of development. Indeed, it may be confidently claimed that but for the statesmanlike way in which Dumayne shaped the policy of the Trust, and administered its affairs during the difficult period of his Vice-Chairmanship, the port of Calcutta would not have been in its present satisfactory position.

Dumayne, who was knighted in 1909 for his services to Calcutta, was 77 years of age at the time of his death. He was married in 1896 to Mary, third daughter of John Macadam of Blairoer, Drymen, N.B., but Mrs. Dumayne died within a year of the marriage.

INDIAN NOTES.

(Continued from page 115.)

The whole theory of the system is contained in the idea that the Ministers should realise the full force of their responsibility to the elected members of the Legislature. The Reserved side of the Government was, on the contrary, to be free from the influence of this responsibility. But in actual practice, in Madras, the Executive Council —as regards legislation and the provision of funds—has been just as much dependent on the Legislative Council as have the Ministers. On the other hand the Ministers have been constantly supported by the official *bloc* and the nominated members. They have been thus independent of the elected members. Again, the Legislature has been in the position of being able to criticise every department of the Government. It has not, however, been reponsible for the consequences arising from its criticism. Similarly as regards the electorate. The maintenance of law and order, and finance, are, as Lord Goschen pointed out, the most important items of Indian administration. But the voter has no power and no responsibility in respect of them. In whatsoever way he exercises his vote the Government will continue to function, and funds will continue to be provided. He knows this, and he knows that the Government will protect his life and property, however wildly and irresponsibly his elected member may behave in the Legislative Council. The fact that the dyarchic system has not been unsuccessful in Madras does not clear these difficulties out of the way. On the contrary, experience in other parts of India, where the mutual understanding and mutual forbearance which have been so conspicuous in Madras, have been wanting, shows of how serious a character they really are. Lord Goschen's remedy is the establishment of a unitary government consisting of eight Ministers. There would be no Executive Council, and no "Reserved" subjects. Every department of the Government would be in the charge of a Minister; and the Cabinet would be responsible to the Legislative Council. The Governor would have the power to override the Cabinet if he should consider that the safety, tranquillity or interests of his province are or may be essentially affected by a decision from which he dissents. Proposals on these lines have been submitted, by the Government of Madras, to the Statutory Commission. The scheme is a bold one, but that is no reason for rejecting it. And after all, what is the alternative? To think of returning to the old system of government which prevailed before the Reforms is out of the question. To attempt to maintain dyarchy is equally impossible. There is nothing for it, but to go on, "in the hope and belief," as Lord Goschen said, "that, freed from the unrealities of the present system, the politician and voter in Madras would more fully realise their great responsibility and that, with the fog which now overshadows Indian political life swept away, they would to their advantage and the advantage of their country be brought face to face with the stern logic of facts."

THE DRUG TRAFFIC IN EGYPT.

(Contributed.)

The whole aspect of the drug situation in Egypt is new, and has burst startlingly upon an unsuspecting world. It is an object-lesson, bringing home the disturbing fact that the drug habit, once started in a country, spreads with incredible rapidity, so that by the time the authorities awake to the danger, it has already developed to such an acute stage that no national measures can remedy the situation. It proves, too, that the abuse of narcotics is not confined to the leisured and wealthy classes, and that despite the high prices charged to addicts, it remains one of the cheapest forms of intoxication.

Until after the War, cocaine and heroin were unknown in Egypt. Since then narcotics have taken such a hold that in 1928 the seizures of heroin alone by the police amounted to 892 kilogrammes.* One kilogramme of heroin contains 15,433 grains or 92,579 doses†; so that assuming, as we may, that the seizures represent about one tenth of the illicit trade, we may calculate that some 875 million doses of heroin were being illicitly circulated in Egypt during the year. Distribute this quantity among a population of about 12½ million, allowing that half of that number are children and half the remainder women (few of whom, for economic reasons, have the opportunity of indulging in narcotics), and you get roughly a supply of 300 doses per head of the male population, taking only one, albeit the most noxious one, of the drugs in use.

But the abuse of narcotics is no longer confined to males, although they form the bulk of its victims. Among the 500,000 addicts who are known to exist in Egypt there figure not only women, but even young people still in their teens. In ten short years the habit has spread from town to the country, from wealthy pleasure-seekers to fallahin and simple artisans, and to women who can honestly or dishonestly come by the money to pay for it. From a secret habit to be indulged in alone, it has become an established custom with its places of meeting, which are sometimes, though despite all their efforts not always, discovered and raided by the police.

Of the 500,000 addicts, about 4,000 are imprisoned yearly, the numbers are increasing from year to year with the vigilance of the police. Twenty per cent. of these have to go to hospital before they can be placed in the ordinary prisons, and forty per cent. are so undermined physically that they can only be set to light tasks. The hospital for mental diseases has treated 750 drug addicts in the last three years, and refused numbers of others, as the lack of accommodation compels it to turn away all but the worst; even so, it has often to discharge them before the cure is complete, with the distressing knowledge that they will almost inevitably revert to the use of drugs. The medical authorities are now urging for a reformatory to be established, where not only those convicted under the law, but also any person suffering from the effects of narcotics can be treated. For many of them it is already too late; others, even if they are really cured and do not revert, have permanently undermined their health and the health of their children to come.

The Egyptian Government has taken all the national measures in its power to put down the evil. Since 1925, when the improved policing of the railways revealed the seriousness of the illicit traffic, it has passed laws imposing heavy penalties, in the hope that the infliction of fines of from £300 to £1,000—the sum to be doubled in the case of a second offence—would discourage the trade by rendering it less lucrative. It has reinforced and improved the police service in town and country and on the trains, which are inspected by officials specially trained to detect drug addicts. It has enlisted the aid of the *ulama*, preachers sent out by the religious authorities into all parts of the country, urging them to use their influence against drugs with the folk to whom they preach.

But experience has proved, not only in Egypt but elsewhere, that national legislation is powerless against the illicit traffic without international limitation of manufacture. Under The Hague Convention of 1912 and the Geneva Convention of 1925, Governments have been striving to control the distribution of drugs and eliminate the illicit trade by strictly supervised export authorization and import certificates, and they have failed. The smuggling of drugs is so easy, it can be done in such small quantities and yet bring in such enormous profits, that preventive and punitive measures have alike proved useless. As long as greater quantities of drugs are manufactured than are needed for legitimate medical use, the surplus will inevitably find its way into the illicit trade.

This fact has at last been realized and taken to heart by manufacturing countries, and last September the League of Nations Assembly agreed to limit the total drug supply of the world by international convention. The Advisory Committee on Opium is drawing up plans for such limitation, which will be discussed this year by a conference of the manufacturing and consuming countries.

We are not yet out of the wood. The problem of the interests of manufacturing countries, of the world's needs for medical purposes, and the possibility of an increase in the price of drugs which would lead to new factories being established in countries which do not at present manufacture drugs, will not be easily solved. But it is the one way to combat the evil, which is causing incalculable harm, not only in the countries manufacturing drugs, but in non-manufacturing countries, like Egypt, that are defenceless against the illicit traffic flooding them from abroad.

* Report of the Chief of the Department of Public Security (1928).

† Average medical dose equals ½ grain (Health Section, League of Nations).

PALESTINE.

Jamal Effendi Husaini spoke to the Near and Middle East Association on January 22 upon Palestine, at a meeting which was held, by kind permission of Mrs. Arthur McGrath, at 28, Great Cumberland Place, W. Dr. E. H. Griffin presided.

Jamal Effendi, in a comprehensive statement of the Arab case in Palestine, referred to the British pledges made to the peoples of Syria and Palestine and elsewhere, to the uneconomic immigration of the Jews into Palestine since the War, to the fact that administration in Palestine was autocratic, and to the demand of the Arabs for a National Government in Palestine.

Afterwards, Mr. Israel Cohen, Secretary of the Zionist Organisation, made a speech which, he claimed, tore to tatters Jamal Effendi Husaini's case. Why, he asked, was Jamal Effendi in London at all? Because of the "slaughter by Arabs of Jews" last August. As for the MacMahon pledges, they did not refer to Palestine, and in any case were made conditionally upon the Arabs' rising against the Turks. Mr. Cohen supplied details of material improvement since the War, and sought to disprove alleged Arab grievances and the statement that Jews received preferential treatment.

Jamal Effendi answered at once. He did not refer, he said, to the August disturbances because the matter was still *sub judice*. And if, he said, Mr. Cohen's statements were true, if many millions of money had been taken by Zionists into Palestine to the advantage of the country as a whole, if Arab interests had been so zealously cared for as Mr. Cohen had pretended, then he, for his part, could find no meaning at all in the Arabs' hostility to the Jews in Palestine.

Mrs. Arthur MacGrath claimed that 1,300 years of residence in the Holy Land gave the Arabs of Palestine some sort of right to have a say on their future. Lord Balfour had spoken of the movement for a "Jewish National Home" as at least a poetic idea. But there was trouble behind it, trouble which must inevitably lead again to bloodshed unless the Arabs were granted a National Government.

Major Polson Newman asserted that Jews and Arabs could never live peaceably together—of that he was more than ever certain since he had heard Jamal Effendi and Mr. Cohen speak. He did not, for his part, think it fair to subject the "Jewish National Home" to a National Government in Palestine, but suggested local autonomy in the Holy Land. Predominantly Arab villages should, if possible, remove the Jews in them to predominantly Jewish villages; and *vice versa*. He had good hope, however, that the British Government would shortly take such measures as to ensure tranquillity in Palestine.

PERSONAL AND GENERAL

TO-DAY

January 30, 1930 (New Style).
January 17, 1930 (Old Style).
Shaaban 29, 1348 A.H., of the Muslim Calendar.
Shebat 1, 5690 of the Jewish Calendar.

Lord and Lady Romilly have returned to London from Egypt, where they have been spending their honeymoon.

Sir John and Lady Simon's London residence is now 71, Addison Road, W.14.

The Marchioness of Titchfield left London on January 23 to join the Viceroy of India at Marseilles for Bombay.

The Hon. Alexander and Lady Margaret Shaw returned to London last week from Cairo.

Lord and Lady Headley arrived in England on January 23 on their return from Cairo.

Mr. and Mrs. J. Thyne Henderson left London last week en route for the British Legation, Athens.

Mr. and Mrs. A. G. McCorquodale have left London for Egypt, and will be away a month.

Sir Ian Malcolm joined the s.s. Viceroy of India at Marseilles on January 25 for Port Said.

Sir George and the Hon. Lady Barstow will return to 36, Sussex Gardens on February 1 from Persia.

Sir Laurence Halsey has returned to 64, Elm Park Gardens from Egypt.

The Bulgarian Minister left London last week for Sofia on leave of absence.

Lady De L'Isle and Dudley left London on January 22 in the Mongolia for Port Sudan.

The Hon. William and Lady Beatrice Ormsby-Gore returned on January 22 from Bedford to 5, Mansfield Street, where they will remain until Easter.

Dr. Hamed Mahmoud, the newly-appointed Counsellor to the Royal Egyptian Legation, will arrive in London early in February from Cairo to take up his duties.

Mrs. J. M. Hanbury and her son, Mr. J. C. M. Hanbury, left England on Saturday, January 18, for India and the Far East, and will be abroad for some months.

Mr. and Lady Dorothy Meynell and Miss Meynell have sailed for Bombay in the Viceroy of India, and expect to be away for three months.

Viscount Ikerrin, who is returning to Calcutta, left London on January 23 to join the s.s. Viceroy of India at Marseilles.

Mr. Henderson, Secretary of State for Foreign Affairs, received his Highness General Shah Wali Khan, Afghan Minister, at the House of Commons on January 23.

Mr. Charles C. Hart, the new American Minister to Persia, has arrived in Teheran. Before going to Persia Mr. Hart was American Minister to Albania.

Mr. Charles Palairet was received in audience by the King at Buckingham Palace on January 20, and kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Bucharest.

Mr. and Mrs. Washington Singer, Miss Longsdon, and Miss Jean Longsdon left last week for Egypt in the s.s. Viceroy of India. They will be away until the beginning of April.

Prince Sixtus of Bourbon left Addis Ababa on December 31 on a journey across Abyssinia to the Sudan by way of Beni Shangoul. He will follow the Blue Nile past Roseires to Khartoum, which he hopes to reach on February 5. He is accompanied by le Comte de Béarn.

Mr. John Plamenatz, the son of M. Pierre Plamenatz, formerly Foreign Minister for Montenegro, who has been educated at Clayesmore School, Winchester, has obtained an Open History Scholarship at Oriel College, Oxford. He is the first Montenegrin who has obtained such a distinction, and is probably the first Montenegrin who will enter the University.

Brigadier-General Lord Playfair, C.V.O., Lady Playfair, Lady Maffey, Miss P. Maffey, Sir Paul and Lady Harvey, Lieutenant-Colonel J. C. Brinton, C.V.O., Mrs. Brinton, the Duchess di Sermoneta, Sir Arthur and Lady Keith, and Sir P. S. Stott, Bt., and Lady Scott are travelling East in the Bibby Line motor-vessel Staffordshire, which sailed from Marseilles on January 18.

The Archbishop of Canterbury has accepted the resignation of the Rev. F. A. Rogers from the post of Civil Chaplain at Baghdad, as he is advised by his doctors not to spend another summer in Iraq. Mr. Rogers, who will return to England in April, will be replaced by the Rev. Hylton I'Brook Smith, assistant curate of St. Peter, Leicester.

Hamza Bey, Egyptian Chargé d'Affaires, left Victoria on January 24 for Switzerland, where he will spend several weeks before proceeding to Cairo. He was seen off by Mr. W. Mack, of the Foreign Office, Atta Amin Bey, First Secretary of the Iraq Legation, the personnel of the Royal Egyptian Legation, and members of the colony. M. Georges Cattaui, Secretary, will act as Chargé d'Affaires at the Legation.

At the At Home held by Sir John and Lady Stavridi at 33, Lennox Gardens last week, in connexion with the Golden Fleece Ball which took place on January 28, also at 33, Lennox Gardens in aid of the Eye Clinic established by the Save the Children Fund in Athens, those present included Lady Barker, Mme. Banachi, the Dowager Lady Boyle, Mrs. Kenneth Bruce, Mrs. Constantine Craies, Lady Newnes, Mrs. Rossiter, and Mrs. Wesley Watson.

It is reported from Peshawar that Colonel Ghulam Mahomed Wardak, who was a member of the Indo-Afghan Peace Conference at Rawal Pindi in 1919, died on January 21 from pneumonia. Colonel Wardak was 80 years of age.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

Conservatives' Fiscal Policy.

Undoubtedly the Conservative Party is in a bad way. Distraction is in the air. Members themselves acknowledge it; facts proclaim it; enemies welcome it. Most of the trouble arises, it seems, from the flabby fiscal policy pursued by the Party, a flabbiness which the Empire Free Trade Crusade of Lord Beaverbrook has revealed in all its ugliness. The Empire Crusaders are doing their utmost to persuade the Conservative Party officially to renounce the old dogma of Free Trade, and where they fail to convert they deliberately oppose.

The Conservative Party is a little frightened. It does not like to be hustled in this way. Who are these newspaper proprietors that they should thus dictate policy? Ignore the charlatans, and proceed warily: that seems to be the slogan of Conservative headquarters. But they are frightened. What other explanation can there be to their frenzied appeals to the members sitting for Nottingham and for Stroud not to resign just now, and so allow Empire Crusaders to test their strength against the official Conservatives?

A contest, cannot, however, be put off much longer: there is actually a debate on the subject of Empire Free Trade this week in the House, the main interest of which will lie, not in the Labour and Liberal opposition to the motion, but in the Conservatives' reaction to it. Presumably the Conservative leaders are delaying so that the Empire Free Trade Crusade can be to some extent incorporated in the scheme for Imperial development which they are known to be preparing. But will Lord Beaverbrook wait?

It is, I find, an increasingly accepted view that Mr. Baldwin will, sooner or later, be deposed from the leadership of the Party. Suggestions abound, of course, that, if this comes about, it will not have been owing to the campaign by Lords Beaverbrook and Rothermere against him; but that is as it may be. The one certain fact is that the Conservatives are supremely unhappy about their present internal condition, and it may be that vast political changes are in store for us during the next year. With their younger members, particularly, who may not fully have realised the implications of the 1923 Election, there is a burning desire to adopt specified Protective measures as the cardinal point of their campaign.

Home Rule for Wales.

It is the fashion to laugh at the attempts of those who are pushing on the cause of Home Rule for such oppressed countries as Scotland or Wales, and there would be little point in suggesting that these movements for autonomy have any considerable backing as yet in the countries concerned. But it would be equally foolish to dismiss the idea as merely the conception of cranks. In Wales already it has been laid down, for example, that teachers in the schools must be able to talk Welsh.

And to-day in the House of Commons a member for Flintshire is to ask the Prime Minister whether the Government will create a separate legislative assembly for Wales and Monmouthshire, and another member will ask whether, in view of the congestion of business in Parliament and the claims of Wales to a department at the seat of government, he will consider the desirability of initiating early legislation with a view to the creation of a Secretary for Wales.

Both these questions are being asked in the name of the Welsh people, for it is claimed that there is a general desire on the part of the people of Wales for a measure of national autonomy. But one cannot see these alleged desires being met yet. For one thing, what a dull place our Houses of Parliament without the gifted Celts! And who would supply our Prime Ministers?

The Hatry Case.

One does not remember any case, whether it was the Bevan, Bottomley, or even a murder case, that has attracted so much attention as was given to the Hatry case, which ended last week with the award of the maximum punishment, fourteen years' penal servitude, to the ringleader of the forgers. It is curious to note the popular reaction to this severe sentence. Some people, who are without doubt ignorant or sentimental, deplore the length of the sentence, for they take into consideration, as if it were a real consideration, the fact that these condemned men did not run away, but stayed rather to help Sir Gilbert Garnsey clear up the mess, and suggest that a less stern Judge than Justice Avory would have allowed this to have a mollifying effect.

But the consensus of opinion applauds the Judge's sentence. It is felt, and rightly felt, that this was an exemplary sentence, designed to discourage other would-be crooks, whose presence in the City would mean little less than the decline of national credit.

The Reading Public.

The way of the author is becoming harder than ever in this country—and this precisely because, rather than in spite, of the fact that more people than ever are reading books. The truth is that books are so multitudinous nowadays, and the reading public so unpossessed of critical faculties, that the ordinary man, still more the ordinary woman, has to be told what he and she ought to read. In other words, a literary dictatorship, serving the popular need, has grown up.

This dictatorship has taken the form of the "Book Society," which each month recommends certain books to be read. Admirable, you might say, for the busy people who have little time for studying the reviews. But obviously all the worthy books cannot be recommended, and what of the unfortunate author who is left out? His chances of being read become slenderer and slenderer. Take the present vogue of war books. Does anybody suppose that such works as "All Quiet on the Western Front," "Journey's End," "War," and so on are the only real works on the War? Unfortunately, yes. Yet the truth is that admirable war works (as Mr. Edmund Blunden has recently pointed out in the ever-discerning *Manchester Guardian*), were published and neglected, long before the present somewhat hysterical fashion of war literature set in.

Book Review

EX-KHEDIVE ABBAS HILMI.

"THE DETHRONEMENT OF THE KHEDIVE." By Ardern Hulme Beaman. (London: George Allen & Unwin, Ltd. 6s. net.)

"A FEW WORDS ON THE ANGLO-EGYPTIAN SETTLEMENT." By Abbas Hilmi II, Twenty-three years Khedive of Egypt. (London: George Allen & Unwin, Ltd. 4s. 6d. net.)

To many it will seem more than a coincidence that the ex-Khedive's book should have been preceded at such a short space of time by the posthumous work of Mr. A. H. Beaman. The latter, however, it may be pointed out, was written in 1927, revised in 1928, and on the author's death in July, 1929, was left in the charge of the Rt. Hon. J. M. Robertson for publication. It certainly serves as a piquant publicity agent for the ex-Khedive's views on the proposals for an Anglo-Egyptian treaty. Mr. Beaman's object is to call attention to the manner in which Khedive Abbas was treated by the British Government. His statement is to the following effect:—Abbas Pasha was in Paris in July, 1914. It was his custom every year to take the waters in Europe after visiting Paris, and then, at the end of his cure to meet his mother, the Princess Emineh, at Constantinople, where he would stay for a month or so. In this particular year he was invited by the French President to be present at the fêtes on July 14, with the result that he did not reach Constantinople until the 23rd. As this date was the first day of two Turkish National fêtes, he delayed his courtesy call on the Grand Vizier until the 25th. On that day, as he was entering the Grand Vizierate in an official carriage, he was fired at and seriously wounded. Throughout August he still kept his room, but in September began to make his preparations to return to Egypt. He had previously been told by the Acting British Ambassador in Constantinople that everything was quiet in Egypt, and that there was no need for him to hurry back, until he was in ordinary health. On September 27, however, he received a visit from "Sir Lewis Mallett" (Sir Louis Mallet), who informed him that the British Government did not wish him to remain on the Bosphorus, but was taking a villa for him at Naples. He added that the Khedive would "never go back to Egypt again." Abbas Pasha declined to go to Italy and remained where he was. On November 5 Turkey entered into the War, and on December 12 the Khedive went to Switzerland, where he stayed until 1917. He was officially deposed by Proclamation dated December 19, 1914, for "adhering to the enemy," and on December 28 another Proclamation placed a sequester on all the Khedive's property. Mr. Beaman contends that "it has never been publicly, or (as far as diligent search can reveal) privately, stated that from July 24 when he was dangerously wounded to September 27, when he was deposed by Sir L. Mallett for 'adhering to the enemy,' Abbas had had any dealings of any sort or kind with Germany or Austria, which were then the only enemies in the War." The author's contention is that the deposition of the Khedive had already been decided upon or desired by Lord Cromer and/or Lord Kitchener, and that advantage was taken of the War to furnish a plausible excuse for the action. The next step, according to our author, was to wind up the Khedivial estates in Egypt. He speaks of "casual offers of an annual allowance of £20,000 and up to £24,000," if the Khedive would hand over all his possessions in Egypt and renounce all his rights in that country—possessions on which, incidentally, the Khedive placed a value of £2,500,000. Ultimately, finding himself practically at the end of his resources, Abbas Pasha decided that, although he would not sign the document presented to him, he would abdicate all rights to his throne and property in his own wording. This revised document he wrote out and signed, and sent it by messenger to Sir Horace Rumbold. In an hour, however, the messenger brought back the big envelope with the seal unbroken. "How many thousands of pounds," writes Mr. Beaman, "and what innumerable difficulties might have been spared had the British Minister accepted the sacrifice he blindly refused!"

The rest of the author's case in regard to the liquidation of the ex-Khedive's estates is that they were ultimately sold at ridiculous prices and that the money was paid over to Abbas Pasha without any attempt to render or to publish any statement of account.

Experience suggests that there are generally two sides to a question, and it is possible that there is another side to this one. That it has never been published in detail would seem to be correct; whether it can be guessed without an official exposition of the whole matter may be doubted.

The matters that are of such deep concern to Mr. Beaman find no mention in the ex-Khedive's book. The latter deals with various points in the prospective Anglo-Egyptian settlement, and is wholly in favour of agreement. He writes:—

> A settlement such as is proposed to-day in the projected treaty may be accepted as a basis for the future relations of the two countries, and time and experience will furnish opportunities to remedy all the defects hitherto disclosed in preceding conventions. No treaty ever yet made between nations was perfect. All are the product of human intelligence, which is necessarily fallible. Only the passage of time, that great enlightener, can reveal defects which must be remedied to keep pace with the perpetual change in human affairs.

The ex-Khedive is not always on sure ground, as, for instance, when he claims that the Sudanese are "of the same race and religion" as the Egyptian—a curious mistake in view of the agglomeration of races in the Sudan; but he is not afraid to give advice to his fellow-countrymen on leading questions. His book—of which this is an English translation—is addressed primarily to Egyptians, although it is to be supposed that an English translation was contemplated from the beginning.

> Egyptian independence, so ardently desired by us, must not be erected into an excuse for loading our budget with the heavy expenses which would be involved in the maintenance of an increased army or navy. The best thing for Egypt would be the presence of British troops in the Canal zone, authorised by treaty of which the League would be arbitrator, and their presence should be considered as a symbol of the alliance with Great Britain. I understand that their number will be limited to about 4,500 men. So small a force is insufficient to defend the Canal, but it may be considered a symbol of the *protection* of the Canal.

One section of the book is devoted to a consideration of the British Commonwealth, for which the ex-Khedive professes unbounded admiration. He desires to explain to Egyptians what he understands to be the inner bond of union which keeps the British Empire in being, and how that idea of toleration and liberty gives value to the treaty now proposed to Egypt.

> Upon these foundations of toleration and liberty has developed in Britain the widest system of democracy that the world has yet seen, where universal suffrage reigns, in the *real* sense, and not in the *rhetorical* sense understood among the nations of Latin origin. It is my earnest hope that Egypt may be influenced by the practical toleration and spirit of self-discipline of the British nation, for without these qualities in the citizen of the modern State all aspirations towards democracy are but idle dreams.

Finally, the ex-Khedive criticises the Constitution of Egypt; from the faulty drafting of which he finds that "all difficulty arises," and he shows the trend of his thoughts by ending up with some scathing remarks about the present occupant of the Egyptian Throne.

EDUCATION IN CYPRUS.

The following correspondence has passed between Mr. Zenon Rossides, Secretary of the Cyprus Deputation recently in London, and the Colonial Office on the subject of the new Education Act in Cyprus:—

The Rt. Hon. Lord Passfield, P.C.,
Colonial Office, S.W.1.

London, December 19, 1929.

My Lord,

Having been duly entrusted by the Cyprus Deputation, I have the honour to lay before your lordship the following:—

2. The education in Cyprus has been so far controlled by the communities, local elected bodies being responsible for the administration of the schools. This privilege and acquired right of the Greek people of Cyprus to have in their hands the education of their own children have been enjoyed by them all through the British occupation and even much earlier under Turkish rule.

3. A suggestion of interference with the education was made in 1882 by Sir R. Biddulph, then High Commissioner of Cyprus in his despatch to the Imperial Government (Parl. Paper C. 2930), and had met with the strong disapproval of Lord Kimberley, who in an important reply, dated June 10, 1881, (Parl. Paper C. 2930 p. 136), after expressing his appreciation of the "highly creditable" efforts made by the inhabitants to promote education, added the following:—"The supervision and control which the Government could exercise over the schools cannot be as effective as that which can be exercised by local bodies directly interested and responsible for their efficiency."

4. Nearly fifty years after that enlightened and broad-minded despatch was written the people of Cyprus see with no little surprise and regret that at a time when a Labour Government is in office a very retrograde step is being taken in Cyprus by the local Government in the matter of education, by which the communities will be deprived of their ancient privileges, which together with their religious rights have been respected even under Turkish occupation. A Bill has been introduced into the Legislative Council whereby the communities lose their right to elect their Educational Committees and their Members of the Board of Education. The elected District Educational Committees are to be abolished and the Members of the Board of Education will not be entitled to make recommendations as to the appointment, salary, transfer and dismissal of teachers, such appointments, etc., being left entirely in the hands of the Governor.

5. These are the main objects of the Elementary Education Bill introduced into the Legislative Council and passed by a majority consisting mainly of official votes against the wishes of the people, the large majority of the Greek elected Members voting against it (nine Greek Members voted against and only three in favour of the Bill).

6. We venture to submit that in the particular case of a long-standing privilege of the Communities the consent of at least more than half of their representatives should be obtained before that privilege might be taken away.

7. A justification will probably be sought in the argument that there have been complaints against members of the Board for party favouritism in the appointment and transfer of teachers. But, that, even if true, constitutes, we may suggest, no sufficient reason for condemning a whole body, which otherwise satisfactorily carries out its functions, and it certainly affords no ground for depriving an entire population of their ancient right and privileges.

It would seem strange indeed if this principle were widely established and if on every occasion when it might be considered that any person or body in an elected public office did not act exactly as they ought to, the right of the people to elect for that office was abrogated.

8. The tendency of civilized nations in their Government of peoples is to advance towards greater freedom and a more liberal form of administration. The step which is proposed to be taken in the matter of Education in Cyprus, in our judgment, reverses this direction.

9. Telegrams have been received from Cyprus reporting the great discontent which prevails among the people for the passing of this unpopular Bill

10. In view of the fact that the large majority of the Greek elected Members voted against the surrendering of this privilege, I appeal on behalf of my compatriots to your Lordship's sense of fairness and justice and request that the sanction of His Majesty to this much resented measure may be withheld in the interests of the island and its tranquillity.

I have the honour to be
Your Lordship's most obedient Servant,
(Signed) ZENON ROSSIDES.

The Reply.

Colonial Office.

Downing Street,
11, January, 1930.

Sir,

I am directed by Lord Passfield to acknowledge the receipt of your letter of the 19th December on the subject of recent reforms in the Elementary Education system of Cyprus.

2. In reply I am to inform you that the Law effecting these reforms was introduced into the Legislative Council, with the approval of His Lordship, after very careful deliberation in the course of which the points put forward in your letter were fully examined. It is understood that the Law has now been passed by the Council; and His Lordship does not feel that it would serve any useful purpose at this stage to open a discussion upon its merits.

3. A copy of this correspondence is being sent to the Governor of Cyprus.

I am, Sir, your obedient servant,
(signed). H. R. COWELL.

Zenon Rossides, Esq.

[Reference to the new Education Act of Cyprus was made in the "Notes of the Week" in our issue of January 9.—ED.]

NEWS IN BRIEF.

Ex-King Amanullah, who is in Italy, has written his memoirs, and they are to be published shortly.

Mr. H. Dowbiggin, Inspector-General of the Ceylon Police, arrived in Jerusalem on January 27 to reorganise the Palestine police force.

After a course of study at classes specially arranged for Turkish policemen, twenty members of the force have been granted certificates for English and twenty for German. An Italian class is to be started.

To show their appreciation of the results of The Hague Conference, Bucharest University students organised a demonstration on January 23, and paraded before the British and other Allied Legations.

The International Straits Commission on January 21 considered the passage of the Dardanelles on January 17 by two Soviet warships from Sebastopol, and decided that there was nothing irregular concerning which a protest could be made.

The Italian archæological mission in Egypt is planning to begin excavations outside Alexandria as soon as the British garrison excavates the "Fort on the Hill." It is hoped to find the tomb of Alexander the Great.

The Yugoslav Prime Minister, General Zhivkovitch, on January 22 dismissed a great number of the members of the municipal councils of Belgrade, Zagreb, and Liubliana elected during the last municipal elections. In their place he is appointing members according to the new administrative scheme.

The Arabs from the village of Koloma who were accused of the murder of five members of the Mackleff family and two of their guests in their house at Motza, a Jewish village on the outskirts of Jerusalem, during the riots last August, were acquitted on January 23 owing to lack of evidence. Their trial before the Chief Justice occupied 44 sessions, the longest in his experience.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Hague Settlement.

Just as the War had its nominal beginning in Eastern Europe, so what we must hope is the last act in the drama—the settlement of the Reparations problem at The Hague—hinged very largely round the vexed question of Eastern Reparations. The two major points at issue were Bulgarian Reparations and the payments to be made by Hungary. The Bulgarian question, which was not complicated like the latter and depended only on Bulgaria's capacity to pay, has been settled on the basis that Bulgaria shall pay ten annuities of ten million gold francs, ten of 11 millions, and 16 of 12.5 millions. The problem with regard to Hungary was two sided. On the one hand there was the question of Hungarian Reparations, on the other compensation payments by the Succession States for agrarian and other claims by Hungary arising from the redistribution of territory under the Peace Treaty. The settlement marks a compromise. Hungary is to continue her present Reparations payments and from 1943 to 1966 will pay annuities averaging 13.5 million gold crowns. Her claims for compensation from the Succession States have been reduced to 240 million gold crowns which will be met from a special fund to which Great Britain, France, Portugal, Japan, and Belgium will contribute from the amounts received from Hungarian Reparations. Finally, on their part the Little Entente has relinquished its claim that Hungary should be responsible for the settlement of the claims of the Hapsburgs and the Catholic Church. Like the former claims these will be met from the special fund.

Importance of the Settlement.

To say that this settlement will come as a relief to Eastern Europe is to understate the position. So long as the problem remained unsolved it had a cramping influence on developments in general, and the arguments in the Press and elsewhere over the questions at issue had anything but a reconciling effect on the countries concerned. The all-important point is that the settlement is one which is universally accepted as the best way out, and that means that it will not sow the seeds of further controversies. A compromise which really satisfied no one would have been futile, but as it is, the way is now clear to forget the past, and for all the countries to devote their attention solely to the work of development. The proximity of Bulgaria and Hungary to the Succession States makes the welfare of any one of the countries intimately linked with that of the others, and the prosperity of Eastern Europe must depend very largly on the realisation by the countries of their common interests. A step which foreshadows this desired economic unity is the Tripartite Wheat Agreement to which reference has already been made in these columns. The significance of this move is obvious, and it is to be hoped that it will be followed by other measures which will show that at long last the countries of Eastern Europe are realising that they are one and all part of an economic whole.

Reassuring Statement for Indian Investors.

As a result of developments in the Indian situation Indian sterling securities have developed marked weakness of late, and in some cases ultra-nervous holders have hurried to dispose of their investments. There is nothing to warrant undue anxiety on the part of investors, but in the circumstances it was clear that some official assurance of security was desirable, and this is now forthcoming in a letter from the Secretary of State for India to a correspondent, the terms of which it may be hoped will be sufficient to allay any apprehensions that may be entertained. The declaration states that: "His Majesty's present Government have no intention of allowing a state of things to arise in India in which repudiation of debt could become a practical possibility, and that it is inconceivable . . . that, in dealing with any scheme of constitutional change in India, Parliament could fail to provide safeguards, should they be needed, against a breach of the conditions under which these loans were issued."

Hellenic and General Trust Issue.

An offer of new capital was made this week by the Hellenic and General Trust Ltd., which was incorporated on January 9, 1928, under the name of the Hellenic Corporation Ltd. The change in the name was effected in May last to indicate the policy of the Board of not concentrating entirely on investments in Greek enterprises. The company's authorised capital is £1,125,000 in £5 shares, of which £779,000 has so far been issued. The offer now made is of 44,200 shares of £5 each, which will bring the issued capital up to £1,000,000. These shares carry the right to receive option certificates entitling the bearer to subscribe at any time between May 1, 1930, and July 15, 1933, for additional shares at £6 10s. per share in the proportion of one share for every four shares allotted. For the first thirteen months of the company's existence, that is up to January 31, 1929, the profits amounted to £36,476, which was utilised to pay off the preliminary expenses, a balance of £15,773 being carried forward. The company began its dividend payments last June with an interim distribution of 3 per cent.

Overproduction of Tea.

Tea has to be ranked with rubber, tin, oil and other commodities the production of which at the present time is in excess of the demand. This is one of the strangest of the post-War economic developments, for if one thing seemed certain it was that in the course of a few years, as Russia gradually regained her purchasing power, the demand for tea would be such that we should see very high prices ruling. But conditions in Russia have left that country out of the tea market, and, as is aptly pointed

out in an annual review of the tea trade, a generation is growing up in Russia which has no knowledge of this beverage. Efforts have been made to develop the tea habit in America, while as I mentioned recently in these notes even in such an unfavourable terrain as Egypt tea is ousting coffee as the popular drink, but the expansion of the demand in these directions has not been sufficient to counterbalance the loss of the great Russian market and the increasing crops. As showing the incidence of these two factors, it may be noted that Russia took about 200,000,000 pounds of tea per annum, while it is estimated that there was an increase in tea production last year of about 54,000,000 pounds, of which India was responsible for 34,000,000 pounds. Negotiations have been in progress for the sale of tea to Russia on the usual long credit terms, and it is not surprising in the state of the market that the suggestion should be forthcoming that it would be good propaganda to give some tea to Russia if it cannot be sold. It would be like casting bread upon the waters, and ultimately the growers could count on reaping the benefit.

COMMENTATOR.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, January 28.

Uncertainty has been the keynote of the stock markets in the past week, and the tone has been far from bright, the volume of business showing a tendency to dwindle in the absence of public interest. In some quarters a reduction in Bank Rate was anticipated, but although there was no change there was little alteration in prices in the gilt-edged market on balance. That a reduction in Bank Rate is only postponed is the general opinion in view of the anomalous position in the money market where discount rates are over a point below the Official Minimum. The welcome news that the "Hatry" settlement would take place on February 13 had no tangible effect and the miscellaneous sections remained dull, with very few features of interest. Home Rails were inclined to slip back after their recent improvement, but Underground continued to attract some attention on dividend possibilities. The Imperial Tobacco dividend, which is equal to an increase of 2¾ per cent. on the old capital, exceeded anticipation.

Japanese Bonds.

Japan has had to make two recoveries to the one of other countries since the War, for not only had she to get out of the trade depression after the War but she had to make good the terrible disaster of the great earthquake. The task of recovery performed with skill and patience is meeting with success, and an outstanding feature of the progress is the high degree of technical and capitalist efficiency which now exists in that eastern country. As an example of this it may be mentioned that the Japanese cotton industry is more highly rationalised than our own. Another sign of Japan's economic recovery is given by her return to the gold standard at the beginning of this month.

Japan has a good reputation as a borrower and there is a good market for her loans and bonds. The Japanese Government 4 per cent. Sterling Loan, of 1899, of which there is now £9,355,660, is redeemable in 1954 or at par on six months' notice. Another attractive Government bond, but for a longer term, is the Japanese 4 per cent. Loan of 1910 redeemable in 1970 or at par on six months' notice. Both bonds yield about £6 2s. per cent. and interest is in each case payable in June and December. Besides the Government loans a number of other Japanese loans are quoted on the London Stock Exchange such as the City of Tokio 5½ per cent. Loan, redeemable in 1961 and now yielding £6 4s. This, like other Japanese municipal loans quoted abroad, is well secured by sundry revenues of the town.

Triply Secured.

Some activity has taken place in the 6 per cent. sterling bonds of some of the leading French railway companies which were issued in this country shortly after the War. The merits of these securities have been mentioned in this column before, but they bear repetition. Although issued by railway companies these bonds are in the last resort obligations of the French Government. Their interest and principal are a first charge upon the resources of the individual borrowing companies in each case, but if these are inadequate the charges fall upon the amalgamated funds of the French railways and if these again are insufficient, the Government has undertaken to meet any deficiency of capital or of interest. Hence the bonds are triply secured, and rank as investments of high standing. They are all moderately long dated, but the P.L.M. bonds, finally redeemable in 1958, are now redeemable at any time at the company's option. The other issues, however, are redeemable at fixed dates. The Orleans bonds, which return £5 18s. per cent., mature in 1956, and the Midi and Nord bonds, which both yield £5 17s. per cent., in 1960 and 1950 respectively. If the anticipations of cheaper money at no distant date are fulfilled, an appreciation may be looked for in these as in other high-class fixed interest securities.

Tin Restriction Progress.

Following last week's announcement regarding restriction of output on the part of one well-known Cornish-Malayan group, we have had this week four news items concerning steps towards a reduction in the production of tin. First, a similar declaration by several more Malayan companies; secondly, news that some two-thirds of the dredges in the Malay States were idle on Sunday, as a result of the adoption of the Tin Producers' restriction scheme; thirdly, the action of the bulk of the Nigerian

producers in restricting their output by 20 per cent.; and finally the announcement by the Aramayo Mines of Bolivia that in connexion with the curtailment of output it has undertaken it has been deemed advisable to withhold the interim dividend usually paid on February1. At first sight it appears somewhat anomalous that in conjunction with the foregoing announcements the price of tin should have descended to a new low level in the present movement and that when recovery in the metal occurred it had no effect upon the share market. The latter feature is doubtless attributable to a realisation of the fact that restriction, even if generally agreed upon, will not immediately produce the desired result and that in the meantime, as emphasised by the example of the Aramayo, some sacrifice may have to be made. The advice we have given before to view the market in tin shares with caution until the whole situation is more stabilised therefore appears to merit repetition. At any rate for those without special knowledge of this market it seems desirable to wait until an equilibrium between consumption and production over some period has been obtained, and until it is possible to estimate the position of individual companies under these conditions.

BRITISH SUCCESS IN YUGOSLAVIA.

A notable tribute to British industry is provided by the fact that Mesrs. Waring and Gillow, Ltd., were entrusted with the work of furnishing the King of Yugoslavia's new villa near Belgrade. This well-known firm has been very prominent in the Near East of late years, while at home it may be recalled that it carried out the work of decorating and furnishing Bute House for the Egyptian Legation.

LOCUSTS IN THE SUDAN.

It is stated in the December report of the Central Economic Board of the Sudan Government that the past season, the third in the present cycle of locust years, is said by many natives to have been the worst, as regards the number of locusts which occurred, within the memory of living man. This may or may not be true, though there is little doubt that locusts have been more numerous than in any year since the battle of Omdurman. As far as can be ascertained, the total amount of damage caused has been relatively small —the figure of 5 per cent. of the total grain crop has been suggested —but in certain districts the local damage was severe. Fortunately, the rains were good and consequently the supply of food for locusts, in the form of grass as well as crops, was plentiful; otherwise the total, as well as the percentage, of damage occasioned would have been very much heavier. It must be borne in mind, however, that had the rains been poor it is unlikely that the locusts would have bred to the same extent.

The provisional commercial arrangement between the Netherlands and Roumania has been denounced by the Roumanian Government, and will cease to have effect as from March 1, 1930. The Roumanian Government has also denounced the provisional commercial agreement concluded between Roumania and Switzerland on February 13, 1923. The agreement is to expire on March 1, 1930.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Clothing, etc.—The Frontiers Administration, Ministry of War and Marine invites tenders for the supply of clothing, etc., required during the year 1930-1931. The contract is in two sections, one section, consisting of clothing and stores to be obtained by contract and the other of a list of clothing quotations in respect of which are required for workmanship and lining only, the outer cloths to be furnished to the contractors by the Administration. March 11. (D.O.T.)

Bunting, Ropes, Canvas, Hose, etc.—The Egyptian Ports and Lighthouses Administration invites tenders for supplies of bunting, ropes, canvas, hose, etc. The schedule of requirements, which relates mainly to small quantities of goods, includes among other articles, bunting, calico, canvas, linen cloth, thread, cotton waste, manilla, etc., ropes, canvas and rubber hose, tarred oakum, etc. February 14. (D.O.T.)

Clothing.—The Egyptian Ports and Lighthouses Administration is calling for tenders for the supply of various articles of clothing. The schedule of requirements, which relates mainly to small quantities of goods, includes, among other articles, badges, boots, braces, celluloid collars, handkerchiefs, jumpers, lanyards, tarbushes, trousers, undershirts, etc. February 25. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, February 4); s.s. Tuscania for Bombay (Glasgow, January 31; Birkenhead, February 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, February 6).

Bibby Line.—S.s. Cheshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, February 5).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, February 8); s.s. Dumana for Bombay (London, February 15).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement offers (Glasgow, February 20; Swansea, February 21; Liverpool, February 22); s.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, February 15; Swansea, February 18).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (the first steamer of the season for the Danube) (Liverpool, February 1); s.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 1).

P. and O. Line.—S.s. Ranpura for Bombay (London, February 4); s.s. Padua for Calcutta (London, February 14).

Prince Line.—S.s. Italian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, February 1); s.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, February 11).

Ellerman and Papayanni Lines.—S.s. Lisbon for Gibraltar, Algiers*, Oran*, Malta, Patras, Syra*, Smyrna, and Constantinople (Liverpool, February 1; Swansea, February 1); s.s. Lesbian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona, Venice, Trieste, Fiume, and Shushak (Liverpool, February 1; Swansea, February 6); s.s. Destro for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 8); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, February 13); s.s. Maronian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 15); s.s. Oporto for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, February 15; Swansea, February 15); s.s. Castilian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 1). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Mr. A. Chester Beatty has resigned from the Boards of British Celanese, Burma Corporation, and N'Changa Copper Mines owing to extreme pressure of business.

We are informed that H.R.H. the Prince of Wales has been pleased to grant Raphael Tuck and Sons, Ltd., the honour of the Royal Warrant of Appointment as Fine Art Publishers to His Royal Highness.

(By Our Motoring Correspondent)

British Light Cars.

It may be said without fear of contradiction that the British "baby" car has proved itself. It is far more speedy than at one time it was felt it could ever be; it is perfectly reliable; it is low priced in the first place and fetches comparatively good prices second-hand, thus proving its real, as well as its monetary, depreciation is not high; it is easily driven and controlled as is shown by the tens of thousands that are on the road, driven by people who have not and never will have the slightest mechanical knowledge, and it is really a comfortable car to ride in.

When one remembers that the average light car has a wheel base of rather under seven feet, that its wheels are little more than motor cycle wheels, that its weight is a mere fraction of that of its big brother, and that its engine is of a size that would have suggested a boy's toy to engineers of a few decades ago, it is little short of remarkable that it is as good as it is. Perhaps the only thing about the car, other than mere refinements or minor matters, that some improvement might be made in, is engine noise. Of course, when you have an engine revolving rather faster than the average buzsaw, one is bound to have a good deal of noise and it is not easy to see how it is to be dealt with. The engine speed is so high that there might be a tendency actually to choke were silencers to be made as perfect as they are for high powered cars with comparatively slow speed engines, and it does not seem likely that any real improvement in this respect is likely to be effected in the near future. Another point to which a little attention might be directed by makers is, in my opinion, that of springing. I am quite aware that most cars of the kind are fairly well sprung, that I am not denying. All I do say is that I think it might be better; it is difficult, I know, with such a wide margin, comparatively speaking, between the loaded and unloaded weights of the car, to design a suspension system that will be satisfactory under all conditions, but some improvement might be possible and, if so, it would add greatly to the value of the car.

The "M.G."

The new "M.G." factory, Pavlova Works, Abingdon-on-Thames has just been opened, and the product, the new 8 h.p., 4-cylinder "M.G." Midget is an extremely fine little car. Its suspension leaves practically nothing to be desired, and the engine noise, though a healthy boom, is by no means unpleasant. There is hardly a sound from the valve gear, and the running, of both the engine and of the car at all speeds, is peculiarly smooth. Such noise as it does make is rather more like that of a big than of a baby car, not only when the engine is running free but when the car is on the road.

A visit to the factory shows that the layout and general design are all that are necessary for quick and economical production. That being so, there should be no doubt as to the success of the venture as the car itself is all that could be desired even by the most fastidious user of light cars. The valves are of the overhead type, operated by cam shaft, and the gear is enclosed in an aluminium cover. The carburettor is mounted on the exhaust side, and for easy starting and running under severe weather conditions it is hot-spotted from the exhaust manifold. The plugs are on the opposite side and the distributor is driven vertically in front of the cylinder block, and so provides a good deal of clearance and room round the engine. The full advantage of this space saving or rather space-providing arangement will not be appreciated by the owner-driver until the time comes when decarbonising or similar work has to be undertaken.

The three speed gear box is centrally controlled and the gear ratios chosen by the makers seem exactly right for the car, which is able to rush any short, stiff incline or hang on as long as is necessary to one of these seemingly endless moderate hills that one gets round Oxford, say between Long Compton and Banbury, and a further point is that the gear ratios not only allow the car to pick up, on a gradient, from almost a standstill, but allow the car to get away from a standing start like a car of three times the power. During a test it was possible to reach 55 on top and a hill with a gradient of one in seven was started on second at 18 miles per hour, and finished at 26 miles per hour on the same gear. The brake horse power of this car, by the way, is about 33, the bore and stroke being 57 by 83. The rated horse power is less than a quarter of that amount.

Liabilities of Garage Owners.

The question as to the extent of the liability of garage owners for the safety of vehicles left on their premises seems still unanswered. In conversation recently a motorist advanced the belief that, irrespective of his own insurance, a motorist who leaves his car in the hands of a garage firm, either for storage or repair, is entitled to think that he will be compensated fully if it suffers injury in any way. The garage proprietors with whom he was discussing the subject, emphatically disagreed with him, and asked if it were reasonable to suppose that any business firm, for a garage fee of about a couple of shillings, would accept perhaps a £500 risk for twelve hours, or for a repair profit of, say £1, a similar risk for possibly a fortnight or three weeks while some part was being sent for, made, returned and fitted. Looked at in that light, it does seem unreasonable to suppose that a garage can take full risks for all cars on the premises, for such small sums. Yet I cannot help thinking that, if a customer's car was damaged, stolen or burned up whilst in a garage, to which it had been taken for repair or for safe keeping and for which a fee had been or would be made, the court would probably consider that the garage had taken the risk on its own shoulders and would have to pay. Perhaps the point would be met mutually in some

Uganda

TANGANYIKA TERRITORY—Dar-es-Salaam, Tanga

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms.
The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfer on all its Branches, at the exchange of the day.
The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchases co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

way; also, in the wonderful new provisions for compulsory insurance, if and when they are made, there will be full cover for the garage proprietor. By the way, we are not hearing quite so much about the advantages of compulsory insurance.

SUDAN GUM SUPPLIES.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended December 31:—

Arrivals in Kordofan Stations and Tendelti amounted during December to 1,505 tons, as against 1,277 tons for the same month in 1928, 1,378 tons in 1927, and 1,003 tons in 1926. The noteworthy characteristic of December arrivals is that they did not regularly increase as in other years, but declined during the last ten days of the month—most likely owing to exceptionally cold weather. The total new crop arrivals to the end of the year compare as follows:—1929, 1,758 tons; 1928, 1,409 tons; 1927, 1,422 tons; 1926, 1,169 tons; 1925, 800 tons.

"G. G. G." Qualities.—Gedaref is expected to be good, but the Gezira poor.

The general tendency of prices was a total fall of 5s. 9d. per cwt. during the first five days of the month, after which there was a reaction, the total rise being 3s. by the 17th. Subsequently prices declined, and by the 24th the total fall was 6s. During the remainder of the month prices fluctuated within the limits of 2s. 6d. and finally closed 1s. 5d. higher. The net fall during the month was 7s. 4d. per cwt.

We estimate total new crop demand to the end of the year for all Hashab qualities about half what it was last year, but for early delivery perhaps something more. In any case, total demand largely exceeded actual arrivals, and we do not believe exporters or dealers have any unsold stocks.

The absolute clean up of old crop is seen by the insignificant gum exports in November—only 46 tons all qualities. The shortage in exports is thereby increased by 485 tons, making a grand total of 6,240 tons. This shortage would have been increased were it not for a larger than usual crop of Talha. Taking Hashab (including bleached) alone the shortage is 7,088 tons against the previous year.

IVORY IN POOR DEMAND.

Messrs. Hale and Son, in their report on the quarterly ivory sales held on January 21 and 22, state that they comprised 37 tons (against 43¾ tons at the same time last year and 30¾ tons in October), viz., 30¾ tons Zanzibar, Bombay, Mozambique, East African, Rhodesian, and Siam, 2½ tons Abyssinian, 4¾ tons Egyptian (Alexandrian description), 6 tons West Coast African and Congo, and 3 tons land carriage, also ½ ton rhinoceros horns and ¼ ton sea horse tusks and boars' tusks; total, 37¾ tons.

There was a fair attendance of buyers. The quantity catalogued was only moderate, but the demand was inactive, and to effect sales in a number of descriptions lower prices had to be submitted to, but in many instances holders were not prepared to accept the reduced rates. America and the Continent were the principal buyers, but the Home trade bought rather sparingly.

Abyssinian was all bought in, being limited above market values.

Egyptian was partly sold. Soft large and medium tusks were £5 to £8 per cwt. lower, hard steady to rather easier, scrivelloes £3 to £4 per cwt. lower, ball scrivelloes steady.

THE BULLION MARKET IN 1929.

The following extracts are taken from the annual report of Messrs. Samuel Montagu and Co:—

The events of 1929 are as yet too near to allow a fair perspective of their significance, but time will doubtless afford the past year its due importance in the march of post-War reconstruction. In surveying the many happenings which have commanded world-wide interest, pride of place must be accorded to the settlement of the intricate questions of reparations. This was only reached by great endeavour and forbearance, and tribute is due to the committee of experts, whose meetings in Paris in February led to the formation of the Young Plan, as well as to the members of the Governments concerned who, in August, after a period of suspense, were able to announce an equitable and honourable settlement.

Gold.

The year just ended has been an eventful one, and abnormal conditions in the principal money markets of the world were such as to bring about movements of gold on an unprecedented scale. The period of unfavourable exchanges, with the consequent heavy gold losses, gave rise to much anxiety, and the feeling of uncertainty brought about by the situation has naturally not been without adverse effect on the general trade conditions of the country. Nevertheless some compensation may be derived from the fact that events have done much towards the maintenance of London in its pre-eminence as the chief financial centre of the world.

The outflow of gold commenced towards the end of January with shipments to the United States. Speculative activity in the New York stock market, which has been one of the features of the year, led to large borrowing by that quarter to finance deals in securities, and funds were attracted to the New York market by the abnormally high rates of interest paid for accommodation. This was not without effect on the sterling exchange, and movements of gold to the United States began. Although this movement of gold was short lived it was sufficient in intensity to indicate the need of some protective measure if the Bank of England were not, thus early in the year, to suffer a substantial drain of its gold stocks. Consequently, on February 7 the Bank of England's rate of discount, which had stood at 4½ per cent. since April 21, 1927, was raised to 5½ per cent. The increase in the Bank Rate put an end, for a time, to the outward movements of gold and the Bank of England was enabled to replenish its stocks by purchases in the open market, securing the main proportion of the weekly arrivals from South Africa by bidding above the statutory buying price.

Early in June, however, there was a resumption of gold shipments to New York, and London was once again faced with a situation threatening further gold losses. The high rates commanded by money in New York for financing Wall Street operations meant that New York, which had hitherto been largely resorted to, was no longer available to European borrowers, who now began to look more to London, where money ruled cheaper than in other centres, to meet the growing demands of their commercial development. This renewal of the export of gold to New York marked the commencement of the period of heavy drain upon the country's gold resources which lasted until the end of September. To that of the United States was now added a demand from Germany.

The circumstances responsible for the situation may be said to have been similar to those which obtained in 1928, although in addition to borrowing by German municipal and commercial enterprises there was about this time a credit arranged in New York for Germany of 50,00,000 dollars, which was said to have been sold in exchange for sterling. These operations naturally affected the exchange, which was forced below gold point with a resultant demand for gold on German account.

French Demand for Gold.

The principal feature of the year has undoubtedly been the loss of gold to France, the total amount taken by that country being £33,000,000. The movement commenced in the middle of July. Many reasons were propounded in explanation of the acute demand for francs and the realisation of the large sterling balances which had been acquired in this country on French account prior to the stabilisation of the franc.

With the continuance of heavy exports of gold a further rise in the Bank Rate was certain. Considering the loss of metal sustained by the Bank and the approach of the season when normally gold tends to move outward, it became obvious that what has been described as "the trusted weapon of the Bank Rate" must be used to relieve the situation. The advance therefore from 5½ per cent. to 6½ per cent. on September 26, thought considered by some belated, was but in accordance with general anticipation. Although the French exchange was less responsive than that of the U.S.A. and of Germany, the rise in Bank Rate proved effective, and there was, for the time being a welcome cessation of the outflow of gold although shipments to France continued at intervals until the end of the year.

As events proved, the turning point was reached with the collapse in the New York stock markets, where reaction soon developed into a slump, the suddenness of which was in marked contrast to the prolonged period of the boom. Funds thus released tended quickly to return. Now eased of much of the strain to which it had been subjected, the Bank of England gold reserve, having reached its lowest ebb, entered upon a period of rapid recovery, as will be seen from the fact that of the £24,000,000 lost between the beginning of the year and October, two thirds were recovered in the last three months of the year.

The position now was that, although the New York exchange was moving more in favour of this country, the French exchange was still adverse, and it became practicable to take gold from New York for direct shipment to France, an operation which relieved to a large extent the demand hitherto borne solely by this country. The more favourable exchanges and the fact that shipments of gold, particularly from Argentina and Australia, were on the way to this country, had created an easier feeling. The rising of the Bank Rate to 6½ per cent. had stemmed, if not altogether stayed, the outflow of gold, and on October 31 the rate was reduced to 6 per cent., which was followed by further reductions, to 5½ per cent. on November 21 and to 5 per cent. on December 12.

Supply and Demand.

The increasing demand for gold has given rise to conjecture as to whether this will lead to a shortage of the metal as years go on, should existing sources of supply show signs of exhaustion. No fresh discoveries of gold have come to light, though there must be possibilities in the unexplored regions of Canada. It is here that the coming of the aeroplane has been of great assistance. The bulletin of the High Commissioner for Canada of May 9 last referred to the work carried out in Northern Canada, where aeroplanes were used to convey prospectors and to re-establish caches of provisions and tools. Encouraging mineral discoveries included one of gold quartz. Since a large proportion of the gold taken from our shores has been conveyed by aeroplanes, it would be a welcome compensation were the use of these machines to lead to new discoveries of gold to add to the resources of the Empire.

Silver.

The year has been noteworthy for the almost monotonous regularity with which prices have declined, and also for the establishment of the lowest quotations ever recorded hitherto. The ease with which supplies, augmented by large quantities of silver derived from demonetised coin, were disposed of was the great feature of the market during 1928. Even as it was then due to the ability of China to absorb an abnormal quantity of silver that the market was so well maintained, it is mainly owing to the continued saturation of that country that caused the white metal to become somewhat of a drug in the market.

Stocks have tended to accumulate. Those in Shanghai, which amounted to about 108,000,000 ounces at the beginning of 1928, had increased by the end of that year to about 150,000,000 ounces, and at present amount to about 192,000,000. An accumulation such as this could not but depress the market. Silver required for coinage purposes has made little demand on the market, supplies being already available from old coin in process of demonetisation. The market has also had largely in view the quantity of silver at the disposal of the Indian Government, from which source sales have been made periodically, a fact which has also tended to restrict buying by the Indian Bazaars. In other words supply has exceeded demand, and all things considered it is remarkable that the decline was so long delayed.

The highest prices of the year were 26 7-16 for cash and 26½d. for two months delivery, which were quoted on four days in January, and the lowest 21 5-16d. and 21⅜d. for the respective deliveries touched on December 30.

During the first three months of the year prices were fairly well maintained in the neighbourhood of 26d., and the principal features during this period were the disturbances in Bombay and the revolutionary outbreak in Mexico. The trouble in Bombay arising from differences between Hindus and Muslims led to rioting which caused a dislocation of local commercial activities, and the Bombay silver market was closed for two days. The situation in Mexico caused some apprehension, seeing the importance of that country as a producer of silver. The slight bullish feeling at first manifest was soon dispelled however, as it became apparent that the trouble was unlikely to assume the magnitude of similar happenings in the past which had proved so detrimental, especially to the mining industries of the country needing, as they do, that transport must be both safe and uninterrupted.

Although prices during April ruled at a slightly lower level, the average being approximately 25¾d., it was in the following month that the weakness of the market became apparent. Support grew less, and reports that in Japan a movement was on foot towards the removal of the embargo on the export of gold caused activity on the part of Chinese speculators to purchase yen exchange. The sales of silver as the counterpart of these operations helped further to depress prices. By the first of May the quotations had receded to 25 5-16d., but during that month the fall was more rapid and on June 4 the price of cash silver had declined to 24d.

A glance at the average prices of June, July and August, varying as they do by only a small fraction of a penny, fairly indicates the placid state of the market for those three months. The steadiness was helped by the situation which arose in Manchuria about the middle of July, following the seizure by the Chinese authorities of the Chinese Eastern Railway. In the circumstances it was natural that some quarters took a grave view of the position, whilst on the other hand it was pointed out that neither of the contestants was in a position to embark upon anything in the nature of serious hostilities. As regards the effect upon silver, a certain amount of nervous covering of bear sales resulted, but the factor that seemed least perturbed was China itself, for although

Digitized by Google

there was some disposition to acquire silver, the same quarters was also willing to sell at signs of advancing rates.

The market presented a still weaker apearance as the year progressed, and by the end of September prices had declined to 23 3-16d. and 23¼d. for cash and two months' delivery respectively. With China more inclined to sell than to buy, and the Indian bazaars operators being content to acquire merely their bare needs, outlet was restricted, quotations still sagged and November saw prices quoted below 23d. The reports that the establishment of a gold standard in Indo-China was imminent seemed to be substantiated by liquidations of silver made on behalf of that quarter towards the end of the year. These sales, coming at a time when the market was least fitted to withstand selling, could scarcely fail to cause further depression, for the weakness of the China exchanges was evidenced by consistent offerings of silver, and the condition of the market, therefore, was not such as to attract buyers.

By the latter half of December inquiry was practically limited to the Indian bazaars, and prices were forced down to a level at which they were willing to give support. From the highest quotation of the month— 22 11-16d. for both deliveries on December 7—there was a rapid decline until on the 30th the lowest prices hitherto recorded for silver were established, viz., 21 5-16d., the figure quoted for cash delivery with two months' delivery at 21⅜d. Prior to this the lowest quotation had been 21 11-16d. touched in November, 1902, and January, 1903. It will be seen that for the year 1929, prices were at their highest point in the first month of the year and reached their lowest in the last. The year closed with quotations level at 21 7-16d.

Sales of Silver by Indian Government.

Sales of silver by the Indian Government have continued, but no official figures have been made available as to the amounts actually sold although, on September 4, in answer to questions raised in the Legislative Assembly, Sir George Schuster, the Finance Minister, stated that he was devoting his attention "to devising some means by which fuller information can be given to the public on these points without actual damage to the public interest." It was agreed that the abolition of the discount on Bombay Mint refined silver removed the handicap on the Government selling such silver in India, and the hope was expressed that the fine silver produced in Bombay Refinery would find its place in the Indian market. Early in the following month arrangements were made through London whereby Indian Government refined silver would be delivered in Bombay, against silver purchased in the London market for shipment to India, and delivery in Bombay commenced with about 2,000,000 ounces of silver bars refined at the Bombay Mint. The Indian Government silver exported has all been in the form of unrefined silver and the amount imported into the United Kingdom this year was about 20,400,000 ounces.

Difference Between Cash and Forward Quotations.

The accumulation of stocks to which we have already referred tended, as the year advanced, to render the market sluggish, with the result that for most of the year silver for cash delivery has been quoted at a discount. Following the arrival in this market of substantial shipments of silver from Mexico and the cost of carrying stocks owing to high money rates, the discount reached 3-16d. in October, whilst on several days in November it was ¼d. Cash silver commanded a premium on only two days of the year, on February 1 and May 15, on which dates the quotations for cash were, however, only 1-16d. higher than those for two months' delivery.

Conditions in China during the year have continued unsettled, the Nanking Government having had to cope with a chain of disturbances, the outcome of minor rebellions instigated by rival War Lords. These of course were overshadowed by the more ominous trouble with Soviet Russia, which involved a certain amount of fighting on the Manchurian border before serious attempts to arrive at a settlement were made in November. Though such conditions are looked upon generally as a "Bull point" for silver, they were unable to produce much effect during the past year.

Supplies have again been amplified by further demonetisation of silver coin, though to a lesser degree than last year. Nevertheless the amounts made available to the market from this source are of considerable importance. To arrive at an estimate is a matter of some difficulty, but it is likely that Indian Government silver has provided about 32,000,000 ounces and French silver coin about 9,000,000 ounces, besides a further quantity of possibly 9,000,000 ounces derived from British coin. The fact must be considered that the use of some of this silver for re-coinage such as for Hong Kong dollars to which reference has already been made has possibly been instrumental in absorbing silver which might otherwise have come into the market.

World Production.

The world production of silver for the year 1928 is given in the United States Mint Report of last year as 257,000,000 fine ounces, which constitutes a record. As far as can be ascertained at present, production for the year under review is likely to be maintained at nearly the same level. Silver being derived for the most part as a by-product of base metals—it is estimated that only about 25 per cent. of the mines are worked for silver alone—falling silver prices have not the same effect of restricting output as otherwise might obtain.

In view of the fall which silver prices have sustained, the future trend, whilst obscure, is still matter of great interest. It may be assumed that as far as Europe is concerned, there is little likelihood of a revival of demand for coinage purposes, and the absorption by the film industry, though likely to become of increase importance, can scarcely yet prove a fully compensating factor.

We must turn once more to the possibilities of the great silver using countries of the East being able to shoulder the burden. Silver imports into India in 1929 will probably be about 65,000,000 ounces and into China about 130,000,000 ounces. In the case of the former country silver is a luxury and, given a measure of prosperity, there is no reason why the demand for silver should not be maintained, for, although movements to provide greater banking facilities for the masses of India are under examination, the time is still far off before the ancient custom of hoarding is likely to fall into disuse. Somewhat different is the case with China, where silver represents the basis of currency. Exports from China have to be paid for in silver, but at present the condition of the country does not appear conducive to commercial progress. An amelioration of the situation is necessary before part of the large stocks now held in the cities can safely move up-country to alleviate the state of saturation which now obtains. A continuance of the fall in the value of silver might have a grave effect upon trade with China in view of the consequent depreciation of her currency in terms of gold.

Should the Indian Government continue their policy, there is an ample supply of silver to meet any demands which might arise for silver for special purposes. Notwithstanding the decline witnessed during the year 1929, the outlook remains far from encouraging, and a study of the conditions now obtaining in the market indicates the possibility of a still lower level of prices in the near future.

Company Meeting.

BENGAL AND NORTH WESTERN RAILWAY.

Gross Earnings Slightly Lower.

The ordinary general meeting of the Bengal and North Western Railway was held on January 28, at the offices of the company, Gresham House, Old Broad Street, E.C., Sir Henry P. Burt, K.C.I.E., C.B.E. (the Chairman), presiding.

The notice convening the meeting and the auditors' report having been read,

The Chairman, in moving the adoption of the report and accounts, said:—Gentlemen,—When I last had the pleasure of addressing you, I said that the prospects for the year with which the report now deals, which ended on September 30 last, were not quite so satisfactory, and that the working expenditure was likely to be somewhat higher. That forecast has been borne out by results. As regards, however, the gross earnings for the entire system, the falling off has been relatively very small, amounting to only Rs.2 lakhs out of a total of Rs. 360.3 lakhs, and they are still higher by some Rs.3 lakhs than they were three years ago.

The decrease was entirely due to a reduction in our earnings from goods traffic and was confined for the most part to the first half of the year, and to the company's section. It may be ascribed generally to scarcity brought about by a partial failure of the monsoon and to a reduction in the coal rates on Government railways, which had to be followed on our system in order to retain the traffic to existing routes. The earnings from the coaching traffic of the system showed an improvement which may be looked upon as satisfactory, seeing that the attendance at Melas was adversely affected by the prevailing scarcity and the prevalence of cholera. It may be mentioned that there was a particularly noticeable increase as regards numbers carried in our intermediate class traffic.

Working Expenses.

Turning now to working expenses, there was an increase in our expenditure of Rs.11.16 lakhs, or about 8 per cent. This increase is accounted for to a considerable extent by the exceptional credit, amounting to Rs.7.28 lakhs, which was obtained last year, partly by refunding to revenue the unexpended balance of the provision made from our earnings for the restoration of the Gundak bridge, which, as you know, has had to be abandoned, and partly from the credit due to the return to stores of the girders and material of the bridge. The real increase in the expenditure is therefore about Rs.4 lakhs, which is spread over all the departments, the largest increase being in the carriage and wagon department, which was due mainly to the construction at the cost of revenue of 200 covered goods wagons in replacement of old stock. With this increase in our expenditure and the reduced gross earnings, the working percentage for the system has risen from 38.90 to 42.15, which is still, however, a relatively low figure compared with most of the other Indian railways.

The net earnings of the company realised £835,907, calculated at the new uniform rate of 1s. 6d. to the rupee. Last year the net earnings were converted at the old rate of 1s. 4d., and they then realised £847,237. There was then a considerable difference between the 1s. 4d. rate and the actual rate at which we were then able to remit from India, which represented a gain on the book rate of £100,837. This year the difference between the book rate of 1s. 6d. and the actual rate obtained for remittances has been against us, and has amounted to £6,199. The total net earnings for the year have thus amounted to £829,708, against £948,074 in 1929. Making the necessary adjustments for income tax, payment of interim and Preference dividends, and providing £35,000 for the sinking fund, the amount to be dealt with to-day is £424,749. Out of this we recommend a dividend of 7 per cent., together with a bonus of 3 per cent., making for the whole year a total dividend and bonus of 19 per cent., which is the same as was paid last year. The balance to be carried forward will then be £158,499.

Leaving now the accounts of the company, there are a few matters of more general interest which I should like briefly to mention for your information. The competition which has arisen by the introduction of motor services is receiving constant attention, and we are meeting it with some success by increasing the numbers and speed of our trains. Fortunately for us the number of rivers in the districts we serve restricts the activities of the motor services, especially during the monsoon.

The final stage of the scheme for increasing the capacity of our wagon ferry at Mokameh will be completed when the floating dock, now being constructed in India, is launched. This has been designed in England, and it is interesting to record that it is the first dock of its kind to be used in India. Hitherto we have been dependent on primitive and intermittent makeshifts for carrying out repairs to our fleet, and it is hoped that we shall now be able to deal with the work much more rapidly and efficiently. A new steamer, three new wagon barges, and two shore flats have been put into service during the year, which will enable us to deal more expeditiously with the traffic across the Ganges. As you are aware, the Mokameh ferry constitutes a most important link in our communications, and although the river conditions have been far from favourable this year, the increased capacity of the ferry has, so far, made it possible for the traffic to be handled without any serious interruption.

Paragraph 13 of the report tells you that while good progress is being made with the Mashrak-Thawe extension, there is no prospect that funds will be allotted this year for the Chakia-Sidhwalia extension. Only a few years ago we were led to believe that, with the separation of the railway accounts from the general finances of India, ample funds would be forthcoming for a very rapid expansion of the railway communications of the country, the construction of which had for so long, been delayed.

An ambitious programme for new mileage was prepared, estimates were sanctioned and funds allotted. There was to be no further postponement of works once started with its consequent loss. This effort on the part of the Government of India to bring about a much-needed reform, expired almost at its birth, and to-day we see a ruthless withdrawal of grants already promised, construction staff dismissed, and a stoppage of construction programmes. In common with all other railways we are suffering from this breakdown of a policy which we had every expectation would remove the financial difficulties experienced in the past as regards the provision of funds. It is not only the development of railways which is thereby affected, but that of the country itself, as in my view there is no greater need at present for the economic progress of India than the extension of its railway communications. So far as our system is concerned, its development is further arrested by the uncertainty surrounding the question as to the Secretary of State's intention in regard to the possible termination of our contract in 1932. I have explained to you on previous occasions that the company cannot, in existing circumstances, provide capital for further extensions, as in the brief period now possibly remaining to us there is no assurance that we could secure any return on the outlay. We are now nearing the latest date, viz., December 31 next year, when the Secretary of State has to disclose his intention as regards the acquisition of our property; but, in the interests of both parties to the contract, it is hoped that his decision will not be delayed until the last moment.

The Current Year.

According to our latest advices from India the prospects for the current year are, I am glad to say, satisfactory. While, however, our earnings are likely to expand, I am afraid that, in common with all other Indian railways, we shall have to face an increase in our working expenses, especially as regards the cost of our staff. Labour questions have bulked largely in India during the year. The final decision connected with the application of the Washington and Geneva Conventions to Indian railways have still to be arrived at. Although it is generally recognised that the conventions can be made applicable to railway working only by a reasonable elasticity in their interpretation, there can be no doubt that their adoption, even with the modifications needed to meet the conditions of the railway services, will add considerably to our expenditure. The Trades Union Act is now in operation in India, and has necessitated a more extended recognition by railways of trade unions.

So far as this railway is concerned, the question of the pay of our subordinate staff is one which receives the constant attention of the agent and the heads of departments in India, and very considerable improvements have been made in their pay during the last few years, which, in many cases, show an increase of 100 per cent. compared with the pay drawn in 1914. We are advised that their prospects compare very favourably with others working in the neighbouring districts, and we have every confidence that our employees, if they are not misled by agitators, will remain contented with the conditions under which they serve us.

I am afraid that the general situation in India, so far as it is influenced by political excitement, has occasioned disquiet amongst those at home who have investments in that country, but it is naturally a subject which I have a considerable, and I hope a pardonable, hesitation in dealing with to-day. I venture to think that the uncertainty as to the shape which constitutional development in India will take, which can be settled only by the British Parliament, the final arbiter, is as much responsible for the fall in the credit of the Government of India as the recent wild utterances of Congress extremists.

It will be difficult to raise capital for India in the future until such views as those to which I have referred are repudiated by moderate opinion, and it is possible that this company may feel the effect, with others, of such conditions. At present, however, our own financial position remains unaffected, and, as I have told you, our prospects for the current year are quite satisfactory.

In conclusion, I should like to say that our thanks are again due to our staff of all ranks in India and to the staff of our London office who, by their zeal and efficiency, have maintained the best traditions of the railway.

On the motion of the Chairman, seconded by Mr. Leonard L. Cohen, the report of the directors dated January 18, 1930, together with the audited statement of accounts and balance-sheets for the year ended September 30, 1929, were approved and adopted.

The Chairman proposed, and Mr. Edward Christian seconded, that a final dividend of £7 per cent. and a bonus of £3 per cent. for the six months ended September 30, 1929, on the ordinary stock of the company, less income tax, be, and the same are hereby declared, making with the ad-interim dividend of £4 and a bonus of £5 per cent. paid on July 29, 1929, a total dividend of £19 per cent. for the year ended September, 1929. The resolution was carried.

On the motion of Lt.-Col. T. Gracey, R.E., seconded by Sir George Sutherland, Sir H. P. Burt, K.C.I.E., C.B.E., was re-elected a Director of the company. The Chairman then proposed, and it was seconded by Lord Meston, K.C.S.I., that Mr. Edward Christian be, and he is hereby re-elected a Director of the company. The motion was carried.

Messrs. Cooper Bros and Co., and Messrs. Gerard Van de Linde and Son were re-elected auditors for the ensuing year, and after a vote of thanks to the Chairman, the Directors, and the staff, which was briefly acknowledged, the meeting terminated.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 22:—

Egyptian Futures.

Sakel Contract.—Only a moderate business has been transacted in this market during the majority of sessions since our last report, and, with fluctuations correspondingly restricted, little alteration in the level has been recorded, near positions showing gains of 16 to 9 points, and more distant 9 to 12 points on the week. Whilst no doubt sooner or later some developments will work up to lift the market out of the groove, there appears nothing in the immediate outlook to warrant a return to normal activity. At present, the combined effects of heavy supplies, restricted trade support, and Government intervention effectively narrow the issue to such a fine point that speculative enterprise is eliminated. This is unsatisfactory from most points of view, and rather endorses the opinion that, when grounds for a movement occur, values may be affected to a greater extent than the cause warrants. Throughout the week the current position in Alexandria has hovered in the neighbourhood of 28 dollars limit; to-day is the last tender day, and, judging from reports, the Government will be called upon to accept a considerable weight of cotton. Very little alteration in the situation has to be recorded from a trade point of view; the offtake for fine qualities continues on a restricted scale, but rather more price fixing has been in evidence, and this has been the main cause of a slight hardening of values during the past few days.

Upper Contract.—Very little business has been recorded in this contract during the past week, both trade and speculative interests maintaining a neutral attitude. In a report from Alexandria we note the visible supply there is given as 3,062,000 kantars, against 3,016,000 kantars last season; exports from this time last year to the end of the season amounted to 2,712,000 kantars. Even if this season's figures fall somewhat below this owing to reduced consumption, and this has yet to be determined, the statistical position appears fairly sound. Whilst not anticipating any change in values for the time being, we think that for a long run moderate commitments on the "bull" side are to be recommended.

Egyptian Spot.

There is very little improvement to report in the situation on this side in so far as Egyptian cotton is concerned. The inquiry has been of a spasmodic character, and the best board of the week was seen to-day. The feature of the week has been the large business done in Sudan Sakels.

Sakels have been in very moderate request without any special feature of interest. Moderate tenders have been made, the total to date this month being 726 bales.

Sudan Sakel.—A large business has taken place. Interest in the new crop is gradually working up, but there is little authentic news regarding the latter beyond the fact that it is about three weeks late.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 16, state:—Since our last report the futures market has been moderately active, with the tone rather steadier. The week's summary of price movements is as follows:—Sakellaridis: January, 27.10 dollars, 0.03 dollars down; March, 27.85 dollars, 0.19 dollars down; May, 28.38 dollars, 0.12 dollars down; July, 28.82 dollars, 0.01 dollars up; November N.C., 29.04 dollars, 0.08 dollars up. Ashmouni: February, 19.21 dollars, 0.04 dollars down; April, 19.75 dollars, 0.01 dollars up; June, 20.11 dollars, 0.06 dollars up; August, 20.31 dollars, 0.11 dollars up; October N.C., 20.48 dollars, 0.07 dollars up.

C.i.f. business has been quiet on the whole, but we believe that here and there an increased interest has been shown in the better qualities of Sakel. Forwardings amounted to 7,028 bales Egyptian and 1,630 bales Sudan. Spot sales are estimated at 1,200 bales Egyptian and 7,600 bales Sudan Sakel. Quotations of Sakel are raised 5 points and those of Upper 3 points. F.G.F. Sakel to-day, 14.55d. F.G.F. Upper to-day, 10.49d. F.G.F. Pilion to-day, 11.15d.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended January 18:—

Grain.—Business has come to a complete standstill and no new grain transactions have been reported during the week, with the exception of a sale to Italy for which a small steamer is sought, shipment January, from up river. Negotiations for cargo to the U.K., which were prominent early in the week, have fallen through. Consequently no bookings have been effected and freights are nominal at 11s. 6d. Continent from Sulina, whilst from Constantza 9s. 6d. to 10s. has been paid for prompt shipment.

Timber.—Two or three steamers have been fixed during the week from Constantza for Italy and North Africa, and there is also some inquiry for Syria at about £9 5s. per wagon. The small regular traders, Ville de Toulon and Marechal Foch, have come up the Danube, the former being probably placed for Greece and the latter for Italy, whilst the Turkish vessel, Yekta, is reported as having been fixed for a full cargo of timber from Galatz to two Syrian ports at £11 5s.

Weather.—The weather has continued to be abnormally mild for this time of the year when severe frosts are usually experienced. The temperature here ranged from just above freezing point to a few degrees above till ten days ago, and to-day the temperature has not risen above zero Centigrade. After two days of fog the sky showed a tendency to clear on Tuesday, and the following night was cloudless, but it has since been as overcast as hitherto. Some light precipitations of rain or snow have been reported from several districts, and there was a

slight intermittent drizzle here yesterday. The long spell of mild weather and the absence of excessive moisture should have enabled the autumn sowings to become well rooted and in good condition to resist frost, even in the absence of a covering of snow. So far there is no sign of ice danger in the lower Danube.

Sulina.—Bar depth remains 24 feet with good conditions. River depth: the minimum is still 24 feet.

Constantza.—This week about 10,500 tons of grain have arrived from the interior, and about double that quantity was exported, mainly to Rotterdam and Hamburg. Five small vessels are loading timber for various Levant and Sicilian ports. Eleven vesels loaded about 40,000 tons petroleum products, and three took oil fuel for bunkers.

Bulgarian Report.

Bourgas, January 11.—The grain market remained quiet. Several parcels aggregating about 2,000 tons have been booked for Antwerp and Rotterdam at 10s. 6d. Tobacco exports during the week amounted to about 300 tons. There was hard frost and snow in the greater part of the country, but mild, dull and damp weather prevailed at Bourgas. Reports on the condition of autumn sowings are favourable.

Notes of the Week.

A Nile Federation.

In a letter to *The Times* Aziz Izzet Pasha, formerly Egyptian Minister in London, asks whether it would not be possible to devise a system of federation between Egypt and the Sudan, to which Abyssinia might in some way be a party, for the preservation intact of "the entity of the whole Nile Valley." Although he does not elaborate his theory at any length, Izzet Pasha makes it clear that he contemplates a system that would cover strategic and economic spheres, as a corollary of the natural indivisibility of the river-valley. There can be no question as to the soundness of the idea, and such a scheme, it would be thought, must follow almost inevitably the establishment of Anglo-Egyptian relations on a basis of genuine friendship and mutual confidence. It is this latter stage, however, that has to be reached first, if only because any proposals put forward at the present time would certainly be regarded by the Egyptian Parliament—if a debate on January 29 reflects the mentality of that body—as an occasion for increased suspicion of Great Britain's motives. The value of Izzet Pasha's letter lies in the fact that it indicates the trend of thought of enlightened Egyptians, who realise that there are weightier matters calling for Egypt's consideration than many of the speeches that take up the time of the Chamber of Deputies suggest. There can be no move on Great Britain's part in matters concerning Egypt until those who now wield authority in the country have indicated their attitude towards the proposed terms for an Anglo-Egyptian treaty.

Serbia's Roll of Honour.

It is unfortunate that during the decade that preceded the merging of Serbia into the modern State of Yugoslavia the national heroes whom the Serbs seem to have selected for special honour should have been assassins. The murderers of King Alexander and Queen Draga achieved high position in the State, and now a memorial tablet has been unveiled in the year 1930 to the youth Prinzip, who in 1914 assassinated the Archduke Francis Ferdinand. On occasions of this kind, as the event proved, a very thin line divides public from private ceremonies, but in deference, apparently, to feeling abroad the unofficial character of the unveiling of the Prinzip tablet at the spot where the Sarayevo murder took place was officially stressed. The fact remains that the Dictatorship has hitherto not shown such complete indifference to public acts and ceremonies as to prevent its acquiescence in the present instance from being interpreted abroad as tacit endorsement of the tribute paid to a murderer. It would be a mistake, however, to suppose that public opinion in Yugoslavia, or indeed in that part of it which, in spite of being split up into three *banovine*, still retains many of the characteristics of unregenerate Serbia, approves of the cult of murder. All too slowly, perhaps, as events in the Skupshtina, in the prisons and generally throughout the country testify, the Serbs are throwing off their heritage of Turkish jurisdiction which regarded murder as the hall-mark of patriotism and statesmanship, and, before it disappears entirely, it may be necessary for the more enlightened section of the Yugoslav people to assert their influence on the counsels of the State more effectively than they have hitherto been able to do. It is, at least, all to the good that official Yugoslavia did not attend the unveiling of the Prinzip tablet, but was to be found a few days previously at the unveiling by King Alexander of a memorial to the students and professors of Belgrade University who fell in the War—a commemoration more in keeping with the spirit of the age than the provocative celebration of crime last Sunday at Sarayevo.

Yugoslavia and Bulgaria.

Of the best possible augury for the future relations of the two countries is the agreement that has now been reached between Yugoslavia and Bulgaria for the settlement of frontier questions. A joint conference on the subject has been in session in Sofia since December 15, and the final meeting took place on February 1, the formal agreement being signed on February 3. Its terms embody a commonsense compromise. Yugoslavia waives her claim for a "dead" zone, and the principles of voluntary exchange of properties on the part of proprietors who own land on both sides of the frontier is retained to the extent that their consent to the exchange is required; but the spirit of the agreement is that each country is committed to bring about the required exchanges, and for the purpose of facilitating them five regional mixed commissions

Digitized by Google

are to be appointed with local representation. Where the private lands available would not constitute a fair exchange, each Government pledges itself to add State lands. The exchanges are to be effected within two years. Thus, it is to be hoped, yet a further fruitful source of friction has been removed from the Balkans. January saw the question of Reparations adjusted, and February is ushered in with the settlement of the Yugoslav-Bulgarian frontier question. Continued good will on the part of both Governments will be needed to prevent Macedonian extremists from embroiling the satisfactory relations that have now been inaugurated.

A Brigand's End.

Little sympathy will be spent on Dost Mohammed, the Baluchi chief who has just been executed in Teheran. For this inveterate brigand represented no principle except that of disregard for external authority. He could have been happy only in a régime of anarchy. Time and time again he defied authority in that wild region on the Baluchistan and Afghanistan borders, and unquestionably Duzdab will breathe relief now that he is gone. It took a regular campaign last spring to affect his capture. He was kept as a hostage in the capital, and was actually granted a monthly pension. But he chafed at the confinement, and the wily old fox slipped his guards in Teheran last November, killed one of them, and escaped into the desert. For a few weeks he remained at large, a hunted and doomed creature. He was caught again near Semnan, and now he has met a richly merited end. There is no room in modern Persia for brigands of the old irreconcilable type, and though the tradition of lawlessness may not die out in a day, the authorities in Persia are to be congratulated on the determination which they are showing to root out elements which will find a place in no self-respecting State.

A British Legation at Jidda.

Sir Andrew Ryan may well account himself a proud, if not a lucky man, in having been appointed as the first British Minister to the State of the Hijaz and Najd. There are many posts in the Islamic world which offer greater pleasaunces than does Jidda, but there is, one dare say, none more important at the present time. This appointment might, indeed, have been made some time ago, for, whatever the pundits think of the permanence or transience of the Wahhabi régime in the Hijaz, there is in fact no valid argument against the raising of the Agency and Consulate at Jidda to the status of a Legation. The step now finally taken is in accordance with the real facts of the Arabian situation, and is unreservedly to be welcomed. We need hardly reiterate here the fact that by far the larger portion of the foreign affairs of the Dual Kingdom in Arabia is concerned with the British Empire, in one way or another, and it is certainly to be hoped that in the future many of the differences which have arisen, happily with no damage to fundamental relations, between King Ibn Saoud and the British Government, will be resolved before they are made public, before, that is, they are seized upon and exaggerated by those interested in creating bad blood in Arabia. If, as is hoped, the forthcoming conference between King Ibn Saoud and King Faisal of Iraq, which appears likely to take place in a few weeks' time—possibly in a British ship in the Persian Gulf—results in a comprehensive treaty defining, among other things, the relations between Iraq and Najd, we may look forward to a long spell of co-operation between the Wahhabi leader and the greatest Muslim Power in the world.

Arab Kings' Conference.

The projected desert conference between King Ibn Saoud and King Faisal has been postponed, but the unique opportunity of effecting a meeting of these two monarchs is not to be let slip. Naturally there must be no suspicion of any undue influence or preliminary concession, such as might possibly be implied in a meeting upon either Iraq or Najd soil, and the suggestion that a conference should take place in a British warship in the Persian Gulf has much to recommend it. For Great Britain, in its capacity both as Mandatory and as Imperial Power in the Middle East, is pre-eminently interested in the establishment of a good understanding between the Wahhabi leader and the King of Iraq. In the meantime, King Ibn Saoud may take advantage of the occasion to visit the Hasa, the Governor of which, Ibn Jiluwi, is reported to have been far from well of late. Ibn Jiluwi, who lost his son in a recent engagement with the rebellious *Akhwan*, has been one of his King's most loyal lieutenants, and the leader of the Wahhabis might have to go far to find a servant of such unswerving fidelity and zeal. In any case, and however Ramadhan be spent by King Ibn Saoud, there is still every hope that, before the advent of the Pilgrimage season, and the return to Mecca of the King of the Hijaz and Najd, a real tripartate understanding will have been reached between the Wahhabi ruler, King Faisal and the British.

Mr. Gandi's Demands.

Those who contend that the much-discussed Independence creed of the Congress has been adopted solely as a bargaining counter, following the time-honoured practice of the Indian bazaars, will find ample support of their view in the series of demands put forward by Mr. Gandhi in reply to the Viceroy's recent reaffirmation of the Government's position. Obviously in the desire to evoke the support of various interests which have refused to be associated with the Congress programme Mr. Gandhi, in the latest issue of his paper, *Young India*, enumerates certain terms on which he is prepared to suspend the threatened campaign of civil disobedience. Like his reiteration of the plea that "threats of vengeance" cannot affect a "non-violent revolutionary" like himself, the fourteen points on which he suggests the Government should accede to the popular will well merit the description of "childish" which Mr. Gandhi himself applies to them. This is not the first time that the Mahatma, for all his visionary proclivities and love of "soul force," has shown an aptitude for political strategy of a decidedly mundane sort. Nor is it strange that while recalling with pride the fact that a similar ultimatum was presented by him to Lord Reading in 1923, he should studiously ignore the fact that the "non-violent" campaign of civil disobedience initiated on the flimsy pretext of the refusal of his demands led directly to the revolting massacre at Chauri Chaura, and later to the Moplah atrocities.

EDUCATIONAL AIMS IN THE EAST.

A valuable Report on Certain Aspects of Egyptian Education was drawn up last year by Mr. F. O. Mann, one of His Majesty's Inspector of Schools and Training Colleges, who had been lent for the purpose by the Board of Education in London at the request of the Egyptian Ministry of Education. The Report raises the important question of what should be the aim —one aim, if not the whole aim—of any system of public instruction where the standard of education has lagged behind the material development of the country and, to no less a degree, behind the national aspirations. For this reason Mr. Mann's remarks merit attention not only in Egypt, but also in other countries of the Near and Middle East. As considerations of space forbid an examination of the whole Report, we will deal here with the problem of the correlation of the educational system with the practical needs of the country. After drawing attention to the disproportion in the money at present expended in Egypt on elementary and advanced education, the Report continues: "The danger of a swollen and top-heavy expansion of advanced education (secondary, technical or higher) is the more serious in Egypt in view of the national enthusiasm for the more ambitious forms of instruction, and of the peculiar tradition which has attached itself to such instruction, more especially in connexion with State employment. Probably in no country in the world is the status of a Government employee so high in popular estimation. . . . Failing Government employment, of some kind, the next best in the ordinary Egyptian judgment appears to be establisment in one of the more dignified professions, e.g., in medicine or the law. What least of all appears to be desired generally is that a boy at the conclusion of an advanced course of education should have to go out into the world and make his own way by individual force in the spheres of unsheltered industry and commerce." The Egyptian system of education is judged to have succumbed to the temptation to meet the uninstructed, but vigorous, demands of a public in making education, mainly, if not entirely, the grand corridor to Government employment, which may well prove non-existent when the end of the corridor has been reached. In the secondary schools there is an almost entire absence of any tradition of boys leaving of their own free will for business appointments and of any machinery for assisting this very desirable process, with the result that these schools turn out in the place of well-trained, well-educated men, easily and profitably absorbed into the social and economic life of the country, youths unfitted both in body and temperament for competitive employment in agriculture, industry or commerce, whose sole aim is professional, administrative or clerical employment.

Egypt is not the only country that has realized the handicap of having its commerce and industry mainly in the hands of foreigners and in common with others it has been inclined to find the sole explanation of the phenomenon in foreign aggression or in the privileges secured by Capitulations. Mr. Mann's report suggests that the reason for failure on the part of the nationals of a country to develop and extend its natural resources is to be sought in the temperament and the training of the people. Nature abhors a vacuum in the economic as well as in the physical world, and it is certain that where a people are backward in promoting the commercial and industrial development of their land, others will carry out the work. Accordingly, when once the desire has manifested itself in a nation that it should take its own proper share in this development, it becomes the duty of both Government and people to see that the change is effected with the least possible dislocation of the nation's business and without any permanent or serious setback in the standard of efficiency. Industry and commerce to-day not only require almost as specialized a training as the professions, but they also call for different qualifications, if they are to be carried on with any degree of success. It is evident that, if the people as a whole lack the necessary qualifications or if an inadequate number feel the call for a commercial or industrial career, the Government's efforts to transfer the commerce and industry of the country into its nationals' hands must be doomed to failure, or will be persisted in to the grave prejudice of the State. The warning conveyed in Mr. Mann's Report is that preparation for a commercial or industrial career should form as important a part of the educational curriculum as training for Government service or a profession, if not, indeed, an even more important part, in view of the fact that sooner or later the economic sphere in a modern State must afford wider scope for the youth of the country than the restricted openings of official life.

Egypt's experience must be in varying degree the experience also of Turkey, Palestine, Iraq and the Sudan. In the latter the output of the only Secondary School, Gordon College, has hitherto been entirely absorbed in Government service, and the numbers of its pupils, as well as of those in its "nurseries," the Primary schools, have been regulated with reference to the employment of those who complete the College course. In the early stages of public instruction in such a country as the Sudan, it is possible to regulate supply and demand in this way; and the elementary vernacular schools (Kuttabs) aim at little more than to make their pupils more useful members of the society in which they have been born, with due regard to the changed circumstances caused by the development of the Sudan. If, as is clear should be the case, the education of every country were always mapped out with adequate attention to its own particular requirements, the wisdom of an educational system in Palestine that allowed for the segregation of the youth of the country into Arab and Jewish schools must remain problematical. The peculiar circumstances obtaining in that country are admitted; but there can be little doubt that insistence from the first on uniformity in education would have done much more to promote the creation of a rising generation with a consciousness of Palestinian nationality than has been achieved under a system which has helped to perpetuate racial differences. For Turkey the educational problem is on all fours with that of Egypt. The Republic suddenly discovered that the national standard of education fell far short of national, or at least Government aspirations in respect of the economic sphere. An attempt was mode to create Turkish commerce and Turkish industry by order, with unfortunate results not only to individuals but also to the nation's self-confidence. The aim was legitimate and sound enough; the mistake made was to try to build in a hurry without realizing that the only foundation available was largely composed of sand. Turkish education is less advanced than that of Egypt, and it can yet avoid the danger of "a swollen and top-heavy expansion of advanced education" planned without reference to the nation's more urgent needs. Mr. Mann's Report contains a very valuable lesson for the educational authorities of Angora, for it points the only way to the ultimate development of Turkish resources by Turks.

*The Near and Middle East

From Our Own Correspondents.

THE HIJAZ.

Jidda, January 16.

Good Auguries.

The first fortnight of the New Year has been full of bright promise for the future, far and near. In the first place, Jidda enjoyed a visitation of rain of quite unprecedented volume. Next came the celebration of the King's Accession to the Throne of the Hijaz. And no sooner was that over than we received the glad tidings that the long-drawn-out rebellion of Faisal al Duwish and his misguided friends had finally collapsed with the flight of all the rebel leaders into British mandated territory.

Unusual Rains.

To take the rain first, it came upon us on the 4th and poured almost continuously for 30 hours until the evening of the following day, reducing Jidda and its environs to a vast quagmire dotted and lined with lakes and rivers, while Mecca, only 45 miles distant, remained bone-dry. At one time it was feared that the Accession celebrations would be seriously interfered with, and Jidda provided a wet welcome to the Pressmen and other distinguished guests specially invited for the occasion from Egypt. The total volume of the rainfall was no less than 5.65 inches in the 30 hours—a record so far as one can gather from statistics and memories of old residents—making a grand total of exactly 8 inches up to date this season, as against only 5 last year. All the cisterns round the fringes of the town were soon filled to overflowing, and there is now every prospect of a bumper harvest of millet and melons in the coastal region. There will also, unfortunately, be an unusually good crop of mosquitoes, but on the whole the people and the pilgrims have good cause for rejoicing. Water will be plentiful and cheap for a year to come.

End of Rebellion in Najd.

Before proceeding to describe the Accession celebrations it may be as well to dispose of the news from the frontier, where the King has been spending the fourth anniversary of his coming to the Throne of the Hijaz in military operations against one who was at that time his chief and most redoubtable lieutenant. As has already been said in previous letters, King Ibn Saoud, having decided to root out the canker of rebellion from the Wahhabi fold, had left nothing whatever to chance in making his dispositions, and it seemed that his complete and final success was assured. The King struck and struck hard on the field of Sha'ib 'Auja, near Riqai, in the Batin valley, having previously declined all but unconditional tenders of submission. His blow was crushing in its effect; the rebels fled; and their relief and surprise must have been as great as his mortification when it was found that they could cross to Iraq without let or hindrance. Faisal al Duwish, however, and his two chief lieutenants, Naif ibn Hithlain and Ibn Mashhur, are now at Basrah under the protection of the British authorities pending the discussion of their future which is to take place at Al 'Ubaid in neutral territory between the representatives of the parties concerned, the British representative being Colonel H. R. P. Dickson, Political Agent at Kuwait, while King Ibn Saoud is being represented by Shaikh Hafidh Wahba and Shaikh Yusuf Yasin.

As I understand the position, the King regards the failure of Great Britain to prevent the flight of the rebels into British-controlled territory as a very serious matter. He has categorically demanded the immediate extradition of Faisal and the other leaders in a strongly-worded letter of protest addressed to the British Chargé d'Affaires here. And he will certainly press the point in the Riqai conference as a *sine qua non* of agreement on the general situation as between himself and his neighbours.

So far as Najd is concerned, the collapse of the rebellion is a matter for unqualified congratulation, and, if one may assume that Duwish and his fellows will henceforth be powerless for ill-doing, there is great hope for steady administrative progress both in the desert kingdom and in the Hijaz, where the presence of the King, released from desert anxieties, is urgently required.

The Wahhabis and Egypt.

In these circumstances the first official celebration of the anniversary of His Majesty's Accession serves to set up a historical landmark in Arabia. As already noted, a number of guests representing the newspapers and notables in Egypt were invited by the Government to visit Jidda for the occasion, and duly arrived here on the 5th, to find the country flooded. All the leading Egyptian dailies sent representatives to attend the ceremonies, while Ahmad Zaki Pasha came as the leading representative of the citizens of the sister Arab Kingdom. They came and saw and were deeply impressed by the great and obvious progress that has been made under Wahhabi auspices in the Cradle of Islam during the past four years. And it is perhaps not too much to hope that their visit may result in a prompt and definite move in the direction of the amelioration of the present unsatisfactory official relationship between two Arab countries, which, acting in harmony, might do so much for the advancement of the moral and material interests of Islam. The present obstacle to the establishment of cordial diplomatic relations between the two countries is an open secret of which the less said the better; but it may be hoped that the new Egyptian Government will lose no time in following the example of the great Powers in creating a Legation at Jidda despite the fact that its predecessors found the establishment of a mere Consulate beyond their powers. It is a pity that so obvious an opportunity of so doing as was presented by the recent celebrations has been missed owing to Egypt's own preoccupations with the elections and the consequent change of Government; but it is not too late now to act.

The Accession Ceremonies.

On January 8 the Accession ceremonies began at Mecca with a reception of the citizens by the Amir Faisal, who had already, on behalf of his father, announced the release of all short-term prisoners and the reduction of all long sentences by one-third. He then left the capital at midday for Jidda, where meanwhile the Governor had received the congratulations of the citizens and the representatives of the Powers and a royal salute had been fired. In the afternoon the Amir attended a garden party at the villa of Kandara, to which all the notables of Jidda and the whole European community were bidden, and afterwards the assembled company had the pleasure of seeing a

grand parade of the troops and an exhibition of Arab jousting. The march-past of the troops in four groups representing the regular and irregular infantry, the cavalry and the camelry was very well done and exceedingly picturesque. The same evening a great banquet was held at the Kandara villa, the tables for the 140 invited guests being set on four sides of a hollow square in the open courtyard, which had been elaborately decorated with electric lights, palm-fronds and green and white bunting, while in the central space two portraits of the King had been set in illuminated frames facing east and west. The recent rain had made the weather conditions somewhat Arctic for an out-of-doors banquet, but that interfered but little with the general enjoyment of the sumptuous fare provided by the celebration committee and of the long speech in which the Minister for Foreign Affairs passed in review the achievements of the four years of His Majesty's reign. The occasion for a speech on behalf of the foreign community of Jidda was unaccountably missed by the doyen of the Diplomatic Corps (the Soviet representative) and his colleagues; but their omission was to some extent made good by a breezy utterance on behalf of the honoured guests from Egypt by Zaki Pasha, who certainly expressed the sentiments of those present when he roundly declared that King Ibn Saoud must henceforth be regarded as the pivot of the Arab world.

The celebrations were continued on the following day with a great picnic at the oasis of Madra, in Wadi Fatima, some forty miles distant from Jidda, to which no fewer than 220 guests were invited from Mecca and Jidda, including the foreign representatives and a number of other European residents. Here within sight of the pinnacles of the hills in and immediately round the Islamic capital a tent of unusual length had been put up to accommodate all the guests at a single sitting for lunch, after and before which they were entertained with speeches and recitations and were also free to wander about the palm-groves of the oasis fed by running streams of spring-water. Admirable poems had been specially composed for the occasion by the Najdi poet, Muhammad al Bulaihid, and by the Syrian bard, Khair al Din Zurakli; and were recited by the authors in person amid great manifestations of enthusiasm; but perhaps the palm should be given to the performance of a young poet—one should perhaps call him rather a minstrel, for he seemed to have stepped in straight from the pre-Islamic age of chivalry. This was Mahmoud ibn Shauki al Ayoubi al Kuwaiti (reputed to be of Ayoubid descent), whose truly beautiful voice and dramatic delivery completely charmed the assembly and fully merited the wonderful reception he received. Towards sunset, after an exhibition of Najdi war-dances, the proceedings terminated and the guests drove off in motor-cars on their return to Mecca and Jidda, unanimously voting that the celebration ceremonies had been a wonderful success, for which the responsible committee deserved great praise. It should be noted that on the occasion of the picnic the Soviet representative and the British Chargé d'Affaires made amends for their omission of the previous night with short speeches of congratulation.

The Pilgrims.

On the 11th the guests from Egypt embarked on their return journey; and since then Jidda has resumed the normal routine of its daily life. The pilgrims already in the country number 22,867, according to the latest statistics; and the pilgrimage prospects remain excellent. Large numbers of pilgrims have been taking advantage of the opportunity of visiting Madina before the advent of Ramadhan, which begins this year on the evening of January 30. The weather conditions seem likely to be ideal from the point of view of those who will have to endure the great Fast. The King had hoped to be back at Mecca for the Fast, but it is now clear that circumstances will not permit of this, and it is, therefore, scarcely likely

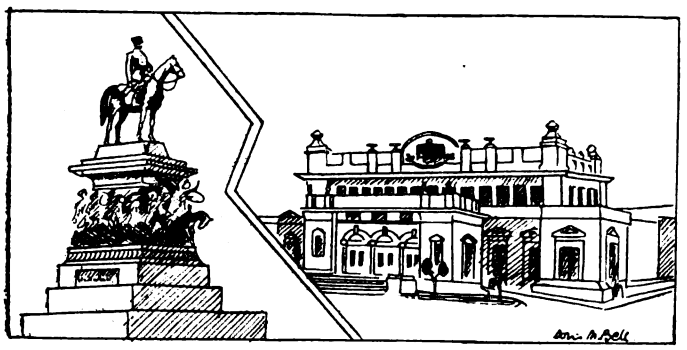
that he will reach the Hijaz much before the end of March. Even that depends somewhat on the outcome of the conference at Al 'Ubaid.

The Hijaz-Najd and Afghan Governments.

The new Afghan Government has recently announced its existence to the Hijaz-Najd Government, and it is probable that its formal recognition by the latter will be announced as soon as the King's instructions are received here. Presumably the Afghan Government will then proceed to the creation of a Legation here. No other developments have taken place in diplomatic circles, though it is understood that the British Chargé d'Affaires will shortly present his credentials and that the arrival of a Minister accredited to the Court of King Ibn Saoud will not be long delayed. Climatic conditions alone make it desirable that he should come in time to settle down before the heat becomes uncomfortable.



BULGARIA.

Sofia, January 22.

The Ministerial Situation.

The return of the King from his month's tour abroad, and especially the Reparations settlement have once more brought into prominence the ministerial situation, which is far from satisfactory. Owing to the increasing tension between the different sections of the Government group of the Democratic Entente, this Entente appears to have split irrevocably, and, unless a comprehensive reformation of the Cabinet, is made, to quieten the discontent, the Government runs a grave risk of seeing itself in a minority in the Sobranye. Antagonism is relentless between the friends of the President of the Council, M. Liaptcheff, and those of the President of the Sobranye, M. Tsankoff. Already two Ministers, M. Bobochevski and M. Naidenoff, Ministers for Commerce and Public Instruction respectively, deeming it impossible to maintain the intolerable position thus created, have placed their resignations in the hands of the President of the Council in order to hasten a reformation of the Cabinet, or perhaps to precipitate a general ministerial crisis.

The Reparations settlement, which has not given to Bulgaria the satisfaction which she expected, has added to the feeling of irritability. In effect, Bulgaria will have to pay for 37 years an annual average sum of eleven and a quarter millions of gold francs, without any moratorium, and the only advantage she gets is the liberation of Bulgarian property sequestrated in Roumania—which comes to a sum of 110 million leva. Also, the agreement at The Hague is making many enemies, even in the governmental majority. In reaction against this current, the Government, through M. Liaptcheff, has officially interpreted the results obtained at The Hague. The great merit of this agreement, according to the Government, and also according to more impartial observers, is that, by means of a definite settlement, the country is rid of a terrible nightmare which prevented it from working effectively for its financial and economic rehabilitation, and is able to proceed surely to the liquidation of the consequences of the war in the Balkans by the solution of questions still outstanding with its neighbours.

In view of the grave economic crisis in the country, this reasonable argument is not making much impression on the Opposition, which is preparing itself to attack the Government when, in the near future, the Reparations settlement is coming up for discussion in the Sobranye.

Macedonia and the League.

An important Macedonian *démarche* has just been made at Geneva. The importance of it lies in the fact that, whereas up to the present the complaints laid before the League of Nations on the subject of Macedonia came from Macedonian organisations outside Yugoslavia and were, therefore, declared unacceptable by the Yugoslav Government, this time a special delegation went from Macedonia to present its petition to Geneva.

The petition, signed by M. Dimitri Shaleff, advocate, ex-Mayor of Skoplye, and by M. Dimitri Ilieff, ex-Judge and advocate of Veles, explains the intolerable situation in which the Yugoslavs have placed the Bulgarians in Macedonia. It states that the authorities are aiming at "Serbisation" by whatsoever means, cites a large number of anti-Bulgarian persecutions, the interdiction of the Bulgarian language, of papers and books, even of Bulgarian songs, the enforced changing of Bulgarian names by the adding of the Serb ending "-itch," the compulsory replacement of Bulgarian national customs by Serb customs, the marriage of young Macedonian girls and women with Serb gendarmes, and the witholding from Bulgarian intellectuals of all public offices, communal or State.

Expressing the profound faith of the Bulgarian population of Macedonia in the generous mission of the League of Nations, the signatories to the petition, in their capacity as legal representatives of the national Bulgarian minority in Yugoslavia, recommend the following measures to remove the intolerable situation in which this minority lives, a situation full of the ugliest possibilities:

1. Recognition of the nationality of the Macedonian population and strict respect, under the control of the League, of the Treaties or the protection of Minorities.
2. Permission for emigrants to return to Macedonia.
3. Amnesty of all political prisoners who have been sentenced by Yugoslav tribunals almost exclusively because they had claimed the rights and liberties guaranteed in the Minority clauses of the Peace Treaties.
4. Reopening of the Bulgarian Schools and Churches which the population had built at the cost of much sacrifice, before the establishment of Yugoslavia in Macedonia.
5. With a view to the execution of the obligations assumed by the Yugoslav Government in virtue of the Treaties, the installation in Macedonia of a special commission nominated by the League, which should see that the protection of Minorities was duly carried out.

EGYPT.

Cairo, January 25.

The Treaty.

So far no development in connexion with the Treaty has taken place in Parliament. Such sittings as have been held have been occupied with the final approving of the composition of the various committees and the postponement to future meetings of the questions addressed to the Government by deputies. It is stated that the Cabinet is busy drawing up the note by which it will submit the Henderson proposals to the Chamber. But before that can be discussed both Houses must vote the reply to the Speech from the Throne. There is also the very pressing question of the Customs Tariff, which, according to the Speech from the Throne, is to be submitted to the Chamber for discussion.

New Customs Tariff.

It is authoritatively stated that it is the definite intention of the Egyptian Government to put the new Customs régime into operation on February 17, subject to such subsequent modifications as may become necessary in the light of experience or as a result of the observations which may be put forward either by the Chambers of Commerce or the foreign Governments. Whatever views one may hold of the advisability of changing the régime, there can be no doubt that, once the details of the new tariff had been published, its application became necessary at the earliest possible date in order to put an end to the almost wild speculation that has gone on ever since those details were made public, and so to avoid the serious crisis which otherwise would overwhelm this country.

The British Chamber of Commerce has submitted to the Egyptian Government a note on the subject of the new Customs law and tariff based on its own information and the observations which it has received from the various Chambers of Commerce in England to which the details were communicated as soon as they were received from the Egyptian Government. The Chamber expresses the view that Egypt will be unable to support economically a 100 per cent. rise in her Customs duties, which the new tariff provides, and that one of the objects of the revision, *viz.*, an increase in Customs revenue, will be defeated by a decrease in import owing to the high rates of duty proposed. For various considerations which it puts forward the Chamber further thinks that the protective features of the proposed tariff require further study, and it emphasises that the most disquietening results of the new proposals will be an increase in the cost of living, particularly for the poorest classes.

On the question of specific duties, it states that it cannot but be regarded as a retrograde policy for a country such as Egypt, endowed with a Customs régime which has been proved in practice to be simple in operation and suitable to its needs, largely to change it for a system which has been untried and the administration for which does not exist and has to be created. Particularly does the Chamber criticise the imposition of a single duty on articles of the same kind but of varying value which will in many cases cause hardship to the poorer classes, who in purchasing the cheaper qualitiy of the article in question must pay proportionately a higher tax. For this and other equally strong reasons the Chamber regards it as unwise to bring in at one moment so large a number of specific duties as is proposed, and it suggests that, if an experiment must be made, it should be made with a strictly limited number of articles, to which additions can be made in the future as experience and expediency dictate.

In regard to the various subsidiary duties proposed, the Chamber strongly recommends that the Government should alter the tariff so that each item shall be liable to one inclusive duty only, thus eliminating much unnecessary difficulty and delay. It strongly protests against the provision in the new law on arbitration, which expressly lays down that the Tribunals are to have no jurisdiction in such matters, and against the Government's retaining for itself the right of appointing the umpire in case of difference of opinion between the two experts, one of whom is appointed by the Government. These provisions, it considers, are prejudicial to the rights of importers. It also protests at the provision in the law which makes of the Government's technical experts judges as against importers. Attached to the note is a preliminary anaylsis of the categories in the new tariff, where the proposed duties will definitely increase the cost of living or where the duties are too high or their assessment may lead to delay and disputes.

The Chamber does not claim that this note covers all the points which the new Customs régime raises. But a time-limit of one month from the publication of the tariff was given to the Chambers of Commerce for the presentation of their observations, and the note, which the Chamber has been able to prepare, is a tribute not only to the industry of the gentlemen who now direct the activities of that Chamber, but also to their foresight. Had they not taken the precaution last summer to organise in England committees representing the different trades concerned, they could not possibly, within the four weeks granted by the Government to the local Chambers, have sent the new tariff and Customs law home, got back the observations of the trades interested, and compiled the note which is now in the hands of the Egyptian Government.

The "Albu-Said" Dynasty.

Mr. Rudolph Saïd Ruete, who is no stranger to the people of this country, gave a lecture last week-end at the Royal Society of Geography, under the auspices of the Ligue Orientale, on the subject of the "Albu-Saïd" Dynasty in Arabia and East Africa, in the course of which he traced the rise of this great family and the close relations that have throughout existed between it and Great Britain. The lecture, which was delivered in English, was very well attended, there being present a large number of Egyptians, to whom a summary in Arabic was afterwards delivered by Shaikh El Taftazani.

The Greek Parliamentary Commission on Foreign Affairs has approved the ratifications of the Treaty of Commerce with Soviet Russia.

Sir Ahmed Hassanein Bey, King Fuad's First Chamberlain, who was flying to Egypt from England alone, crashed near Pisa on January 29. His aeroplane was badly damaged, but he was only slightly hurt.

The Iraq Government has introduced substantial increases into the Customs tariff upon tobacco, beer, spirits, groceries, silk, and artificial silk. The bulk of Iraq's imports are drawn from Great Britain and India.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 16.

India and England.

One would warn England against the danger of her public men going now to the opposite extreme. It is a very short time since the Viceroy, perhaps under "pressure" of the new atmosphere at the India Office, a "pressure" that he may more have felt than been aware of feeling, made a pronouncement in which the more sober of us thought he said too much. Our anxiety followed that too much would be said in the Houses of Parliament. Too much was not said—in favour, that is, of too great changes in the Constitution under which India is now governed—but that was not due to a determination at the India Office to be cautious, but to Mr. Baldwin, Sir John Simon, and even Mr. Lloyd George's putting their feet down gently. In the last few days, in ten days at most, we have had Lord Meston saying that "Dominion status" and "provincial autonomy" are dangerous phrases, which is true; we have had Earl Russell saying that Dominion status cannot be granted for long enough, which is also true; we have had the *New Statesman* arguing that Lord Irwin should be removed from his office. This may be so, or perhaps, there should be a new Secretary of State for India appointed. I should prefer the latter, for in very many ways Lord Irwin is the best Viceroy that India has had for a quarter of a century. In the last two or three days the cables have brought us reports of articles—Mr. Lloyd George's, Earl Winterton's—alarmist in tone.

The Rule for the Moment.

What the rule of all prominent English statesmen should be, until the Round Table Conference begins, is to say no single word about India, or to get better informed men to advise them before they speak. It is absolutely necessary, if such as Pandit Madan Mohan Malaviya, Sir Tej Bahadur Sapru, Sir Phiroze Sethna, and the other more reasonable leaders are to get the upper hand of Mr. Gandhi and Pandit Jawaharlal Nehru, that England should show that she is ready to meet the Indian leaders, and hear them. England must rely upon her statesmen being able to convince the Indian leaders in conference that this or that too great step in advance just would not do. They must not talk *now* in public (let them write whatever they like to the India Office in private) of "the peril in India," of "prompt action to prevent a recurrence of the events of 1919-21"; because that is to help Mr. Gandhi against Pandit Malaviya, as giving him words to quote. It would help India and England, if your newspaper editors had no money with which to pay for articles on India for a year or two.

The Indian National Congress.

A question that it would be natural that you should ask in England, and not only now, but again and again as the time for the Round Table Conference draws near, is: How much greater or smaller a following has the Indian National Congress than it had, say, a year ago? So a correspondent will wish to be well informed on that point. I find it difficult to arrive at the truth. The number of resignations from the Legislative Councils would be an index of the trend of things. There have been many resignations; some tendered in a spirit of unquestioning loyalty to the leaders at Lahore, and others tendered in a very different spirit. Mr. Pantula, leader of the Congress Party in the Council of State, has tendered his resignation, and has asked each member of the Council adhering to his Party to resign his seat. Mr. A. Rangaswami Iyenger, member of the Legislative Assembly, has told his constituents that he has resigned his seat, notwithstanding his disagreement with the Lahore decisions. Another member of the Assembly has given out that "obedience to the Congress resolution may induce him to resign from the Assembly, but his conviction about the utility of the legislatures for the coming fight will impel him to seek re-election." Another report says that Dr. Pramathanath Banerjea, Member of the Bengal Legislative Council, "who has resigned his seat in the Council, in obedience to the Congress mandate, characterises the Lahore decision as inexpedient in the existing circumstances." One gathers that for the larger number to have to resign is to be made to eat very bitter fruits.

Mr. Satyamurthi.

Mr. S. Satyamurthi, of all those who are still adherents to the Congress, is at the moment by far the most prominent in this opposition to the late and present Presidents, the Nehrus, father and son, and Mr. Gandhi. He has issued a lengthy communication to the Press. I have seen only a summary so far. This is part of it: "Even assuming that Pandit Motilal Nehru is correct, there is no justification for the boycott of Councils to-day. He points out that, as Mr. Gandhi frankly admits, there is no atmosphere for immediate or early civil disobedience in the country. Thus, with civil disobedience only in the air, the proposed boycott of Councils is at least as unjustifiable to-day as it was in 1923. Proceeding, he says that the idea that the programme of Council-entry was started for Dominion status, and should be dropped because of Independence being declared the objective, is not borne out by facts. Their fight was always for Swaraj, which meant "within the Empire, if possible: without, if necessary;" and to-day, in the fight for Swaraj, Council-entry is as much an integral part as it was before."

Congress Work Ahead.

Pandit Jawaharlal has been speaking at Allahabad. I take this from the report: "It appeared to him that the year was likely to see a big struggle. The Congress could not proclaim the details of every step it would take at this stage. For the moment the Congress was concentrating on taking the message of Independence to all parts of India. For this purpose January 26 had been fixed as a day of national celebration of Independence. After January 26 the Working Committee of the Congress will meet to decide on the steps to be taken to carry out the Congress resolution. The strength of the Independence Movement, the Pandit thought, lay with the masses—the peasantry and the industrial workers. "The die had been cast," he added, "and the choice taken after the fullest consideration. There was no alternative for India now but to fight on till full independence is achieved." It is characteristic of the school of Indians to whom Pandit Jawaharlal Nehru belongs, to fix a day of national celebration of independence before independence has been gained; it is natural for them to want speeches made all over the country rather than that things should be done; when he says that he *thinks* the strength of the Movement lies with the peasantry and the workers, it should be understood that he hopes it will be found to be so. He hopes so; or he does not know where else it could be found in any weight. There is a lot of play-acting in all of it. Not that Pandit Jawaharlal Nehru is not a dangerous man. He is dangerous; for he is fanatical to playact in that part, and Heaven knows to what inflammable masses he may set fire.

The President of the Assembly.

Mr. Patel, President of the Assembly, was a leading member of the Congress Party up to the time of his election to the Presidentship. It has been much discussed in India, during the last fortnight, whether his resignation of the Chair should or should not follow from the adoption of Independence as the creed of the Congress. In my letter of September 5 I had this: "The implication of that [a passage quoted from a letter from the Viceroy to the President about the latter's ruling on the Public Safety Bill, and what followed] is that, in Lord Irwin's opinion, such a body of tradition as, in the sphere of the House of Commons, has enabled each of a long line of

Digitized by Google

Speakers to be accepted as an impartial guide, has not yet established itself around the Chair of the Assembly." No man in England, of those not wholly ignorant of public affairs, but knows the inestimable value in English public life of the traditions that surround the Speaker, and even lads know what is Speaker-like conduct in public—as that the Speaker no longer belongs to any Party, and never makes a political speech. We wish to see such a body of traditions grow up in India. It does not seem to begin to grow. Many members of the Congress Party regard the President as still a member of the Party; one with this additional value, that his occupancy of the Chair places it in his power to do more for the Party. Mr. Jamnadas Mehta, and he is no obscure member of the Party, has just said: "The defeat of the Reserve Bank Bill, the Public Safety Bill, and the withdrawal of the Hunger Strikers' Bill would have been impossible without the presence of the Congressmen and their tough opposition, while the intrepid President Patel added one glorious feather after another to his Congress cap by his splendid independence and courage throughout." If Earl Russell was asked why he should feel so certain that Dominion status should not be granted for long enough, he might reply: "Well, listen to him! You see what small atoms of practical sense they have for political affairs!" He would be quite right.

INDIGENOUS RULE IN INDIA.*

In this interesting brochure, Mr. Rushbrook Williams makes a comparison between the British and Indian conceptions of Governments as he believes them to exist. He points out that the three essential institutions in Indian life are the family, the village, and the caste: and he contends that these institutions have still so great force that the Indian State regards the family as of greater importance than the individual. He argues that, according to the theories of the Aryans, the Raja was not the owner of the soil, and that the head of the State throughout the history of India has been, at least in the orthodox Hindu theory, merely a salaried officer of the State, whose services and emoluments are alike definitely fixed. He argues that, from the extent of village self government, and the power of caste in regulating both employment and social ethics, the sphere of State activity is far more restricted in Indian political theory than in the political conceptions of the West. As the absolute rule of the autocrat is, in his view, opposed to the fundamental political ideas of India, he argues, as we understand him, that it may be possible to build up indigenous self-governing institutions even within the apparently autocratic Indian States, and thus to further the Federation of Provinces and States which, in the opinion of many, is the only possible form of government in India, as a self-governing Dominion in the British Empire.

We may appreciate the ingenuity of the argument, and cordially agree with the correctness of the object aimed at, without accepting the correctness of the historical premises. Mr. Rushbrook Williams himself admits that the village was a Dravidian and perhaps also a Kolarean institution entirely foreign to Aryan ideas. The village system therefore has retained its strength only in the Dravidian South, and even there its continuance has been largely due to the absence of a strong government. Mr. Rushbrook Williams also, it seems to us, places too great reliance on ancient books of statecraft and polity, which laid down what was desirable rather than what was actual, except perhaps for limited periods and areas. The great factor, however, to which the author appears to pay insufficient regard, is the Muhammedan, and particularly the Mughal, domination.

Every Indian State, with the exception of one or two in the extreme South, has been constituted, at a comparatively recent date, out of a portion of the Mughal Empire. If the Rajput States must be excepted as regards their dates of origin, they also were portions of that Empire, and were profoundly affected by its theory of government. It can hardly be doubted that the Mughal Emperors were regarded as lords of the soil and as absolute autocrats: and the chiefs who acknowledged their dominion, or who succeeded to portions of their Empire, have not been slow to claim a like authority. Nor does Mr. Rushbrook Williams seem to allow sufficiently for the difficulty of reviving institutions once disintegrated. The entire failure of the well meant effort of the Bombay Government to restore village self-government by the Panchayet Act may be quoted as an instance. It is true, as the author points out, that the village council had originally its own tribunals and powers of taxation: but any attempt to revive these powers has proved inoperative because of their unpopularity among the villagers themselves.

Ideas and beliefs, however, have a wonderful permanence in India, and it is possible that a laudable anxiety for self-expression in government may lead to the revival of ancient models. If Mr. Rushbrook Williams' essay may be taken to mean that the rulers of Indian States may be willing to regulate their powers, and to submit to a limitation of their demands on the State Revenues, such a concession would beyond doubt remove the greatest obstacle to the levelling up of administration in the States and in the British Indian Provinces. Uniformity of political theory would render more possible that federation under which alone the administration of India on a Dominion Status can be anticipated with any prospect of success.

OBITUARY.

Lady Reading.

The cause of social reform, and of welfare work among the women and children in particular, in India is the poorer for the death which took place at her London residence on January 30, after a long illness, of Lady Reading. How much the late Viceroy owed to the help he received from his wife—the third daughter of the late Mr. Albert Cohen, a City merchant, she married Mr. Rufus Isaacs in 1897, shortly after his call to the Bar—Lord Reading has himself more than once borne witness.

When Lord Reading, after becoming in succession Solicitor-General, Attorney-General and finally, Lord Chief Justice of England, was offered in 1921 the Viceroyalty of India, it is an open secret that he was very doubtful as to the effect of the climate upon his wife's delicate health. As on an earlier occasion, when she prevailed upon him to continue at the Bar, instead of taking up a business career, Lady Reading overcame his hesitation, but her work in India imposed a very severe strain upon a constitution prematurely weakened by much physical suffering borne throughout with the utmost fortitude. While the welfare of the women and children was her special care, all efforts directed to the advancement of every good cause enjoyed her warmest and most active support.

INDIA IN LONDON.

Forthcoming Events.

Sir David Chadwick, C.S.I., C.I.E., Secretary, Imperial Economic Committee, will preside at a meeting of the Indian Section of the Royal Society of Arts on Friday, February 7, at 4.30 p.m., when a paper will be read by Mr. G. H. Tipper, M.A., F.G.S., M.I.M.M., late of the Geological Survey of India, on "Recent Mineral Developments in India."

On Wednesday, February 12, at the Royal Institute of International Affairs, a lecture will be delivered, under the auspices of the Central Asian Society, by Mr. J. T. O. Barnard, C.B.E., C.I.E., on "The Frontiers of Burma." The chair will be taken at 5 p.m. by Sir Harcourt Butler, K.C.S.I.

GREAT BRITAIN AND CYPRUS.

[*The following Communication was published in the "Cyprus Gazette" of December* 13.—ED.]

REPLY TO THE MEMORIAL OF THE GREEK ELECTED MEMBERS OF THE LEGISLATIVE COUNCIL OF JULY 20, 1929.

His Excellency the Governor directs the publication of the following dispatch received from the Right Honourable the Secretary of State for the Colonies :—

(M.P. 1076/29.)

CYPRUS. Downing Street,
No. 264. November 28, 1929.

Sir,—I have had before me the Memorial signed on July 20 last by the Greek Elected Members of the Legislative Council of Cyprus in which they formulated certain requests for change in the political status and administrative system of the Island. This Memorial has now received my attentive examination: and I have had the opportunity of listening to the arguments urged in its support by the Bishop of Kitium, Mr. Stavrinakis, and Mr. Rossides during their recent visit to London. My reply to these representations is contained in the following paragraphs; and I should be obliged if you would communicate this dispatch to the Greek Elected Members and then publish it.

2. The first request contained in the Memorial is a renewal of the demand that Cyprus should be ceded to Greece. My answer on this point can only be the same as that which successive Secretaries of State have in the past returned to similar demands, namely, that His Majesty's Government are unable to accede to it. This subject, in their view, is definitely closed and cannot profitably be further discussed.

3. In paragraph 22 of the Memorial the Greek Elected Members put forward certain requests for consideration in the event of the rejection of their major demand for union with Greece. The first of these, contained in sub-paragraph A, is the submission that the Island should be granted a form of responsible government. This is a request which has been given very careful consideration. The conclusion at which I have arrived, not without regret, is that the time has not yet come when it would be to the general advantage of the people of Cyprus to make a trial of a constitutional experiment in this direction. Those institutions already established in the Island which are subject in varying degrees to popular control cannot be said to have attained that reasonable measure of efficiency which should be looked for before any extension of the principle is approved. The requests contained in sub-paragraphs B and C do not in these circumstances appear to arise. In sub-paragraph D it is represented that the payment to the Evcaf and to individual tithe-owners should be discontinued. I can only say in regard to this that the matter is, as the Elected Members are aware, already occupying the attention of the Cyprus Government.

4. I will now refer to the so-called "Tribute." The points made by the Greek Elected Members with regard to this subject are contained in paragraphs 17-20 and in sub-paragraph E of paragraph 22 of the Memorial. Up to the Annexation in 1914, the payment of the Tribute was made in virtue of the Convention with Turkey of 1878. His Majesty's Government are unable to share the view advanced by the Memorialists that the payment of this sum from Cyprus revenues was contrary to the provisions of the Convention. It is true that Clause III. of the Annex to the Convention stipulated that England should pay the money to Turkey. But it is clear from that document and from the terms of the allied negotiations that the intention was that England should pay the money from the revenues of Cyprus, or, in other words, that it should come from the same source as in the past. The effect of the arrangement was that Cyprus became liable to Great Britain for £92,800 a year and Great Britain became liable to the Ottoman Empire for the same annual sum. When the Ottoman Empire defaulted on the 1855 Loan, the interest on which had been guaranteed by the British and French Governments, Her Majesty's then Government was advised that the "Cyprus Tribute" formed part of the revenues of the Ottoman Empire and could be withheld from the Porte and used for the service of the Loan so long as the default lasted. The whole of the money was therefore and always has been devoted to the liquidation of a liability on which the Ottoman Empire had defaulted. The Greek Elected Members state that no legal relation exists between the 1855 Loan and the revenue of Cyprus. The 1855 Loan, however, was secured upon the whole revenues of the Ottoman Empire as well as specifically on the balance of the Egyptian Tribute and the Customs revenues of Syria and Smyrna. In these circumstances the British Government clearly had ample justification in diverting to the service of the Loan the payment for which they were liable to the Ottoman Empire under the Cyprus Convention. It has never been their contention that the 1855 Loan had any specific connexion with Cyprus.

It is hardly necessary for me to point out that the liability of Cyprus to Great Britain for the annual payment of £92,800 was in practice greatly reduced by Grants-in-Aid from the Imperial Exchequer. After a period of fluctuation the Grant was definitely fixed at £50,000 a year in 1907, and remained at that figure until 1927. During that period Cyprus had therefore to find only £42,800 a year. On a purely material evaluation this sum cannot be considered an excessive price to pay for the practical benefits which accrued from the establishment of a British administration.

On the Annexation in 1914, the 1878 Convention was abrogated: and I agree with the Greek Elected Members that the payment of the Tribute then ceased to find any sanction in that Instrument. The payment was, however, continued as the share of Cyprus in the general Public Debt of the Ottoman Empire. It is contended that in accordance with the generally accepted principle of international law Cyprus, as a Succession State of the Ottoman Empire, could properly be charged with this liability. It is true that, as the Greek Elected Members state, no reference to the liability of Cyprus in respect of the Ottoman Public Debt is made in the Treaty of Lausanne, although under Article 20 of that Treaty Turkey recognised the annexation of the Island by Great Britain. The reason why the liability of Cyprus was not mentioned in the Treaty was that the Island was already paying the sum of £92,800 a year which had been appropriated for the service of the 1855 Loan. The matter was carefully considered at the time, and it was decided that this payment should be treated as the contribution of Cyprus to the Ottoman Public Debt, and that the matter did not therefore require to be dealt with in an international Instrument. Had it not been for this payment, Cyprus would no doubt have been required to take over a share of the Ottoman Public Debt on the same basis as the other territories detached from Turkey as a result of the War, and on that basis her contribution would have been substantially more than the gross amount of the Tribute.

In 1927 His Majesty's Government, with the desire of accelerating the progress of the Island, decided to increase the Grant-in-Aid to the same amount as the Cyprus contribution to the Ottoman Public Debt charge, namely, £92,800 a year. The only condition attached to this increased grant was that Cyprus should contribute £10,000 a year towards the cost of Imperial defence. The grant on this condition was accepted by the Legislative Council. In the reply to the offer of His Majesty's Government dated September 5, 1927, and signed by the Elected Members, which was handed to you on your return from your visit to Rhodes in that month, they stated "The happy answer of the Imperial Government has fulfilled all Cypriot aspirations concerning this burden." His Majesty's Government therefore regard the settlement of 1927 as having finally closed the question of the Tribute: and it is one which they are not prepared further

Digitized by Google

to pursue. They feel that after studying the facts set out above, all reasonable opinion in Cyprus will agree that Cyprus has been treated not ungenerously in the matter.

5. In paragraph 23 of the Memorial, it is suggested that a Royal Commission should be appointed to inquire into the condition of affairs in Cyprus. This proposal has received my consideration, but after careful reflexion I have formed the view that the appointment of such a body would, at the present juncture, be of no real benefit to Cyprus. An inquiry of the character proposed would raise unprofitable issues, and could only distract attention from those more practical matters on which the progress of the Colony depends. There is much to be said for the view that what Cyprus needs at present are fewer occasions for political discussion and more occasions for constructive work.

6. Before concluding this dispatch, I desire to make the following observations with respect to certain of the statements contained in the Memorial. His Majesty's Government do not wish to make any immoderate claims for the achievements of British rule in Cyprus. They are conscious that the material progress of the Island has not been so rapid as they would have hoped. This is in a large measure attributable to certain special causes. The first of these is the anomalous and uncertain position of the Island up to the Annexation in 1914. Cyprus was until that date a territory leased by Great Britain from the Ottoman Empire. Owing to this ambiguous situation, the Island was unable to attract the capital necessary for its development, and no Government loan for that purpose was raised in the open market. After the Annexation, the War and the subsequent economic depression further retarded development.

7. A further cause is to be found in the peculiar nature of the Cyprus Constitution. Responsible observers have contended that, had Cyprus possessed an officially-controlled Legislature, its progress would have been more rapid. There is much weight in this contention. The divorce of power from executive responsibility is rarely conducive to efficient administration, however much unofficial control over the Legislature may be valued from other standpoints. Had the Executive Government had full control, it could, for example, have paid salaries which would have attracted highly qualified experts to the service of its technical departments. The Greek Elected Members have argued that salaries paid to the British officials in the Island have been too high. In doing so they are, to my mind, failing to take a long view of their own material interests. Until recent years the salaries paid have in my opinion been too low. Had they been nearer to the market rate for the best ability, the progress of the Island would have been accelerated and the extra outlay would have been more than repaid in the added wealth derived from the development of the Island's undoubted resources. I think it is desirable that the Greek Elected Members should realise that on this subject they have adopted a policy of false economy, which is responsible to no small extent for the lack of progress of which they now complain.

8. In spite of these admitted obstacles to the advancement of the country, I am unable to admit that the picture drawn in the Memorial of the British achievement in Cyprus is a fair one. No person who is correctly informed as to the condition of the Island in 1878 could refuse to recognise the very great advance which it has made in only fifty years of British rule. In 1878 the population was only 180,000. At the time of the British occupation the only road in the Island was a track of some 26 miles between Nicosia and Larnaca. Under the rule of the Ottoman Empire there were no hospitals; and the protection of public health was a matter which received no attention from Government. The encouragement of agriculture and the preservation of the forests were equally neglected. No effort was made to develop the Island's mineral resources. Taxation was abusive, and rates of interest were usurious. The administration of justice was defective, and access to the Courts difficult.

9. The Island to-day shows considerable improvement upon this state of affairs. The population has nearly doubled. There are, apart from village roads, a thousand miles of roads which can be traversed by motor. The revenue has increased from £176,000 to nearly three-quarters of a million: and the whole of this money is devoted to the public service, which was not the case under the rule of the Ottoman Empire. A railway has been built and harbours have been considerably improved. Regular post, telegraph, and mail services have been instituted. The development and protection of the forests has been taken in hand on scientific lines. The growing revenue from royalties attests the attention which is being paid to the Island's mineral resources. The spread of education, which has been largely assisted by Government grants, is illustrated by the fact that there are now over 46,000 children attending the schools, whereas in 1881 there were fewer than 7,000. Increasing regard has been paid to the important subjects of agriculture and irrigation. The co-operative system has received every encouragement from Government, while credit has been made available to the farmers upon reasonable terms.

10. It is, however, broadly true to say that until recent years the main work of the Government has been not so much to develop the country by direct administrative action as to create conditions favourable to the natural growth of prosperity. For fifty years Cyprus has enjoyed the benefits of law and order, and the equitable and honest administration of justice. There has been no public disorder within, and there has been immunity from attack from without. During the War, while neighbouring countries were the scene of military operations, Cyprus remained secure and peaceful. In the economic dislocation which followed the War, the Island preserved the advantages of a sound currency and financial system. The inhabitants of the Island have enjoyed a wide liberty of speech and action which compares favourably with that

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Digitized by Google

permitted in adjacent territories. They have escaped the obligation of compulsory military service; the more prosperous classes have not been called on to bear the heavy direct taxation which has been a feature of other fiscal systems. These conditions have not only allowed energy and enterprise to reap their due rewards, but have also a moral value which cannot be computed in merely material terms.

11. I have not written this dispatch in any narrow spirit. In many ways I welcome the high standards of achievement which the Greek Elected Members set in their criticisms of the British administration. These conceptions are in some sense a tribute to the change in outlook which has resulted from half a century of British rule. The anxiety of the Greek Elected Members for improvement in the conditions of the island has my entire sympathy. I am confident that in the next few years considerable improvement in the equipment of the country and in the development of its resources is possible. Government can do much to assist the people of the Island to take advantage of their opportunities; and I trust that this frank interchange of views may do something to foster the spirit of co-operation and mutual understanding which is a desirable condition to the attainment of this common goal. If this spirit is forthcoming, it will meet with a generous response.

I have the honour to be,
Sir,
Your most obedient, humble Servant,
(Signed) PASSFIELD.

In reply to Lord Passfield's communication, Mr. Zenon Rossides, *Secretary of the Cyprus Delegation recently in London,* writes:—

Lord Passfield in his reply to the requests of the Greek people of Cyprus as embodied in a Memorandum addressed to him (a summary of which appeared in THE NEAR EAST AND INDIA of November 21 last), states that His Majesty's Government cannot accede to the request for the application of self-determination to Cyprus by allowing its political union with Greece. Now, it may be quite likely that the Government, confronted as they are with so many difficulties, cannot see their way at present to give the Cyprus question its legitimate and final solution. But the Secretary of State for the Colonies is not content with his point-blank refusal; he deems it necessary to proceed further and declare that the Government consider that subject as "definitely closed," disposing, as it were with a couple of words, of the future of a people fully conscious of its national entity.

The reply in general denotes a disposition which is in direct conflict with those very notions of liberty and fairness which should be rudimental in the policy of a Labour or any progressive Government. It may also be observed that the above sweeping declaration, in particular, bears the melancholy mark of a striking inconsistency when contrasted with earlier noble pronouncements by the head of this Government, Mr. Ramsay MacDonald, who, expressing the views and principles of his party at the Labour and Socialist Conference at Berne in 1919, with special reference to Cyprus, said:

"The principles laid down in the main resolution before the Conference (the right of all nations to determine their own fate and to decide to which State they will belong within the League of Nations) will be applied as far as the British Labour Party is concerned to the people of Cyprus." (Official Bulletin of the International Labour and Socialist Conference, Berne, February 21, 1919.)

Though it may be needless here to emphasise that, despite Lord Passfield's statements, the subject will never close, so far as the people of Cyprus are concerned, until justice is done, and the air of freedom breathes again on those historic and long-neglected shores, yet it should be made clear that such adverse statements, far from having a disheartening effect on the Cypriots, will only stimulate their inherent desire for freedom, which is inseparably bound with the very honour of every self-respecting people.

The problem of Cyprus may indeed be very small and unimportant among the world problems of to-day, but its treatment by a British Labour Government is most significant in that it indicates how much or how little has this world advanced after all in its moral progress towards justice and respect of the rights of small nations and peoples, towards liberty, and towards that great principle of "keeping faith."

Coming to minor points of administration, Lord Passfield declines to make any improvements in the autocratic system of Government given to the Island fifty years ago, on the alleged ground that the people have not sufficiently advanced to merit a more liberal administration. A comparison, however, in respect of civilisation and literacy between the Cypriots and the people of certain other British Colonies to which various forms of self-government have been given, also those of other adjacent, quasi-independent, countries with 90 per cent. of illiteracy, is enough to demonstrate the pretext-like element in the ætiology of that refusal. At any rate the allegation itself reflects unfavourably upon the actual effects of 50 years of British administration in the island. The cause of any such political immaturity, as alleged, should be sought rather in the method of government which has been so far applied to that country. It cannot be denied that an autocratic system of administration which gives no real voice, no opportunities, and no responsibility to the people is not likely to educate them in the use of their own initiative and to promote their latent qualities, nor can it be conducive to high political standards. Only in liberty and in responsibility can the people effectively advance, become constructive and politically mature. Deny them responsibility and you have the safest way of impeding their progress and of rendering them always destructive and inefficient, thus creating a vicious circle, which cannot be too strongly condemned. All nations who have at different times and places attained a high standard of civilisation have gradually developed to that stage only in liberty, without which there can be no real progress; so that a denial of freedom amounts, in effect, to a denial of the means of advancement.

With regard to the so-called "Tribute," I feel I must disagree with Lord Passfield's following three contentions, namely: (1) That even after the abrogations in 1914 of the 1878 Convention the payments of £92,800 yearly were rightly continued as the share of Cyprus in the Ottoman Public Debt, on the alleged ground that "Cyprus is a succession State of the Ottoman Empire," and could be legally so charged. (2) That the reason why no mention of this liability was made in the Treaty of Lausanne is that Cyprus was already paying £92,800 a year, which had been appropriated for the service of the 1855 Loan; and (3) that had it not been for this payment, Cyprus would have been required to take over a share of the Ottoman Public Debt on the same basis as the other territories detached from Turkey as a result of the War.

Now the Treaty of Lausanne in 1923 had for the first time sanctioned that a proportional contribution to the Ottoman Public Debt should be paid by the Succession States of the Ottoman Empire in respect of territories detached from Turkey at the Balkan wars and at the Great War; it also enumerated the succession States and the territories detached, giving a list of the Turkish Debts to be respectively contributed to, by the Succession States. In connexion with this latter term it should be pointed out that the reference to Cyprus, by Lord Passfield, as "a succession State" cannot be accepted as a correct statement, in view of the fact that not Cyprus, who is the territory detached, but Great Britain, whose sovereignty succeeded that of the preceding State, is the succession State; and it also follows that, as she has benefited territorially by the acquisition of the Island, she would also have to bear liability, if any, for contribution to the Ottoman Public Debt, in the same way as the other succession States, namely, Greece, Serbia, Italy, defray from their own Budgets such contributions and do not exact the respective sums from the territories annexed.

In the case of Cyprus, however, the fact is that the Island has not been detached from Turkish administration

Digitized by Google

during the Balkan or the Great War; she had already been, since 1878, the object of an International Settlement which kept her out of the pale of Turkish rule; furthermore, the thirty-six Turkish Loans and Advances, enumerated in the Treaty of Lausanne for contribution, were all, save one, contracted by Turkey after 1878, when Cyprus was not under Turkish administration. It can therefore be clearly seen that nowise could legal liability for contribution on the same basis, or at all, be imposed in respect of Cyprus, and this, in consequence, is the reason why no mention of any such liability for contribution by the Island was made in the Treaty of Lausanne.

Regarding the Loan of 1855, though I am quite willing to agree with Lord Passfield that the British Government had sufficient justification in diverting to the service of that Loan the Cyprus payments due to the Ottoman Empire by the 1878 Convention, yet after the abrogation in 1914 of this Convention, there were no more payments due to the Ottoman Empire by Cyprus to be legally diverted to the service of the 1855 Loan, and therefore any further payments, after 1914, were taken arbitrarily and without legal basis. It follows that were it intended by the Lausanne Conference, as suggested in the Reply, that Cyprus should continue any payments for the service of the 1855 Loan, it would have been necessary to give to such continued payments the sanction of a special dispensation in the same Treaty. Lord Passfield's reason for the absence of such provision is that Cyprus was already paying the £92,800 a year for the Loan of 1855. But if in the case of Egypt, who was also paying for that Loan and, what is more, by an existing legal obligation, mention was made in the Treaty, *a fortiori* would it be required for Cyprus, whose payments needed legalisation and a new adjustment to requirements, it being understood that Cyprus was paying £92,800 by the 1878 Convention, whereas only £81,000 was needed and used for the service of the 1855 Loan. In the absence of any such dispensation it may be positively inferred that the liability of Cyprus was not mentioned in the Treaty because none was intended, as on the one hand no legal connexion existed between Cyprus and the Loan of 1855, and on the other no responsibility for contribution to the General Ottoman Public Debt could be imposed in respect of the Island for the reasons already stated above. In point of fact, the Turkish Delegation at the Lausanne Conference asked for a proviso to be inserted in Art. 20 (dealing with Cyprus) whereby Turkey should be released from all liability in respect of Debts served by the revenues of Cyprus. In reply to this Mr. Waley, a British Delegate, said that "the Turkish Delegation mistakes the character of the 1855 Loan; this Loan in fact is not legally guaranteed by the revenues of Cyprus" (*Procès verbal* No. 1. *Séance* 24.4.1923). Following an examination of the question by the financial experts it was decided that the above proviso should not be inserted in the Treaty. It is true that Art. 18, referring to Egypt, releases Turkey from all liability in respect of certain debts, including the Loan of 1855; but there is nothing in the Treaty of Lausanne or elsewhere which throws any of these burdens on Cyprus, who, moreover, it should be remembered, is not included in the list of territories detached from Turkey in the Great War, in respect of which liability for contribution was imposed by the Treaty as from March 1, 1920. Now on what legal grounds and in virtue of which International Instrument were the annual payments as a contribution to the Ottoman Public Debt extracted from Cyprus from 1914 until 1927 is a question which has not and, I believe, cannot be answered; the fact, therefore, remains that Cyprus has an incontestable right for the refundment of all sums so arbitrarily taken; and since there is a right, there ought to be a remedy.

Lord Passfield's allusion to the enthusiastic reception by the elected Members of the Legislative Council in 1927 of a long-delayed discontinuance of those arbitrary payments, would seem to betray a considerable weakness on the part of the Government were they to depend on the terms of a formal eulogy (which in any case does not refer to past payments) rather than on the legal merits of the case.

The Secretary of State for the Colonies further in his reply appears to overlook the main impediment of the Island's progress, which is the fact that a total of £2,600,000 has been taken away from its meagre revenues during the 50 years of British occupation, which sum would, had it remained in the Island, have entirely altered its condition and its rate of progress. This is so obvious that it hardly needs an argument in its support.

As to the generosity of the Imperial Government in its treatment of Cyprus, I would quote from a high British official, Capt. C. W. Orr, a former Chief Secretary of Cyprus, who in his book "Cyprus under British Rule," after making some very impartial and pertinent remarks on that treatment, which he admits to be unjustifiable, "contrary to preconceived notions," and a singular instance in British colonial history, ends with the following words:

> "Is it not the duty of the British Government to see that the revenue raised in taxation in any of its dependencies is expended for the benefit of those dependencies and that no portion is utilised for exterior purposes having no direct individual connexion with the taxpayers who provide the revenue?" (p. 64.) And in his preface he says: "If this book arouses in anyone who reads it a feeling that England in its treatment of Cyprus since 1878 has in any way failed in the generosity and liberality expected of a Great Power in dealing with its dependencies, surely there is a duty imposed on such a person to urge that we should set our house in order, and make good without delay any shortcoming of which we may have been guilty in the past. We are fond of representing ourselves as the champions of small nationalities and peoples, and we boast of our hatred of injustice, oppression and illiberality in any form. It behoves us, therefore, to take especial care that in our relations with our dependencies our attitude and actions should be above reproach, and that we have nothing on our conscience for which we can be justly condemned in the eyes of civilisation." (p. 8.)

In the Reply the lack of sufficient progress is attributed mainly to the low salaries paid to British officials. It is true that economy in salaries may be a false economy, but it is also true that even with the best abilities there can be little improvement if the funds left for that purpose are insufficient. In the 1929 Cyprus Budget, for example, over 47 per cent. was absorbed by salaries, while only 27 per cent. was applied for the welfare and general development of the Island.

The Reply further indicates that the Island's present position is a considerable improvement to that under Turkish rule. This, however, has never been denied and really means very little. It has not been conceived that a British administration of to-day would take pride in its superiority to Turkish rule and that of 50 years ago. Further, the isolated comparison of to-day's conditions in Cyprus with those of 50 years ago can be of little avail. A better criterion would be accorded by comparing the small progress achieved in Cyprus with that attained during the same period in other territories also detached from Turkey and now under a different administration.

Though it is readily admitted that the administration of justice in Cyprus is quite up to the best traditions of equity and impartiality, and also that public safety is effectively answering its purpose, yet on the other hand such facts as that the Island's mail communication with the outside world is, after 50 years of British occupation, only weekly—sometimes delayed for a further week when weather conditions render the open roadsteads unapproachable—and that agriculture is almost entirely unassisted and still in a primitive state, are not indicative of efficient administration or progress; nor is the fact that the export trade is hampered by the absence of harbours or other protective works in the main exporting centres resulting in an increase of the rates of freight, with the inevitable consequence that the Island's produce is found at a disadvantage in the market competition with stuff coming from other countries possessing shipping facilities.

Finally, it is also acknowledged that the Island has enjoyed security in British hands. But who would prefer the benefits of external security to the blessing of national liberty? Who would have an imposed safety within four walls rather than the dangers incidental to the freedom of open space?

ZENON ROSSIDES.

THE WEEK AT HOME

London, Tuesday Morning.

Empire Free Trade.

Empire Free Trade is dead. So, at least, say its opponents. Certainly those who espoused Lord Beaverbrook's cause in the House of Commons last week did not make it appear that its chances of becoming a reality are very near. I have heard men, in fact, who know the Empire well, and who would wish for nothing better than the exercise of Free Trade within the Empire, dismiss it as a "stunt," which will be dead within a twelvemonth.

Mr. Lloyd George thoroughly enjoyed himself making fun of Lord Beaverbrook's proposals. He had the House with him, too. The trouble seems to be that this proposed has not been properly thought out—one difficulty is met by slightly changing the plan, only to find a host of others waiting solution! Our national problem is that, whereas our Dominions and Colonies could give us very substantial benefits, we can give them very little. Most of the Colonies' products are already duty free in British markets.

One thing, however, Lord Beaverbrook does deserve credit for: he has brought the Empire to the front, and although the Conservative Party have been working for the cause of Imperial development generally, there is no doubt that this newspaper campaign in favour of Empire Free Trade has given an enormous fillip to the ordinary Briton's interest in the Empire. It may be, then, that over the corpse of Empire Free Trade something really practical may be hammered out.

A Clash of Principle.

It is not often in these days of opportunism that a real clash of philosophic princple is visible in the House of Commons. But last week, when the Canal Boats Bill was introduced, it was obvious that the fundamentals of politicians' make-up were touched. Briefly, the Bill sought to prevent any child under the age of fifteen travelling in a canal boat. Such children, the supporters of the measure argued, must be educated, and incidentally, they must be inspected by officials of the State.

Naturally, this extension of State interference with private affairs was chiefly supported by Labour and Liberal members; but it did not wholly fail of appeal to Conservatives. In the main, however, Conservatives took up the line that the Bill was a fussy one, that bargemen and bargewomen were decent, kind folk who brought up their children well, and that nothing could be more deplorable that the prospect of the break-up of family life if the children of the barge were separated from their parents.

It was a nice example, in effect, of the difference between Socialist and Individualistic philosophy. There is, I think, little doubt that the majority of people in this country now are prepared to see an extension of the State's authority—provided that their own private affairs be not touched. The picturesque elements in our national life are doomed, it seems, increasingly to disappear, always in the name of humanity and of officiency.

A Post Office Surplus.

The Post Office is often shot at as an example of the inefficiency of State enterprise, but, to judge by the result which all capitalists must regard as the final criterion, it does not do too badly. Last year, for example, a record profit of over nine million pounds was made. The question which is everywhere being asked is: what will be done with all this money?

Some men say, of course, that the penny postage should be restored. But Mr. Churchill, when he was Chancellor of the Exchequer last year, explained that such a change would mean a loss of six millions. It is being suggested that the telephone system should be improved and extended—there is certainly abundant room for that. Others think that the interest paid in the Post Office Savings Bank should be increased—also a desirable measure. But supposing that Mr. Snowden, who wants money badly for the Exchequer, should collar the lot? That seems the most probable fate of this nice little surplus which you and I have helped to build up.

Brightness as an Ideal.

Brightness! That is the modern slogan. It must permeate our whole life. We must dress brightly, think brightly, live brightly. Hence the introduction of the Cross-Word into *The Times*, of all supposedly unassailable places; hence the outcry which followed a Judge's condemnation of too highly coloured a dress in Court last week.

Of course, it is only a phase. But some phases are good. Who would deny that the modern craze for ice-skating, for example, is not infinitely better than the craze of a few years ago for jazz dancing, or for that matter, better than the craze for roller-skating before the War? To move with *The Times* is not always a sign of retrogression, though I know of a hundred revered heads which drooped in sorrow at the capitulation to that wretched cross-word!

Grass for Coast Protection.

Readers of these paragraphs will be well aware of the seriousness of erosion along our coasts, and the gales of this winter are naturally increasing anxiety. Uncommon attention, therefore, is being paid to the experiment which the Empire Marketing Board is just making in Suffolk.

Everyone knows how marram grass is used to hold together sand dunes along the coast. Now, however, it appears that another grass will be extensively used. This is rice grass—*Spartina Townsendii*. Although it was discovered some fifty years ago in Southampton Water, only ten years ago was it found to possess an economic value. It can live well though drowned feet deep at every tide; its long roots bind mud into the soil, and, therefore, bind a sea-dyke together; and before long it can turn a mud flat into a meadow of green.

This sounds like an important discovery. In any case, the grass is being extensively planted (under the auspices of the Empire Marketing Board) at Hadleigh, near Southend, and at Goldhanger, near Harwich, where a large section of land has had to be abandoned recently owing to inroads of the sea. It is being exported all over the Empire, and, according to the *Manchester Guardian*, which is well up in facts of this kind, "may soon create 30,000 or 40,000 acres of mud flats into meadows in Essex alone." This, indeed, would be a most noble kind of reclamation.

PERSONAL AND GENERAL

TO-DAY

February 6, 1930 (New Style).
January 24, 1930 (Old Style).
Ramadhan 7, 1348 A.H., of the Muslim Calendar.
Shebat 8, 5690 of the Jewish Calendar.

The Roumanian Minister and Mme. Titulesco arrived last week at St. Moritz.

Sir Edwin Lutyens will return to 13, Mansfield Street on February 8 from India.

Lady Brooke sailed from Tilbury on January 31 in the P. and O. Kaisar-i-Hind for Port Said.

Mme. Ferid Bey, wife of the Turkish Ambassador, returned to London last week from the Continent.

Field-Marshal Viscount Allenby and Viscountess Allenby will return to London on March 2 from India.

Sir Philip Grey-Egerton will sail for India in the P. and O. s.s. Ranpura, which will leave Tilbury on February 14.

The Hon. Alexander and Lady Margaret Shaw have returned to 24, Princes Gate from Cairo.

Mirza Habibullah Khan Hoveyda (Ain-al-Mulk) has been appointed as Persian Minister to the Hijaz-Najd.

Sir Graham and Lady Wood left West Heath House, Hampstead, on February 1 for a six weeks' tour in Egypt.

M. Zulfacar has been appointed Counsellor to the Afghan Legation in London, and has taken up his duties.

M. Abdol Fazel Mirza, Persian Vice-Consul at Kadhimain, has been appointed as Consul to Kirkuk and Sulaimani.

Mirza Nasrullah Khan Khalat-Bari (Ettalaul-Mulk), the new Persian Minister to Afghanistan, has left Teheran for Kabul.

The Raja and Ranee of Kashipur left London on January 30 to join the Rawalpindi at Marseilles on the way to Bombay.

The Marques and Marquesa del Merito left London on January 30 to join the P. and O. s.s. Rawalpindi at Marseilles for Port Said.

Sir Cecil and Lady Beatrice Lister-Kaye left Tilbury on February 1 in the Orient liner Oronsay, which is sailing for the Mediterranean and the East.

At a meeting of the Board of Directors of the Anglo-Persian Oil Co., Ltd., held on January 28, Mr. William Fraser, C.B.E., was appointed Deputy Chairman.

Field-Marshal Viscount Plumer and Viscountess Plumer left London on January 31 for Santa Margherita, and will not return to England before the middle of March.

Lord Lloyd, late High Commissioner for Egypt, addressed the Unionist Canvassing Corps at Caxton Hall on January 29, on "British Interests in the Middle East."

Mr. A. Lloyd-James, M.A. (Camb.), B.A. (Wales), has been appointed to the University Readership in Phonetics, with special reference to Oriental and African languages, tenable at the School of Oriental Studies as from August 1, 1929.

The King has given authority to Lieut.-Col. Herbert John Mackenzie, D.S.O., to wear the Insignia of Commander of the Order of Skanderbeg, conferred upon him by the King of Albania, in recognition of valuable services.

Lord and Lady Dunsany will leave India on February 22 for England.

Dr. A. M. Blackman will lecture to the Royal Asiatic Society, on February 13, at 4.30 p.m., upon "The Drama in Ancient Egypt." The lecture, which will be illustrated with lantern slides, will be given in 74, Grosvenor Street, W.1.

The Duke of York received in audience at Buckingham Palace on January 30, on behalf of the King, General Shah Wali Khan, who presented his Letters of Credence as Envoy Extraordinary and Minister Plenipotentiary from the King of Afghanistan.

Mr. J. Swire will speak to the Near and Middle East Association to-morrow (February 7) on "The Evolution of Albania." The meeting, over which Lord Lamington will preside, will take place, by kind permission of Miss Spalding, at 133, Queen's Gate, S.W.7., at 8.30 p.m.

The betrothal is announced between Princess Ileana of Roumania to Count Alexander Frederick William von Hochberg zu Fürstenstein. Princess Ileana is a great grand-daughter of Queen Victoria, Count Alexander von Hochberg is the second son of Hans Henry XV, third Prince of Pless and of Mary Cornwallis-West, daughter of the seventh Earl de la Warr.

The Foreign Office announces that the King has approved the appointment of Sir Andrew Ryan, K.B.E., C.M.G., as Minister Plenipotentiary at Jidda. Sir Andrew Ryan, who is 54 years of age, has been Consul-General at Rabat, French Morocco, since 1924. Previously to that he held a succession of important posts in the Levant, and he was a member of the British delegation to the 1922-23 Near East Peace Conference held at Lausanne.

The King has given authority for the wearing of the following decorations: Lieutenant-Colonel Edward Cuthbert De Renzy-Martin, C.M.G., D.S.O., M.C., Insignia of Commander of the Order of the Skanderbeg, conferred upon him by the King of Albania, in recognition of valuable services. Mr. Hugh Warner Bedford, Insignia of the Fourth Class of the Order of the Nile, conferred upon him by the King of Egypt, in recognition of valuable services. Mr. Hugh Henry Gordon Mitchell, O.B.E., Insignia of the Third Class of the Order of the Brilliant Star of Zanzibar, conferred upon him by the Sultan of Zanzibar in recognition of valuable services.

Book Reviews

TWO NOVELS ON MESOPOTAMIA.

"ADVENTURE CALLS." By Katharine Woolley. (London: John Murray. 7s. 6d. net.)
"THE TAWNY DESERT." By M. L. Eades. (London: Herbert Jenkins 7s. 6d.)

Mrs. Claude Woolley, who knows Iraq well, the country and its history, has here written a most readable novel. Her writing is clear and unaffected, and if her "plot" is vastly improbable, at least she does no harmful violence to the real facts of 1920 in Mesopotamia. Her Baghdad-born hero and heroine are, it is true, utterly peerless, but their adventures provide a clean, consistently moving tale.

To describe in detail the theme of the book would be unfair: suffice it to say that a twin sister of a young Scottish officer in Mesopotamia, who wishes for Intelligence reasons to disappear from his regiment awhile, actually takes on a man's part in Lower Iraq. The spit of him in looks, in knowledge of Arabic, in love of the desert, and so on, she is a great success. Posted in "Kelekiyah" in this dummy's rôle, so to speak, this heroine—the child, by the way, of a man well known to and thoroughly loved by the Arabs before the War—becomes involved in the intrigues which were rife in 1920, and actually takes a leading part in frustrating them.

It is all, of course, wildly but delightfully impossible. If criticism were indulged in, it would be to the effect that perhaps Mrs. Woolley is too naïve—her characters are either white or black—and that the bigger elements in the story, namely, Iraq and Scotland, are, for all the excellence of their description, somehow smaller than the few odd persons who inhabit them. But certainly the authoress, whose femininity, by the way, is never disguised, would not asked to be judged by the highest standards of novel-writing. She has aimed at the telling of a good tale, and in that modest aim she has very well succeeded.

A gallant Introduction to the second novel, written by Brigadier-General R. H. W. Hughes, who was Director of Inland Water Transport in Mesopotamia from 1917 to 1921, arouses hopes that something good is to follow. Alas! however, the novel itself is worthless. Its heroes and heroines never come to life: they are such impossible marionettes as are contained in the novelettes which the authoress pretends to despise. Of the life of the people of Mesopotamia, of the desert itself no understanding is vouchsafed: and the love affair which is the *clou* of the book is wearisomely trivial.

Nor is the poverty of the tale redeemed by its telling, for the style of Mrs. Eades is affected. A trick of inversion is badly overdone, and every now and then one comes across phrases such as "she exclaimed with a little fluttering laugh pertinent to her gesture," or "she was drinking it in—a spiritual pabulum to her."

It is perhaps fortunate that the book lacks all air of reality, otherwise the uninformed reader might carry away a false impression of what Englishmen in Mesopotamia were about in the years after the War.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

AN ARAB DELEGATION TO LONDON.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It has been stated in your issue of January 23 that the Arabs of Palestine "are revealing a lamentable weakness in the internal quarrels now being made public over the personnel of the Delegation to London," with an invaluable piece of advice on the necessity and importance of unity for which I wish to manifest my gratitude.

This incident, however, which the Jews tried to enhance to the limits of discord, needs an explanation. The Secretariat of the Arab Executive called a general meeting of the members of that executive to decide on several questions. Owing to a clerical error the item for the election of the London Delegation was not mentioned in the agenda. Although a majority of the members met and decided on several matters including the personnel of the Delegation, the minority objected as to the procedure of including this item when it was not mentioned in the agenda. The objection was considered as reasonable, and another meeting of the Executive was convened for that purpose. The result was that the same personnel were returned with the inclusion of the President of the Executive as President of the Delegation.—I am, etc.,

JAMAL HUSAINI.
Palestine Arab Delegate.

The Milestone Hotel, 1, Kensington Court, Kensington, London, W.8., January 27.

THE CENTRAL ASIAN SOCIETY.

The next three lectures of the Central Asian Society are to take place at the Royal Institute of International Affairs, in each case at 5 p.m. The first will be by Mr. J. T. O. Barnard, on February 12, upon "The Frontiers of Burma"; the second by Dr. Dugald Christie, on February 26, upon "Manchuria: Its Possibilities and Problems"; and the third by Lt.-Colonel F. M. Bailey, on March 2, upon "Travels in Bhutan." The first two lectures will have lantern, and the last, film, illustrations.

PERSIA AND THE LEAGUE.

On January 12, Prince Arfa M. Riza Khan, who is Persian Minister for Scandinavia, sent from his residence in Monaco a telegram of congratulation to Sir Eric Drummond at Geneva upon the occasion of the tenth anniversary of the League of Nations. The Secretary-General replied thanking Prince Arfa for the unfailing support which he had given to the League during the ten years of its existence.

King Fuad has purchased for £3,400 in London, from a Scotsman, what is described as the finest collection of Egyptian stamps in the world.

Mr. Herman Bernstein, the well-known journalist and author of war books, has been offered the post of United States Minister to Albania by President Hoover.

The King and Queen of the Belgians will leave for Egypt early in March, on a return visit to King Fuad. They will embark at Genoa for Alexandria, where they will arrive on March 10. M. Hymans, Belgian Minister of Foreign Affairs, will accompany their Majesties.

The Cathedral of Tiflis, the capital of Georgia, built in the eighteenth century, is reported to have succumbed to the anti-religious theories of the Russian Soviets. The walls were last week blown up by detachments of the Ogpu with dynamite. On its site an international Communist library is to be erected.

Commandant Mary Allen, of the Women's Auxiliary Service, left Croydon Aerodrome on February 3 on a visit to Egypt, Greece, and Turkey. Two members of the Women's Auxiliary Service are already in Egypt working under the direct control of the Commandant of Police in Alexandria. Commandant Allen is visiting Egypt in order to see the Chiefs of Police in Cairo and Alexandria. She will then go to Greece and Turkey to meet representative men and women of both countries to discuss the question of training and employment of police-women. She will return to England at the end of February.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Egyptian Budget.

Another heavy draft on the reserve is provided for in the Egyptian Budget estimates for 1930-31. Last year's estimates provided for the withdrawal of £E8,460,000 from the reserve to balance the Budget, while this time, with the revenue estimated at £38,062,000 and the expenditure at £E44,950,000, a draft of £E6,888,000 will be necessary, bringing the reserve down to about £E25,000,000. No provision has been made for an increase in the Customs receipts as a result of the new tariff which comes into operation this month. It is anticipated that the effect of the tariff will be an increase in revenue of about three million pounds, but in view of the inevitable effect on the part of the importers to anticipate the new duties, it is clear that the incidence of the tariff in the next few months will not be very pronounced. The reason why such heavy drafts are being made on the reserve is the imperative need for carrying out a programme of development which will enable Egypt to provide for the requirements of its constantly increasing population. Thus the estimated expenditure in the current Budget includes £E4,707,000 for new works, £E2,696,000 being for irrigation schemes, and £E1,333,000 for railway expansion. These works of development will far more than pay for themselves in the long run, and it is satisfactory to know that whatever the changes in the Administration there is no difference of opinion in Egypt as to the desirability of pressing on with plans for the better utilisation of the country's resources.

The Industrial Position.

At the meeting of the Westminster Bank, Mr. Hugh Tennant, the Chairman, pointed out that as regards British industry the trend in 1929 was in the right direction with one important exception, that of the cotton trade. That is no doubt the case, but, as the figures for unemployment suggest, the progress which is being made in a number of directions is not sufficiently rapid to make an appreciable difference to the country's prosperity as a whole. Since the bank meeting we have had various official pronouncements on the outlook, the last of which, by Mr. Thomas, was couched in the most depressing terms. The tenor of what he said was that things will get worse before they get better, which is no doubt true as regards certain industries. Trade's slow revival is enough to make anyone pessimistic, and Mr. Thomas's remarks may be read in the light of the facile optimism entertained a few months ago. It must be remembered that last year was an exceptionally difficult period from many points of view, and if despite all the discouraging circumstances developments in all but one industry are in the right direction, there is no need to take too unfavourable a view of the outlook.

A Tariff Truce.

It is not surprising that the proposals for a tariff truce should have met with a very mixed reception in this country. Three years ago the World Economic Conference was held at Geneva, when efforts were made to further the reduction of Customs and other trade barriers. The effect of this Conference, as I have already pointed out, has been almost negligible, and while in some cases there have been reductions of duties, a move in favour of higher protection both for revenue purposes and for the development of local industries has been increasingly in evidence. One need only cite in this connexion the new Turkish and Egyptian Customs Tariffs. It is very probable that pressure of circumstances may compel Great Britain to enlarge the scope of its Safeguarding duties and even ultimately to turn to some form of Protection, and the effect of our adhering to this truce would simply mean that for a number of years our Governments would be powerless to make any alteration in the existing position. It is not open to question that Free Trade all round is the ideal, but as that is impossible, it is surely advisable to refrain from any commitments which would restrict the bargaining power that the right to impose duties gives us.

Egypt's Tourist Traffic.

It is not a little surprising to learn that the Egyptian Government in its search for new sources of revenue should have decided to impose quay dues for first, second, and third-class passengers of 10s. 3d., 4s. 2d., and 2s. 1d. respectively, payable both on arrival and departure. The tourist traffic, as is well known, is one of Egypt's two great sources of income, and it would seem obvious that sound policy would dictate as little interference with either of them as possible. I do not share the view that the dues will have an effect on the volume of the tourist traffic. To those who can afford a trip to Egypt an extra pound one way or the other is an immaterial consideration. But the dues are bound to create an atmosphere of friction, for those who have to pay them will do so with precisely the same degree of willingness with which they remunerate employees in hotels who have not been seen until they line up in the entrance hall to greet the parting guest, and Egypt, it may be pointed out, already makes quite enough out of her guests, and it should not be necessary in addition to put a tax on their arrival and on their departure.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 4.

Dull conditions have again prevailed in the Stock Markets. Very little interest is being taken by the outside public, and with stock being sold in preparation for the special "Hatry" settlement on February 13, prices have been inclined to sag. Anticipations of an early reduction in Bank Rate have dwindled in view of the unfavourable position of the principal foreign exchanges, though the reduction in the French Bank Rate from 3½ to 3 per cent., produced an immediate rally in the French Exchange on London. The gilt-edged market reflected the less favourable monetary conditions, but India stocks registered a pronounced recovery on the statement issued by the Secretary of State. The underwriters of the Central Electricity Board Loan were left with 91 per cent. of the issue on their hands and the stock opened at 1½ discount, a result which indicates that at the present time only trustee securities are likely to obtain a satisfactory response. In other directions there were no features of interest beyond an outburst of activity in Rhodesians. No general improvement in markets as a whole can be looked for at least until after the Hatry settlement, and then it seems more than likely that the shadow of the Budget will become more pronounced and check such incipient activity as may develop.

Metropolitan Railway Dividends.

Unlike investors in the main line railway companies, holders of Metropolitan Railway stocks have no reason to complain of their experiences in recent years. With the growth of the Greater London area, traffic has naturally expanded, and with beneficial results to stockholders. Thus the Metropolitan Railway announced on Thursday that the dividend on the consolidated stock would be 4 per cent. for the full year 1929, against 3½ per cent. for 1928, and 3 per cent. for 1927. The gross receipts for the whole year increased by £36,000, but the higher dividend, requiring £37,892 more, and the increase in the carry-forward by £8,128, indicate that further economies have been effected. On the basis of the increased dividend Metropolitan Consolidated Stock returns nearly £6 10s. per cent. With the continued growth in the area which it serves the company has very good prospects, and this immediate return is very satisfactory indeed.

Artificial Silk Outlook.

A number of artificial silk companies are now in a bad way. Their trouble is very largely due to the circumstances in which they were formed. Two factors helped them at the start, the facility of obtaining capital during the 1927-28 boom, and the existence of protective import duties, and both proved a snare. In 1927 there were already in existence enough companies to supply all and more of the artificial silk trade of this country, both for home consumption and for export. Indeed the demand could have been met by the three big companies, Courtauld, British Celanese and British Enka. Besides this other efficient companies, such as Harbens and Branstons were also in existence. The creation between December, 1927, and November 1928, of nine more companies with a capitalisation of over £8½ million was economic folly. The market price of the shares of these nine companies has now fallen to less than £2 million.

None of the nine companies has yet declared a profit. Innumerable excuses have been offered, but the fact remains that they are not likely to make a profit for some years to come. Artificial silk prices have been falling, and if one of the big companies were to make a further serious cut in prices may of the smaller ones would very quickly go to the wall. The removal of the artificial silk duty, if it takes place next May, would probably have this effect. For 1929, artificial silk production amounted to 56,900,000 lb., a substantial increase over last year's 54,240,000 lb. The excess of supply over production for 1929 was 380,000 lb., but with a surplus of 1,650,000 lb. at the end of 1928 very heavy stocks are still on hand depressing the market. In the circumstances it is hardly necessary to remind investors to confine their attention to the leading companies, such as those named above, and of these perhaps only Courtaulds, although their profits, too, may be expected to be lower this year, can be recommended with confidence. Courtaulds ordinary shares yield £6 18s. per cent.

Directors' Remuneration.

Once again a meeting of John Barker and Co., Ltd., the well-known London store company, has been the occasion of a long and acrimonious discussion of the method of payment of the directors. The directors of this concern are remunerated by a commission on turnover, and the amount paid in this way has never been disclosed to the shareholders. The new companies' legislation requires the publication of amounts paid to directors, but not of payment made to managing directors. Barkers, therefore, propose to make all those directors who are in charge of departments managing directors, thus continuing to conceal their remuneration. This proposal was carried by an overwhelming majority, but one or two shareholders crticised both the intention of avoiding publication of the sums paid, and the payment of a commission on turnover rather than on profits. While it must be recognised that the prosperous record of this company is evidence of the loyalty and efficiency of its directorate, the arguments of the dissentient shareholders are sound in principle. It is quite true that an adequate salary must be paid to retain good men, but their worth to the owners of the business is reflected in the profits earned rather than in the turnover. Still more is it undeniable that shareholders have the right to know what payments are being made on their behalf to the directors.

BANQUE FRANCO-BELGE ET BALKANIQUE

Joint Stock Company

Capital - Leva 150,000,000 fully paid up.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended January 25.

Grain.—There is practically no change to report in the position, business remaining stagnant owing to low prices and lack of demand abroad, and merchants are constantly finding it exceedingly difficult to effect sales either from the Danube or Constantza. A small prompt vessel has been fixed to load grain at Sulina for Piræus at 9s. 6d. per unit, but otherwise the only movement has been confined to the fulfilment of old engagements. Some of the more important shippers are reported to have been covering their tonnage requirements for spring business, and it is stated that half a dozen steamers have been fixed at about 17s. full terms for the Antwerp/Hamburg range, with full U.K. and Danish and Scandinavian options.

Timber.—Owing to lack of snow, work in the forests proceeds with difficulty, and if there is no change in this respect, there may be a shortage of timber in the spring. Meanwhile important sales have been effected for the coming season, mostly to Greece, Alexandria and Italy, but no activity is noticeable for German and French markets. Several steamers are loading small parcels at Constantza, but no freight engagements of any importance are reported this week.

Weather.—The weather continues to be very dry with intervals of bright sunshine. It became colder at the beginning of the week, and the thermometer showed minima of 10 to 15 Centigrade on Wednesday, January 22, in the greater part of the country, but these low temperatures did not last except in the northern and more elevated parts. Though the autumn sowings are mostly not protected by a snow covering, no damage has been reported so far. In the lower Danube region, though it has been colder than hitherto, the frost has been much milder than elsewhere. There was a certain amount of very thin, almost invisible, ice, in the river on the 22nd, but this has since disappeared and in any case was not sufficient to hinder the local ferry boats which are practically the only craft navigating here at present. The temperature here during the last two days has oscillated closely around freezing point, and to-day it is very mild with a strong wind from the south-west. The barometer has fallen considerably during the day.

Sulina.—Bar depth remains at 24 feet and no reduction is anticipated although little dredging has been done recently owing to a heavy swell and occasional bad weather. The river minimum is also 24 feet up to Braila.

Constantza.—Arrivals of grain from the interior aggregated about 7,500 tons, and approximately 11,000 tons were exported during the week mostly to the Weser and Hamburg. Eight vessels loaded nearly 24,000 tons petroleum products, and two were supplied with oil fuel for bunkers.

Bulgarian Report.

Bourgas, January 18. Business has almost come to a standstill and grain shipped this week to Continental destinations, amounting to about 7,000 tons, has mostly been in fulfilment of old engagements.

The mild weather in the Bourgas and adjoining districts continued, but the temperature has dropped considerably since yesterday, the thermometer showing only a degree Centigrade above zero to-day. In the northern parts of the country a rise in the temperature has been registered, but in many places it remained below freezing point. The sky has been generally overcast, but no precipitations have been reported.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tuscania for Bombay (Birkenhead, February 10). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, February 10).

Bibby Line.—S.s. Yorkshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, February 19).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, February 8); s.s. Dumana for Bombay (London, February 15).

Cunard Line.—S.s. Bactria for Gibraltar, Malta, Calamata, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, February 20; Swansea, February 21; Liverpool, February 22); s.s. Bantria for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Gruz, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, and Ancona if sufficient inducement (Liverpool, February 15; Swansea, February 18).

Johnston Line.—S.s. Aviemore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 1).

P. and O. Line.—S.s. Padua for Calcutta (London, February 14); s.s. Razmak for Bombay (London, February 21).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, February 11).

Ellerman and Papayanni Lines.—S.s. Destro for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 8); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, February 13); s.s. Maronian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 15); s.s. Oporto for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, February 15; Swansea, February 15); s.s. Castilian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 1); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, March 1; Swansea, March 6); s.s. Manchurian for Gibraltar*, Algiers*, Oran*, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 8; Swansea*, March 8). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

ANCHOR LINE
LIVERPOOL TO BOMBAY.
KARACHI via Bombay, calling at Gibraltar and Egypt.
LARGE STEAMSHIPS, UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.
Indian Government Vouchers accepted.

Passenger sailing dates:—

¶†TUSCANIA ... Feb. 11 *†CASTALIA ... Mar. 12
*†CIRCASSIA ... Feb. 27 ¶‡BRITANNIA .. Mar. 27
¶ Leave Marseilles February 17 and April 3.
*First class passengers only. Specially low fares. †Calls Port Sudan
‡ First and Third class passengers.

T.S.S. TUSCANIA 17,000 tons leaves LIVERPOOL Feb 11. MARSEILLES Feb. 17. Carrying FIRST Class and THIRD Cabin passengers.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

The islands of Psara and Antispara, in the Ægean Sea, 15 miles to the west of Chios, have been shaken by an earthquake, which has done considerable damage.

H.M. Consul-General at Constantinople last week reported that all ships arriving in Turkey from Basrah will be subjected to medical inspection.

The League of Nations Financial Committee has approved the terms of a convention between the Greek Government and the Greek Refugee Settlement Commission concluded with a view to winding up that organisation on December 31, 1930.

It is estimated that the total crude oil output of the Roumanian fields during 1929 was in the neighbourhood of 4,860,000 tons, as against 4,192,882 tons for the preceding 12 months. The exports for the past year amounted to 2,770,000 tons, as against 2,341,000 tons for 1928.

The new Turkestan-Siberia railway, which is over 900 miles long, and which runs from Semipalatinsk to a point on the Tashkent railway, will be opened on May 1, which is three months earlier than was originally planned. About 700 miles of the line are already in use. The new line connects the cotton area of Central Asia with the corn, timber, and coal producing areas of Siberia, and at the same time opens an immense territory. It was begun in 1926.

Engineering Topics

(By Our Engineering Correspondent)

Road Construction.

There are a number of engineers interested in highway construction who are not viewing with favour the suggestions which have been put forward for the standardisation of the principal roads in this country. They hold, not so much that the time is not yet ripe for that measure, but that it is, and always will be, impracticable. The practical difficulties in the way are too great and too financially serious in their opinion; local considerations are generally unfavourable, and if the public once get it into its head that the country is to be covered with a network of roads all exactly alike, of the same width and surface, all as straight as they can be planned and all alike in their chief characteristics, it will speak with no uncertain voice against the proposals.

After all, it is not easy to see what would be gained by the adoption of the idea. If the suggestion was that road traffic loads should be classified into grades of tons per mile-hour, and road widths and surfaces graded accordingly, it might be received with more favour, although even that suggestion would be open to the objection that road loads varied seasonally and fluctuated according to conditions which could not be foreseen. At present we have certain road sections which are very heavily loaded, and the question is asked as to whether those sections are to set the standard for width, foundations and surface. If so, it would be wasteful and inefficient to specify similar width, foundation and surface for roads that did not carry anything like the amount of traffic. On the other hand, those who are in favour of the idea say that as yet no universal specifications have been laid down so that we find in many places a single stretch of road under the supervision and in the care of as many as, in some instances, a dozen authorities, all of whom have their own ideas and their own methods.

Of course, if anything like unanimity can be arrived at and any steps taken in the matter, such unanimity ought to be arrived at with as little delay as possible, as during the next few months commitments for large sums for road purposes will be voted by county councils and municipalities. The time would seem to be opportune for the Institution of Municipal and County Engineers to meet and discuss the matter with a view to arriving at an early decision as to what is to be done.

A Road Authority.

Interviewed on the subject, a well-known road engineer told the writer that he thought it was time that some central road authority, other than the Ministry of Transport, which would deal with road use rather than road construction, should be set up. The first duties of such an authority would be to collect information of any and every kind that was relevant to the subject, which would be sifted, arranged and brought into suitable form for the information of all, road engineers and public works' contractors alike, who were interested in road work. The ultimate duty of this authority would be, first to advise and then to see that all roads connecting the big commercial centres were made of standard materials, with a uniform camber, of similar width and with a surface most suitable for the probable traffic density.

Standard Lighting.

There is one point in regard to this suggestion which might be brought into effect immediately, with great advantage. That is the standardisation of road lighting. As matters are at present, road lighting is a matter for the various administrative bodies connected with the roads and depends largely on their financial state and on, to a lesser degree, the opinions of the engineers concerned. As a result we have not only a chaotic but a dangerously chaotic state of affairs as regards road lighting, ranging from lighting as bright as that on the Thames Embankment to the zero state where the only illumination is that given by the moon or stars. What is wanted and what should not be difficult to arrange is a uniform system of lamps throwing a soft and diffused light over a wide area. There is no particular need for brilliance—special lighting could always be arranged for dangerous places—but there is need for uniformity.

Another matter to which the attention of everyone concerned should be directed at the earliest moment is that of selecting and adopting a uniform system of lighting street and road obstructions. At present that vitally important matter is largely left to the discretion of municipal and road contractors' foremen and gangers. Each of them is a law unto himself, and whilst one will string red lamps about until the fairway reminds one of a nightmare avenue of chemists' shops, another will be so parsimoniously inclined that he will content himself with one at either end of a big obstruction. A further point is that all obstructions should be marked from the point of view of an approaching car. If the obstruction is on the left of the road any obstruction should be marked with a red light at the point nearest the centre of the road. If, on the other hand—and this is a matter of vital importance and one that is almost uniformly neglected—the obstruction should be on the right of the road, the point nearest the centre should be marked with a bright white light, red being used as and if necessary at other points further along. To the motorist a red light on a road means the tail lamps of some vehicle which he must pass on the right hand side, and if he assumes that a red light which is placed near the outside edge of an obstruction on the right hand side of the road is a tail light, then he, without slackening speed, steers to pass it on the outside and finds, perhaps, when it is too late to do anything more than jamb on the brakes and pray, that he is steering straight into a pile of drain pipes or a cavity big enough to bury him and his car.

In just the same way, an obstruction on the left hand side of the road, which has a red light to mark the point

nearest the centre should have its lighting system terminated with a white light, a precaution which is seldom or never taken. Further, there should be some relation between the size and/or number of the warning lights, and the size or dangerous character of the obstruction. Instead of which we find that here again every authority concerned decides for itself as to what is to be done, and, as a result, the road user finds that in places such as London where at night the streets are lighted so brilliantly that a newpaper can be read, even the most trifling and easily seen obstruction is lighted up like a carnival; whilst in some parts of the country a landslide that has carried away a few hundred tons of road is lighted up by a couple of smoky paraffin lamps, one at either end. Before worrying about standard surfaces and widths for roads, let us have standard road lighting; it will not only be cheaper and more popular but will be a good deal more useful.

An Important Contract.

The electrical equipment which the Metropolitan-Vickers Company are supplying for the new steel rolling mill of the Whitehead Iron and Steel Co., and which is to be the largest in the world, comprises six rolling mill drives, one of 1,500 h.p., and five of 700 h.p. In addition there are two 1,500 kilowatt rotary converters to provide a supply of continuous current energy to the mill motors. The big contract includes also the necessary starters and switchgear, the transformers for the rotary converters and all the high and low tension accessories. The contract for the building has been secured by Davy Bros., of Sheffield, and the mill is known as a 14 in., 12 in., semi-continuous merchant mill of the Morgan type. The intention is that it shall produce, in addition to the usual merchant sections, a number of other semi-finished and finished products including sheets, bars and rods.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date January 31:—

Currants.

Greek.—We entered the New Year full of hope that an early resumption of activity would be witnessed, our belief being based upon the knowledge that buyers were carrying small stocks. January is usually characterised by extreme quietude. In the early days buying continued on a very small scale, and it was expected that as the month progressed normal trading would be resumed. Unfortunately the apathy of buyers continued, as they were undoubtedly apprehensive of prices declining, and it is questionable if we have ever experienced such pronounced stagnation as at present, traders being unable to find a single redeeming or encouraging feature. With this continued activity it was natural that holders exhibited some signs of restlessness and anxiety to sell, and prices all round showed a slight decline. However, taking all the facts into consideration, the reduction is very slight, showing the underlying strength of the position and that the market would quickly respond to a renewal of interest. The little business passing has been in Pyrgos at 37s. 6d., Amalias at 39s., Patras at 41s. to 43s., Zante at 41s. to 42s., Gulf at 44s. to 52s., and Vostizza at 54s. to 60s. During the period under review s.s. Oporto brought 80 tons and s.s. Bantria 240 tons. Clearances to December 31, 7,985 tons. Quotations are:—Pyrgos, 37s. 6d.; Amalias and Patras, 39s. to 43s.; Zante, 41s. to 42s.; Gulf, 44s. to 52s.; Vostizza, 52s. to 60s.

Sultanas.

Smyrna.—The market has shown no more life than it did towards the close of last month and idle conditions prevailed, business being practically at a standstill. Quotations are:—Rain damaged, 28s. to 30s.; Fair, 40s. to 44s.; Good, 50s. to 58s.; Cretan, finest, 65s. to 70.; Lower, 38s. to 50s.

Greeks.—Slow sale, Bold fruit, 40s. to 62s.; Smalls, 50s. to 54s.

Figs.

Sales were: large boxes, 32s. to 40s.; small boxes, 45s. Bags, Genuines, 32s. to 36s.

NEAR EAST MARKET REPORTS.

Barclays Bank (Dominion, Colonial, and Overseas) have issued the following cabled reports:—

The Sudan.

Khartoum, January 16.

Markets generally exhibit a weaker tendency. Large stocks and a poor demand have forced local prices for sesame down to £E13 for White and £E12½ Red f.o.r Port Sudan, and for groundnuts to £E8½. Piece-goods remain firm, with an advancing tendency, following a brisk demand and sales. The gum situation has been unsatisfactory and the promise of good crops indicated by early arrivals is not being fulfilled. With regard to the cotton crop, the estimated yield of the Gezira Sakel cotton has fallen by 53,000 kantars to 522,000 kantars from an area of 174,000 feddans.

Palestine.

Jerusalem, January 15.

The general situation is unchanged. The orange market has been disappointing, although prices rose to 18s. per case. The latest prices realised in the United Kingdom range between 4s. and 16s. per case, the average being about 11s. The abundance of the olive crop has been offset by low prices, in sympathy with the situation in other countries. Business in woollens has been satisfactory, and there has been an active demand for cotton goods. Prices for cereals remain unchanged and a further fall is not thought likely.

The Cairo offices of the General Assurance Corporation have been removed to larger offices at Baehler's Savoy Buildings, Sharia Soliman Pasha, owing to the expansion of business.

Mr. Walter Osborne Stevenson, foreign general manager of Barclays Bank, Ltd., has been elected a Director of Barclays Bank (Dominion, Colonial and Overseas).

M. Buroff, Bulgarian Minister for Foreign Affairs, has expressed to the Ministers of Great Britain, France, and Italy the deep gratitude of Bulgaria for the help given by their Governments to the Bulgarian Delegation in the reparations settlement.

Dr. Shiels (Under-Secretary for the Colonies), replying in the House of Commons on January 29 to Lieut.-Colonel Howard Bury (C., Chelmsford), who asked whether the Dead Sea Concessions agreement had been signed and ratified, said the transaction had been completed. A deed was signed on January 1, he added, granting the Concession to Palestine Potash, Ltd., a company formed by Mr. Novomeysky and Major Tulloch for this purpose. The concession was on the lines of the heads of agreement printed in a White Paper.

Company Meetings.

WESTMINSTER BANK.

Higher Profits.

British Monetary and Financial System.

Pre-eminent Position.

Address of Mr. R. Hugh Tennant.

The annual general meeting of the Westminster Bank was held on January 29 at the head office, Lothbury, E.C. Mr. R. Hugh Tennant (Chairman) presided.

The Chairman, having reviewed the balance-sheet, said that the profits for the year were £2,160,000, some £12,000 higher than those of the previous year. After reserving £1,356,000 for the payment of a dividend similar to that of 1928, they allocated £250,000 to bank premises, £200,000 to officers' pensions fund, as in former years, £400,000 to contingent fund, leaving £506,000 to be carried forward, or about £45,000 less than the amount brought in.

The Chairman then commented briefly on the unparalleled frauds and forgeries committed by Hatry and his associates, whereby banks and financial institutions had been victimised.

He said the advances made by the Bank had in each case been granted for a perfectly legitimate purpose, and that the securities deposited as cover therefor would, in the absence of fraud and misrepresentation, have proved more than sufficient for their purpose.

He further stated that the Bank had provided fully for any possible losses it might make, and, despite the troublous times experienced, had been able to deal with this unfortunate affair without encroaching on its contingent fund, which was now larger than it was a year ago.

The Chairman then reviewed at length the broader aspects of the present economic position of the country, observing that of British industry, as a whole, it might be claimed that, if no spectacular progress had been made in the past year, at least the trend had been in the right direction with the exception of the cotton trade. Commenting in detail on the leading staple industries of the country, he remarked that the review revealed many tendencies which might justly be regarded as matters for congratulations.

Iron and Steel.

In spite of all handicaps—and it would be foolish to belittle them—the iron and steel industries were putting up a good fight. In 1929 some progress was made, and markets were being extended both at home and overseas; 1930 opened, therefore, with a degree of sober optimism.

So far as the production of pig-iron and steel was concerned, last year's figures were the best for many years past. Further, it was encouraging to note that while world production of those items showed increases of 11½ per cent. and 11 per cent. respectively, the figures for the United Kingdom were somewhat higher, at 15 per cent. and 13 per cent. Even so, they were working at much below their full capacity—at about 65 per cent. in the case of pig-iron, and 5 per cent. in the case of steel. A most serious factor had been the considerable increases in cost of the raw materials—ore and coke—which were several shillings in advance of last year's prices.

Despite the increased activity, the financial results of most of the leading iron and steel companies had been insufficient to yield any dividend on their Ordinary shares. This was in marked contrast with the position on the Continent, where dividends had usually been distributed on an increased scale. Another significant point was the ability of the Continental rivals to provide out of revenue for extensions and renewals, whereas at home sufficient profits were not being earned to enable any such allocation to be made. Rationalisation proceeded but slowly here as compared with abroad, where lower wages, lower overhead charges, and lower taxation operated so advantageously.

Shipping Depression.

After a not unpromising start the shipping trade was overtaken by serious depression in the later months of the year, attributable mainly to the decline in shipments of wheat, actual and prospective, from the New World to the Old. This falling-off arose from the relatively large harvests in Europe and the much less satisfactory yields obtained in the great wheat-growing areas overseas. At the same time it was difficult to avoid the conclusion that the supply of the world's tonnage was still largely in excess of effective demand. To this condition was due, in the long run, the disparity which existed in many cases between the price of shipping facilities and those of other commodities and services, as judged by pre-War standards.

Outside the domain of industry the year's outstanding achievements were the formulation of arrangements for the final removal of the German reparations question from the dangerous sphere of politics to the more appropriate field of finance and the liquidation of other outstanding international legacies of the Great War.

Excessive Speculative Movements.

He had purposely refrained from alluding until now to a factor which had proved more particularly reassuring to the city of London—the success with which the financial machinery of this country had withstood a period of the gravest international stress and strain. He need not here recount the various stages of the phenomenal speculative movement in security values in the United States of America, and its reflexion, on a smaller scale, on Stock Exchange conditions in every European country. Nor did he propose to dwell upon the causes of the catastrophic break in Wall Street prices last autumn, when American industrial shares lost, on the average, from one-third to one-half of their "paper" values within the space of a few days. The effects of such a movement must necessarily be widespread. British investors had, in their turn, suffered serious loss during the costly though less spectacular Stock Exchange reaction here, which incidentally began at a much earlier date than in America. The numerous failures associated with new and speculative concerns or with particular financiers, had been a disquieting feature of the year's history. But while frankly facing this situation, let them not fail to recognise the important fact that, on the whole, London had emerged very creditably from a most trying ordeal.

London as an International Money Centre.

The course of affairs in the sphere of international finance, and the part played by London as an international monetary centre during the past very difficult year, formed a topic of such outstanding interest, not merely to the banker but to the whole world of business, that he proposed to select that as the main theme of his address. There were two main reasons why he did so. In the first place, it was no exaggeration to say that the year 1920 had been the most critical and testing period for London's position as an international money centre since the outbreak of the Great War. Secondly, the very fact of the strain placed upon London by her successful efforts to maintain that position, had given rise in certain quarters to a complaint and to a questioning—a complaint that the interests of British industrial production and trade were being sacrificed in order to maintain London's international position, and a questioning whether the maintenance of that position was sufficiently important to make such supposed sacrifice worth while.

Demands for Gold.

The fundamental cause of the strain to which the money markets of the world were subjected last year must be sought on the other side of the Atlantic. Mr. Tennant then commented in detail upon the persistent demands during the year under review for funds from all monetary centres to finance the speculation in America, with the repeated advances in our Bank Rate. Then came the relief of the tension, the bubble of speculation in America and Europe burst, followed by the rapid reduction of the Bank Rate here. Wall Street ceased to act as a magnet, and the Bank of England was quickly able to reduce its rate by successive stages to 5 per cent. Nevertheless, it was some evidence of the strain through which London passed that the Bank of England gold reserve, although only £7 millions lower on December 31 than on January 1, 1929, had in the meantime fluctuated by as much as £34 millions, from the highest point, reached in June, to the lowest, in October.

Contributions to National Income.

Having shown in detail from official sources that the contributions made by London's financial business to the national income and wealth of the country had been estimated for the years 1926, 1927, and 1928 (the latest available) at over £60 millions in our favour, he went on to indicate the various directions in which this country immensely benefited through London as an international financial centre. If we were to awaken to-morrow and find that London had ceased to function as an international centre, it was clear that we should have to face a situation in which British trade and the national wealth would be very much worse off than they were at present. The figures that he had given suggested the scope of the definite losses which would be involved. Was it possible that there could result for British industry any compensating gain?

Critics' Proposals Analysed.

It was, of course, utterly inconceivable that London should suddenly abandon her international business, but there were some who appeared to think that those who guided our monetary and credit system should concentrate their resources more in the development of British industry, and less in international finance. But it was never quite clear what precise measures critics of the present system would suggest. Having mentioned the various proposals of the critics of the present system, he said that, in spite of the abnormal conditions of the past year, London's position as an international centre was not only indispensable to the country's international balance-sheet, but was also of definite assistance both to overseas trade and to home industry, and that the present system could not be replaced by any other so far devised. Let them not suppose for that reason, he said, that any banker imagined that the system was perfect beyond all hope of improvement. Critics might rightly urge that the interests of domestic industry should always be kept to the forefront, especially in times when there was danger of over-lending abroad. They might urge, too, that money rates should not be changed more frequently than was absolutely inevitable, and that every effort should be made by co-operation among the central banks to avoid international competition for the world's supplies of gold. All those subjects would, he believed, receive the increasing attention of British bankers and, one could not doubt, would be among the important subjects discussed by the banking inquiry which had recently been set up by the Chancellor of the Exchequer. What that inquiry might recommend he did not venture to forecast, but of one thing he was certain, that their report would take due cognisance of the vast importance to this country of the City of London's international functions, and of the necessity to our economic well-being of maintaining her world-wide credit and prestige.

The report and accounts were adopted and other formal business transacted.

CREDIT FONCIER EGYPTIEN.

Egypt's Financial Position.

The following is a translation of the report of the Credit Foncier Egyptien, which was presented to the shareholders at the annual general meeting, held at Cairo on January 15:—

In conformity with Article 36 of our statutes we have the honour to present to you the account of the results of the past year, ended October 31, 1929.

The cotton season opened in September, 1928, with prices ranging from 34 to 37 talaris. The rates were maintained and even reached 38 talaris in December and January. They subsequently declined, especially from April onwards, and closed in August at about 33 talaris. These prices were based on an abundant crop, which exceeded eight million kantars, giving a satisfactory return and leaving only a small stock over, about equal to the previous carry-over. The crop of 1929, the consistency of which appeared similar to that of last year, suffered from a rapid fall in prices. The October prices fell below 30 talaris, and in November 27¾ talaris were quoted. The Egyptian Government deemed it opportune to intervene at that juncture and to purchase Sakellaridis at 27 talaris and Ashmouni at 19 talaris. On December 27, 1929, the arrivals, exports and stocks of cotton compared as follows with the corresponding totals of the previous year:—

	Arrivals. Kantars.	Exports. Kantars.	Stocks. Kantars.
December 27, 1929 ...	4,780,692 ...	2,722,017 ...	3,222,898
December 27, 1928 ...	5,413,629 ...	3,011,880 ...	3,554,978

It will be seen that despite a shrinkage of 632,937 kantars in the arrivals at Alexandria, due partly to the delay in the crop, the decrease in the exports was only 289,863 kantars.

The stock market has followed an almost parallel course to that of cotton. The particulars given in an annex enable the extent of this movement to be gauged. The fall in Egyptian securities took place in successive stages, brought about first by the fall in cotton, then by the raising of the rate of discount in London and by developments in America as well as by the poor tendency persisting in the foreign markets. The publication of the proposals for an Anglo-Egyptian agreement and the controversy occasioned by this project have resulted in some sales of shares, with the result that the depreciation of the shares of the leading Egyptian companies is in striking contrast at present with the strong position these companies have acquired as the consequence of a long and persevering effort. It behoves the new Government, the advent of which coincides with the return of Parliament, to dispel this unfavourable atmosphere and to improve the general conditions of credit by encouraging the recovery of the Bourse and of business.

MICA AND ALL ELECTRICAL INSULATING MATERIALS

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

The realisations of shares which we have carried out for the needs of our treasury have been effected in conditions still advantageous, and our portfolio shows, by comparison with the cost price, an appreciable profit. We have redeemed during the year 26,326 bonds without prizes of our company. Allowing for the amortisations, our redemptions reached on October 31, 1929, the total of 386,015 shares.

The Budget.

The last official information regarding Government finances was provided by the Note of the Council of Ministers on the Budger proposals for 1929-30, dated May 13. The forecasts of the receipts were put at £E38,950,000, and the expenditure was estimated at £E47,410,000, the difference, £E8,460,000, having, by reason of its special character—it is due principally to public works—to be met from the general reserve, estimated at April 30, 1929, at nearly £E40,000,000. Possibly influenced by this important reserve, most of the credits of the current Budget show an increase on those of the previous year. The exceptional credits have concerned irrigation, drainage, communications, public health, roads, and buildings. The Finance Committee considered last May that if it took from the reserve fund the amount for a special reserve for cotton—which was definitely fixed at an amount of £E4,000,000 by the Decree Law of September 3, 1929—as well as the necessary credits for carrying out the programme, entailing an expenditure of £E24,000,000, to be spread over ten years from the Budget of 1929-30, for the extension of the barrages for the improvement or the bringing into cultivation of 1,150,000 feddans, the Government would only have at its disposal sufficient resources to meet the expenditure on irrigation already asked for by the Ministry of Public Works and without taking account of the numerous projects under examination. So the Government has considered, after the denunciation of the existing commercial treaties with various Powers, an increase in the Customs duties, from which it counts upon an increase in the annual receipts of about three million pounds, which ought to permit the establishment of a system of protection under which it will be possible to develop or to establish local industries.

This extensive programme is inspired by the need for meeting the requirements of a population which increases at the rate of 150,000 persons a year. The development of vast uncultivated tracts raises serious questions which must be solved in the light of experience which teaches notably that the small proprietor is the product of a slow evolution and cannot be improvised. For the satisfactory outcome of such an enterprise the financial effort of the Government ought to be accompanied by a parallel effort on the part of private capital under the direction of the companies which constitute the long-proved strength of the country and which have already contributed in such a large measure to its successful development.

Our mortgage business pursued its normal course last year. The totals in the following table will show the realisations and repayments in each of the last three years.

Amount of Current Loans.	Realisations.	Repayments.	Surplus.
	£E	£E	£E	£E
October 31, 1926	16,860,359	2,075,676	1,845,824	229,852
October 31, 1927	17,090,211	2,177,932	1,974,333	203,599
October 31, 1928	17,293,810	2,734,160	2,365,971	368,178
October 31, 1929	17,661,999			

There is sometimes a tendency to consider the increase in the total of our mortgage loans as an unfavourable indication pointing to the difficulties of the landed proprietors. We would point out that our loans are frequently used to repay private loans at a higher rate of interest and that when the loans concern new construction they are an indication of the growing wealth of the country. Mortgage business is, on the other hand, maintained in a prosperous period by transactions concluded at high prices necessitating our intervention. The moderate rates for our loans may further induce certain proprietors to mortgage their properties either to avoid recourse to bank credits or to take an interest in investments which appear to them advantageous. That is what has taken place this year.

The impression which arises from the course of our mortgage business in recent months is that there has been nothing abnormal. We have certainly had to consolidate a total of arrears higher than that of the previous year. But compensation is forthcoming in the fact of the diminution of the arrears at the end of the year. We have, on the other hand, realised an amount of £E719,664 on urban loans, or 26.32 per cent. of the total of our loans.

The balance of the account for annual and half-yearly payments and interest due at October 31, 1928, was £E1,372,538. Adding the maturities of the year £E2,104,295, we obtain a total sum of £E3,476,833. At October 31, 1929, we had collected £E2,175,708. The amount of our arrears stood at £E1,301,035, a decrease of £E71,503 on the corresponding total at October 31, 1928.

The account of third party purchasers shows at the end of the year a balance of £E218,783, an increase of £E94,705 on that of October 31, 1928. The new business carried to this account in the course of the year stands at £E319,327, as against £E226,852 for the previous year. This increase is due to some expropriations of a certain importance.

Balance-sheet.

The principal feature of the balance-sheet which we submit to you is the conclusion of the amortisation of the premium on our bonds. As you know, our various issues, already old, have been placed below par. It was then necessary to make provision each year in the profit and loss account not only for the interest on the shares, but

Digitized by Google

also for the premiums on amortisations. This last provision was onerous. This year we have been able, by utilising the provision for the reduction of the premiums on bonds as well as various exceptional receipts, to amortise the premium on the 3½ per cent. bonds, as we had already done for the 3 and 4 per cents. Henceforward all our bonds will figure in the liabilities in the balance-sheet for their nominal value and not at their value at encashment, the premiums amortised having their counterpart in the assets in the balance-sheet. We have now reached an absolutely clear position with regard to these bonds, realising a definite economy, of which you have already been able to appreciate the happy results.

This important operation satisfactorily concluded, we considered that the increase of the two reserve accounts, entitled "Provision for the dividend on shares" and "Provision and reserve for contingencies," in conjunction with the old account for contingencies for risks on loans—the two constituted by appropriations on the 70 per cent. going to the shareholders—no longer called for the same measure of provision, and we have therefore allocated from the revenue of this year a sum which permits an increase by five piastres of the dividend on the shares. The balance left for the amortisation of the premium on the bonds has been transferred to the account for provision and reserve for contingencies, the total of which thus amounts to £E1,465,000.

The net profits of the year stand at £E1,726,209. The corresponding expenditure was £E934,797. The amount of distributable profit stands at £E791,412, enabling the allocation of P.T. 4,200 to the founders' shares, and, after the deduction for the credit of the ordinary shares of £E20,000 on the interest of the reserves constituted by the deductions on the 70 per cent. going to the shareholders, P.T. 160 to the ordinary shares, subject to deduction of French taxes, or P.T. 40 for the shares which circulate in France, or on which the coupon No. 55 has been paid in France. The founders' shares presented in France will be subject to the retention of the tax affecting uncompounded shares.

If you agree to these proposals the position of the various reserve and provision accounts will stand as follows on November 1, 1929:—Statutory reserve, £E1,278,087.942; extraordinary reserve, £E970,773.067; provision and reserve for sundry contingencies, £E1,465,000; provision for dividend on shares, £E286,501.719; total at November 1, 1929, £E4,000,362.728. For the accounts "Provision for the amortisation of bonds," £E2,358,480.878; "Provision for the service of drawings," £E350,391.141. We ask you to join us in thanking our staff for their entirely satisfactory work.

Resolutions of the Meeting.

The general meeting (1) approved the accounts for the year ended October 31, 1929; (2) adopted the division of profits proposed by the board of directors, and decided in consequence on (a) the distribution for the year on the 400,000 shares of a dividend of P.T. 160 per share, £E640,000; on the 2,000 founders' shares of P.T. 4,200 per share, £E84,000; (b) the allocation to the statutory reserve of £E55,996.208; to the board of directors, £E27,998.104; (c) to carry forward for the account of the ordinary shares, £E4,158.873; for the account of the founders' shares, £E215,334; total, £E812,368.519, representing the amount of the profits of the year and the sums brought forward from the previous year, as well as the allocation of £E20,000 to the ordinary shareholders, on the interest on the reserves constituted by the deductions on the 70 per cent. which goes to them; (3) decided that the dividend on the ordinary shares and on the founders' shares shall be payable at the date fixed by the board. The dividend on the ordionary shares will be payable in Paris and in London in sterling at the rates of exchange fixed by the board, less French taxes, which correspond to 8s. 2d. per coupon; in Cairo in piastres tarif less the same French taxes or P.T. 40 per coupon. There will be exempted from this retention coupons on shares which have not circulated in France since November 1, 1928, and of which the previous coupon has been paid out of France. The dividend on the founders' shares will be payable under deduction, for the shares liable to French taxes, of the tax on the revenues from uncompounded securities. (4) Re-elected in accordance with Articles 15 and 36 of the statutes as directors for five years, MM. E. Miriel, Ch. de Serionne, and M. Lascaris. (5) Confirmed, by virtue of Article 17 of the statutes, the nomination as director made provisionally by the Board, of S.E. Adly Pacha Yeghen. (6) Re-elected as auditor for one year, M. H. Boinet. (7) Elected as auditor for one year, M. L. Lefrère. These resolutions were carried unanimously.

M. Venizelos, Greek Prime Minister, returned to Athens on January 25 from The Hague, where he had been attending the Reparations Conference.

The cruiser Caledon left Malta last week for Ismailia to take part in the ceremony, performed on February 3, of unveiling the War Memorial erected by the Suez Canal Company.

The ceremony of laying the foundation stone of the new building of the Imperial Bank of Persia in Teheran was performed on January 9 by Taimour Tash, Minister of the Court. To this Minister's speech, Mr. Wilkinson, Manager of the Bank, replied. The plans of the building were draw up by Mr. A. Scott, of London, and are being executed under the direction of Mr. Cole.

Cotton and Cotton Goods.

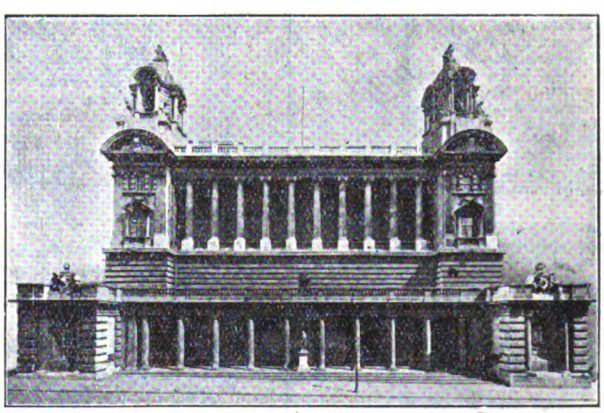
THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended January 29:—

Egyptian Futures.

Sakel Contract.—Since our last report, business in this market has run on similar lines to preceding weeks; operations continue to be restricted to unimportant transactions, and the daily fluctuations recorded have been confined to a few points. Just latterly, the declining tendency of the American markets has caused the development of an easier undertone, and caused a small amount of "long" cotton to be liquidated, as a result of which values show declines on the week of 7 points for near and 8 to 14 points for more distant positions. The final January tender in Alexandria only totalled 5,500 bringing the figure for the month up to 110,250 kantars. This is much below the quantity generally anticipated, and is no doubt due to the fixing of a premium on the next trading position. There is now talk of the stabilisation policy being extended to May at 28 dollars, if values of other cottons decline further. Uncertainty as regards the final result of these operations will become still more pronounced, especially should reports from fine spinning centres continue in their present pessimistic tone. The demand from the trade has been poor throughout the week, and sales of actual, either out of the local stock or for shipment from Egypt, have been on a reduced scale in comparison to the recent average. The position of our contract continues, and will probably continue, to have little inducement as a speculative medium for some time, and on this account we see no reason to advise commitments. The only factors that would cause a material change in the level would be a suspension of Government buying in Egypt on the one hand, or a sustained improvement in the trade demand on the other. As neither of these appear in the prospective, at the moment only very minor fluctuations are to be anticipated.

Upper Contract.—The offtake for the Upper varieties continues to be on a moderate scale, and this has been reflected in the contract position, where very little business has been transacted during the week. Some slight easing in prices has been witnessed, due mainly to the decline in American values. However, differences with Alexandria have worked down to the extent that further declines are improbable unless the Government revise their buying limits. The outstanding feature of the week has been some belated covering of the near positions in progress to-day, with the result that January/March have closed in to one point.



THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

The Greatest Spot Cotton Market in the World

MEMBERS OF THIS ASSOCIATION OFFER FACILITIES FOR THE SALE, PURCHASE AND FINANCE OF EVERY GROWTH OF COTTON.

Egyptian Spot.

Once again we have to report no improvement in the spot situation, and features of interest have been entirely lacking.

Sakels have attracted comparatively little attention. A moderate business has taken place in the lower and medium qualities, but cotton over Fully Good Fair in grade appears to have been neglected.

Uppers.—A limited business has taken place. The lower qualities, say, cotton at from 9½d. to 10d., have received rather more attention, and a limited inquiry for the 30 to 50 on cotton has been in evidence. The best grades have excited no interest.

Pilion has been in moderate request only, and tangible results have been few and far between.

Maarad, Fouadi, Nahda, etc.—Scarcely an inquiry has been met with.

Sudan Sakel.—Business in this growth has been stagnant. There is nothing to report so far regarding the new crop.

Tokar Sakel has remained neglected.

C.i.f. business.—It is always difficult to estimate this at our end, but we are inclined to describe it as moderate to fair. Forwardings amounted to 5,328 bales Egyptian and 1,658 bales Sudan. Spot sales estimated at 1,200 bales Egyptian and 50 bales Sudan. Quotations of Sakel have been reduced 15 points, those of Upper and Pilion 5 points. F.G.F. Sakel to-day, 14.40d. F.G.F. Upper to-day, 10.44d. F.G.F. Pilion to-day, 11.10d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 23, state:—Since our last report the futures market has been moderately active with insignificant changes in prices. The week's summary of price movements is as follows:—Sakellaridis: March, 27.71 dollars, 0.14 dollars down; May, 28.29 dollars, 0.09 dollars down; July, 28.75 dollars, 0.07 dollars down; November N.C., 29.10 dollars, 0.06 dollars up. Ashmouni: February, 19.12 dollars, 0.09 dollars down; April, 19.67 dollars, 0.08 dollars down; June, 20.09 dollars, 0.02 dollars down; August, 20.26 dollars, 0.05 dollars down; October N.C., 20.53 dollars, 0.05 dollars up; December N.C., 20.90 dollars.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Chemicals.—The Egyptian Government Assay Office invites tenders for the supply of "special chemicals for assay purposes." March 1. (D.O.T.)

Clothing, etc.—The Frontiers Administration, Ministry of War and Marine invites tenders for the supply of clothing, etc., required during the year 1930-1931. The contract is in two sections, one section, consisting of clothing and stores to be obtained by contract and the other of a list of clothing, quotations in respect of which are required for workmanship and lining only, the outer cloths to be furnished to the contractors by the Administration. March 11. (D.O.T.)

Liquid Asphalt "Bitumen."—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 900 tons of liquid asphalt "Bitumen," required for the year 1930-1931. April 12.

Why not visit

The SUDAN

this Winter?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

Anglo-Egyptian Negotiations.

The fate of the proffered terms for an Anglo-Egyptian treaty has been brought a stage nearer by the formal authorisation accorded to the Government of Nahas Pasha by the Egyptian Chamber to negotiate with the British Government "with a view to reaching an honourable and durable agreement." In asking for this authorisation Nahas Pasha said: "The Government is resolved, if you give it a mandate, to seize the opportunity of the presence in power of a British Government animated by a spirit of good understanding and friendship towards Egypt to negotiate with it on the proposals in the same spirit and with the same desire of good understanding and friendship in the hope of reaching an honourable and lasting agreement between the two countries." The negotiations, therefore, are to be "on the proposals." The request of certain deputies that the proposals should be discussed before the Government was authorised to negotiate was rejected by the Chamber; and, as they were not submitted to the electorate, of which between eighty and ninety per cent. is illiterate and would, in any case, have had only an inadequate, if any, knowledge of the proposed terms, Nahas Pasha, who, it is to be presumed, will shortly come to London for the negotiations, will be not better equipped than Mahmoud Pasha to satisfy the British Government that the treaty, if concluded, will be broad-based upon the national will. Nahas Pasha, however, has this advantage over his predecessor, that he can speak on behalf of, and commit, the Egyptian Parliament. Whether this circumstance will lead to an alteration in the contemplated procedure remains to be seen.

Political Poker.

Writing to Mahmoud Pasha last August, Mr. Arthur Henderson stated that if the newly-elected Egyptian Parliament found in the proposals "a satisfactory basis for the future relations between our respective countries," the British Government would immediately submit the proposals to Parliament "with a view to the conclusion and ratification of a treaty carrying them into effect." His intention clearly was that he and Egypt's Prime Minister should meet for the conclusion of the definite treaty, with the assurance that each of them not only had the full support of his own Parliament, but was also provided with the virtual wording of the treaty, the proffered terms being not "a satisfactory basis" for further negotiations, but "a satisfactory basis for the future relations" of the two countries. In the place of any specific endorsement of the terms Nahas Pasha will be in the comfortable position of being able to do what he likes, with the knowledge that a Parliament and an electorate which have shown not the least desire to examine the proposals for a treaty can be relied upon to do as they are told when he returns. In these circumstances it is to be hoped that Mr. Henderson, confronted with a second Dictator, will not again be overcome by the democratic squeamishness that prompted him to disinfect himself, as it were, after conversations with the first Dictator, by insisting upon the solemn submission of several thousands of words to people who cannot read. His relations with his own Parliament may be more complicated. On the one hand, he will have the Egyptian Prime Minister anxious to convince the Egyptian people that the formal treaty is a marked advance on the terms offered to Mahmoud Pasha, and on the other hand he will have to satisfy a British House of Commons that, as the proposed terms were "the extreme limit" to which Mr. Henderson could recommend the British Government to go, what is a marked advance for the Egyptians is within the prescribed area as far as Great Britain is concerned. Another disadvantage under which the Foreign Secretary labours is that his original intention to allow Parliament to discuss the terms offered to Egypt with the knowledge that they had already been endorsed by the Egyptian Parliament goes by the board, as the Government of Nahas Pasha has vetoed their discussion in the Chamber, before their leader has had an opportunity of trying his powers of persuasion upon Mr. Henderson and the British Government. Consequently, it becomes a waste of time for the House of Commons to discuss the terms offered to Mahmoud Pasha, as it is not yet known whether Nahas Pasha will accept them, and by the time a treaty has been negotiated with Nahas Pasha the House will be discussing a *fait accompli*. By and short, the negotiating of an Anglo-Egyptian treaty now seems to call for poker players rather than politicians. The pity is that there are so many people looking at all the hands.

A Greek Challenge.

The saying that "when Greek meets Greek, then comes the tug of war," was not exemplified by the challenge thrown down by M. Kondylis, leader of the Greek National Republican Party, to M. Venizelos's Government. It will be recalled that M. Kondylis had written from France a letter criticising the Administration in such strong terms that two members of his Party who were in the Government found themselves obliged to resign their posts, and they then withdrew from the Party. In due course M. Kondylis returned to Greece and had his opportunity of elaborating before the Chamber his attack on the Government. The performance was not as effective as the preliminary rehearsal. His charges resolved themselves into an indictment of the economic crisis, bad administration and the defective functioning of justice; but he disclaimed either the power or the desire to blow any trumpet that could demolish the walls of the Government fortress. M. Venizelos had little difficulty in meeting such a half-hearted attack. In some respects he disarmed his adversary more effectively by his admissions than by his denials. He owned that the administration of justice in Greece was not ideal. In spite of political changes the judges had remained equal to their high mission; but, continued M. Venizelos, "when I recall that the Hatry crash occurred in September and that Hatry and his accomplices are already convicted, I cannot help reminding myself that, if this scandal had happened in Greece, it would have taken four or five years to settle the matter." The reason he found in the nation's bad habits. "I spend all my time," added the Prime Minister, "in bustling people." He admitted that he had not yet reduced the numbers of the Civil Service, as he would like to see them reduced. A thousand officers from the three services had been retired, and that was something. To M. Kondylis's complaint that the Government had destroyed the confidence of the people, M. Venizelos could only offer the debating point that he did not imagine that M. Kondylis's object was to increase that confidence. In his candid avowal, "you know how difficult it is for us to move quickly," the Greek Prime Minister almost touched a note of tragedy.

The Shah in Khuzistan.

Nothing is more admirable in the character of the Shah of Persia than his practice of visiting the outlying provinces of his vast Empire. His energy is unsurpassable. Now he is in Luristan, now in Azerbaijan, now in Khuzistan. It was this last province, which contains not only the southern end of the trans-Persian railway, but also the port of Khor Musa, which he went to see last month. What Riza Shah's impressions of this very important section of his State were we cannot guess, except to presume that his inspection of Khor Musa will have confirmed the impression, widely entertained by competent engineers, that there is the making of an excellent port. Upon the progress which is being made with the railway from Bandar Shapour northwards little information is as yet available: it seems possible, however, that the Shah's visit may be intended to result in a resolve to hasten matters towards its completion. Riza Shah stayed a fortnight in the South, during which time he visited not only Ahwaz but also Abadan (to see the A.P.O. Co's refineries) and Bandar Shapour. He appears to have been dogged by bad weather—the rains apparently made travelling difficult—though this fact can only have re-impressed upon him the necessity for making communcations better and surer. In any case, his personal presence in this region, which, with adjacent provinces, was slightly disaffected not very long ago, must have done considerable good.

A Turkish Holiday.

The Turkish Press has recently eclipsed all its previous achievements in the triumph of mind over matter in the attention that it has paid to a former Minister of Commerce, who is still a member of the Grand National Assembly. In fairness to the newspapers it may be mentioned that there have been one or two *causes célèbres* of late, "featuring," in the language of the cinema, highly-placed officials. There seemed, therefore, to be nothing inherently improbable in a statement that appeared in the Press to the effect that Ali Jenani Bey, ex-Minister of Commerce, had suddenly left Turkey without the usual passport formalities. In a very short time the Press of Angora and Constantinople warmed to its subject. A considerable amount of State funds, it was stated, had passed out of the country with Ali Jenani Bey, who had also relieved several of his friends of much ready money; no one knew where he had gone, but—in the same breath or paragraph—extradition proceedings had been set on foot to secure his return. Then came the news that he had been seen at Adana; a little later he was located at Mosul. Still more circumstantial was a letter written by the fugitive from Mosul, in which "he spoke of his life full of remorse and despair; he was an outcast, holding a revolver in one hand and in the other a dose of cocaine." Finally, as he had been absent for more than two months from the Grand National Assembly, Ali Jenani Bey was to be removed from the roll of deputies—the first to suffer the penalty for desertion. A brief interlude, without any further mention of the defaulting deputy, followed, and then the colourless announcement that Ali Jenani Bey had returned by rail to Turkey, coming from Syria. In due course, he arrived at Angora, where the journalists interviewed him, and learned that, having been in bad health, he had gone to Egypt to recuperate. There, on hearing what the Turkish papers were saying about him, he had felt obliged to break off his cure and return to his own country. At this point, apparently, the story ends. Ali Jenani Bey made it quite clear that he was peeved at the unkind things that had been written about him, but the supply of new Turkish characters must be supposed to have been exhausted before the word "libel" was reached, and the newspapers have again space available for the next scandal.

INDIAN NOTES.

After the Congress.

As was to be expected the demand which was made by the Lahore Congress for the resignation by the Swarajists of their seats in the Central and Provincial Legislatures has not been universally obeyed This fact is clear from the figures which were quoted by the Secretary of State in the House of Commons at the beginning of January. As regards the Central Legislature twenty-five of the thirty-four Congress members of the Assembly have resigned, and eight of the nine Congress members of the Council of State. The Provincial Legislatures exhibit marked differences. Of the seventeen Swarajists in the Central Provinces Council as many as sixteen have obeyed the Congress. In Bihar and Orissa also there has been a large response, thirty of the thirty-five Congress members having resigned. In Madras, on the other hand, only fifteen out of thirty-five have obeyed, and in Bombay seven out of sixteen. In Bengal the Congress creed is of course notoriously popular, the number of Swarajist members of Council being as many as forty-seven. Of these, thirty-eight have resigned; and it is said that the beneficial effect of their action is already being felt in the province. Co-operators are being elected to replace them, and the majority of these new members are men of substance and education. Except in Bengal and the Central Provinces the Congress party has made very little, if any, headway in its avowed policy of wrecking the Councils from the inside.

TURKEY'S FINANCIAL DIFFICULTIES.

It is to be hoped that the Turkish Government, in its own interests and in those of the young Republic, will not carry into effect the intention with which it has been credited of applying for a moratorium in respect of its foreign debts. The mere contemplation on its part of such a proceeding calls attention to the weak spot in the fabric of new Turkey—the lack of sound economic instincts and of any real knowledge of the importance of finance in the building up of a State. Only at the end of 1928, was an agreement, reached after years of negotiations with foreign bondholders, for the settlement of Turkey's share of the Ottoman Public Debt, ratified by the Grand National Assembly. Until that year the general attitude of the Angora Government appeared to have been that it was indifferent to all questions of moral obligation in the matter of the country's public debt, and that, if it were able to build up the Republic without recourse to financial assistance from abroad, it would disclaim all liability in respect of the old Ottoman Debt. Gradually experience in the ramifications of the business of administering a modern State brought home to the rulers of Turkey that the country could not proceed far along the path designed for it without foreign assistance, and it may be supposed that the Government's object in coming to an agreement with Turkey's creditors was to secure the re-establishment of such credit as she previously enjoyed under the old régime. The spirit in which the negotiations were conducted, however, as well as the reservations made by the Grand National Assembly when ratifying the agreement, showed that there was no genuine appreciation of the benefits that Turkey had derived from an autonomous and efficient Debt Administration in effective control of her finances, or of the essential part played in international credit by the establishment of mutual confidence. In their dealings with the foreign bondholders the Turkish authorities seemed more concerned to establish their own reputation for hard bargaining than to achieve the purpose that had driven them to bargain. Only a long period of the most punctilious fulfilment of the terms of the agreement would serve to remove the unsatisfactory impression conveyed abroad by the course of the negotiations, but now within a year of the payment of the first coupon under the new Contract the Angora Government is found to be coquetting with the idea of applying for a moratorium.

In fairness to the Turkish Government, it must be noted that the suggestion is to apply for a moratorium, and not, as might well have been the case a few years ago, to announce curtly a suspension of debt payments. To this extent there has been a notable improvement. It is far better for Turkey that the real reason for the country's financial and economic difficulties should be sought in the financial and economic inexperience of those who are in charge of her destinies than in any fixed resolve on their part to ride roughshod over all principles of international dealing and permanently to flout foreign opinion. After all, it is no longer possible to disguise the serious economic straits in which Turkey finds herself. Both in the country and abroad there may be a tendency to lose sight of the hard facts of the case in the glamour of the heroic efforts now being made by the whole Turkish people to extricate itself from its difficulties. The economy campaign is being carried out with all the thoroughness that has come to be associated with national movements in modern Turkey, whether for the abolition of the fez or for the introduction of Latin characters for the Turkish alphabet. National retrenchment is being spontaneously adopted in a spirit that does credit to the people, and that ought to inspire its rulers all the more with a determination that the valuable asset which the Republic has in the Turkish national character and grit shall not be squandered by sheer mismanagement born of inexperience. The hard facts of the case, however, are that within a year of announcing its ability to meet its foreign obligations, the Turkish Government is confronted with the prospect of being unable to do so. There has been no serious intervention of conditions beyond its own control. Drought in Anatolia and bad harvests have to be reckoned with by any Turkish Government until something has been done for the irrigation of that plateau; the policy of spending two-fifths of the national revenue on the Army and Gendarmerie is pursued deliberately apart from any circumstances in the international situation that can be described as compelling or even justifying the disproportionate outlay. So strongly are economic fallacies rooted in the Turkish mind that during the recent depreciation of the Turkish exchange it was the custom to refer to the fluctuations of the English pound, and the misguided public was invited to see in the collapse of Turkey's fiscal policy some subtle exercise of foreign ill-will acting through the pound sterling to innocent Turkey's detriment. The Turks are encouraged to regard themselves as a financially beleaguered people surrounded by enemies, whose machinations have to be defeated by isolated sallies, now in one direction, now in another; whereas, in point of fact, peace and good will reign throughout this financial world, and the Turks have shut themselves in a fortress which the Government is trying to convince them, while they starve, is wholly independent of supplies from without.

Economic salvation is not to be won in Turkey by the substitution of linden tea for coffee, or by a still more comprehensive economy campaign. It is well that the nation should set its face against luxury, but what is needed above all is an expert study of the whole economic situation and the adoption of a sound fiscal policy based on the needs and actual resources of the country. The course of events during the last five years has proved conclusively that the necessary expert knowledge is not to be found in Turkey itself; it must, therefore, be sought abroad. The Angora Government is understood to have been afraid of having Turkey back again in the position in which the Ottoman Empire was under the Ottoman Public Debt Administration, yet the financial control thus imposed on the Turks was the inevitable outcome of the failure to meet the State's obligations, and is likely to follow any fresh default, whether Turkey is a monarchy or a republic. On the other hand, no stigma attaches to the voluntary adoption of foreign control in the interests of the country. It is no reflexion on the Turkish people that they should look to the more advanced nations of the West for expert advice in one or more departments of modern statecraft, in order to bring the Republic within the shortest possible time up to Western standards. Such a course of action, it would be thought, is dictated both by the interests of the present Government in Angora and by the higher interests of the State as a whole. If Fascism fails in Italy, its collapse will have been brought about as much by economic stress as by any inherent unsuitability to present-day conditions. It may be doubted whether the system created by Mustapha Kemal Pasha can continue indefinitely to command the support of the people if it is to lead the country to bankruptcy. No nation responds more readily to discipline than the Turkish, and it will be unfortunate if this characteristic and the material resources of the land are to be squandered from lack of properly applied knowledge.

From Our Own Correspondents.

TURKEY.

Constantinople, January 29.

The Petroleum Monopoly and the City Prefecture.

When the State Monopoly for petroleum was established some two years ago, stocks in the hands of wholesale houses were taken over by the Monopoly at a valuation. Among these stocks, there were absorbed by the State Department all the petroleum and benzine stored in the depots of the Prefecture of the City situated at Chiboukli on the Bosphorus. When the time came for retailing the goods purchased from the Prefecture, the officials of the Monopoly were amazed to find benzine can after benzine can completely empty. A survey of the whole stock brought to light the unpleasant and disconcerting fact that there was not so much as a solitary pint of benzine in the Prefecture's store. The day and night watchmen attached to the establishment, at an inquiry which was immediately instituted, maintained that the benzine must have disappeared by evaporation, as the cans, to their certain knowledge, had not been tampered with by a living soul. The Monopoly objected that, whilst evaporation might conceivably account for a certain amount of loss within a given period, a 100 per cent. shrinkage must obviously be attributed to human agencies.

The incident, like so many other inter-departmental imbroglios which have arisen since the various State Monopolies were set up, has led the disputants into the Law Courts. The technical aspect of the proceedings has so greatly puzzled the learned Bench that, in the interests of justice, a call is to be made for outside expert advice which, it is anticipated, will be sought for among the ranks of the local officials of the Standard Oil Company of New York, the Russian "Nephtsyndicat" and the technical staff of the leading merchant dealing in petrol and its by-products on this market, who, curiously enough, happens to be a Greek.

The damages claimed by the Monopoly from the Prefecture amount to close upon £T100,000.

Employment Bureaux for Domestic Servants.

The local demand for men servants, cooks, waiting-maids, housemaids, nurserymaids *et hoc genus omne*, generally exceeded the supply even in those good old pre-War days when, though wages were paid in golden liras, the cost of living was relatively low, when fowls could be purchased or about tenpence and turkeys for about half a crown. Such a combination as a Turkish servant, either male or female, working in a Christian household was never dreamed of. Christian servants, both Armenian and Greek, were occasionally to be met with in Turkish homes where, as a general rule, they were well treated.

Curiously enough, the best type of female servant, whether nurse, ("Daddá" as a "Nanny" is called out here), cook or housemaid, was drawn from the population of the island of Tinos in the Archipelago and these women, all Roman Catholics, were not only dependable and trustworthy, but also clean and truthful. To-day a change has come over the scene. The scheme for the Exchange of Populations, among other unforeseen consequences, has struck at the very root of the domestic servant problem, and it was no uncommon thing, as soon as the Exchange law had been put into operation, to find both foreign and native housewives changing their servants two or three times a month. As a result of this metamorphosis, there has evolved a hybrid type of native servant peculiar to the age in which we, of the Near East, now live. The Anatolian Turkish servant, both male and female, is now to be found in both Christian households and public establishments.

The writer's own "cook-butler"—a domestic "combination" that can never yet have been dreamed of in Brook Street or Grosvenor Square—who rejoices in the historical patronymic of Eyoub, is typical of the "finished article" as it has evolved during the past year or two. Eyoub, who comes from the mountains round about Diarbekir, that home of scorpions and centipedes, has only partly completed his military service and the fighting machine will therefore swallow him up again one fine day when he least expects it. The "cook-butler" will prepare a fairly well-cooked meal and then appear at table in a spotless white coat to wait upon the members of the household. This ceremony, during which he is all smiles, once completed, he will again descend to the lower regions whence there will presently ascend the echo of that clatter usually associated with the activities of marmitons and

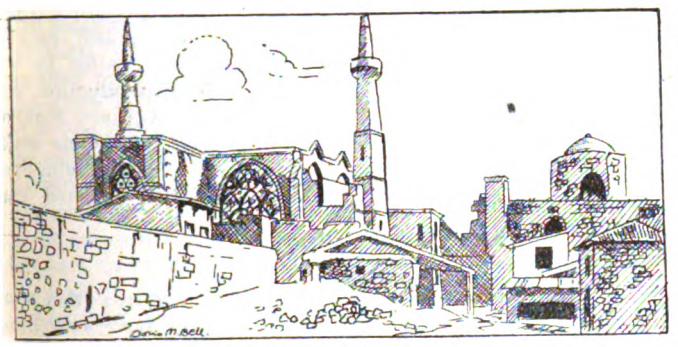
scullery-maids. Eyoub, in addition to the foregoing, incidentally bids fair to become quite an efficient batman for potential Turkish officers. Thanks to the careful training imparted to him by the writer, assisted and abetted therein by his two O.T.C. cadet sons, Eyoub can put as fine a polish on shoes, boots and riding-leathers as many a case-hardened old Contemptible might have envied in the days of long ago.

And now the Prefecture of the City steps in and ordains that the supply must on no account exceed the demand and that the general level of wages for domestic servants must be maintained at all costs by a system of house-to-house registration, by means of which it will be possible to ascertain the exact ratio of employers to employed. Where too many servants are encountered in one household, some of them will be passed on to houses in which there are none. And so, also, the employment bureaux are to have their days numbered and will have to put up their shutters.

Eyoub, in the meanwhile, has inquired very earnestly of the writer on three successive occasions whether any machinery exists by which he can eventually become a British national.



CYPRUS.

Nicosia, January 20.

A Regrettable Incident.

In connexion with the recent landing of the Governor, Sir Ronald Storrs, on his return from Egypt, at Famagusta, an incident of an unpleasant nature occurred. The President of the Municipality, a Greek, who at that port represents not only his own community, but also Turks and others in local affairs, abstained from taking any part in meeting the Governor. This distinct breach of good manners is no doubt condemned by all right-minded Greeks as reflecting discredit on their community, and the episode has, of course, been the subject of much comment.

The Commissioner of the Famagusta District, by direction of the Colonial Secretary, sent for the Mayor and informed him that the attitude he had taken up constituted an affront towards the King's representative in Cyprus. The Mayor, it is said, in reply, requested the Commissioner to convey to the Colonial Secretary his surprise that he should, through the Commissioner, make such observation on his attitude, and that he recognised no right on his part to do so to one who was not a Government official, but one whose office was not dependent on the Government. Neither he nor those whom he represented had the slightest intention of offering an insult to H.M.'s representative. His object was to show, in the only loyal manner open to him, his disapproval and protest in relation to the recent Education Bill.

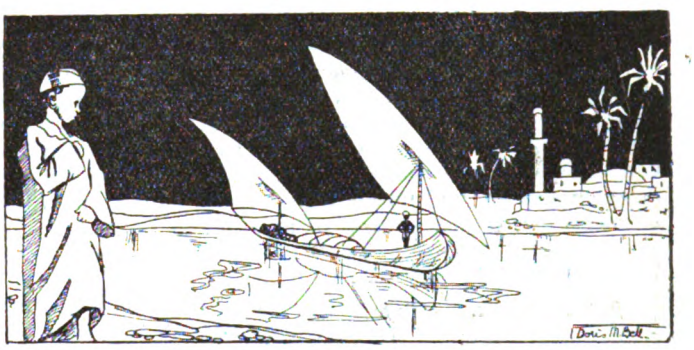
The Cyprus Forests.

In the complaints submitted in the memorial of the late Greek delegates to London it was stated that very little had been done for reafforestation. This is far from being correct. Although more would no doubt have been done had money been available, the Governor was able, when opening the eighth annual forest exhibition at Nicosia last autumn, to give a very encouraging account of the work carried out by the Forest Department, now under the able direction of Dr. Unwin, and the present state of the forests. These occupy about 2,216,000 dunums (about 740,000 acres). Enumeration and valuation of trees began in 1921, and, taking the timber of full-grown and large trees at about 104,000,000 cubic feet at 6d. per cubic foot, the value would be about £2,600,000 or, at one shilling, double that amount. Re-afforestation has proceeded according to the grants made annually. The issue of seedlings by the Department to villagers and others has been so large that only a third of the applications could be satisfied. In 1928, 227,000 plants were issued. One very satisfactory fact is that illicit animal grazing in the forests has diminished, and the grants of lands where more intensive feeding can be practised will be of mutual advantage to both goatherds and forests. Had the felling of trees and the practically unlimited grazing been allowed, as in Turkish times, during the fifty years of British rule, little would have been left of the island forests.

About three years ago a local committee was appointed to inquire into forest affairs and management, and the publication of their report has been anxiously awaited. One result has been that last summer Prof. R. S. Troup, Director of the Imperial Forest Institute, visited Cyprus to examine and report on the forests and their management. These reports should be of great importance, and should lead to developments in various directions.

The New Bank Notes.

The new issue of £5 and £1 notes will circulate from February 15. Those of ten shillings will be issued a little later.



EGYPT.

Cairo, February 1.

The Treaty Proposals.

As was to be expected, the reply to the Speech from the Throne, which came before the two Houses this week, was passed in the form previously approved by the Wafd. The Nationalist members demanded that the reply should specifically contain a reference to the Sudan, and that there should be no negotiations before the British troops had completely evacuated Egypt. But the House was in little mood to listen to such proposals and, beyond being accorded a hearing, the Nationalist opposition obtained no satisfaction.

The treaty proposals have now been promised to the House for next week, when, it is understood, the Cabinet will merely ask for a vote of confidence to enable it to carry out negotiations. It is stated that the Wafd insists

on these negotiations taking place in London. If the British Government agree to this, the Egyptian delegation will not leave Egypt until the Naval Conference has been concluded, certainly not until the beginning of March.

The New Customs Regime.

The first difficulties in regard to the new Customs régime are now being felt in a serious congestion in Alexandria harbour. So much merchandise is arriving there that the accommodation in the Customs is quite inadequate, and the administration is at its wits' end to know how to cope with it. A good deal is being stored in the open, and as a large portion of the arrivals are sugar and flour, there is considerable anxiety, since this is the period of the year where a good deal of rain usually falls in Alexandria. The state of affairs is serious not only for the Customs and the importers, but also for the insurance companies, who may suffer considerable loss in consequence of this insufficiency of covered accommodation.

A Pioneer Aviator.

There have been great rejoicings this week over the arrival of Mohamed Sidky Effendi, who is the first Egyptian to fly to this country. He was received with wild enthusiasm at Heliopolis and was granted an audience of the King, who presented him with a special medal. Sidky Effendi has been the guest of honour at various receptions, including the German Legation and the Ezbekia Garden. In Parliament it was announced that the Government had decided to make him a special grant of £E1,000, and he has been the recipient of a cheque for a similar amount, together with other presents, from the Committee which undertook the arrangements for his reception. Sidky Effendi's successful flight has given an impetus to the public interest in flying, and an Aero Club of Egypt is in process of formation. Its activities will, however, be considerably cramped until the Government completes, and puts into force, the legislation which is necessary for the control of aviation in Egypt.

German Assessors.

This week the election of the foreign Assessors attached to the Mixed Tribunals in Cairo took place. It is interesting to note that for the first time since the War the list included two representatives of the German community. Although Germany has lost her position as a Capitulatory Power, it is only right, in view of the annually increasing share which her nationals are acquiring in the commercial activities of the country, that the community should participate in the work falling to foreign assessors.

The "Egyptian Gazette."

Congratulations are due to the *Egyptian Gazette* on having celebrated this week its fiftieth birthday. In honour of the anniversary the paper published an eight-page supplement, giving a retrospect of its career with biographical sketches of the Englishmen who since its foundation have played a part in its organisation, together with a facsimile of the first number and interesting and curious cuttings from various of its subsequent numbers. The *Egyptian Gazette* has made great strides since Andrew Victor Philip first started it in 1880, and particularly has its advance been noticeable since it came under the direction of Mr. A. Stanley Parker, the present Editor, who has more than fulfilled the expectations with which his nomination two years ago was hailed.

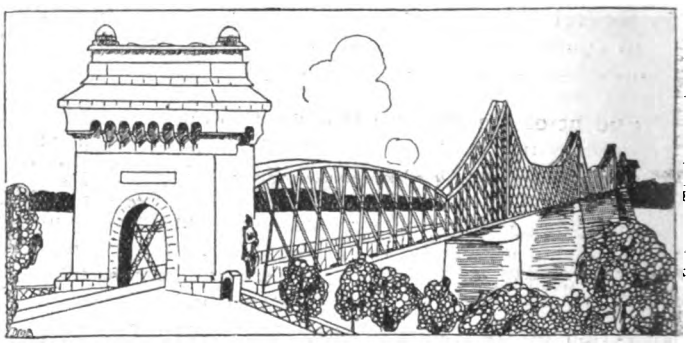
Successful Dramatic Production.

The Cairo Amateur Dramatic and Musical Society added one more laurel to the large sheaf which it has already accumulated, when it produced Mr. St. John Ervine's comedy, "Mary, Mary, Quite Contrary," this week at the Ramses Theatre. The piece was played for four consecutive nights and could have continued for several more to draw the crowded houses which it attracted, for undoubtedly it constituted in every respect one of the best-produced and best-acted dramatic entertainments seen in Cairo for many years.

Where all were so excellent it would be invidious to single out any for special mention. I will, therefore, merely state that Mrs. A. J. Brown (in the title rôle), Mr. G. E. J. Hodges (Mr. Hobbs, her Cockney Manager), Mr. F. C. R. H. Boyd and Mrs. W. R. Lucas (the Reverend and Mrs. Considine), Mr. T. M. Muggeridge (their susceptible son Geoffrey), Miss Pamela Rowlatt (Sheila, the ultra modern girl), Mrs. H. W. Dudgeon (Miss Mimms, the Girl Guides' Captain), Mr. C. V. W. Grose (Sir Henry Considine, the retired Colonial Governor), Flight-Lieut. A. Rowan (Beeby, the successful but eccentric playwright), and Miss Betty Cole (Jenny, the maid), each in his or her own individual way repeatedly called for the warm applause of their audiences. The production, due to Mr. Hodges, was given in aid of the Bursary Fund of the English School, which is doing such admirable work, and the C.A.D.M.S. has the satisfaction of knowing that once again its efforts have materially assisted that deserving enterprise.

The Royal Opera House.

Cavaliere Dalbagni scored another success this week by his production of Puccini's "Turandot," with Elena Barrigar in the title-part. It was a thoroughly good performance.



ROUMANIA.

Bucharest, February 3.

The Hungarian Optants' Question.

The last fortnight has been full of events of various kinds. First and foremost there was the final settlement of the Optants' question and the Eastern Countries' Reparations payments, which have so long hung over Roumania like a sword of Damocles. The agreement with Hungary marks an important success not only for Roumania, but also for all the States of Europe and for the whole world; for it has established peace on a sounder basis. The disputed points, which have remained in abeyance since the War, have now been settled; they will no longer interfere with the establishment of frankly friendly relations between the countries concerned, which can henceforth collaborate in good faith for the maintenance of peace.

For Roumania the nightmare of international conflicts, in which Hungary played a prominent part, has been banished by this agreement, which is quite favourable to Roumania and is generally considered satisfactory. Its conditions are so well known to the world at large that

there is no need for them to be repeated here. It is gratifying to note, too, that the Hungarian people are no less pleased than the Roumanians with the result of The Hague Conference and are equally glad that this thorny question will no longer envenom her relations with her southern neighbours, with whom open and friendly relations can henceforth be established.

"The Little Entente, and Roumania in particular, have every reason to be content," said M. Mironesco, Minister of Foreign Affairs, in his *communiqué* to the Press. "They have worked together in complete and sincere agreement. But our grateful homage must be rendered to our Allies who, by their goodwill and disinterestedness have helped to bring about the favourable solution of the various questions pending since the War." The Minister of Foreign Affairs concluded his statement with a vote of thanks to M. Titulescu for his indefatigable efforts on behalf of Roumania during the past seven years, in his negotiations with the Great Powers whose self-sacrificing attitude has facilitated the present happy consummation.

Local Government Elections.

Internal political activity is practically limited to the preparations for the election of the Departmental and Communal Councils provided under the recent Law for the reorganisation and decentralisation of internal administration. The mandates of the members of these councils expired on January 1, 1930, but up to the present they have not quitted their posts pending the appointment of their successors. Competition for these posts promises to be exceedingly keen, and the Opposition has launched a violent campaign on behalf of their candidates. Nevertheless there is every reason to believe that the Government candidates will be successful, for the Opposition appears to be disunited in its own ranks. Moreover their method of presenting their lists has caused some confusion, and it appears that some of their candidates intend to withdraw at the last moment. The Press of all parties is very active. Manifesto follows manifesto, and one political meeting succeeds another, all quite peaceful up to the present, but the atmosphere is highly charged and the date of the elections, February 15, is awaited with impatience and excitement by some, although the Government party preserves a philosophic calm.

The Engagement of Princess Ileana.

An event which has caused great rejoicing throughout Roumania, and in the Royal Family in particular, is the engagement of H.R.H. Princess Ileana to Count Hochberg, son of the Prince of Pless, who married a daughter of Earl de la Warr. As Queen Marie remarked, when announcing this happy event, it is a true love match attended by all the poetry and romance of an ideal betrothal, for the happy pair plighted their troth while on a ski-ing excursion in the Carpathians, where they lived in the Royal railway carriage shunted on to a siding. The Princes Ileana is greatly beloved by the whole Roumanian people, and her happiness has caused a general thrill of pleasure.

Prince Nicholas.

Too great importance has been given by a certain section of the Press to a rumour that the Prince Regent wished to resign his high post. It is possible that the Prince in a fit of ill-humour and in the intimate circle of a few friends may have expresed impatience at the irksomeness of his many duties as Regent; but this does not mean that he seriously intended to abdicate from his post of High Command and the responsibilities of the Regency. If proof be needed, it may be found in the fact that at the very moment when these rumours were rife and the Prince was said to be longing for the quiet life of a private person, he signed an Army Order for January 1, and was working constantly on the most cordial terms with M. Maniu, President of the Council of Ministers. He was present with the young King and Queen Marie and members of the Royal Family and of the Regency to receive the New Year's greetings of the Government, the High State officials and the Diplomatic Corps; he was present at the ceremony of the "Blessing of the Waters" (Epiphany) on January 6, when he held a review of the troops.

Queen Marie spent the Christmas holidays on the estate of Princes Ileana in the company of her two daughters (Princess Ileana and the ex-Queen of Greece) in peaceful rural surroundings. It is clear, therefore, that, if the Prince had in reality the intention of taking so grave a step, Her Majesty, who would be the first to know of it, could not have left the capital. Everything points to the fact that this report, which was at once officially denied, may be ascribed, like many others, to political intrigue and the love of sensation—and possibly even to some machinations on the Bourse.

The Administration Law.

Since January 1 many meetings have been held for the purpose of initiating into their new duties the new Directors of the seven regions into which the country has been divided for administrative purposes under the new Administration Law. These Directors are political personages of some importance, who have played a prominent political part in the past in the provinces that they are now called upon to administer. Their appointments have been very favourably received by the population of the respective regions. They took up their posts on January 20, each taking with him about 200 employees, chosen from the respective Ministries where the affairs of the region in question have hitherto been managed. Thus the Ministries are relieved of a good deal of work and the affairs of the provinces should be more expeditiously managed. It is confidently hoped that this new departure in administrative procedure, which is based on the British model, will give most interesting results. It may, however, be some time before the officials have gained the necessary experience to make their efforts as fruitful as they should be.

NEWS IN BRIEF.

The protocols relating to the regulation of the frontier region drawn up by the Bulgaro-Yugoslav Conference which has been meeting in Sofia were signed on February 6.

Mr. H. Earle Russell, formerly American Consul at Casablanca, Morocco, arrived in Alexandria at the end of last week to assume charge of the American Consulate.

The Constantinople Penal Court met on February 5 to begin the hearing of the case against the captain of the Greek vessel Chrissi, which collided in December last in the Sea of Marmara with the Bulgarian ship Varna, resulting in the sinking of the Varna and the loss of 27 lives. The captain failed to appear.

The Egyptian Chamber on February 6 approved a statement made three days earlier by Nahas Pasha, the Prime Minister (in which he asked for authority to negotiate a treaty with Great Britain on the basis of the recent British proposals), and authorised the Cabinet to negotiate with a view to reaching an honourable and durable agreement.

The Sphinx states that M. Nahmias, of Cairo, has received permission from the Egyptian Government to publish a French-Arabic weekly newspaper in Cairo. The journal, which will be called *Al Samir* ("The Companion"), will be illustrated, and is expected to be published shortly.

In the Durban Supreme Court on February 3 Mr. Justice Tatham delivered a judgment under which the Jewish Colonial Trust, the financial instrument of the World Zionist Organisation, becomes the eventual trustee of a sum of £330,000 left by the late Albert Soloman Nathan, a wealthy Natal Jew.

Mr. Edward P. Lawton, who for the past four years has held the position of American Vice-Consul in Cairo, has been promoted to the grade of Consul. He will, therefore, continue to remain in Cairo pending appointment to a new post, no change having been made in the assignment of Mr. George Wadsworth, First Secretary at the American Legation, who also holds the ranks of Consul and who, during the past year and a half, has been in charge of the Cairo Consulate.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 23.

Presidential Utterances.

There have been two "documents" given us to read this week presenting important features, and either of them might be cited, when the question is of the capacity of the Indians for administrative work. The one I shall take first was the second in point of time—the statement of President Patel in the Assembly regarding himself and his position *vis-à-vis* the Lahore resolutions of the Indian National Congress. To the principle laid down in the beginning of the President's statement—"the President belongs to no Party: he belongs to all Parties"—no man could take exception. To the historical statement that followed there could equally be no objection taken. The remainder of the statement, however, was a political speech: a restrained speech, be it admitted, but none the less a political speech. To what do such as this belong, if not of the *genre* of speech that men call political?—"I have given my most anxious consideration to the situation in the country to-day arising out of the Viceregal announcement and the resolution of the Lahore Congress, and I have come to the conclusion that in the interest of the cause itself . . . it is necessary that I should continue to occupy this chair at this juncture." What political cause has the Speaker any right to be concerned with?

The President's Political Activities.

The President went on to give a picture of his political activity in the past. Though at the beginning of his statement he had quoted this with approval: "It is said that after his appointment the Speaker never enters a political Club," he could utter this later: "I have always maintained, and still maintain, the change in the Congress creed . . . notwithstanding, that the relations between Great Britain and India can only be finally adjusted on the basis of India's right to Dominion Status being acknowledged without any reservation, and on the method of giving effect to that decision being examined in some joint and equal conference between the plenipotentiaries of the two countries, and that the greater the delay in finding a solution of the problem on these lines, the lesser would be the chances for a favourable atmosphere for the purpose, and its general acceptance in this country. I have missed no opportunity during the last four years that I have been in this Chair to press this view as strongly as I could upon the attention of the authorities concerned. I am aware that the Viceregal announcement does not go so far, but, viewing the situation as a whole, I am bound to admit that it represents a genuine and honest attempt on the part of a sincere Viceroy, anxious to find a way for peace in the most difficult circumstances. The country, no doubt, remains dissatisfied with the announcement, and it would be a grave mistake to underrate the strength behind the Congress." All that is pure politics. It might all have been deliberately addressed to the Secretary of State for India. One hopes it will be studied by him, especially the words: "The country no doubt remains dissatisfied with the announcement." The Secretary of State, if he took in all the implications of those words, would do better the next time than receive the news of a changed India with a glad heart. He would know that India is not to be so easily changed. It can only be changed if, the forces of reason and order having been strongly marshalled, and ably led, the disruptive forces are worn down after a prolonged struggle, the struggle of long years.

Pandit Jawaharlal Nehru.

The author of the other document I spoke of in the first sentence of this letter was Pandit Jawaharlal Nehru. Its publication was preceded by the publication of a statement by his father, from which I may quote this: "The next step is the celebration of Independence Day on January 26. It will be a test of how far the country is prepared to take stronger steps, which are bound to follow. Trust in your general, Mahatma Gandhi, and wait for the word of command." The other document is a resolution issued on behalf of the Congress Working Committee for adoption at the meetings proposed to be held all over India on *Purna Swaraj Day*, to give Independence Day its Indian name. It is a long resolution, but I propose to give it in full; for there is no better way of showing what the disruptive forces are heading for.

Purna Swaraj.

This is the resolution:—

"We believe that it is the inalienable right of the Indian people, as of any other people, to have freedom and to enjoy the fruits of their toil and have the necessities of life, so that they may have full opportunities of growth.

"We believe also that, if any Government deprives a people of these rights and oppresses them, the people have a further right to alter it or to abolish it. The British Government in India has not only deprived the Indian people of their freedom, but has based itself on the exploitation of the masses, and has ruined India economically, politically, culturally, and spiritually. We believe therefore that India must sever the British connexion and attain *purna swaraj* or complete independence."

"After explaining," my newspaper report goes on, "the four aspects of British connexion with India, the resolution states:—"

"We hold it to be a crime against man and God to submit any longer to a rule that has caused this fourfold disaster to our country. We recognise, however, that the most effective way of gaining our freedom is not through violence. We will, therefore, prepare ourselves by withdrawing, so far as we can, all voluntary association from the British Government, and will prepare for civil disobedience, including non-payment of taxes.

"We are convinced that if we can but withdraw our voluntary help, and stop payment of taxes without doing violence, even under provocation, the end of this inhuman rule is assured. We, therefore, hereby solemnly resolve to carry out the Congress instructions issued from time to time for the purpose of establishing *purna swaraj*."

Sincere? Insincere?

A question you may be expected to ask is: "Does the Congress Working Committee really believe all that to be true? Does it honestly believe that the Government of India is really based on the exploitation of the masses? that it has ruined India? that it is inhuman?" It is the same Government whose work I have heard extolled by Americans travelling in India; men whom I met in hotels; men who confessed that they had landed at Bombay believing a great deal to the discredit of the Government of India that they had been told in America. It is not so simple a matter as what they believe. They are men who spend their lives among words that mean more to them than anything they have knowledge of; men word-intoxicated. They have no connexion with affairs, except those of the law courts, of law pleadings; that is, words. They are prone to indulgence in the excitement of being hysterical. They are fanatical. They have their share of Disraeli's half-conscious love of play-acting. When they sit down to draw up a document that shall stir the masses, they have passed, in their absorption, to a point far beyond that at which men's cognisance of fact and truth ends. They are not "standing on earth, not rapt above the Pole," so that they might ask themselves a question; but if they did ask one, it would be: "What is the point of drawing up a document at all, if we don't make it the very best document for its purpose?"

Indian Trade Union Congress.

There was a split at the session of the All-India Trade-Union Congress, held recently at Nagpur, and a movement has been on foot since then to form a body that shall

Digitized by Google

concern itself more with trade union matters proper and less with politics. The fact that the older body remains in the hands of the politicians is shown by its Executive Council having met the other day at Jamshedpur under the presidency of Mr. Subhas Chandra Bose. The growing strength of the new body may be gauged by the fact that the Executive Council did not think fit to ignore it and its activities, but considered them maturely, and passed a resolution deploring them both, that is, the persons and what they are about.

Central Medical Research Institute.

I devoted a few paragraphs in my letters last year to the vexed question of the location of the proposed Central Medical Research Institute. It was proposed to locate it at Dehra Dun. The sounder view seemed the view of those opposed to that. It was with interest that I read this a few days ago, in a report of the proceedings of the Standing Finance Committee of of the Central Legislature: "Regarding the demand for a grant to the Indian Research Association for the establishment of a Central Medical Research Institute at Dehra Dun held over from the previous meeting, Sir Frank Noyce informed the Committee that certain proposals had been received which made it necessary to re-examine the entire scheme. It had been found that sufficient residental accommodation was not available at Dehra Dun." I think we may have heard the last of Dehra Dun in connexion with the Institute.

INDIA'S MINERAL WEALTH.

A most interesting survey of India's mineral wealth was given by Mr. G. H. Tipper, late of the Geological Survey of India, in a paper on "Recent Mineral Developments in India," read before the Indian section of the Royal Society of Arts on February 7. Sir David Chadwick, Secretary to the Imperial Economic Committee and one time Secretary to the Government of India in the Commerce Department, presided.

The mineral products of India, Mr. Tipper said, fall into two categories: (a) those which are chiefly exported in the raw state, and (b) minerals which are utilised or refined within the country, forming the basis of industries of greater or lesser importance, the products of which may be partly exported and partly used in the country itself. India, however, is not yet sufficiently advanced industrially to make use of more than a small proportion of its natural mineral resources. After pointing out that a falling off in the value of mineral production in any given year does not necessarily mean a decrease in output, Mr. Tipper instanced the fact that the decline of nearly 4 per cent. in 1928 was more than accounted for by the drop in price of two of the chief products—coal and oil. While the output of the former had shown a fairly steady increase from just over 19 million tons in 1922 to 22½ million tons in 1928, the value, since 1924, had steadily declined until in 1928 it was barely £7,000,000. Similarly the value of oil production, in spite of a further advance in volume to nearly 306 million gallons, continued to decline.

The output of Indian coal is about one-twelfth of the output of Great Britain. It is, however, greater than the output of Canada or Australia, or any of the other Dominions or Colonies, and is greater than that of many European countries. India's contribution to the world's petroleum output is less than 0.75 per cent. of the total. But India, Trinidad and Canada are the only Empire producers, and as such even India's small contribution might in certain eventualities be of importance. With regard to manganese, India at present holds her own, and is the most important producer in the Empire.

With regard to iron ore, India is the second producer in the Empire, and there is very little doubt that her exceptionally large reserves of iron ores form an asset of great potential value. Indian muscovite mica has always held a leading position in the world's supply. The production of sheet mica as black and splittings is about 65 per cent. of the total. The extension of electrical industries throughout the world makes mica, for which no efficient substitute has yet been discovered, a very important mineral.

THE EUROPEAN ASSOCIATION.

The past year has witnessed a very real development of the activities and influence of the European Association in India, largely as the result of the alteration in the constitution which became operative from the beginning of 1928. For the first time for many years the Council of the Association can legitimately claim to speak on behalf of the overwhelming majority of the British community in India. The significance of the Association's improved status is discussed in the current issue of the *Review of India*, which points out that "the result of the wider consultation with British opinion all over India secured by the new constitution has been a remarkable change in the political outlook of Britishers in India."

"There is no doubt," the journal proceeds, "that the reforms of 1921 found us completely unprepared. Previously Britishers had relied entirely on Government, and whilst to some extent we adapted ourselves to the new conditions, we found it difficult to shake ourselves free from the lethargy arising from that position. We still were inclined to cling desperately to the skirts of Government, with the resultant lack of any definite policy. To-day we have more faith in our political judgment and are prepared to face the future with a courage and self-reliance which must ensure to the British community in India a prominent place in the new India which is so rapidly developing."

INDIAN NOTES.

(Continued from page 170.)

A Pandit's Confession.

A remarkable admission of the failure to secure general support to the Congress manifesto was made the other day by Pandit Motilal Nehru in his statement on Earl Russell's speech. Council entry, he said, was an experiment that had been tried for six years and had failed. "Our opposition to the Government during those six years has," he went on to say, "steadily weakened. . . . There has been among some members of the party an unseemly scramble for membership of various Committees. We began by carrying other parties with us, but find ourselves now being carried by them. . . . Dyarchy has stood on firm ground against Swarajist attacks in the Provinces other than Bengal and the Central Provinces and whatever success was achieved in the last-mentioned Provinces in defeating Ministries was due more to rivalry among the candidates there than to the force of Swarajist opposition. There were no doubt some beneficial measures passed in various provinces, and in the Assembly, but it was not for these measures that the Swarajists entered the Councils." In other words, the Pandit publicly confesses that non-co-operation has failed again. His party tried its hardest, but it failed, to destroy the Councils by ignoring them and remaining outside them. During the past six years it has tried its hardest to destroy the Councils from the inside. On the Pandit's own admission it has failed in this attempt also. Indeed it has not only failed in its work of destruction, it has not even succeeded in preventing the passage of some beneficial measures! The position is, therefore, that whatever defects dyarchy may have—and as Lord Goschen has shown it has a good many serious defects—the Councils stand. The most determined efforts to destroy them have failed, except for some small measure of success in two Provinces. They have indeed become, as we have insisted over and over again, the real centres of the political life of India; and any political party that ignores them will quickly cease to exercise any influence worthy of the name.

BENGAL COTTAGE INDUSTRIES.

The Bengal Department of Industries have issued a second edition of its valüable Report on the Survey of Cottage Industries in the province. India is a country of cottage industries, and in Bengal as in other provinces, they are still of great importance, although they have naturally suffered through the importation and diffusion of cheap machine-made goods. It is the aim of the Provincial Departments of Industries not only to assist organised industries, and to promote industrial efficiency generally, but also to safeguard and to extend cottage industries. The creation of these Departments was recommended by the Industrial Commission of 1916-18, and they are doing useful work in most of the Provinces. The Bengal Department is well equipped, and it is working successfully not only for cottage industries, but for organised industries also.

Hand-loom weaving is easily the most important, and the most widely extended of the cottage industries of Bengal. Indeed in a number of centres in the province the whole population is engaged in hand-loom weaving and its subsidiary occupations. It is their chief source of livelihood, but, as is usual in India, they mostly have a small stake in the land, and in agricultural operations. It is stated in the Report that the local markets carry on a large business, extending to many lakhs of rupees yearly, in mill-made yarn of Indian and foreign origin, and in the purchase and sale of finished hand-woven products for local and distant consumption. The cottage weavers work with primitive tools and implements, and their methods are antiquated. Nevertheless they show much dexterity and artistic ability; and notwithstanding the disadvantages under which they labour they still manage to keep in their hands a large share of the weaving and clothing business of the country. Very many of them are unacquainted with, or decline to use, the fly shuttle loom and other modern apparatus. The Serampore Weaving Institute—which works under the supervision of the Industries Department—has for some time past been attacking this conservative tendency. But according to the Report a more forcible and concentrated presentation of the advantages of modern methods and processes will be necessary to overcome the unwillingness of the weavers to depart from their time-honoured practices. It is unfortunate that so far want of money has been the chief obstacle in the way of this much-needed campaign.

The Report makes it clear that the next largest cottage industry is the manufacture of brass and bell metal. According to the census of 1921 there were no fewer than 36,471 persons engaged in this industry in Bengal. The articles manufactured are used for dietary and household purposes, and are known as *lotas*, *thalis*, etc. The industry is still of considerable extent, the annual turnover aggregating lakhs of rupees. But the report shows that it is carried on under inefficient and make-shift conditions. The apparatus used for casting the ingots is bad in comparison with modern foundry practice. The clay crucible and mould are used once only in many cases. The hammer-men who beat the bell metal articles are becoming fewer in number year by year. It is true that the industry is carried on all over the province; and that its history and traditions give it a hold on mofussil life; but the Department of Indutries has nevertheless been forced to the conclusion that it will not be able to maintain this hold much longer unless it modernises its methods and processes, and uses simple power-driven machinery. It is slowly being displaced by aluminium-ware, which is cheap and satisfactory in use, and is being turned out in large quantities by factories in Calcutta. The Department is making an effort to save the industry, and, with this end in view, it has worked out a scheme for demonstrating, in the chief centres, the advantages of modern labour-saving machinery and up-to-date processes.

A disability common to all cottage industries in Bengal is noticeable in this particular industry. It is that the actual work is done by men who, although they are certainly skilful, are nevertheless the most ignorant, and the less socially advanced elements of the population. Very rarely indeed, and that only within the last few years, has the Department of Industries come into contact with any cottage industry of which men belonging to the intelligent and more socially advanced classes have any actual working knowledge. The educated class—the intelligentsia—hold themselves aloof from the industrial processes and traditions of the Province. It is only with the greatest difficulty that young men of these classes can be persuaded to take up training in modern mechanics, machinery and power apparatus and processes. They might, if they so wished, infuse new vitality into the cottage industries of the Province, and adapt these industries to the modern conditions which are essential to their survival. But they mostly content themselves with the exercise of capitalistic and marketing functions. They become middlemen—*mahjans*, or *beparis*, as they are styled. Their functions are unquestionably important, but they keep themselves apart from the practical prosecution of the various industries.

Over and over again reference is made in the Report to the bad effect of the present want of organisation of the cottage industries under the average *mahjan*. At the same time it would be wrong to be unduly pessimistic. There are cases—and some of them are mentioned in the Report—where young men of the higher classes have established industrial concerns. In one case a number of young men have organised a business for the manufacture of steel work for houses and other buildings, and of articles such as pruning knives for tea gardens. In 1928 the turnover of this business was estimated at Rs.5 lakhs, and it is understood to be increasing. The important point is that all the proprietors by whom the business was established are men who, although they belong to the *bhadralog* class, are competent to work in the shops.

There are two other cottage industries in Bengal to which reference may be usefully made. One of these is the manufacture of soap, and the other is the tanning industry. Soap manufacture is more general in Calcutta and Dacca than elsewhere, but according to the Report it is widespread throughout the province. The apparatus used is of the most elementary character, and the processes are said to be neither efficient nor wholesome. The essential constituents of soap are boiled in crude iron pans over a fire; and the resulting product is adulterated with substances such as China clay. The final mixture, when it has solidified, is cut into curious shapes and sold in the bazaars to washermen and others. The improvement of this industry is one of the many problems which the Department of Industries is tackling. And it is certainly satisfactory to learn from the Report that more than a hundred young men have applied to the Department for training in soap manufacture. They will eventually engage in the industry with a view to its improvement and organisation.

In the tanning industry also the methods employed are stated to be of the most primitive and uneconomic character. Technical knowledge is wanting, as are also capital and equipment. And the industry is just as much in need of improvement and organisation as the manufacture of soap. Fortunately the Department has in Calcutta a Tanning Institute where research and training in modern tannery methods are given. The Department also maintains two tanning demonstration parties as a result of whose work a number of small tanneries, run on modern lines, have been started.

The Bombay, Baroda, and Central India Railway is preparing plans for the construction of two new railway lines aggregating 280 miles in length.

PERSONAL AND GENERAL

TO-DAY

February 13, 1930 (New Style).
January 31, 1930 (Old Style).
Ramadhan 14, 1348 A.H., of the Muslim Calendar.
Shebat 15, 5690 of the Jewish Calendar.

Sir Edwin Lutyens, R.A. arrived at 3, Mansfield Street on February 8, on his return from India.

The Bulgarian Minister returned to London on February 10 from Sofia.

Lady Norton-Griffiths left London on February 6 to join the Kaisar-i-Hind at Marseilles for Port Said.

Lord and Lady Forester will return to 93, Cadogan Gardens from Egypt at the end of March.

Sir Murdoch and Lady Macdonald will return to London in the middle of February from Cairo.

Field-Marshal Viscount Allenby and Viscountess Allenby will return to London from India on March 2.

Sir George and Lady Murphy will join the P. and O. s.s. Narkunda at Marseilles to-morrow (Friday) for Egypt.

Captain Phocas has been appointed Naval Attaché to the Greek Legation in London.

Mr. J. H. H. Pollock, Assistant Secretary, Nigeria, has been appointed District Officer, Palestine.

The Countess of Malmesbury left on February 7 for Egypt. She is not expected to return to England until the middle of April.

Lord and Lady Lloyd will receive the guests at the Lion ball, which the British Empire Union is arranging at the May Fair Hotel on Wednesday, February 26.

The Turkish Ambassador and Mme. Ferid Bey will hold a reception at 69, Portland Place on Thursday, February 27.

Sir Henry Betterton, who has not been well since his return from Palestine, is now much better, and hopes to resume his Parliamentay duties in the near future.

Dr. Hamed Mahmoud, the newly appointed Counsellor to the Royal Egyptian Legation, arrived in London on February 7.

Brigadier-General and the Hon. Mrs. Portal were among the passengers from Bombay in the P. and O. s.s. Ranchi, which left Marseilles on February 7 for Tilbury.

Bishop Palmer, late Bishop of Bombay, will lecture to the East India Association at the Caxton Hall, Westminster, on Tuesday, February 18, at 4.30 p.m., on "Recent Movements in the Churches in India." Viscount Chelmsford will preside.

The second annual dinner of the Sudan Dinner Club will be held on June 25, at the Hotel Victoria. Past members of the Sudan Club, Khartoum, who have not already been notified should communicate with Mr. B. W. Echlin, Hon. Secretary, Sudan Government Offices, Wellington House, Buckingham Gate, S.W.1.

A series of public Lunch Hour Addresses on "Peace and Internationalism" is being given on Tuesdays at Friends House, Euston Road, N.W.1. Two of those so far announced deal with the East. On February 18, Mrs. Ramah Rau, of Madras, will speak on "Women in India," and on March 4, Mr. H. W. Nevinson will speak on "Palestine." These meetings are timed to last from 1.20 until 2 p.m.

Mr. and Mrs. Ruyard Kipling left Batemans, Burwash, last week, for a visit to the West Indies.

Professor Garstang, directing the Sir Charles Marston expedition on the site of the old Jericho mound, reports the discovery of a tower dating from 2000 B.C.

The four R.A.F. aeroplanes which arrived at Cape Town on February 1 after accomplishing the annual flight from Cairo, took off on February 4 on their return flight.

As a result of the recent friction between Roman Catholics in Croatia and the State, the *Cross*, the Roman Catholic newspaper published in Yugoslavia, has been ordered to cease publication.

M. Venizelos, the Greek Prime Minister, replying to criticisms in the Chamber last week of the provisions for national defence, said that there was no question of danger to the country from the lack of armaments.

The Secretary of State for Foreign Affairs, in a letter to Sir Ian Malcolm, one of the British directors of the Suez Canal Company, announcing that H.M.S. Caledon would be present at the unveiling of the Suez Canal War Memorial at Ismailia on February 3, asked him to express to the Canal Company, on behalf of His Majesty's Government, the hope that the monument would perpetuate for all time not only the gallantry of the officers and men to whose memory it was dedicated, but also the gratitude of those upon whose behalf the supreme sacrifice was made.

Major-General Sebert Francis St. Davids Green, late R.A.M.C., whose death in London at the age of 62 occurred last week, joined the Army Medical Service in 1894, and when the War broke out went to France with the Indian Expeditionary Force and commanded there and afterwards in Mesopotamia the Rawal Pindi British General Hospital. He was subsequently Assistant Director, Medical Service of Amara and A.D.M.S. of the Base, M.E.F., the following year, 1923 he was promoted to Major-General, and he became Deputy Director Medical Services, Western Command, India. From 1924-27 he was hon. physician to the King.

Major-General Sir Henry West Hodgson, Colonel of the 14th The King's Hussars, died on February 5 at his residence in London in his 62nd year. After the outbreak of the War he was made Brigadier-General, and took part in the operations against the Sanusi. In February, 1917, in command of a force of armoured cars from As Sollum, he decisively defeated the Shaikh Sidi Ahmad at Siwa. In the same year he was appointed Major-General commanding the Australian Mounted Division in Egypt, and held that post till the end of the War.

The memorial erected on the shores of Lake Timsah to commemorate those who lost their lives in the defence of the Suez Canal during the War, was unveiled on February 3. Representatives of the Allied countries were present, including the British High Commissioner in Egypt, Sir Percy Loraine, the French and Italian Ministers, the Egyptian Minister of War, and members of the Suez Canal Board and staff, including Sir Ian Malcolm, M. Barrère, and M. Miriel, as well as the captains of H.M.S. Caledon and of the French cruiser Valmy, which came up the canal specially to take part in the ceremony. Four canal tugs conveyed the company to Lake Timsah.

Where to stay in the East

CANON GAIRDNER MEMORIAL FUND.

[*We have been asked to publish the following letters in connexion with the Canon Gairdner Memorial Fund.*—ED.]

Temple Gairdner was an outstanding personality in the Missionary life of the Church. To his lifelong task of commending the Christian Faith to Islam he devoted singular gifts of a vigorous mind, a vivid imagination, a chivalrous and enthusiastic spirit, and an ardent and joyous faith. In the creation of an Arabic Christian literature and in the building up of an Egyptian community he did a great work and left the inspiration of a great ideal.

It is right that some permanent memorial of him should be placed and some provision made for the carrying on of his work in the land which he served in Christ's name for twenty-nine years.

I cordially commend the Appeal for a Memorial Fund whose objects have been devised by those who best knew Canon Gairdner's life and ideals.

(Signed) COSMO CANTUAR:

Lambeth Palace, November 25.

When Gairdner sailed for Cairo under the Church Missionary Society in 1899 he wrote to his father in prophetic words:

"Cairo is my destination . . . It is to Islam that I go—not to any particular phase of it. My ideal is to become a master in Arabic (an awful aim); and perhaps to help in creating a Christian literature in that tongue; and thus to get at the heart of the problem of Islam."

This aim he lived out for twenty-nine years of unsensational exacting work.

He mastered Arabic; he put more original thought and more warmth and humanity than any man for all but a hundred years into an apologetic literature for Muslims; with his friend, Douglas Thornton, he started an Arabic magazine for educated readers, a paper outspokenly Christian but respected throughout the whole Near East; he wrote books and papers for the education of the Church at home concerning Islam; he revolutionised the teaching of Arabic to missionary students; he gave great gifts of beauty and of music to the city he served; but above all, and always, he spent himself on bringing to the birth an Egyptian community which should be a home of welcome for Christ's converts from Islam and a spear-head of evangelisation.

Yet quietly as he worked on in Cairo, there was in him a spiritual quality which made him felt as a leader by men of many nations, so that Bishop Gore could write of him as "our common friend, the friend of the whole Church." "I saw the news of his passing away and for two days I could not eat, for I thought of him as our leader in Christ," wrote an Indian priest who had never seen his face. And another of West African race could write, "I thank God, for that hero and saint of Christ." Many, too, who know little of his missionary life-work, remember Canon Gairdner as a music-maker, as a centre of good talk and good fellowship wherever he came, as a lover of all beauty, as a man of zest and vigour, of humour and vision.

For his life, laid down in Cairo on May 22, 1928, Canon Gairdner's friends, known and unknown, propose to give thanks by the creation of a memorial to him, in the City which he served. A memorial which should have some visible and permanent form, and also take some share in those activities of Canon Gairdner which cannot be expressed in bricks and mortar.

At Old Cairo is an Egyptian congregation which has completely outgrown its present church building, and which is giving steadily and generously towards the building of a larger church. This, moreover, more than any other congregation in Egypt has realised Gairdner's ideal of "Christ's Church as a home for His converts from Islam," and it is under the charge of an old and trusted Egyptian friend and colleague trained by him for ordination.

Old Cairo is the site of all the Christian centres of the city, and a parish church placed near the cemetery used by British and American residents could also be a beautiful and welcoming sanctuary where the first part of the Burial Service could take place. For such a purpose the Church authorities will gladly put the building at the disposal of their friends of other denominations. Some twenty years ago, Gairdner himself proposed the building of a Church at Old Cairo with this double purpose. "How vastly superior," he then wrote, "would this Church be to a mortuary chapel within the cemetery itself. No structure dimly associated with just the one sad function, but a Church with all its living and joyous associations." It is now proposed to build such a Church in Temple Gairdner's memory. To this end we are happy indeed to have secured the services of Sir Herbert Baker, one of the greatest architects of our time.

There are other activities of Canon Gairdner's life which his friends can help to conserve and develop. The magazine, *Orient and Occident*, for more than twenty years Canon Gairdner's peculiar care, should be placed on a sound financial basis. The magazine has an editorial board drawn from various churches of East and West, and reaches Muslims in fourteen countries, but it needs a capital of £4,000 to secure it from constant harassing anxiety.

In the life of the Arabic Church which Canon Gairdner served is a need which constantly pressed upon him, and for which his friends could provide. He was not concerned so much to make a large community as to make one truly historic, truly Eastern, and withal filled with vigour and freshness of thought and spirit. To this end he desired a training for his Egyptian friends which should put at their disposal the riches of Christ's Church in thought and in life. Constantly he regretted the narrowness of the opportunities before them in training for Christian leadership, and he would rejoice greatly in a travelling scholarship to be used sometimes for the education of a young leader in the Egyptian Church, sometimes for the better equipment of a Western missionary in Islamic studies.

We now appeal for a sum of £20,000 for these objects:—

1. The purchase of site, and the building and endowment of a Church at Old Cairo. £10,000.
2. A capital fund for *Orient and Occident*. £4,000.
3. The provision of a Gairdner Memorial Travelling Scholarship for the training of Egyptian Church leaders or of missionaries to Islam. £6,000.

We call upon all who have cause of thankfulness for Canon Gairdner's life to make their offering to his memory and to the glory of God.

Signed by:—The Rev. Cyril A. Alington, D.D., Headmaster of Eton; G. H. Allen; Mrs. R. L. Barclay; Sir Frederick Butler; The Rev. W. Wilson Cash; The Bishop in Egypt and the Sudan; The Rev. Principal A. G. Fraser, Prince of Wales College, Achimota; The Rev. Donald Fraser; Bishop Gore; Sir Arthur Hirtzel; Sir A. Henry McMahon; The Bishop of St. Albans; The Bishop of Salisbury; Mrs. Douglas Thornton; J. H. Oldham, Esq. (Hon. Secretary for the Fun).

Contributions may be sent to the Hon. Treasurer in London, Mr. R. L. Barclay, 54, Lombard Street, E.C.3, or to the Hon. Asst. Secretary, the Rev. E. M. Bickersteth, 12, Warwick Square, S.W.1; for the Near East to the Hon. Treasurer, Mr. John A. Crawford, National Bank, Cairo.

All cheques should be made payable to "The Canon Gairdner Memorial Fund," and crossed "Barclays Bank Ltd."

Contributors, who are prepared to divide their subscriptions into seven yearly parts, can *without any extra cost to themselves* benefit the Appeal by sending their contributions through the "Tax free scheme," full details of which can be supplied by the Hon. Assist. Secretary.

The Sobranye on February 7 ratified, by the votes of the Bulgarian Government parties alone, The Hague Agreement on Bulgarian reparations.

Two French airmen, Commander Girier and Colonel Weiss, who recently flew from France to Pondicherry, landed at Aleppo on February 7 on their return flight, having covered 3,700 miles in two days and a half.

The Yugoslav Government has dismissed without explanation M. Jovanovitch, an official of the Censorship, who allowed to be published in one of the local newspapers a report about the unveiling at Sarajevo of a memorial to the murderer of the Archduke Francis Ferdinand.

Major-General J. D. Graham, Public Health Commissioner with the Government of India, left on February 7 to preside at the annual meeting of the Advisory Council of the Eastern Bureau of the League of Nations Health Organsation, which this year is being held at Bandoeng, in Java.

THE WEEK AT HOME

London, Tuesday Morning.

Political Doldruns.

Mr. Baldwin, as spokesman of the Conservative Party, has spoken: and the Labour heavens have not fallen. For the plain fact is that the only thing for the Opposition to do is in effect to wait until the Government hangs itself, if it is, indeed, that way inclined. As far as can be seen at present, the Labour Party has no inclination to let itself be rushed into precipitate action by its "wild men," as the more thoroughgoing Socialists are called, by the Opposition: and so long as measures that are in the main little more than Liberal are passed, there is no fear of the Government's being deposed.

To Conservatives in need of being roused to fervid action, Mr. Baldwin's speech, admirably phrased and in as sincere a key as he always is, can have brought little inspiration. The damage that he did to the Labour Party was negligible: the concrete suggestions which he had to offer for improving the present state of affairs did not amount to very much. As might have been expected, he put his faith in an extension of Safeguarding (being very careful, incidentally, to pledge himself to no taxes on food) and in what he called "rationalising Imperially." Agriculture he significantly left out for another occasion, though surely a slight indication of what the Conservatives intend to do in this vital particular might have been vouchsafed.

Few will deny that the speech left people unmoved. Politics are still in the doldrums. There is little vitality anywhere. The Conservative leader talked of the urgent need of "economy," but even the most forgetful "flapper" must remember what the Conservatives when in office did in this respect. As for "rationalising Imperially," this also, to judge from the Press, has fallen a little flat. If the Empire in itself cannot provide at the moment a sufficient market for our domestic manufactures, where is the sense, people are asking, in so protecting ourselves against Continental markets that they will be inevitably closed against our manufactures? They see a long way ahead indeed who prophesy a national crisis over the fiscal question. And certainly, as far as may now be seen, nothing less will cause the Government real anxiety. After all, the general election of 1923 was fought on Mr. Baldwin's plea for industrial Protection as a remedy for unemployment, and recollection of the result of that appeal is most comforting to the present Government.

English Pronunciation.

There is no question that the standardisation of English pronunciation is becoming increasingly important. I do not mean, of course, that any form of pronouncing English should be classed as necessarily incorrect (provincial dialects should be preserved eternally), but with the spread of popular education, with the introduction of American "talkies," and so on, there is a very definite danger that people simply will not krow how to pronounce words.

In this connexion the Committee of the British Broadcasting Corporation are doing excellent work. It is only occasionally that they appear to differ from normal cultured usage. When they do, however, there is always amusing correspondence in the papers. Sir Denison Ross has just had them up for their calling *questionnaire* "kwestionair," for instance, and, of course, he has everybody with him. Other words in their most recent list which will be accepted with dismay or disregarded altogether are "mandated" with the accent on the first syllable, tenet as "teenet," and subsidence as "subsydence." Oh yes, and also sarcophagi with a soft "g." Of course, all these pronunciations can be defended, and defended very cleverly. That's the worst of it. For it is a fact that the B.B.C. Committee is as good a one as could have been composed. It is so nice, however, to think that they are not infallible, and that sometimes they differ from ourselves, who are always right!

Our Winter Foe.

Round the corner of every street in the winter months there lurks the foe of us all: the common cold. We progressively civilise ourselves, our clothes become saner, our habits more moderate, our precautions greater—and yet the little devil that is the cold germ beats us all sooner or later. The man who goes through the whole of the winter without a cold of some sort should be mummified, as a specimen unique in his generation.

Apart from the personal inconvenience, however, that is caused by mild influenza—which is what common colds often are—there is the business side of it. A letter was published last week from several large employers of labour which pointed out that, according to estimates by the Ministry of Health, seven million working weeks are lost every year through colds. What these magnates suggest in effect is that the industry of preventing colds should be rationalised—"every employer of labour in this country should inform himself and his workers of the recognised means of prevention." These employers state that "firms who have made concerted preventive efforts" have had an experience of proved value. But one wonders whether this indeed is so. I know that I have been in many large works where anti-cold device after device has been tried, and my impression is that, where any one of them was particularly successful, it was mainly owing to a spasm of a sort of Christian Science on the part of the workers. Confidence in a particular cure is often a greater thing than the property of the cure itself. Not to worry about the wretched cold is the best advice of all. Of course it will come—but it will also go.

Criticism.

It is, I believe, a commonplace among authors that they do not take any notice of what reviewers say, that they do not, in other words, pay any attention to criticism. The point has been put even more strongly by Mr. John Galsworthy in a recent number of *Time and Tide*, which is conducting a discussion on "The Function of Literary Criticism." He says not only that authors do pay scant attention to criticism but also that they should pay even less than they do.

This opens up a very large subject, which concerns, very particularly, the nature of criticism to-day. Almost everywhere, whether in Literature, Art, or Music, the critic describes, not the work, but his own reactions to it. Now some critics deny that this sort of writing is criticism at all. And I am inclined to think that they are right. Nothing is more irksome than to read what such and such a critic thinks ought to have happened, instead of what actually did happen. The ideal critic, in other words, is one who sheds whatever sympathy he may possess and who describes most dispassionately and most lucidly the working of the artist's mind.

But will this kind of impersonal criticism ever become the accepted rule? Never, I think. For a democracy demands the individualistic touch. It is not so much interested in what a work is, as in what so-and-so thinks of that work. Popular education is largely responsible for this state of affairs, and to suppose that popular education could be so developed that this condition no longer obtained is inconceivable. Only the very highly educated can bear to read of a work in the form of pure exposition.

ALTER EGO.

PERSIAN SELF-TAUGHT

By SHAYKH HASAN.

In Roman Characters, with English Phonetic Pronunciation.

Containing the Persian Alphabet, Transliteration and Pronunciation; Outline of Grammar with Persian Characters; Classified Vocabularies and Conversations; Travel Talk; Trade and Commerce; Persian Handwriting; Money, with English and American Values; Weights and Measures; Illustration of the Persian Coinage.

Book Review

VIGNETTES OF SYRIA AND TURKEY.

"TURKEY AND SYRIA REBORN." By Harold Arnold Armstrong. With 21 Illustrations and Sketch Map. (London: The Bodley Head. 15s.)

The gifted author of this work, whose "Turkey in Travail" was one of the most brilliant pieces of writing on the Near East produced since the War, does himself wrong in calling it "a record of two years of travel." For "Turkey and Syria Reborn" is nothing of the kind: it is a review, so intimately conceived and represented as to enable the reader himself to be present at the scene. Record, forsooth! There is in truth not a dull page in the book.

But what should one expect from so perspicacious an observer of Eastern things? A thesis on Kemalism, the future of Westernised Islam, or the philosophy of the Mandate as executed by the French? If so, one will be disappointed. Captain Armstrong has, it is true, his vices in writing, but indulgence in prophecy is not one of them. The Near East, as he well recognises, is changing too swiftly to make any writer safe in generalising. Yet he does all but generalise, and it is a little tantalising, perhaps, to be led, by way of a series of penetrating observations, just to the point where a final conclusion might be possible (such as "Turkey is going to the dogs" or "Syria will never succeed under French administration"), only to be left on the edge of this mental precipice, as it were, by the sapient author.

In 1927 and 1928 Captain Armstrong journeyed over that section of the East which most provokes his love and hate, namely, Syria and Turkey. His graphic style enables the reader at once to share his joys and discomforts. This is what he feels, for example, when he gets to Damascus—and many may disagree with it, but none will be unmoved:—

> To-day it (Damascus) is very old, and it had far better have died, for it is like some ancient man, smelling of all his stale vices, his eyes red-lidded and bleared, skin wrinkled and unclean, a querulous and ill-natured dodderer. Death gives a measure of dignity that decrepit old age cannot share.
>
> I understood now how towns could die. Perhaps from an earthquake or an invasion, or again from a change of water or atmosphere, or just because of old age their spirit died and they would rot away and disappear, and the sand would come in and cover them over, as it had at Salamis. Damascus was kept alive only by the great river that ran through it and fed its protecting oasis.

A sense of drama, of mystery, of awe, and of beauty pervades the book. At times, indeed, the author is melodramatic (owing, probably, to a careless facility of style), is blunt to the point of indiscretion (a complex psychologists must explain), is Swinburnian (because his religious roots, though abundant, seem shallow), and is oppressed with the man-made misery of the East. But what gives the book its value is the heightened sense of the author's impressions, its imagination, its courage, its romance—if by that last word be meant a vivid reaction to facts and not incredible departure from them.

We have said courage, which consists, so far as an author is concerned, not in being original, but in uttering what many have thought. Hear Captain Armstrong on the American College at Beyrout, for example:—

> The American College and America as a whole have much to answer for. They have brought unbelief in the old faiths and codes and have given nothing to replace what they have destroyed. They have introduced advanced American ideas into this primitive country, and yet are both unwilling and unable to take any responsibility for the results.

This is the first time that we have seen this statement, heard in conversation a hundred times, expressed in a book. But wherever one goes with this author, to Beyrout, Damascus, along the coast, in Maronite villages by Latakia, in the Alawite country, in Aleppo, in Antioch, and so to Turkey, one find him making shrewd, unusual, or provocative comments. Perhaps he is happiest among the Nusairi, that strange folk upon whose virtues travellers are strongly divided. Captain Armstrong liked them intensely: he felt profoundly their fascination, their happy, unknown religion; and it is in their presence that he rises, probably, to his highest flight of descriptive prose. This, a chapter on a Nusairi dance, performed on a moonless night by a pine fire, is near to poetry: it is direct, unpadded, crystal clear, and very memorable.

To Turkey, whose people before the Kemalist Revolution he had come really to love—rating them high above any Arab such as his friend T. E. Lawrence preferred—Captain Armstrong went with an eager heart. His first impressions were not encouraging. He found by Adana that though the Turks "could fight, could rise to an occasion under the spur of patriotism or hatred and do great deeds, of that plodding spirit needed to succeed in the drudgery of peace they had little. They gave me a sense of desolation and hopelessness, as they sat in their broken villages."

From the coast he went into the interior, and this is what he says of the way between Ulu Kishla and Kaesarea:—

> It was a typical Turkish road, for as a rule they are bad. It had been built by the Romans, broad enough for soldiers to march four abreast. It had been repaired by a Sultan or two, patched by the Germans, and now was in ruins. It was a mass of holes.

It was a disheartening experience. Everywhere the author found one or two good men—"the few who ruled were efficient, vigorous, decisive." But of the rest—"the junior officials were as bad as under the Sultans." The villages were unbelievably poor, the inns inconceivably dirty, the peasants unchangedly animal. No common vitality, no collective initiative anywhere—so that "if the present rulers failed there would be no active reaction: Turkey would just slither quietly down and disappear." Nor was there in religion any hope of revival, for among the younger generation the effort to be religious was too much. Islam, in the author's opinion, is doomed in Turkey. This comment, by the way, upon the fundamental slothfulness of the average Turk may upset the popular notion of the modern Turk's energy.

Our space is at an end, and we can do no more than to recommend the book whole-heartedly, both to those who have an open mind on Syria and Turkey and to those who, we know, will suffer most provocation at the author's hands. In any case, he says, this is his last offence, for on the way from Selefkia to Cyprus, as the dashing spray awoke him from dreams on Turkey, he felt that this was the end of his Eastern travels.

> Resolutely I flung the Gate-key far into the Garden, for I knew that no more should I come this way. Here I must leave behind my heart and the golden years of my youth. Then I turned down the Street of the Future, which led by Cyprus to Europe and England, and into the blinding glamour of great cities.

Yet, for the sake of those who love at once good writing and the Western lands of Islam, we may hope that Captain Armstrong is not entirely lost to the East, whose voice, though fading for a time, is always luring us—to what?—"my withered dreams, my withered dreams"? Possibly; yet still the Sirens will call.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE EX-KEDHIVE AND EGYPT.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It was on reading the issue of January 30 of THE NEAR EAST AND INDIA that I learned of the publications: (1) "The Dethronement of the Khedive," by Ardern Hulme Beaman, and (2) "A Few Words on the Anglo-Egyptian Settlement," by Abbas Hilmi II, Twenty-Three Years Khedive of Egypt. I at once procured and read these two books with great interest, and would now advise all those who are interested in Oriental and Near Eastern questions to read them likewise.

The reading of these books caused me to live the years of my youth over again, and recalled to mind the contemporaneous history of Egypt as well as its rapid evolution, thanks to British genius. My only object in writing is to record the truth and to bear witness to my recollections. I hold no brief to defend the ex-Khedive Abbas Hilmi. Personally, I have the painful duty of reproaching him for certain neglects and forgetfulness; which have been the cause of a rupture in our relations for seven years; but as a public personage he has the right to be judged with strict impartiality.

I knew Mr. A. H. Beaman personally ever since he was correspondent of the old *Standard*, 36 years ago. He was often a visitor at the residence of Princess Nazli Hanoum. All politicians of high Egyptian Society were constant visitors at the drawing rooms of this Princess, who spoke English most fluently. Lord Cromer held her in high esteem and was likewise a visitor, as well as all English residents in Cairo. Saad Zaghloul and Shaikh Abdu, as well as many other Egyptian notables, were among her regular visitors. Mustapha Fehmi Pasha, Prime Minister, was also to be seen there as often as it was possible for him to call.

I was well acquainted with Princess Nazli Hanoum, having served her as a Private Secretary for a certain period, during which time it gave me great pleasure to see her Highness take an interest in the young Turk movement, of which her father, Prince Mustafa Fazil Pasha, was the founder during the reign of Sultan Abdul Aziz.

As regards His Highness the ex-Khedive Abbas Hilmi, I am one of the few persons still living who was on terms of intimacy with him and who served him devotedly and loyally.

In 1905, while I was Councillor of State of the Ottoman Empire, I had the honour also of being his official representative in Constantinople. This nomination did not please Sultan Abdul Hamid, who did not look upon me very favourably, on account of my liberal and advanced views. Notwithstanding the annoyance he felt and the worries he had during the crisis of the Aqaba question, the Sultan summoned me to the Palace of Yildiz desiring to entrust me with the settlement of this question. My reply, being naturally a logical one, did not please His Majesty. This is what I said: "I am not conversant with the details of this question. If His Majesty will be graciously pleased to grant me permission to go to Egypt, I will be sure to do my duty as a faithful and loyal servant of both countries." The matter remained at this stage. Doubtless Abdul Hamid did not wish to see me leave Constantinople. However, a few days later the Aqaba question was solved rapidly and skilfully, thanks to the pressure of British diplomacy.

Mr. A. H. Beaman's book contains a great deal of what is true, as well as criticisms which will give all those who know Egypt well cause for reflexion and thoughtful study. There is not a shadow of a doubt that the deposition of Abbas Hilmi II was not effected in either a graceful or courtly manner, and that his private interests were injured, as a forced sale of his private goods realised ridiculous prices.

The outbreak of War was made the pretext for his dethronement. For a long time previously, I foresaw the coming and bursting of the storm which was brewing; for this reason I never ceased to urge His Highness to adopt a conciliatory and friendly attitude towards Lord Kitchener, a loyal and brave soldier. The Khedive recognised the advantage of this salutary policy, but unfortunately, each time he took a step forward in this sense, he was never encouraged. Without doubt, there was a strong official feeling against him, which greatly influenced any good intentions Lord Kitchener may have had. On the other hand, we had in the Khedive's circle of advisers, attendants and general entourage, very many most undesirable persons, who really caused His Highness considerable harm and damaged his prestige to a great extent. The real interests of both Egypt and Great Britain were subordinated to intrigues. In the course of many private and intimate conversations, His Highness often used to tell me that he expected some day to be obliged to quit his throne. In reply, I always begged him to set aside these preconceived ideas, which were always harmful, and to set himself the task of breaking up intrigues and misunderstanding.

The Khedive upheld his dignity and his position as a Sovereign. He naturally resented being humiliated and submitted with difficulty; unfortunately every occasion was seized to impair his dignity. Lord Cromer treated him as a child. Lord Kitchener treated him as an adversary. It was only Sir Eldon Gorst who appreciated the value of his friendship.

On the subject of Abbas Hilmi's book, "A Few Words on the Anglo-Egyptian Settlement," I would say that the great personality of the ex-Khedive is revealed in this most remarkable book. His Highness speaks as a wise man and a statesman, he advises and expounds, he even shows a high philosophy. He endeavours to make all Egyptians understand what are their real interests and the high ideals of democracy which symbolize Great Britain. I congratulate him most cordially as a true patriot at a critical juncture in Egypt's policy.

With his hands free and with an entourage of advisers and statesmen worthy of him, he could render most important services to Egypt, to Great Britain, to the Near East and to the Mussulman world in general. He is an indefatigable worker; with his organising genius and his personal democratic charms—a good Mussulman to boot—he possesses the best characteristics of a great Sovereign.

Alas, we can only say: "*Al Mokaddar la Yoghaiyar*"; that is, "What is written is written."

In conclusion, one word more. Egypt is indebted solely to Great Britain for her present prosperous condition. Egypt is the only country which is really happy. Egypt has been lifted during the last 50 years into an atmosphere of complete liberty. Can it be denied? Does she appreciate all this? All the trouble arises from the fact that in our Orient, we have no statesmen having a thorough knowledge of Great Britain, that is to say, of her genius, her love of liberty and justice. I, therefore, sincerely advise the youth of, and all those who wish to serve the peoples of, the Near East to aim at understanding more and more the moral grandeur of the British nation.

In her paternal and liberal Imperialism, Great Britain has a high mission to accomplish in this world. May I be permitted to explain myself? Great Britain is not a suppressor of the liberties of peoples; on the contrary, she grants liberty to them and assists in diffusing freedom; but in doing so she insists on the maintenance of order and methods necessary to attain real progress. If one day humanity is to be cured of all its ills and troubles, without upheavals, and if we are to attain universal brotherhood, it will be due to the genius of Great Britain.

—I am, etc.,

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

A Turkish Moratorium?

There does not appear to be much doubt that it is Turkey's intention, should such a project appear possible, to obtain a moratorium in respect of her external debt. As I had occasion to point out recently in connexion with the depreciation of the Turkish exchange there is no question as to the seriousness of Turkey's economic position as a result of a sequence of bad harvests. But Turkey's credit has already been so impaired by her Fabian tactics over the debt settlement that it would be the worst possible policy to meet the situation by a moratorium if any other recourse remains. It must be borne in mind that it was less than a year ago that the resumption of the debt service took place, and the sacrifices that the bondholders made to bring about a settlement should make it a matter of honour for the Angora authorities to continue the payments as long as they possibly can. It has been suggested that the idea of a moratorium has been mooted to see how it will be received in Europe. But the acceptance of this view is to give scant credit to the intelligence of the Turkish Government. How could it be received but unfavourably? and it is surely going too far to assume that they wished to see whether the degree of criticism was as severe as they expected. It can only be emphasised that if a moratorium is obtained the effect will be to make it more difficult than it is at present for Turkey to raise a loan in Europe.

Egypt's Cotton Acreage.

It is interesting to note that the policy of the restriction of the acreage under cotton in Egypt is the subject of increasing criticism in the local Press. Thus one journal points out that the restriction law has been tried for three consecutive years, and but for damage caused by floods in America in one of these years would have had no effect on prices. Of course the crux of the problem is that Egypt is now not the only supplier of the type of cotton with which the country is particularly identified, and as the production elsewhere is steadily increasing it follows that a restrictive policy must in the long run adversely affect Egypt. It is true that a factor which has affected the restriction is the steady increase in the Egyptian cotton yield, which after being as low as 3.5 kantars per feddan in 1918 has now recovered to about 4.4 kantars and promises to go still higher. But that is merely a side-issue and can have no lasting bearing on the problem. There is no question that Lancashire can absorb Egypt's cotton output provided it is good enough and cheap enough, and instead of considering questions of restriction Egypt's real policy lies in discovering how to cut down the cost of cotton production and how to improve the existing strains. A pursuance of this policy will remove the need for restriction.

The New India Loan.

The prospectus of the expected Government of India Sterling Loan made its appearance on Monday. The loan, the amount of which was £6,000,000, took the form of short term bonds, and the attractive terms—the price being 99 and the interest six per cent.—made it certain that there would be an overwhelming response and, as expected, the loan was oversubscribed on the opening morning. The bonds of the loan, it may be added, are repayable at par on June 15, 1932, or twelve months later at the option of the borrower at 101. The decision to issue short-term bonds instead of a long term loan was in continuance of the policy recently pursued by the Government of India—a policy rendered very necessary at the present juncture because of the prevailing conditions, as a long term loan would have imposed an unduly heavy financial burden on the country. The rate of interest that has had to be offered is the measure of the damage that can be done to a country's credit by a handful of agitators. Once before, in similarly adverse circumstances, India had to raise a short term loan at the higher interest of seven per cent. It is something to be thankful for that it was not necessary on this occasion again to have recourse to this figure. Still, six per cent. is quite bad enough, and the Government has very wisely restricted its liabilities as much as possible by making it a short term issue, and no doubt with the speedy improvement in India's credit that will result from the restoration of confidence it will be possible at no distant date to float a loan on much more favourable terms.

Sudan Cotton Growing.

Lord Brentford, the former Home Secretary, who is at present on holiday in the Sudan, in the course of a letter dealing with his experiences pays unstinted tribute to the difference that the rapid development of cotton growing has made to the country. He writes from Wad Medani, which, he points out, was little more than a native village of mud huts thirty years ago, but "to-day it is the centre of 40,000 people, due almost entirely to the wonderful development of irrigation. Something like 400,000 acres of land are now under cotton cultivation, providing over 100,000 bales of best cotton for our people in Lancashire and distributing over £1,000,000 per annum among the 10,000 native cultivators." No doubt Lord Brentford used the phrase "over 100,000 bales" because it is a good round figure; he might have increased it by 30 per cent. and even then he would have been well below the production that may reasonably be expected from the acreage now under cotton in the Gezira. It is very satisfactory that a former Cabinet Minister should have seen for himself something of the painstaking work that is going on in the Sudan and of the notable results which which have already accrued from it. I have said before, and I repeat it, that the work of British administrators in the Sudan (in which I include all those who are so ably carrying out the task of the development of cotton growing) is an object lesson for the Empire.

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathen."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Correspondents all over the World.

The BANK OF ATHENS specialises in the development of Trade between GREECE and the UNITED STATES and GREAT BRITAIN, and in General Banking Business.

London Branch:

22, Fenchurch Street, London, E.C.3

Next Week's Fair.

So quickly do the months revolve that though one knows the date quite well it comes almost as a shock to realise that this year's British Industries Fair opens in London and Birmingham on February 17. I have often doubted whether the late winter was the best time in the year for the Fair, but I suppose there are sound reasons for the date chosen, or it would have been altered. It was held much later once on account of the British Empire Exhibition, and I do not remember hearing that it suffered on that account. To judge by the prevailing conditions it might well have been held later with advantage on this occasion, for with industry under a cloud, unemployment increasing, and Mr. Snowden's Budget exercising a depressing influence, it cannot be said that it will take place in a favourable atmosphere. In these days however, when things seem to go by opposites, it is quite possible that the Fair will be a signal and indeed a unique success. It is much to be hoped that it will, and that by the time it ends British industry will have received a much-needed fillip in the shape of substantial orders for the overseas markets.

Cinemas in Abyssinia.

A country which is undeveloped may have after all some assets to place against its liabilities. I have just been reading an American report to the effect that there is little prospect of the introduction of sound-pictures into Abyssinia within the next few years. As a matter of fact this unhappy country is still so far removed from all that makes civilisation worth having that there are as yet no cinemas with regular programmes, and there are only two or three theatres which show an occasional programme consisting—I quote from the report—"usually of old or antiquated pictures" obtained in the European second-hand markets. But I cannot help wondering whether Abyssinia is much worse off for missing the fine fruits of culture which drop from the average cinema screen. It is a very moot point.

COMMENTATOR.

THE SILK INDUSTRY IN BULGARIA.

Mulberry trees grow well in Bulgaria and it is possible to utilise many mountain slopes that are unfit for other agricultural purposes. It is estimated that at present there are about 1,000,000 mulberry trees in orchards containing other cultures and about 1,500,000 in orchards solely devoted to mulberry trees (say the American Vice-Consul at Sofia, Mr. Samuel Green, in a recent report). The yield of leaves from the total number of trees is sufficient for the production of 2,000,000 to 2,500,000 kilos (1 kilo equals 2.2046 lb.) of silk cocoons annually. Realising the possible further development of sericulture in Bulgaria, the Government is endeavouring to make silk cocoons a staple export item.

The production of silk cocoons in Bulgaria amounted to 1,974,638 kilos, valued at 200,000,000 leva, during 1928, as compared with 2,038,297 kilos, worth 190,000,000 leva in 1927.

According to preliminary figures prepared by the Director-General of Statistics, 856,155 kilos of dried silk cocoons, valued at 265,789,670 leva, were exported from Bulgaria in 1928, as compared with 549,803 kilos, worth 175,929,545 leva, during 1927. As a consequence of the efforts to improve the quality of the silkworm eggs, the yield of dried silk cocoons has increased, and the average at present is about 3.6 kilos of raw silk cocoons equal to one kilo of dried cocoons. Italy is the largest purchaser of Bulgarian silk cocoons, having taken 830,605 kilos in 1928 and 528,127 in 1927. Turkey, France, and the United States are relatively unimportant buyers. According to preliminary figures, 8,340 kilos of raw silk, valued at 9,790,617 leva, were exported from Bulgaria during 1928, in comparison with 5,496 kilos, worth 7,145,463 leva, in 1927.

Bulgaria has four silk-reeling establishments and six weaving mills, aided by foreign capital and technical advice, where domestic fabrics of interesting design are manufactured for local consumption. In 1927 the silk-reeling establishments had an invested capital of about 4,250,000 leva, and a production valued at about 18,525,000 leva. The silk-weaving industry had an invested capital of 8,405,000 leva, 92 power looms, 47 hand looms, and a production of 13,750,000 leva. Owing to the good export markets for raw silk the reeling plants are steadily increasing their production. In 1926 reelers used 70,000 kilos of dried cocoons in producing about 17,000 kilos of raw silk. During 1928 estimates show the production of approximately 24,000 kilos of raw silk from 100,000 kilos of dried silk cocoons.

While the silk-reeling establishments produce principally for the export trade, the silk-weaving industry supplies the demands for the local market. Formerly, the lack of technical skill in giving a fine finish to silk textiles has been an obstacle in the development of the industry. A part of the production was sold abroad roughly finished; another part was sent to other countries for finer finishing and then reimported for sale in the local market. Efforts recently have been made to improve the local finishing process, and it is reported that considerable progress has been made.

It is reported that Bulgarian silk mills have acquired additional capital. The most important factors in this respect are the acquisition of one mill by a French group of financiers and silk manufacturers and the creation of a new association with registered offices at Lyons, France, and Sofia, Bulgaria. The capital of the new company is about 65,000,000 leva, which is several times larger than the total capital investment of the existing silk-reeling establishments and weaving mills in Bulgaria. The mill will have at its disposal the necessary technical personnel from France, and the company is reported to be planning the construction of a weaving mill at Tirnovo and a reeling plant in south Bulgaria.

BANQUE FRANCO-BELGE ET BALKANIQUE

Joint Stock Company

Capital - Leva 150,000,000 fully paid up.

Affiliated to the Banque Belge pour l'Etranger (a foundation of the Société Générale de Belgique), Banque de l'Union Parisienne, Wiener Bank Verein, Oesterreichische Credit Anstalt für Handel und Gewerbe, Ungarische Allegmeine Creditbank.

Head Office: SOFIA.

Branches at Doupnitza, Haskovo, Lom, Pleven, Roustchouk, Varna, Vidin.

Affiliated Banks: **BANQUE DE PLOVDIV AT PHILIPPOPOLIS.**

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 7.

The Stock Exchange, which had been anticipating a reduction in Bank Rate for some weeks, was not, however, fully prepared for Thursday's change, when the rate was lowered from 5 to 4½ per cent., and the reduction produced a marked effect on the undertone of markets. The gilt-edged section, which had been firm in the earlier part of the week, strengthened further and there was some recovery in the industrial section, but the recent activity in Rhodesians received a slight check. The volume of public business, however, remained on too small a scale for quotations to be much affected outside the gilt-edged group. Prices in the latter are, on the whole, at a lower level than at this time last year, just before the Bank Rate was raised from 4½ to 5½ per cent., and it is possible that a further small advance in quotations may occur, especially now that the rate of interest allowed by the banks on deposit accounts has been lowered to the relatively low level of 2½ per cent. A setback was, however, caused on Friday by the announcement of an Indian loan of £6,000,000 on remarkably high terms. As regards other sections, there are signs that the liquidation which has been so prominent a factor for several months is now drying up, and after next week's Hatry settlement something in the nature of a slow recovery may be hoped for.

Old Favourites.

The issue of the Brighton Corporation Loan last week, which, in all the circumstances, was fairly successful, and the present issue of £750,000 Hastings Corporation Loan are welcome features, and it is to be hoped, of course, that investors will give such issues a good reception. The Brighton Loan was for £1,100,000 of 5 per cent. stock, redeemable 1950-60 and issued at 99½. About 48 per cent. was left with underwriters, but the stock opened at only ½ discount and, on the announcement the same day of a reduction of Bank Rate to 4½ per cent., the price immediately responded, so that the yield is just over £5 per cent. Interest is payable in January and July, and a three months' interest payment of £1 5s. per cent. will be made on July 1 of this year. Among already fully issued Corporation loans good returns are obtainable from certain short-dated stocks such as Cardiff 6 per cent., redeemable July, 1946, yielding about £5 19s. per cent., or Northampton 6 per cent, 1950, yielding £5 14s. per cent. Among longer dated loans Birkenhead 4¾ per cent. 1960, gives a return of £5 4s. per cent. All these loans are, of course, well secured, and the administration of all local government bodies is to some extent under the control of the Ministry of Health.

Gas.

The rapid and generally welcome electrical development now taking place in this country may cause some people to wonder if the reign of gas for fuel and light is not coming to an end. An examination of gas undertakings' statistics proves that not only is gas a much desired product, but the demand for it continues to increase. The recently published results of the two most important London companies bear this out. In 1929 the Gas Light and Coke Co., sold 4.5 per cent. more units of gas than the year before, and the income from such sales rose from £8,172,000 to £8,464,000, while rents for gas apparatus rose from £1,340,000 to £1,406,000. Mainly because residual products such as tar obtained a lower price, the net revenue was about £8,000 lower, but even so it amounted to the large sum of £1,846,000, and the directors felt justified in raising the annual dividend by 1s. to £5 12s. per cent. Similar steady expansion is shown in the case of another London Company, the South Metropolitan, whose sales of gas increased by 3.24 per cent. in 1929, compared with the year before. Gross revenue was £3,228,000 against £3,100,000, while net revenue was £571,000 compared with £562,000 in 1928. The dividend was maintained at 6¼ per cent. A smaller company on the outskirts of London showed as might be expected, relatively greater expansion; the South Suburban Gas Co.'s sales increased by 6½ per cent. and the net revenue for last year was £104,218; the same dividend as last year, 6½ per cent., is being paid. Its shares yield about £5 17s. per cent. The yields on the ordinary stock of the Gas Light and Coke Co. and of the South Metropolitan are £5 18s. per cent. and £6 4s. per cent. respectively.

Rhodesians Active.

Once again, as mentioned above, activity in the shares of Rhodesian copper mining companies has stood out against the general dullness of the Stock Markets. This time the movement has been led by Congo Borders, whose quotation has risen from about £8 to £14 in little over a week. Among other leading shares in this market which have also risen are N'Changa and Bwana M'Kubwa. The movement, however, has been largely professional, though public interest increased towards the close, and the steepness of the rise in Congo Borders is mainly due to the fact that the volume of the shares in the hands of the public is very small. The "shops" would naturally like to see the public interest greater. Undoubtedly the area contains great possibilities, but, as has been remarked before in this column, these potentialities are to a great extent discounted in current prices. Not only are there considerable engineering and other difficulties to be overcome before the properties can be developed, but the prices of the shares can only be justified on the assumption that present prices of the metal are maintained, which, in view of the addition to the supply the development of these regions will entail is a large assumption.

ECONOMIC DEVELOPMENTS IN GREECE.

Hambros Bank, Ltd., in their report for the week ended February 7, give the following details of developments in Greece :—

Stock Exchange.—A more favourable atmosphere has been experienced lately, and the whole list shows a more cheerful appearance, especially investment stocks such as Government and bank stock.

There has been a better demand for tobacco during December. Sales recorded amount to approximately 7,400,000 okes, as against 6,500,000 okes sold during November. The appearance in the market of representatives of the Czechoslovakian and Hungarian Monopolies, as well as of American trade interests, has revived interest in the market. The prices are satisfactory and keep steady.

The second balance-sheet of the Bank of Greece just published reveals that the total profits for the second year of its operations amounted to 225,534,936.40 drs., which, after deduction of all expenses and provision for expenses of the issue of bank notes and allocations to pension and other funds aiming at the welfare of the staff, leaves a balance of 109,548,645.38 drs. A dividend of 8 per cent., i.e., 400 drs. per share, absorbs 32,000,000 drs., and reserves absorb 41,473,744.75 drs. The Government share of profit requires an amount of 36,000,000 drs. A balance of 74,900.63 drs. is carried forward. Deposits and other accounts stand at 1,529,385,819.27 drs.

The wine market is passing through a period of suspense owing to the newly published French law which has prohibited the import of foreign wines into France. The decline of the peseta has had also an unfavourable effect on the prices. To meet the competition of Spanish wines in foreign markets, due to the depression of the Spanish currency, the Greek wine producers have been obliged to reduce their prices in order to stimulate the demand, which is reported to be satisfactory.

The figures of imports and exports for the eleven months of 1929, i.e., January 1 to November 30, are now available (in oos) :—

	1929. Drachmæ.	1928. Drachmæ.
Imports	12,159,439 ...	11,381,898
Exports ...	6,360,928 ...	5,097,385
Total	18,520,367 ...	16,479,283

A study of the monthly figures shows that the distribution of imports and exports has been more or less even, which shows that trading has been regular, and there does not seem to exist an excess of stocks.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for January was 71,890 tons.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Various Stores.—The Commandant-General of the Royal Yachts, Alexandria, invites tenders for various stores. The schedule of requirements, which relates mainly to small quantities of goods, includes, among other articles, twist drills, suction hose, leather belts, canvas belts, mild steel, lead pipes, emery sheets, timber, clothing, table linen, etc. February 20. (D.O.T.)

Requirements of Frontiers Administration. The Frontiers Administration, Ministry of War and Marine, Egypt, invites tenders for various stores. The schedule of requirements, which relates mainly to small quantities of goods, includes, among other articles, leather bandoliers, revolver lanyards, leather hose, wire brushes, galvanised buckets, green baize cloth, linen sheets, sacks, etc. April 5. (D.O.T.)

Lifts and Shoots.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply and erection of lifts and shoots for new sheds on mole (E). March 27.

Marine Diesel Engines.—The Director-General, Mechanical and Electrical Department, Public Works Ministry, Cairo, invites tenders for the supply of two marine Diesel engines 45 h.p. for Minia Municipality Ferry boat. April 1.

North Delta Electricity Scheme.—The attention of tenderers is drawn to the following :—Quotations for copper conductors shall be based on the assumed price of eighty-five pounds per ton. Tenderers shall state variations to be made in the price for copper for every one pound rise or fall in the price of copper per ton. The purchase price shall be calculated in accordance with London prices of copper ruling on the day of the notification of the final acceptance of tender by the Department. Offers not complying with this clause will be disregarded. The attention of tenderers is especially drawn to the provisions of Article 45, Part II, of the conditions of tender and specification for high tension overhead transmission lines, isolated basins electricity scheme, Upper Egypt, and same article for Lower Egypt. Shortness of time will be a very important factor in deciding on tenders.

Air Compressing Engines.—The Director-General, Main Drainage Department, No. 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply and erection of three air compressing engines and auxiliary machinery at Damanhour Power Station and two small air compressing engines at Kafr el Zayat. May 1.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, February 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahseer for Calcutta (Birkenhead, February 20).

Bibby Line.—S.s. Yorkshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, February 19).

British India Line.—S.s. Dumana for Bombay (London, February 15); s.s. Mantola for Colombo, Madras, and Calcutta (London, February 22.)

Cunard Line.—S.s. Bantria for Casablanca, Gibraltar, Oran, Genoa, Leghorn, Naples, Bari, Gruz, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, and Ancona if sufficient inducement (Liverpool, February 15; Swansea, February 18).; s.s. Bactria for Gibraltar, Malta, Calamata, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, February 20; Swansea, February 21; Liverpool, February 22).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 1); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 29).

P. and O. Line.—S.s. Padua for Calcutta (London, February 14); s.s. Razmak for Bombay (London, February 21).

Ellerman and Papayanni Lines.—S.s. Maronian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, February 15); s.s. Oporto for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, February 15; Swansea, February 15); s.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 1); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, March 1; Swansea, March 6); s.s. Manchurian for Gibraltar,*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 8; Swansea*, March 8). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

Motors and Motoring.

(By Our Motoring Correspondent)

Open or Closed Cars.

In spite of the cold spell and the snow which fell in many parts of the country, there were larger numbers of cars than usual on the road during the week-end, and a big proportion of these were open cars, so that the British motoring public is evidently getting hardened to bad weather. In many parts of the country the sun was shining brightly on Sunday, and perhaps that accounted for it. At the same time, the question does arise as to whether the closed body is not becoming a thing of the past, especially amongst the younger generation. The plutocrats of the road will still want to drive about in something that is indicative of finance and the aged and infirm will continue to screen off every possible draught from their bodies, but the majority of motorists, with sturdy common sense, drive about in all weathers with no special protection against the wind, and, in seven or eight cases out of ten, without a hat. Even motor cyclists who have always seemed to feel that they would be mistaken for novices unless they wore crash helmets, airmens' suits, and armour-plated gloves, were going about last summer in the same light and negligent costume affected by the ordinary cyclist, and, no doubt, rode and felt all the better for it. All this special clothing business is chiefly faddism; the writer is old enough to remember when motorists donned fur coats, goggles, ear muffs, and foot-warmers on their hands to drive down Bond Street. And probably these special bodies are also in the nature of fads. If so, they will surely disappear and the common-sense and hygienic open body take their place. Of course, with a one-second, one-man hood in case of thunder-storms.

Diesel Cars.

So much has been said of late regarding road vehicles fitted with engines of the Diesel or semi-Diesel type, that many motorists seem to feel that the day of the petrol engine of the four-cycle type is almost at an end, and that in a few months or a year at latest we shall be driving about in cars fitted with engines that will run in some mysterious way without either magetos or sparking plugs, and shall be using for fuel anything between tar on the one hand and sewing machine oil on the other. Actually, let us progress as quickly as we can, that day is still far distant and petrol will be in as much demand as it is to-day for a long while to come.

Broadly speaking, oil engine practice, into which category come petrol, Diesel and semi-Diesel engines, has followed two distinct but converging avenues of development. These have led to the evolution of the surface-ignition engines and the high-compression or Diesel engine. Between these two types there are many variations, as Mr. Porter pointed out a few days ago, when speaking on the subject. But so far as the general public are concerned, the intermediate designs are very few and we have only, in practical politics, to deal with the respective merits and advantages of the four-stroke spark ignition, the two-stroke spark ignition, the hot bulb and the Diesel types. Every motorist is more or less familiar with the two first-named types; the hot bulb was familiar to us in the earlier days of the gas and oil engine and the Diesel is an engine everyone is always hearing about but comparatively few understand. As has been said before in these columns, the limitations imposed by ordinary materials, the processes adopted for the preparation and combustion of the working fluid, and the restraining influence upon design exercised by the essential objectives of the type—namely, extreme simplicity and low first cost—restrict the construction of the true surface ignition engine in the hot bulb form to units of comparatively low horse power. It is with the purpose of improving the running conditions of the power unit, and to attain higher horse power that a hybrid type has been evolved. The hot bulb, with its temperature variations between 750 degs. and 1,400 degs. Fahr., has been eliminated as such, since it now consists of no more than an extension of the clearance space, returning no heat to the charge at ignition and being entirely water cooled. The compression pressure has been increased from about 30 to about 45 lb. per square inch. The low mean brake pressure and the retention of crankcase compression for scavenging purposes prevent the construction of units of the type described from exceeding about 500 brake horse power at competitive prices, but it is evident that this margin is quite high enough to allow of engines for road use being made of this type. How far development will go in that direction remains to be seen; it may be a long day before anything of real value is done and on the other hand it may not. It must be remembered that engines of the semi-Diesel type are already being made of as low a power output as 4 h.p., and there is a three-cylinder, two-stroke type, with the cranks at 120 degrees apart which has decided possibilities. It must be remembered also that developments have a tendency to move rather quickly nowadays after they are once started.

Light Aeroplanes.

For years some of us have waited as patiently as possible for the light aeroplane to become popular. Years ago, as aviation editor of a certain daily paper, the idea fascinated me, and at that time makers, all over the country, entered into and endorsed my views, supplied me with facts and figures and, together, we did our best to show people that flying was not only enjoyable but safe. One or two bad smashes seemed to induce a feeling of listlessness amongst the travelling public; they seemed to prefer to remain on what a lady at Stag Lane Aerodrome one day, in conversation with me, referred to as "terra cotta." In spite of the gallant efforts of Sir Alan Cobham to show people that flying is about as easy as going to sleep, it is only recently that the private individual has taken to flying as what one may call, I presume,

an owner-flier. Of course, De Havilands have done yeoman service in the fight to popularise flight, as also have A.D.C. Aircraft, Ltd., of Croydon.

I find comparatively few motorists, men who might and should take up flying, have an idea as to the size, design and power of the modern light aeroplane, and for that reason it may be of interest if I go over the chief features of a one-man type of plane. To begin with, the engine is a four-cylinder air-cooled unit; the cylinders being in line, vertical direct drive. A typical engine of the kind is that of the Cirrus III., and in that the bore and stroke are 110 and 130 mm respectively, so that the engine has a total capacity of 4,939 cubic centimetres. So far as rotation is concerned the power unit is a right-hand tractor, and it weighs 285 lb. complete with air screw boss, which will work out at about 3½ lb. per horse power. An engine of this size, at normal flying speed, will consume just over half a pint of petrol per horse-power hour. As the normal power output at 1,900 revs. per minute is 90 h.p., the petrol consumption would be about 0.6 x 90 pints, or rather under seven gallons per hour. It may be mentioned that the power output in this particular engine is obtained by a 5.1 : 1 compression ratio. When this is raised to 5.4 : 1 the output is about 92½ hours power. The maximum power of the engine would be about 97 horse power at 2,100 r.p.m., and to reach this a compression ratio of 5.4 : 1 is necessary. Some interest attaches to the crank case which is of aluminium alloy. The upper section is stiffened by three transverse webs and carries the crankshaft and cam shaft bearings and the mounting for the oil pump spindle. The sump, which is also of aluminium alloy, is bolted to the top half of the crank case, and is large enough to contain six quarts of oil which is ample for twelve hours' flying. This oil supply is pressure fed to the main and big end bearings. The main oil supply, however, does not circulate, but is only used as required, as this arrangement has the desirable effect of maintaining a lower temperature, with a corresponding increase of viscosity, over a longer period. By this arrangement the pressure as recorded by the oil gauge is a definite indication of the proper functioning of the system. The crankcase sump is so designed that during aerobatic manœuvres, the oil is retained and will not foul the pistons.

H.R.H. the Prince of Wales will attend the inaugural session of the twelfth triennial congress of the Federation of Chambers of Commerce of the British Empire at the Guildhall on Monday, May 26, and will open the proceedings with a short address of welcome to the Empire delegates.

ADVERTISING IN
THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

The Manager, "The Near East and India," 170 Strand, London, W.C.2

THE ROUMANIAN MARKET.

Messrs. Watson and Youell reports as follows from Galátz for the week ended February 1:—

Grain.—No revival in exports has yet taken place, and the position on consuming markets abroad appears to be as difficult as ever. Only insignificant fresh business has been done, and berth rates at Sulina have fallen to as low as 10s. for the Continent. There is some demand for Italy, and a small steamer of 1,500 tons is reported as having been fixed for Ancona and Ravenna at 14s. 7½d. A similar small steamer has loaded for Bari and Ravenna from Braila and another has sailed from Galatz for Sicily, but otherwise there has been no grain movement from up-river loading ports.

Timber.—In view of the possibility of trade being resumed from Danube ports at an early date, arrivals of timber at Constantza have not been as important as was expected. Most of the wood loaded at that port has been destined for the Mediterranean, only small quantities having been shipped for Rouen and Rotterdam.

Weather.—The weather remains abnormally mild. The temperature has generally been well above freezing point even at night, and on Wednesday it reached 14 degrees Centigrade in the shade at midday. The sky has generally been overcast, and light falls of rain or snow are reported from the western and northern districts; but in this neighbourhood practically the only precipitation has been in the form of intermittent drizzles. Mist has been very prevalent during the week, and fog has hindered navigation on the Danube during the last few days.

Sulina.—Bar depth unchanged, 24 feet. River depth: the minimum up to Braila is still 24 feet.

Constantza.—This week about 5,000 tons of grain arrived from the interior and about 4,000 were exported, most to Mediterranean ports. At the time of writing two steamers are under the elevators loading 5-6,000 tons each for Rotterdam and Hamburg, whilst several other vessels are waiting berth or expected to load for the same range. Thirteen vessels loaded nearly 35,000 tons petroleum products.

Bulgarian Report.

Bourgas, January 25.—The stagnation on the local grain markets continues, only insignificant quantities having been shipped, but for second half of February about 1,000 tons of maize for Antwerp and Rotterdam are available.

There were slight frosts the first half of the week, but since then the temperature here has been above freezing point, though in the northern districts it remained well below. The sky was generally overcast, but no falls of snow or rain have been reported. The abundant falls of snow of a few weeks ago are still covering the autumn sowings in many parts and protecting them from the hard frosts experienced in the northern districts, whereas in the southern districts, where the fields are bare of snow, only slight frosts have so far been registered and do not appear to have caused damage.

Conditions in the Turkish raw-silk industry have improved considerably during the past year (says a recent American report). Raw-silk production in Turkey averaged 300,000 kilos annually before the War, dropped to 60,000 in 1923, rose to 95,000 in 1925, and again declined to 70,000 in 1926. Production during 1928, however, amounted to 125,000 kilos, a gain of 56 per cent. over the output of 80,000 kilos in 1927. The 1929 production is estimated at 140,000 to 150,000 kilos. The Turkish Government has been encouraging producers to extend their operations, and to this end distributed free of cost 360,000 mulberry seedlings in 1927. Favourable prices for raw silk and the building of several small but comparatively modern mills in Broussa were additional factors which stimulated production.

Although Roumania has access to 1,075 kilometres of the Danube and a coast line of 310 kilometres on the Black Sea, the number of outboard and inboard motor boats in use is very small (says an American Consular report). The greater number of the boats in use were built locally by individual boat builders at Danube ports, and the remainder come largely from Germany via the Danube. The few outboard motors now in the country, used exclusively for pleasure, were imported principally from America. There is a potential market for this type of motor as well as for the inboard motor, which could be used profitably in the extensive fishing industry carried on in the Danube and its delta branches in the Black Sea. The market for these types would be confined largely to motors and accessories, as the great majority of the purchasers, for reasons of economy, would want to have the boats built locally.

Coal Saving on Industrial Boiler Plants.

An important point in connexion with coal is that most of the world's consumption for steam generation is represented by the smaller boiler plant, and not power stations, as is generally imagined, and great economies are often waiting to be effected in installations of this character. A typical recent example of savings being effected concerns a well-known gold mining company on the Rand, showing also the effective utilisation of a high ash content, cheap low grade coal instead of good quality material, and important for example in regard to small and medium-sized electricity stations.

In this case the boilers are of the hand-fired water-tube type, of only 1,265 square feet heating surface, having a calculated evaporation of 3,850 lb. of water per hour, based of course on good coal. One of these boilers was subsequently fitted with the "Turbine" forced draught steam jet furnace of standard design, 27.5 square feet actually effective grate area (5 ft. 6 in. long) exposed to the air blast and a detailed series of tests under very accurate conditions have been carried out side by side with the "Turbine" boiler and another boiler having the ordinary hand firing.

In the case of the normal good quality coal used (Witbank) containing 20 to 25 per cent. ash, under ordinary conditions the coal burned per boiler per hour was 500 lb. and the water evaporated 1,776 lb., that is 3.55 lb. of water per lb. of coal, the general conditions also of the test being a steam pressure of 150 to 160 lb. and very hot feet water, about 200 degrees F.

The corresponding boiler under exactly the same conditions, equipped with the "Turbine" furnace, burned 760 lb. of coal per boiler per hour and evaporated 4,200 lb. of water per hour, that is 2½ times the amount of steam, exceeding the calculated rating of the boiler, hardly ever attained in practice, and corresponding to 5.60 lb. of water per lb. of coal.

In a second series of tests much inferior coal was used known as "Springs," containing 35 per cent. ash. In this particular test the ordinary natural draught boiler with good quality Witbank coal as before burned 600 lb. of coal per boiler per hour and evaporated 2,275 lb. of water, that is 3.7 of water per lb. of coal, a slightly better performance than the first one. Using "Springs" inferior coal the "Turbine" furnace burned 900 lb. of coal per boiler per hour and evaporated 3,275 lb. of water, corresponding to 3.60 lb. of water per lb. of coal. That is about 50 per cent. more of the inferior coal was burnt with an evaporation of more than 1½ times as much, naturally representing a very great economy because of the difference in price between the two coals, while this type of furnace burns lignite and peat quite easily.

Obviously also a further improvement would be the installation of feed water economisers, which perhaps however would be difficult in the case of ordinary firing, because presumably the natural draught available is not good. It may be stated that in many parts of the world large numbers of extremely small water tube boilers are still at work in mines and other establishments, largely because of considerations of difficulties of carriage in connexion with plant and machinery, although the modern heavy six- and eight-wheeler motor wagon with caterpillar tractor wheels if necessary has now altered the whole situation in this respect.

Callender's Cable and Construction Company, Ltd., London, have obtained a contract for the supply, delivery, and erection of about 400 miles of high-tension overhead transmission lines in connexion with the Uhl River hydro-electric scheme of the Punjab Government.

MARKET FOR AGRICULTURAL MACHINERY IN BULGARIA.

Bulgaria is becoming an increasingly important market for farm equipment—especially in the tractor and harvesting machinery lines (says an article in the United States "Commerce Reports"). The principal industry of the country is agriculture, and cereals constitute the principal crop. It is estimated that 85 per cent. of the population of 5,596,800 (1927) is engaged in some phase of farm activity; and although the purchasing power of this class is rather low, because of the depreciation of the lev, there is an increasing interest being shown in the use of modern farm equipment. The importance of the market is shown by the fact that during 1927 Bulgaria's imports of farm machinery were valued at 748,780,704 leva, or about £1,108,000.

Most of the tillage implements, havesting machinery, and threshers are imported from Germany and Austria, which, with Czechoslovakia, surpass the United States as suppliers of farm equipment. It is unfortunate that import statistics fail to show the types of implements imported, but it is thought from the kind of farming carried on that tractors, harvesters and binders, and threshers are, along with ploughs and harrows, the principal types used. So far as is known, combines are not used—most likely because of the very small size of the farms.

It is estimated that at present there are 3,000 tractors in use in Bulgaria, with the average annual import around 600 machines. With the introduction of new methods of work which are necessary to the development of agricultural production, the importation is expected to increase during the next few years. Sales possibilities are very good, for the Bulgarian market should be able to absorb more than 30,000 machines. The small tractor suits the needs of the country best, and to the lightness must be added another quality—that of simplicity of mechanism. The wheel type is most used, and no crawler tractors are found except a few in certain rice-growing districts and forests where wheel tractors are not used to best advantage. In Bulgaria the land is very much cut up, and each peasant owns only small plots of ground, seldom exceeding 10 acres in area. It is the exception to find large farms, and those which are in existence rarely exceed 200 acres. It is therefore very rare for one tractor to be used exclusively for a single farm. The owner of the machine usually hires it out in the same manner as in France the peasants rent out their threshing machines.

Tractors, as well as other agricultural machines, are imported into Bulgaria duty free. Further modifications, which have been made recently in article 94 of the law dealing with the protection of agriculture, provide for the importation duty free of gasoline and heavy oil used as

fuel for tractors, as well as lubricating oils. Thus, a litre of gasoline, which formerly cost nearly 10 leva, now costs only 4 leva to tractor owners. Also, the Internal Revenue Administration recently decided to exempt tractors used for agriculture from the automobile taxes, which for tractors amounted to 400 leva per horse-power. The Ministry of Agriculture is also endeavouring to influence peasants to purchase tractors, and besides the privileges which it accords tractor owners, is launching a campaign for deep ploughing, which cannot be effected by light draught animals.

Tractor prices vary from 140,000 to 300,000 leva, according to the power of the machine. The usual custom is to give the purchaser credit of one year to a year and one-half, and in some cases three-year credit is given. The peasant can thus pay for his tractor from the revenue earned by its use. In general the Bulgarian peasant is industrious and honest, and credit can be given him freely and with safety. To facilitate further the granting of credit, and at the same time to protect the dealers in agricultural implements, the Ministry of Agriculture is about to launch a new plan whereby farm equipment of large value, such as tractors and threshing machines, may be sold on the instalment plan, the seller reserving the title to the equipment until the final payment is made. It is thought that this plan will cause an increase in the use of tractors in Bulgaria.

Threshing machines have been used in Bulgaria for 35 years. They were first imported by associations of farmers in northern Bulgaria, but now they are found in all parts of the country, and it is rarely that a village has not its own threshing machine. More than 3,500 threshing machines are in use in the country at present, with yearly imports amounting to between 300 and 500 machines. However, the market for threshers is not as great as that for tractors, inasmuch as it is believed that the maximum capacity for the thresher market is between 6,000 and 7,00 machines.

The threshing machines used in Bulgaria are of the 32 to 42 inch type, the 36-inch type being the most popular, because it is purchased by the peasant himself. In southern Bulgaria buyers generally insist that a thresher be fitted with a chaff-cutting machine, while in northern Bulgaria this apparatus is not demanded. This is due to the fact that southern Bulgaria is not a prairie country and the peasants of that region utilise straw for feed, while in northern Bulgaria, where there is an abundance of prairie land, hay takes the place of straw. Northern Bulgaria offers a better outlet for threshing machines, but it is in southern Bulgaria that the greatest number of tractors is found. Fairly long credits are granted to purchasers of threshing machines, the period varying from one and one-half to three years. The law mentioned in a foregoing paragraph—permitting the sale of farm equipment on an instalment plan—may also have a favourable effect on the sale of threshing machines.

For the later part of the winter months, when most people like to get out of the England, Messageries Maritimes have an attractive series of Mediterranean cruises. Thus there is one leaving Marseilles on February 22 for a ten days' tour, in the course of which visits will be made to Mentone, Monte Carlo, and Ajaccio. Then on February 25 there is a cruise from Marseilles lasting 45 days, when the centres visited will include Constantinople, Smyrna, Mersin, Beyreut, Damascus, Tiberias, Jerusalem, Cairo, Assuan, and other centres in Egypt. Other cruises to the Near East leave Marseilles on March 4 and 25 and on April 1 and 15.

COMPANY NOTES AND REPORTS.

SOUTHERN PUNJAB RAILWAY.

The report of the Southern Punjab Railway for the year ended September 30 states that the net revenue, after deducting £106,010 0s. 5d. payable to the Secretary of State for India as the share of the surplus net receipts due to the Government, and allowing for administration expenses, Indian taxes and interest on Debenture stock, is £283,798 6s. 10d., to which must be added £105,341 17s. 2d., brought forward from September 30, 1928, making a total of £389,140 4s. The dividend on the Preference stock paid in respect of the six months to March 31, 1929, together with the interim dividend on the Ordinary stock, reduce the balance available to £283,140 4s. The dividend of £40,000 on the Preference stock for the six months to September 30, 1929, was paid on December 2 last, leaving £237,140 4s. In conformity with the announcement already made the Directors recommend the payment of a final dividend on the Ordinary stock of £6 per cent., together with a bonus of £4 per cent. (making, with the interim dividend of £6 per cent. paid in September last, a total distribution of £16 per cent. for the year ended September 30, 1929), subject to income tax. This will absorb £100,000, and leave £137,140 4s. to be carried forward. The Directors also recommend the payment of a dividend on the Preference stock for the six months to March 31, 1930, to be made on the last mentioned date, subject to income tax. The profits for the three months to December 31, 1929, which will not be ascertained until after the date upon which it is proposed the company shall go into liquidation, will be distributed by the liquidators, as part of the capital assets of the company.

On November 27 a circular letter was issued to all stockholders advising them, *inter alia*, that the Secretary of State for India would pay the purchase money, as to £1,000,000 on December 31, 1929, as to £2,300,000 on March 31, 1930, and the balance on April 30, 1930. The Debenture stocks amounting to £1,000,000 have been repaid with the exception of a small amount, the holders of which have not yet claimed their moneys. The distribution of the capital stocks will be effected by the liquidators, who will repay the £2,300,000 four per cent. Preference stock on March 31, 1930, and make a first distribution in respect of the Ordinary stock on or about April 30, 1930. An extraordinary general meeting is to be held on March 5, after the general meeting, for the purpose of submitting a resolution for the voluntary winding up of the company and for the appointment of liquidators; and also a resolution to add to the present staff compensation reserve the sum of £5,000.

NEWS FROM ALL SOURCES.

The Bulgarian Parliament has ratified The Hague Reparations agreement.

The National Bank of Yugoslavia made a net profit for the past year of 28,200,200 dinars.

It is reported that plans are to be drawn up for improvements to the system of the Greek Peloponnesus Railway Company.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended January 10 amounted to £E11,376, making the total from April 1 £E275,802, as against £E258,434 for the corresponding period of the previous year.

The traffic receipts of the South Indian Railway Company, Ltd., for the week ended January 11 amounted to Rs.11,86,100, making the total from April 1 Rs.5,23,40,250, as against Rs.4,81,82,203 for the same period of the previous twelve months.

The Royal Exchange Assurance announces that Mr. E. W. Giffard, chairman and managing director of Messrs. Barclay, Perkins and Co., Ltd., has been elected to a seat on the court of Directors of the corporation.

The Egyptian State Railway have given a contract to the Metropolitan-Vickers Electrical Company for a complete equipment of a 5,000 k.w. generating station which is to be constructed at Gabbary, about a mile from Alexandria. The power-house is to supply power for the railway workshops and also for public distribution in the district, including Alexandria. The contract includes three turbo-alternator sets, boilers, superheaters and economisers, coal-hauling plant, fans, pumps, pipework, etc., and also the necessary switchgear and transformers for linking up to an existing 3,300-volt distribution system and for the supply to the station auxiliaries.

The total crude oil production of the Roumanian fields during 1929 amounted to about 4,800,000 tons, as against 4,268,541 tons in 1928, an increase of about 530,000 tons. The production of the principal companies was as follows (in tons):—Steaua Romana, 805,210; Astra Romana, 852,372; Phœnix Oil, 483,014; Creditul Minier, 437,850; Romano-Americana, 426,642; Sirius, 406,450; Concordia, 267,071; I.R.D.P., 196,325; and Colombia, 171,490. The Phœnix Oil and Transport Company had the largest proportionate increase, 191,907 tons, or 60.3 per cent. over 1928. The Steaua Romana had the largest actual increase with 242,021 tons, representing 37.2 per cent.

DEVELOPMENTS IN CRETE.

The island of Crete, one of the wealthiest Departments of Greece, has shown a good degree of stability during the period of readjustment in Greece proper. Its economic development, however, has been hindered by the lack of roads, which has affected the marketing of many of its agricultural products (says the United States Assistant Commercial Attaché at Athens, Mr. Ralph B. Curren, in a recent report). In the new road construction programme of Greece, provision is made for certain roads in Crete, which are expected to have a beneficial effect on the purchasing power of the island. It is one of the few Departments of Greece that show an excess of exports over imports.

The island is traversed throughout its length by a mountain range of limestone, and two-thirds of its area is a barren stone waste. The ancient famous cypress and cedar forests have practically disappeared; only a few remnants are found in some of the less accessible mountain regions. The arable land is comparatively small, totalling about 840,000 stremmata (208,000 acres). The island is exclusively agricultural, the principal products including currants, grapes, wine, olives and olive oil, citrus fruits, and garden products. Certain quantities of cereals also are raised. The total agricultural production of the island compares very favourably with the rest of Greece. Estimates place the value of this production at 800,000,000 drachmæ, or 2.073 drachmæ per capita, as against 11,268,000,000 drachmæ, or 1.810 per capita, for the entire country. Production during 1928, according to official statistics, comprised in cereals: wheat, 4,530 metric tons; barley, 7,510; maslin, 3,640; oats, 5,650; rye, 130. Pulse accounted for 2,920 metric tons; garden products, 11,960; tobacco, 920; hay, 1,000; wine, 35,180; black currants, 3,140; raisins, 6,380; grapes, 640; olives, 1,730; olive oil, 25,140. Unofficial estimates place the rozakia raisin crop at 8,000 tons; lemons, 4,472,000 pieces; citron, 5,654,000; oranges, 15,362,000; mandarin oranges, 8,606,000; locust beans, 19,440 metric tons; acorns, 1,100; chestnuts, 810; almonds, 530; walnuts, 200; dried figs, 470; apples, 230.

Development of agriculture has been handicapped by the lack of an adequate system of transport. Products from the mountainous regions of the interior are carried to the seaports almost entirely on horse, mule, or donkey. As a result, large quantities of these products remain for weeks awaiting transportation and often suffer through decay.

Industry in Crete is relatively unimportant. The largest plant is one for packing drained citron peel, jams, and marmalades. Established about two years ago, it is equipped with modern machinery and ranks with the leading plants in southern Europe. It produces about 400 tons of citron peel annually, and its products have found a favourable reception in foreign markets, chiefly England and the United States. The remaining plants are small and equipped with old machinery. These include tanneries, olive-oil presses, soap mills, alcohol distilleries, raisin washing, dyeing, and packing of plants.

In contrast with a large adverse balance for Greece, the foreign trade of Crete shows an excess of exports over imports, according to data for the three chief ports. These three ports handle approximately three-fourths of the total foreign trade of the island. There are no details showing the foreign trade of the island by countries, but Italy, Australia, Egypt, and Czechoslovakia are believed to be the principal countries of origin for Crete's imports. Imports from Italy and Czechoslovakia consist chiefly of manufactured good and colonial products.

Port Developments.

With the increase in number and size of vessels calling at Cretan ports, there has been a growing need for construction of more adequate port facilities. A total of 2,203 steam and 1,294 sailing vessels arrived in 1928, as compared with 2,170 and 1,082, respectively, in 1927. Up to 1927 there were practically no ports in Crete. The small ports of Canea, Rethymne, and Candia were only large enough for sailing vessels. In order to develop these ports, special funds were established with each port committee for the construction of new harbours. The first port decided upon was Candia, the largest and most important commercial city in Crete. The work was awarded to a British firm in 1925, and since then the largest section of the new port, which can accommodate the largest steamers, has been completed. The new port is expected to be finished in 1931, and will be equipped with modern facilities for loading, discharging, bunkering, etc. Similar construction will later be undertaken at Rethymne and Canea.

The lack of adequate transport facilities has been a major factor in retarding the economic development of Crete. The island has no railways and very poor highways. The villages and fertile plains in the mountainous districts can be reached only by animal traffic, while trade between the coastal villages is handled by steamers and sailing vessels. As a result a large part of the crops remain undisposed of because of transport difficulties. Under the new road-construction programme of Greece, however, provision is made for the building of about 500 kilometres of new roads on the island over a period of five years. The most important artery will be that extending from Palaeokastron on the eastern end of the island to Kastelli on the western end, about 300 kilometres in length. The road, which is now under construction, follows the northern coast and crosses a very rough mountainous territory, varying in height from sea level to 2,500 feet. Two other important arteries will join Candia with Phaetos and Canea with Sphakia, both of which are very wealthy districts with important agricultural production. The length of these two roads will be 45 and 75 kilometres, respectively.

The motor car is expected to play an increasingly important rôle in the economic developments of Crete, especially in view of the absence of railways. At present, motor vehicles are concentrated in the three larger cities of Canea, Candia, and Rethymne, but with the gradual extension of the highway system and the growing need for expediting the movement of crops from the interior to the ports, the motor is expected to take its place as a necessity rather than a luxury. Official statistics of the number of automobiles in Crete are not available, but trade estimates place the total at approximately 1,000.

Viscount Goschen has been appointed a Director of the Bank of Roumania.

An Athens report states that M. Venizelos, the Greek Premier, has placed before the Chamber a Bill for the creation of a Supreme Economic Council.

With reference to the rumour that the P. and O. Company have in contemplation taking over the White Star group, we are informed on the highest authority that there is no foundation whatever for the report.

The total direct shipments of oranges from Palestine to the United Kingdom up to February 1 amounted to approximately 940,000 boxes, as compared with 630,000 boxes at the corresponding date last year. Total shipments to the Continent amounted to about 290,000 boxes, as compared with about 140,000 boxes shipped up to the corresponding date last year. Transhipments to the United Kingdom via Port Said and Alexandria up to January 25 totalled about 140,000 boxes, as compared with about 71,000 boxes at the corresponding date last season.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 5:—

Egyptian Futures.

Sakel Contract.—The recent sharp break in American values and a growing feeling of uncertainty regarding the ability of the Egyptian Government to hold their crops in the face of lower prices for all other commodities have resulted in this market being obliged to face consistent liquidation of stale "bull" accounts during the past week. In the absence of trade support, the cotton thrown on the market has, at times, had an almost demoralising effect, and, with the offtake being confined to periodical bouts of "short" covering, local values have declined well below the control limit in Alexandria. This being the case, cotton imported and hedged here can be sold at a very attractive basis, but, unfortunately, the trade position is such that spinners are unable to take advantage of the opportunity. At the time of writing, the entire Egyptian Sakel stock only consists of 18,341 bales, with about 20,000 bales available of the tenderable Sudan varieties. The smallness of local supplies, should a demand develop, would quickly react on the contract position, but, as stated previously, consumers at the present are not showing the slightest interest in the situation, business in "actual" being practically at a standstill. The main Sudan crop generally starts to arrive here from the middle of this month onwards; however, the movement this year is late, and, from reports received, there seems to be some doubt whether the earlier estimates of the yield will be realised. Whilst the technical position of the contract is undoubtedly improved by the liquidation that has been effected during the week, and some reactionary tendency may now develop, we doubt any appreciation being consolidated unless backed up by improving American values and increased trade activity.

Upper Contract.—We have experienced some rather poor sessions in this market during the past week, Continental liquidation of near positions, induced no doubt by the periodical weakness shown in the American departments, causing prices to decline sharply. Local values now stand well below the Alexandria basis, but the recent widening-out in premium over varieties hedged in the American contract has tended to restrict business. Local stock figures are small for this period of the season, being 26,556 bales of all grades. The fact that this moderate weight of cotton has influenced our market to well below a shipping parity with Alexandria, emphasises the prevailing moderate demand from trade sources.

Egyptian Spot.

The market has had to face a smart drop in values during the week, which, after the somewhat fractional declines to which we have been accustomed during the past few months, came rather as a shock. The offtake has been about the same as last week; buyers have been half-hearted, and there is nothing encouraging in the situation to report as yet.

Sakel.—A small inquiry has been seen for cotton at from 50 off to 50 on, but, apart from this, very little interest has been shown.

Uppers.—A limited business has been done in cotton at from 15 to 35 on, otherwise the inquiry has been poor.

Pilion has been neglected this week.

Maarad, Nahda, etc., have figured in the inquiry from time to time, but sales have been insignificant.

Sudan Sakel.—Business in this growth has been almost at a standstill.

Tokar Sakel has not figured at all in the general inquiry, but an odd sale has been reported at a very cut price.

C.i.f. business.—Except one day, when the official reporte stated "rather more business," little interest has been shown. Forwardings.—Last week's figures caused some surprise in view of present unsatisfactory conditions. They were 11,919 bales Egyptian and 1,639 bales Sudan. Spot sales estimated at 1,100 bales Egyptian and 170 bales Sudan Sakel. Quotations of Sakel have been reduced 45 points, those of Upper and Pilion 25 poins. F.G.F. Sakel to-day, 13.95d. F.G.F. Upper to-day, 10.19d. F.G.F. Pilion to-day, 10.85d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended January 30, state:—

Since our last report the futures market has shown much more activity, although the tone has been heavy, and slight declines have been registered for all deliveries. The week's summary of price movements is as follows:—Sakellaridis: March, 27.63 dollars, 0.08 dollars down; May, 28.22 dollars, 0.07 dollars down; July, 28.55 dollars, 0.20 dollars down; November N.C., 28.66 dollars, 0.44 dollars down. Ashmouni: February, 19.06 dollars, 0.06 dollars down; April, 19.58 dollars, 0.09 dollars down; June, 19.93 dollars, 0.16 dollars down; August, 20.08 dollars, 0.18 dollars down; October N.C., 20.17 dollars, 0.36 dollars down; December N.C., 20.55 dollars, 0.35 dollars down.

Sakel.—The week opened with rather featureless markets, but the dullness later gave place to great activity, the substantial declines in American bringing out heavy liquidations by long operators and selling against spot cotton previously held unhedged by interior merchants. The weight of the selling fell chiefly on November New Crop, this being only natural seeing that it is not only the dearest delivery, but also the only one quoted to which the Government intervention will not extend, at least for some time. As to demand from spinners, it can only be said that the week has been one of the poorest of the season, orders received having been insignificant to almost vanishing point.

The matter of the Government's eventual intervention in the later deliveries of the present season was brought up in Parliament, the Minister of Finance, in reply to a question, announcing that it is the intention of the Government to continue its operations in the market during the remainder of the season and at prices higher than the present limits. This maintaining of artificial prices for Sakel for the rest of the season will probably lead to a large proportion of existing supplies being thrown into the hands of the Government and will constitute a bearish factor influencing the prices of next season's crop.

The statistical position of Sakel could hardly be called satisfactory, and the recent decline in American has naturally not improved matters in any way. The Sakel/Uppers straddle (March/April) this week stands at 805 points, against 804 points last week and 1,444 points at this time last year.

Uppers.—The market for Uppers has been active, but prices have declined on the weakness of American. The demand from the trade, while continuing to be much better than that for Sakel, has nevertheless fallen off considerably during the last few days. This, we think, is principally due to the widening of the difference between the prices of Ashmouni futures and New York.

The first tender against February contracts has been fixed for Monday next, and it is expected that the quantity of dockets issued will be fairly large. The Ashmouni/American straddle (April/March) this week stands at 302 points, against 299 points last week and 276 points at this time last year.

Digitized by Google

The week's receipts amount to 168,110 kantars, against exports 182,651 kantars; the stock in Alexandria stands at 2,402,698 kantars.

Spot.—The total turnover during the week amounts to about 20,400 bales, of which we estimate 3,300 bales Sakellaridis, 15,800 bales Ashmouni and Zagora, 800 bales Pilion, and 500 bales other varieties.

Sakellaridis.—Very little interest indeed has been shown in this variety with the exception of low grade cotton, and holders being anxious to dispose of their stocks, especially of grades above Fully Good Fair, spot differences have eased.

Ashmouni and Zagora.—The increased demand for both these varieties mentioned in our last report has continued, a notable feature being the inquiry for low grades, in which a good business has been done. Spot differences have hardened all round.

Pilion.—The spot differences remain unchanged, and the turnover registered has been chiefly in the high grades.

Other Varieties.—There has been some demand for Nahda, but White and Maarad have been neglected.

Up-country.—The weather has again been unfavourable and business is very dull everywhere.

Crop, 1930.—Preparation of the land is going on actively in Upper Egypt and in the South and Central Delta districts; on the other hand, in the Northern Delta work is only progressing rather slowly. Opinion is still divided on the question of acreage, but we should say that present indications point to an area about 10 per cent. larger than that of last year. Regarding the proportions of the different varieties which will be planted in the Delta, it is expected that there will be a slight increase in Sakel and Zagora; Maarad and Fouadi will show a fairly substantial increase, while Nahda will lose ground and Pilion remain more or less about the same. As regards Upper Egypt, Ashmouni and Zagora will, as usual, be the main crops. Farouki, Giza 3 and Giza 7 will be planted, but only on very small areas.

Mr. Arthur W. Bibby, head of the Bibby Line, celebrated his eighty-fourth birthday on February 10.

A Greek-Roumanian Chamber of Commerce has been established at Athens.

The traffic receipts of the Suez Canal Company from January 25 to 31 amounted to 26,490,000 francs.

An Angora message states that a special commission has decided upon the unification of weights and measures and the adoption of the metric system.

Mr. Einar Winther has been appointed managing director of Eastern and Overseas Products, Ltd., and Mr. A. Peech has resigned from the board.

The production of the Attock Oil Company for January was 21,778 barrels. Two wells now in a sand at 4,100-4,200 ft. have given indications of oil production, but very high gas pressure is giving considerable trouble. It is as yet impossible to say if these wells will give good production when in good producing condition. Two wells have previous been drilled through these sands, and only shows of oil and gas were met. These latter wells are now being carried down as deep tests.

Notes of the Week.

Local Government Elections in Roumania.

Local government elections in Roumania invariably acquire a strong political tinge, but this year they were deliberately made by the Liberal Opposition a formal challenge to Dr. Maniu's Government, and in the event of the defeat of the latter, the National-Peasant Party might have found it difficult to retain office without a fresh appeal to the electorate. In its official Manifesto to the Roumanian people the Liberal Party was at no pains to mince its words. If the National-Peasant Party were to continue in power, it declared, the country would be ruined. The crisis from which Roumania was suffering was not merely an economic and financial crisis, but also a political and moral one. It was this state of affairs that impelled the followers of M. Vintila Bratianu to rally the people of Roumania to a sense of their duty at the departmental and communal elections. The victory of the Liberals would once again lead the country into "the normal path of consolidation and of progress in every sphere," for the electorate would indicate by its local government votes its wishes in regard to the conduct of State affairs. For this reason the Liberal Party remained outside any amalgamation for these elections and its candidates stood alone. This perfervid appeal does not appear to have been attended by any marked success at the election held a little over a week ago, for the larger departmental councils. The National-Peasant Party is reported to have obtained sixty-six per cent. of the votes polled, as compared with seventy-seven per cent. at the general election in 1928, while the Liberals polled twenty-one per cent. as compared with their previous sixteen per cent. The results may be regarded as satisfactory for the Government, and as affording little encouragement to its opponents. Electorates in south-eastern Europe are notoriously fickle; for many years in Roumania, as the result of the custom of placing a new Government in power to "make" the elections, office alternated between the two chief parties with monotonous regularity. To M. Maniu, indeed, belongs the credit of holding elections without any official attempt to influence the attitude of the electors, although in isolated centres there may have been cases of over-zealous officials, and of party feeling allowed to overrule injunctions from headquarters. The "freedom" of the recent elections would appear also to have been respected officially, and where charges of "riots and assassination" have been laid against the authorities it is stated by the latter that the trouble has in each case been started deliberately by their opponents, with the object of discrediting the Government. The departmental elections will be followed by elections for smaller local bodies, but there is no reason to expect that the voting will show any marked change-over of public opinion.

Turkey's Public Debt.

The Turkish Government has replied to the request of the Council of the Ottoman Debt for information regarding the reports of the Government's intention to ask for a moratorium by inviting the Council to make itself acquainted with the actual economic position in Turkey with a view to devising a solution for the predicament in which the country finds itself. The President of the Council of the Ottoman Public Debt will, accordingly, visit Angora early in March to discuss the question of the Debt payments. It is clear that the Turkish Government has convinced itself that the present situation can be eased only by means of a moratorium; but if the visit to be paid to Turkey by the Debt Council's President is to be of any lasting value to Turkey, it must be of much wider scope than a mere investigation of the state of the Turkish exchequer. That, indeed, can hardly be other than empty, and experts are not required to decide the point. What is needed in the interests of Turkey is that a comprehensive inquiry should be made into the whole question of Turkish finance and the Government's fiscal policy. If the Turkish authorities will offer the visiting experts a free hand in this respect, all may yet be well for the country. It would be idle to authorize a postponement of Debt payments without making any effort to insure that in due course the financial position will be sufficiently improved to enable payments to be resumed. There will be no desire anywhere to impose financial control upon Turkey for punitive or vindictive reasons. In all such cases the control is exercised for the benefit of the country concerned as well as for bondholders, as may be witnessed in Greece, where the Government has been at pains to invest the International Financial Com-

Digitized by Google

mission with fresh responsibilities over and above those concerned with old debts. It is to be hoped, therefore, that the Turkish authorities will take advantage of the visit of the representatives of the Debt Council for a careful examination of its fiscal policy and of State expenditure as a whole.

Arab Kings' Conference.

Within a few days now the preliminaries of the very important conference between King Ibn Saoud and King Faisal will be taking place on board ship in the Persian Gulf. Presumably there will be first a meeting between the respective Ministers of the two Kings, when the details that are to be thrashed out will be discussed. One reported difficulty between the two parties has, apparently, already been got rid of, namely, the question of the extradition of Shaikh Faisal al Duwish and his immediate lieutenants. This old Mutairi has already been delivered up to the Wahhabi leader, on the natural condition that his life be spared. Next in popular interest may be found the question of the "frontier police posts," which is a much more difficult problem to resolve. Whether King Ibn Saoud can be persuaded, in exchange for the manifest benefits of tranquillity that has been preserved in the frontier region after the first outcry against these posts, to change what has been his consistent view, remains to be seen. Other problems concerning his relations with Iraq and his whole position in the Gulf should be easily susceptible of treatment. We look forward to this Conference with hope of considerable result; it may well mark a turning point in the history of Arabia.

The Boycott in Palestine.

There is little doubt that the boycott of the Jews by Arabs in Palestine has had considerable effect, though it would not be surprising if the report were true that this weapon is being decreasingly used by the anti-Zionists. Obviously the indulgence of a boycott must bring loss to certain Arabs as well as to Jews, and if the interests of such Arabs be not looked after, a wedge is formed which must, in the nature of things, become wider and wider. For it always has been patent that certain Arabs would benefit by the immigration of Jews, and it is such as have benefited—property owners, merchants, and so on—who have chiefly felt the effects of the boycott—apart that is, from the Zionists on whose heads this economic weapon was intended to fall. It is probable, however, that the organising Arabs will endeavour to keep the boycott going at least until the Commission of Inquiry has reported: if that is done, something will have been accomplished that many observers thought to be impossible.

Arabs' and Jews' Divisions.

While on the subject of driving wedges into parties, it may be of interest to remark the letter that Sir Martin Conway has written to the Press emphasising the feuds which exist in Palestinian Arab life, and mentioning, in particular, the hostility that exists between the Husaini and the Nashashibi factions. Sir Martin's intention is to suggest the impossibility of a correct representation of Arab opinion by the Arab Delegation which is shortly expected in London. This, of course, is fair shooting: the rivalry which exists between the Husaini and Nashashibi families is recognised by all students of the Palestinian problem. But is not the way open to a *tu quoque?* Are the ranks of Jewry so absolutely united that one body of men can speak with full authority? Are the words that are spoken by pro-Husaini Arabs about the Nashashibis so very much worse than those spoken by some Zionists against non-Zionists on the Jewish Agency? Quite certainly the Mandatory Power for Palestine is fully aware of how correct is the claim of whatever delegation comes before it to represent national sentiment. If it is the general observer whom Sir Martin is anxious to put right, it would seem that he must remember that the opportunity for driving wedges exists in both Jewish and Arab camps. The attempt on the part of both Jews and Arabs to present a "united front" is a perfectly natural one, but the impartial witness may observe that neither has completely succeeded. To suppose that dissensions existed only in one camp, would indeed be to misread the situation. What is wanted always, and particularly at the present delicate time, is, not propaganda, but truth.

INDIAN NOTES.

India's New Dictator.

At the end of last week, when the Viceroy was appealing to all those who hold responsible position in India "to endeavour to allay rather than use language which may have the effect of encouraging feelings of disquiet when she specially needs the confidence of the rest of the world," Mr. Gandhi was busily engaged in concocting plans for his much-advertised "rebellion." When outlining his impressions of the Lahore Congress in *Young India* several week ago, Mr. Gandhi made it plain that the actual working out of the militant programme to which the Congress had at his invitation committed itself presented great difficulties. Since then the Working Committee of the Congress have been actively engaged in an endeavour to bring forth a scheme of civil disobedience and non-payment of taxes which will embarrass the Government without entailing any criminal liability upon its sponsors. The result was announced in the usual verbose and grandiloquent resolution issued to the Press on Sunday. Beyond confirming the reports that the outcome of the discussions was no more than a decision to authorise Mr. Gandhi and those who like him believe in the "non-violence" policy to start the "civil disobedience" campaign as and when they wish, the publication of the actual text of the resolution adds little or nothing to our knowledge of the new dictator's intentions. The reason for the continued indecision is not far to seek. The Congress leaders have been still more demoralised, as we anticipated, by the arrest and conviction of Mr. S. C. Bose, admittedly the brains and genius of the extremist movement. The endeavour to incite their unfortunate dupes to organise civil disturbance throughout the country in such a manner that the real instigators incur no personal responsibility is so characteristic of Mr. Gandhi's more recent activities and would have met with scant support from the Bengal leader, who at least possessed the courage of his convictions.

THURSDAY, FEBRUARY 21, 1930.

ANGLO-IRAQI RELATIONS.

Anglo-Iraqi relations are in an unsatisfactory state, from whatever angle they be looked at. The Iraqis are more suspicious at the present time than perhaps they have ever been of the integrity of British motives, and the gratifying effect of the "gesture" which Great Britain made, soon after the death of Sir Gilbert Clayton last year, concerning the recommendation of Iraq for entrance into the League of Nations in 1932, has dissipated in the hopeless air of Baghdad. Hopeless is possibly too strong a word; yet it does seem that Iraqis are losing hope. How can we guarantee, they say, that Great Britain will actually recommend Iraq for League membership in 1932: have we not been given similar promises in regard to other things at other times? How, moreover, will the League accept us, if we cannot defend ourselves? Were we not solemnly promised that, by the end of 1928, such problems as those relating to our national defence, to the Iraq railways, to the Port of Basrah, and so on, would be finally settled? And what has been done? Nothing, nothing. What is the use of talking to us of your friendship, when by all these tests of it you fail? Is it to be wondered at, then, that we are growing more and more suspicious? We would, indeed, be friends, but your policy belies your fair words. You talk of Iraq as a free and independent State, and you treat her as a Colony or Protectorate. What, in Heaven's name, are you really after in Iraq? Such are some of the thoughts which we believe even the well-disposed Iraqis are now harbouring. Certainly there is singular consensus in Iraq now on this question of British tutelage. There exists a body of opinion which even the late Sir Abdul Muhsin could not withstand. In the Majlis, in the Press, in the bazaars—almost everywhere, in fact, there is to be found evidence of anti-British sentiment. The Press, in particular, has been vitriolic against the Mandatory Power. Certain journalists have indeed gone "off the deep end," though whether they will remain swimming in the unplumbed depths remains to be seen. Do we mistake these signs of uneasiness? Are they manifested only by malcontents, by evildoers, by a negligible minority? Hardly. In short, the official position as between Great Britain and Iraq is a regrettable one, and one that needs, by whatever means, urgent remedy. The description which Lord Passfield recently made of Anglo-Iraqi relations was grotesquely wide of the mark.

What, then, can be done? Of course, there are explanations, if not excuses. It is true that the Iraqis took the "gesture" of 1929 concerning 1932 in a way different from that in which the British had conceived it; it is true that the distinction between the early attaining of independence and the immediate attaining of it is one that appears to make little appeal to the ordinary Iraqi mind; it is true that in the Press campaigns against Great Britain there have been distortions of fact, exaggerations, and all the rest of it. These considerations must be very trying to those concerned in the Administration of Iraq: to be perennially misinterpreted, to see the possibility of good work being wasted, moreover, is a galling experience. One can, therefore, fully sympathise with what the Iraqis might call the British official point of view without losing sight of the fact that the Iraqis have genuine grievances. It is idle now to discuss whether the policy adopted at the Cairo Conference of 1921 was a correct or a wise one, idle also to doubt the wisdom of definite promises for 1928 concerning certain military and financial matters: the point is, that a policy was laid down, and that promises were made. One of two things must now be done: either openly, frankly, and boldly reverse that policy, and announce that the promises cannot be kept, or adhere strictly to it and to the promises. Most unfortunately, after the death of Sir Gilbert Clayton matters were allowed to drift in Iraq, and, as we have already said, the effect of the publication of his advice (which had previously been tendered by Sir Henry Dobbs), was soon lost. More than that, a positive reaction seems to have set in. Friction is constant, suspicion is growing. These can be removed only by an early and fresh formulation of British policy. The Iraqis, in virtue of the treaties already concluded with them, have a right to know where they are. They must not be allowed to drift away into the arms of Great Britain's enemies, which spread widely and eagerly in the Middle East. It is essential to retain their friendship; and is it really so difficult? Is it not possible to satisfy at once Iraqi *amour propre* and Imperial interests?

We believe that it is possible, and we have hopes that negotiations which will shortly be inaugurated between Great Britain and Iraq will bear proof of Great Britain's good will. No one realises more fully than we ourselves that this very delicate problem of Anglo-Iraqi relations cannot be solved by merely reiterating the desire and the need of friendship between the peoples of Iraq and of Great Britain. The human factor in negotiation may be a difficulty; the common difference in the plane of thought as between Iraqi and Englishman may be a difficulty; absence of first-class, representative statesmen in Iraq may be a difficulty. But such obstacles must be overcome. There must be a fresh definition, approved by the British Cabinet, of what are really essential British interests. Among these, according to our view, must be an honouring of Great Britain's bond. It has already been officially pointed out that, judged by the usual standards, Iraq will be ready to enter the League of Nations in 1932. Why, then, allow the suspicion to arise that Great Britain will not be as good as her word? As in Palestine, so in Iraq, we want more air, more light. Let our intentions be proclaimed from the house-top, so that the meanest journalist, even, can find no equivocation, no vagueness in them. That opportunities have been missed in the Middle East for the settlement of various difficulties we may not doubt, but equally we do not doubt that vagueness in the laying-down of policy has brought half Great Britain's ills. Remember the result of adopting a policy of drift in regard to Turkey immediately after the Great War. In a few days two Arab Kings will be meeting under British auspices, and it is profoundly to be hoped that they will amicably settle the differences that have arisen between Iraq and Najd. No less profoundly is it to be hoped that this conference will be followed by generous negotiations between Iraq and Great Britain, negotiations that may result in a clearing of the murky atmosphere and a new manifestation of friendship between Iraq and Great Britain.

*The Near and Middle East

From Our Own Correspondents.

THE HIJAZ.

Jidda, January 23.

The King's Meeting.

For the moment all eyes are turned expectantly towards the distant Iraq frontier, where after the long and unhappy turmoil of alarums and excursions an event of great historic importance is about to be enacted. Two Kings are to meet now for the first time who should have met ten years ago; and it is perhaps not too much to hope that their personal meeting will go far to solving the various problems which during all those years have divided the Arab world and weakened its counsels. And it is all to the good that Sir Francis Humphrys, British High Commissioner in Iraq, is to be present at the meeting of the two monarchs, for which preparations are being pushed on apace. Shaikh Fuad Hamza, Foreign Minister of the Hijaz-Najd Government, left yesterday for Egypt, whence he will proceed by air to Basra and Kuwait: and it is understood that Colonel Barrett, Resident in the Persian Gulf, and Colonel Dickson, Political Agent at Kuwait, are already in touch with King Ibn Saoud in connexion with the preliminary arrangements for the meeting between the Wahhabi King and King Faisal.

Amir Faisal's Activities.

In these circumstances Jidda will cease for the nonce to be an important source of information regarding developments in the political sphere. During the absence of the Foreign Minister, the Amir Faisal himself will discharge the functions of the Foreign Office in addition to his other arduous duties; and such an emergency arrangement serves to emphasise the chief want of the Hijaz-Najd Government, namely, a sufficiency of trained and fully qualified officials to meet all the requirements of a modern State. The last official act of the Foreign Minister before leaving Jidda was to receive the credentials of Mr. W. L. Bond, Chargé d'Affaires of the British Legation. The actual date of arrival of the new Minister is not yet known and his name has not yet been published.

Compulsory Vaccination and Inoculation.

In a recent letter I commented briefly on the question of compulsory vaccination and inoculation at Suez of all persons leaving that port for the Hijaz. The matter seems to be growing more and more serious, and for some weeks past a large proportion of visitors to Jidda (who mostly come on short business or recreatory visits and naturally want to make the most of their time here) has arrived in a state of semi-collapse or grave discomfort. If the International Quarantine Board is really responsible for the regulations applied at Suez, it cannot be too strongly represented that it is making itself not only extremely objectionable but supremely ridiculous. It is high time that the matter was taken up seriously by the authorities concerned, and it would seem that there is no legal justification for the imposition of vaccination on those about to quit the jurisdiction of the Egyptian Government; but perhaps that point will have to be contested in the Courts by some enterprising person! For years now under the Wahhabi régime there has been no epidemic in the Hijaz, and it is perhaps time for the International Quarantine Board to realise that it is not the sole means of safeguarding unnecessary life. At present it seems in grave danger of being a public nuisance, and it has yet to show why small-pox incidence in the Hijaz regularly rises with the increase of vaccinated pilgrims in the country. There is really something seriously wrong.

An Explorer Foiled.

I understand that Mr. Eldon Rutter, who left Damascus in November for the interior in spite of the refusal of the Najd-Hijaz authorities to accord the necessary permission, arrived some weeks ago at Hayil with his two Badawi companions. In the absence of the Governor, Abdul Aziz ibn Musaid, who is occupied on the frontier, he was detained pending reference to him, and ultimately his case was dealt with by Shaikh Abdullah ibn Bulaihid, the Wahhabi chief ecclesiastical authority. It would seem that since the publication of his book ("The Holy Cities of Arabia") Mr. Eldon Rutter's *bona fides* as a Muslim has been under suspicion, and it is not surprising, in the circumstances, that his plans for the further exploration of Arabia, including, it would seem, an attempt on the great *Ruba al Khali* itself, failed to find favour in the eyes of the Shaikh. The latter, according to reports emanating from Madina, appears to have offered Mr. Rutter the choice between a safe return, under surveillance, to Damascus, and the continuance of his explorations at his peril. Mr. Rutter wisely chose the former, being then sent back under escort to the Syrian frontier. Mr. Rutter in his disappointment has the satisfaction of being the first Englishman, or indeed, European perhaps, to visit Hayil since Gertrude Bell did so in 1914; and, if the surveillance to which he was subjected was not too rigorous, one may expect an interesting account of the Shammar capital from his pen. His journey there and back is scarcely likely to have covered any new ground: and it is much to be regretted that Mr. Rutter, who in 1925 was accepted as an English Muslim by the Wahhabi régime at Mecca, has deprived himself of the opportunity of further distinguished work in Arabia by failing to make his position clear in the eyes of the Arab world.

General News.

In my last letter I omitted to mention that the fourth anniversary of the King's accession to the Throne of the Hijaz was marked by the issue of a special set of commemoration stamps in five values, which were on sale only for a few days from the 8th and were then withdrawn from circulation. It is understood that the dies have been destroyed (the issue was made and printed in Mecca) and the stamps ceased to be valid for the franking of letters after the 12th.

It is announced that the Hijaz-Najd Government has telegraphed its formal recognition of the Kingdom of Afghanistan to the Foreign Office of that country. And it is also notified that a new Quarantine Station has been established by the Hijaz Government on Abbassiya Island off Yanbu. The number of pilgrims in the country up to date is 30,582 as against 27,365 at the same season last year.

EGYPT.

Cairo, February 8.

Treaty Negotiations.

The Government has now received its mandate from Parliament to negotiate a treaty with Great Britain. The procedure was not altogether what was expected, as the question was not referred to a special committee, nor did any discussion take place with regard to the proposals themselves. Nahas Pasha presented the proposals, which, he said, had been received from the British Government, to the Chamber on Monday last, together with a statement that the Government was anxious to receive authority from Parliament to negotiate. No reference was made to the channel through which these proposals have reached the Egyptian Government, nor was the letter from Mr. Henderson to Mohamed Mahmoud Pasha covering the proposals communicated to the Chamber. The Prime Minister merely promised Parliament that, if his Government received a mandate to negotiate, the result of those negotiations would be submitted to both Houses for discussion before ratification. But he particularly avoided asking for a discussion at the present juncture.

The debate, which was fixed for Thursday, centred, therefore, on the question of the authority which the Government sought to negotiate. Both on Monday and Thursday the Nationalists strongly opposed negotiations in general and particularly without a previous discussion of the proposals themselves. But the Chamber, which was well under control, would have none of this, and voted with but five dissentients—the Nationalist opposition—a resolution prepared in advance by the Wafd caucus authorising the Government to negotiate.

The way is, therefore, now clear for negotiation, but no one has the slightest idea what the exact intentions of the Wafd are. The Wafd is admittedly in a difficult positioin, and, from its own point of view, it was obviously essential that no discussion of the proposals should take place at the moment in the Egyptian Parliament, so that its representatives might be left free to adjust their programme according to the atmosphere which they may find prevalent in British circles when they come to open negotiatioins.

The Egyptian Delegation.

It is stated that Nahas Pasha and his Minister of Foreign Affairs, Wassef Ghali Pasha, will form part of the official Egyptian Delegation. Possibly Mr. William Makram Ebeid, Minister of Finance, will join them, but as that will mean two Copts and only one Muslim, it is probable that in that event Oman Moharram Pasha, Minister of Public Works, and one other Muslim may be added. It is further asserted that, while preliminary conversations may, perhaps, take place in Cairo, the main negotiations will be in London. From the Wafd point of view a delegation to London is absolutely essential, but, if that is agreed to, Nahas Pasha and his colleagues will not be able to leave before the middle of March, as the King and Queen of the Belgians are due in Cairo on March 10 on a three-day official visit to King Fuad, and the Prime Minister and Minister of Foreign Affairs must be present on an official occasion of this nature.

The Bank purchases grants, advances against or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms.
The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa and elsewhere, and also sells Telegraphic Transfers on all its Branches, at the exchange of the day.
The Bank, on behalf of its Constituents, undertakes the collection of Furlough Pay and Pension from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of interest and Dividends thereon.
Powers of Attorney or other forms and any information required may be had on application to the Bank in London or any of its Branches.
The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application. Trusteeships and Executorships also undertaken.

AGRICULTURAL BANK OF BULGARIA

Head Office — **SOFIA** — Founded in 1865

CAPITAL & RESERVE FUND, 522,000,000 leva

97 BRANCHES AND 64 AGENCIES

The Bank gives credits and supplies agricultural machinery and implements, sulphate of copper, seeds, etc., to the agricultural population. It has its own warehouse for cocoons and cocoon-drying sheds in the principal cocoon-producing districts. The manufacture of Attar of Roses is made under the control of the Bank in all rose-growing co-operative centres. The Bank gives credits to, and supervises all agricultural co-operative societies in the country to the number of 1,400, inclusive of credit societies, sales and purchase co-operatives, production and tobacco co-operatives.

The Bank transacts every description of banking operations.

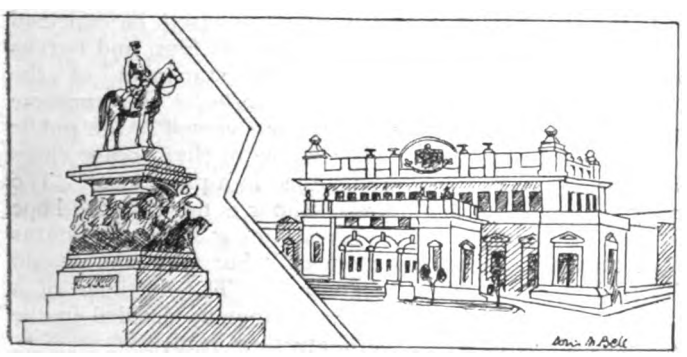
Two Lamented Deaths.

It is with much regret that one has to record the deaths of El Sayed Abdel Rehim Demerdash Pasha and Mr. David Scott Montcrieff, both of whom were well known to Anglo-Egyptians of the past three decades. Demerdash Pasha, who had been in indifferent health for some time and was a very old man, was perhaps one of the most generally popular Egyptians of the old school. Particularly was he known for his charitable nature—his last act was the presentation to the Government of a piece of land and a sum of £E100,000 for the erection thereon of a hospital for the lower classes—and to the day of his death he remained a staunch supporter of the British régime, to the good work of which in Egypt he often courageously made reference in public, though, as a result of the frequent changes in policy, he, like many other Egyptians, began towards the end to lose some of his faith in the British nation.

Mr. David Scott Montcrieff will also be much missed, for he had been a resident in Cairo for nearly thirty years, during twenty-five of which he had been representative in Egypt of the Standard Life Assurance Company. He was a prominent Mason, and, until bad health latterly circumscribed his activities, was one of the leading lights of the Caledonian Society. Highly cultured and possessed of a keen sense of humour, he was most popular wherever he went, and the deepest sympathy is felt everywhere for his widow, who, when her husband's health began to fail a few years ago, stepped into the breach and held the fort for him while he underwent the cures ordered by his doctors.

The Tariff.

As a result of the representations made on all sides, some important changes have been made in regard to the tariff. The high duties which it was proposed to introduce on sugar and matches have been substantially reduced. That on cigars, regarded as a luxury, has been further increased, while the tax on passengers landing at the ports has been halved, and the decision that any goods that had not paid duty on the afternoon of February 15—the new tariff comes into force on the 17th—would have to pay the new rates, has, in consequence of the tremendous congestion in the ports, been varied in the sense that goods already in the customs or bonded stores on February 17 will come under the old tariff. An illustration, however, of the unequal incidence of the specific duties is afforded by the new tariff on cigars. Here cheroots from India, which are materially cheaper than, but weigh comparatively the same as, Havana cigars will pay exactly the same duty, so that the rate becomes one of almost 100 per cent. on the value of cheroots compared with some 25 per cent. on Havana cigars.



BULGARIA.

Sofia, February 13.

The Vote on Reparations.

After four days of agitated discussion, in the course of which M. Bouroff, Minister for Foreign Affairs, and M. Moloff, Minister for Finance, who conducted negotiations at Paris and at The Hague, thoroughly explained their efforts to obtain the maximum reduction in the Bulgarian obligation in Reparations and the benefits which the agreements signed at The Hague secured for Bulgaria, the Sobranye ratified these agreements, but only in virtue of the Governmental majority, all the sections of the Opposition declaring themselves utterly opposed to ratification and severely critical of the work of liquidation accomplished by MM. Bouroff and Moloff.

The Yugoslav-Bulgarian Entente.

As a consequence of the negotiations, conducted since last November by the Bulgarian-Yugoslav conference at Sofia—to consummate the work begun at Pirot in the Spring—the Bulgarian and Yugoslav Governments to-day signed a convention on the liquidation of bilateral properties and a special agreement concerning the proper means to secure order on the Bulgarian-Yugoslav frontier.

The liquidation of the bilateral properties, which the Yugoslavs asked for, has been accepted, but within limits that cannot be transgressed. The Conference rejected all idea of compulsory ex-propriation, and adopted the principle of liquidation by exchange of properties of equal value on side or other of the frontier, without hurt to the interests of the owners, whose consent is necessary, and without in any way provoking an emigration of the fronter population. In short, the problem is to bring about a voluntary liquidation, realised under the control, or, rather, under the direction of five Mixed Commissions, which will be for the regions of Timok, Tsaribrod, Trn and Bossilegrad, Kustendil to Kriva Palanka, and Bélassitza (from Gorna Jourmaya by Stroumitza to Petritch and the Greek frontier) respectively. These Commissions, which will be presided over on the Yugoslav side and on the Bulgarian side, by a Judge of the departmental Tribune and which will consist of the sub-prefect of each *arrondissement*, an agriculturist and a revenue official, will watch over these exchanges and secure that equivalent value is given, supplementing where necessary from State property in the respective regions, such as forests and pasturages, to be distributed to peasants who agree to the exchange on a new piece of ground for the loss they will have sustained on an old. The governing idea of this plan is to group as many as possible of the owners on ground of the nationality of their owners, always keeping these last in the immediate neighbourhood of the frontier so as not to change the ethnic configuration of the frontier districts. Above these Commissions, there will be a large central Commission which has to settle the differences that may arise among a regional Commission and to play the rôle of a Court of Appeal on all contested divisions.

The liquidation thus established must be completed within two years of the ratification of the agreement by the two Governments.

In so far as frontier surveillance is concerned, there has been an appreciable simplification. The Yugoslav Delegation, having obtained satisfaction on the first point, showed itself very obliging on the second, and, yielding to the very reasonable demands of the Bulgarian Delegation, abandoned its first demand for the establisment of a "dead" zone on each side of the frontier. The two Delegations agreed, in a special Protocol, to advise their respective Governments to take all the proper measures for security and good order on the frontier and in the immediate neighbourhood of the line of demarcation. It is understood, however, that these measures will be applied only with the effectives which the two countries have at the moment in the regions concerned, and that they will not involve fresh expenditure. Each Government will have to give the strictest instructions to the respective authorities on the frontier, the surveillance of which will be necessary with as much strictness as is observed in the liquidations of properties, and which extends to Customs control. In the measures which each of the two Governments takes to this effect, it will conform to its national legislation, which will be explicitly applied in what concerns the sanctions to be inflicted on

Digitized by Google

its nationals who contravene these measures. In case of incidents on the frontier the military chiefs on each side of the demarcation line will immediately hold an inquiry to establish responsibility, and, if no agreement can be reached, they will submit the affair to a Mixed Commission of Control which will operate permanently and from the decisions of which there will be no appeal. It is only if the Commission of Paramount Control fails to take a firm decision that the Governments will intervene to settle the difference by diplomatic means. This body will comprise, on each side, a senior officer, a high functionary from the Ministry of Interior, and one from the Ministry of Foreign Affairs. It will have not only to pronounce on the conduct of the respective authorities, in case of incident, but it will take into consideration also the general conduct of these authorities in such and such a section of the frontier from the point of view of maintaining order and security, if one party has lodged complaints. This is an important innovation which will be much more efficacious than the "dead" zone would have been along the frontier.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, January 20.

Dominion Status.

There had already been too many words spoken by English statesmen that implied the belief in the speakers' minds that India has in her the making of a Dominion. This week more have been spoken. The Viceroy, in his address to the Legislative Assembly on January 25, referring to his announcement of October 31, said: "It restated in unequivocal terms the goal to which British policy in regard to India was directed." He also said: "I believe it to be something of tangible value to India that those who demand full equality with the other self-governing units of the British Commonwealth on her behalf should know that Great Britain on her side also desires to lend her assistance to India in attaining to that position." The question whether India has in her the making of a Dominion, or two Dominions, ought not to be prejudged before the Statutory Commission presents its report. The Commission was appointed to answer the question: Has India, or has India not, the making of a Dominion in her? The question, I say, ought not so to be prejudged, and in reality it cannot be.

Sir Malcolm Hailey.

The Governor of the United Provinces, addressing the Upper India Chamber of Commerce the other day, said: "I have always believed myself to be a Liberal in politics, recognising that our own work here would only be half done if we did not foster in the mind of India a genuine desire for her own advance on the path of self-government, and that we should be false to the faith that is in us if we did not strive to the best of our power to assist her in an orderly and progressive movement towards the achievement of that goal. Those who have held that faith have, it is true, hoped to be allowed to see each stage of advance firmly compacted before the next is attempted; but they have recognised that there must be no lack of courage in acting up to their principles, no hasty prejudgment of the capacity of those to whom new power are to be given, no hesitation in extending those powers in any sphere or to any extent within the limits prescribed by a reasonable care for safety." There again is word of the *goal*.

Now to speak of the goal as a thing that is sure to be reached is to prejudge the capacity of the men by whom it must be reached, if it ever is. The fact may be that it will never be reached. I have called attention before this to the extent to which, in the past, India has had to be governed by immigrant stocks; or has in actuality been so governed. There may have been a deeper reason for that than Viceroy or Governor realises. The populations of India are not the only ones on the earth that have been governed during long centuries by immigrant stocks. This is from a review I have just been reading of a book on the history of North Africa, of the Berbers: "Les Berbères . . . sont vigoureux, énergiques, guerriers, intellectuellement assez bien doués. Cependant on les jugerait volontiers dénués de sens social profond. Leurs tribus ont été parfois associées à la fondation d'Etats, jamais elles n'ont donné naissance à des nations. Ils paraissent voués depuis toujours et pour toujours à l'anarchie, à la soumission à l'étranger." Almost every word of that, and every really telling word, is true of the India of the past centuries.

The Indian Politicians' Cue.

The Viceroy will speak of the definition of the goal not being the same as the attainment of it; the Governor of the United Provinces will speak of each stage of advance being firmly consolidated before the next is attempted; but of course the Indian politicians ignore such words, and fasten on the phrase "Dominion status." In all their utterances during the past week there have been words such as these (they are from a statement issued by the Nationalist Party in the Assembly, reviewing the situation arising out of the Viceroy's speech): "We think that the supreme need of the hour was a statement creating a better atmosphere for the Round Table Conference and strengthening the hope for the achievement of Dominion status at the earliest possible moment." Other utterances have been still more pointed. One was: "If we present a united front at the Round Table Conference, we can secure Dominion status in an incredibly short time." Another was: "The main question is the time limit within which the goal of Dominion status is to be completely attained. If Great Britain through her Parliament is not prepared to fix the shortest time for the complete attainment of Dominion status by India, I am afraid there can be no peace in this country. Indian opinion is unanimous on the point that the attainment of the goal of Dominion status cannot be deferred for long."

Revolution.

What will happen? There is a word there of "peace in this country." Are we heading for a revolution? If in a country there is a solid mass such as the Hindus of India form, and if the immigrant rulers of that country—all the British officials are immigrants—*will* introduce things like parliamentary institutions, which are stages upon which word battles are fought; if, further, they *will* speak of goals and dominion, what else is to be expected but that there should be battles of words first, and battles of other kinds afterwards? The statement of the Nationalist Party contained the words, "the supreme need of the hour." To any one long versed in the public affairs of this country, every syllable of that phrase rings of the artificial battle that is staged in a parliament. The supreme need of India's present hour is not that the hope should be strengthened of her attaining Dominion status "at the earliest possible moment," but that men should be told to think and talk sense. The destinies of a congeries of peoples and races cannot be decided in the unreal atmosphere of a parliamentary battle.

The Viceroy's announcement and address, the Governor's speech, the Indian politicians' reviews of the situation which has arisen—those are all items in a battle fought in that atmosphere. It is not sensible. Why is it that in England certain questions are kept out of party politics? Because the English, with their deep political sense, know they must be: that therein resides the only hope of safety. Any political party may at any moment be far more strongly moved by its sense of its own

Digitized by Google

immediate profit than by anything else. This or that supremely important question, then, must be kept out of politics; for otherwise it might be dealt with, at this time or that time, by a party seeking its immediate profit. What they have done in India is to make the most important questions *the* questions of party politics.

The Masses and Loyalty.

In one of my letters I said that the masses of India are not interested in the politics of the country, and do not care. An Indian whom I discuss things with said to me a few days ago: "What you have said of the masses is true." "Yes?" I said, expecting that he would say more. "It is true in a sense in which you may not know. You English have failed in India: you have gained no hold on the affection of the masses. You have less hold than the later Mughal Emperors had on the affections even of the Hindu masses." "Is that really so?" I said: "tell me more; I have long wanted to know the truth. Is there any sense in the talk of the loyalty of India to the British Crown? Have the masses any feeling for us, any affection?" "I would put it in this way," he replied. "If Englishmen or other Europeans visit Agra, they go to the Fort, and admire the buildings, the strength, the fine proportions, the beauty of the work. Indians, Hindus from Bengal or Madras as much as Muslims from the Province of Agra or from Oudh, will have very different feelings. They will say: 'This was once the fort of one of *our* kings. It may . . .'" "Do you mean that they say in their heart," I asked, "that it may again be the fort of one of their own kings?" "Yes; that is what they say." "Hindus from Bengal and Madras as well as the others?" "Yes; they as well as the others." Then my friend told me about a poem written by the blinded Emperor of Delhi, the last Emperor, the Emperor of the time of the Mutiny—a very interesting thing, the thing he said; but I have not space to tell it.

THE INDIA SOCIETY.

Founded in 1910 by a small body of scholars, artists and men of letters (both English and Indian) with the object of promoting in the West and in India itself a better appreciation and understanding of the historic culture of India, especially as represented in the Arts, the India Society continues to fill with conspicuous success and distinction an important place in the social and artistic life of the two countries.

The Society, of which the Marquess of Zetland is President, holds itself entirely aloof from the political controversies of the day and seeks to unite its members, which include several of the ruling Princes and outstanding figures in Art, Literature, and the public services in nearly every quarter of the globe, in the study and admiration of those aspects of Indian culture whose beauty and nobility can be recognised and appreciated by all.

A meeting of the Society will be held at 21, Cromwell Road on Wednesday, February 26, at 8.30 p.m., when Mr. H. V. Lanchester, F.R.I.B.A., will lecture on "The Indian Craftsman and His Environment." Lieut. Colonel Sir Francis Younghusband, K.C.S.I., K.C.I.E., will preside. The lecture will be illustrated by lantern slides.

Attendance at this and other lectures organised by the Society is free to members, who in return for an annual subscription of one and a half guineas a year are entitled also to various publications issued by the Society, including the journal, "Indian Arts and Letters." In Paris and Strasbourg the Society is represented by the Secretary of the Association Française d'Amis de l'Orient, with facilities for temporary membership. Full information regarding the India Society can be obtained on application to the Hon. Secretary, F. J. P. Richter, M.A., 3, Victoria Street, S.W.1.

An India Office *communiqué* states that His Majesty has approved the appointment of Mr. Kanwar Dalip Singh to be a Puisne Judge of the High Court of Judicature at Lahore in place of Khan Bahadur Mirza Zafar Ali, retired on February 19.

Khan Bahadur Sir Abdul Qadir, Kt., has been apointed Additional Judge in the Lahore High Court in the vacancy created by the appointment of Mr. Kanwar Dalip Singh.

The India Office announces that the King has been pleased to approve the appointment of Mr. Hopetoun Gabriel Stokes, C.S.I., C.I.E., Indian Civil Service, to be a member of the Executive Council of the Governor of Madras in succession to Sir Thomas Eyebron Moir, K.C.I.E., C.S.I., Indian Civil Service.

FEDERAL FINANCE IN INDIA.*

It is now generally admitted that the economic and financial aspects of the Statutory Commission's report will be of equal, if not greater, importance than its recommendations in the purely political sphere. The reproduction in book form of Professor K. T. Shah's recent lecture on "Federal Finance in India" is therefore of interest to the general reader of Indian affairs as well as to the students to whom it was originally addressed. It has obvious defects, as, for example, the repeated references to the author's other writings, and a full share of the bias apparent in these writings. Professor Shah wanders wide; as he himself observes, "You may well ask what has this discussion to do with Federal Finance in India?" This is regrettable as these aberrations display his weakest points. It is disappointing to find a professor harping upon the size of the military Budget as the only feasible object of economy in a Federated India. A voluntary army, a large portion of which is brought from overseas, must necessarily be expensive. But the author fails to appreciate that the army is an astonishingly small one for the area and the millions which it has to defend. The author's method of economy would be to eliminate the British element in the army in ten years, while he believes that the Provinces would demand that the army should be recruited all over India, the last thing that the peoples of many of these Provinces would desire. He is equally at fault in asserting that the British Government would "for obvious reasons" not recruit its army from the Indian States. It gladly does so wherever the material exists.

The author is almost as weak in dealing with questions of Land Revenue, and in suggesting that the assessment should be fixed on the class of the cultivator and not on the quality of the land. Many will agree with him that the incomes derived from land by the big Zamindars, particularly those under the Permanent Settlement, should be subject to Income Tax: but what political party in India would enact such an assessment? The author, however, as may be gathered from his remarks about the army, makes little mention of the necessity for efficiency and honesty of administration beyond emphasising the desirability of a Federal audit. Praise for the results of British rule is not to be expected from him. It is all the more significant that he allows that the Indian States are, as a whole, much more backward in administration than the British Indian Provinces, and that he admits the great improvement in the affairs of India, owing to the comparative quiet on the fronter, the stabilisation of exchange, and the practical elimination of famine.

It is more pleasing to turn to points on which one can agree with the author's recommendations. Many will sympathise with his view that the States should receive a share of the Customs Duties, and that these have become protective, and of the earnings of the railways and Post Office: but the author postulates that this revenue should be paid only on a guarantee that it will be used for the benefit of the people; he does not say how this guarantee is to be enforced. Many will also agree with his view that the Federal Government should receive the indirect taxes and the Provinces the results of direct taxation. In proposing, however, that Excise and similar subjects should go to the Central Government, the author hardly allows for the dilemma that, if the departments are administered from a distant centre, either corruption must ensue, or the local officer has to serve two masters.

In dealing with taxation generally, Professor Shah fails to notice the dislike of Provincial legislative bodies to impose any form of direct taxation. They will always prefer to leave the odium of taxation to the Federal Government, and then to clamour for doles. The author's suggestion for a Federal Council for the whole of India, coresponding largely to the old German Bundesrath, is eminently sound. But he presupposes that the smaller

* "Federal Finance in India." By K. T. Shah (Bombay: Taraporevala. Rupees 6.)

Digitized by Google

States will agree (or can be coerced) to combine as units of such a Council, and also that the existing British Provinces will be re-divided "according to cultural affinity," and that the weaker Provinces will be nursed by the Central Government. These are big and difficult suppositions. But it is something to find an Indian economist seeing that Federation for the whole of India is the only possible method of self-government, and that the Indian States must come in as equals, and not as dependents of the political parties in the British Indian Provinces.

A VALUABLE DOCUMENT.

The time chosen for the publication of the Report of the Indian Central Committee—the body which co-operated with the Statutory Commission in recording evidence and studying documentary material both in India and this country—was singularly unfortunate for many reasons. While the desire of Sir Sankaran Nair and his colleagues that their work should not be presented as a mere "annexe" to the Commission's Report—the objections to such a course were indeed manifest—may be appreciated, it is not easy in any case to understand why the document had to make its appearance so far ahead of the latter, which is apparently not expected now until the middle of next month, at the earliest. The unfortunate leakage of the essential features of the findings proper and the still more unfortunate misconstructions placed on the individual minutes of dissent was probably partly responsible for the decision to release the Report on the eve of the Christmas holidays. The fact that the Report, a detailed summary of which appeared in THE NEAR EAST AND INDIA of January 2, was thereby available for the consideration of the Indian National Congress at Lahore and of other important political organisations which assemble in India immediately after Christmas was, it may be presumed, the principal reason.

Apart from the distractions of the holiday season the attempt to assassinate the Viceroy on the previous day and the proceedings at the Lahore Congress during the following week did a great deal to overshadow public interest in the recommendations of a body whose precise functions have never been clearly understood in this country. Appointed at a later stage in the inquiry in deference to Indian opinion—some by election from the Council of State and some by election from the Legislative Assembly—in order that the evidence placed before the Statutory Commission might be elucidated and scrutinised from the Indian side, the members of the Indian Central Committee, who deserve all possible credit for their co-operation in the face of an immense amount of misunderstanding, abuse and even physical danger, have acquitted themselves well of a singularly difficult and thankless task.

It was the original intention that the two bodies, whose work was thus largely complementary, should present their views simultaneously. No very clear reason, as has been previously remarked, has been given for the departure from the programme, unless it was to be sought in the imminence of the Lahore and other meetings and the premature disclosure of the greater part of the main findings. The result, it may be feared, must be to diminish the proper influence of these Indian assessors as a critical and explanatory body of informed commentators.

While comment upon the detailed recommendations must in the circumstances be reserved until the picture can be presented in its entirety, the Report and its collection of dissenting minutes and explanatory memoranda together hold up a mirror to the complexities of the Indian problem which merit the closest study during the intervening period. In many respects the most interesting and certainly not the least valuable contribution, the separate report written by Mr. Kikabhai Premchand has since been printed for private circulation in booklet form. Students of the Indian problems will be grateful to its author for his action. One of the gravest defects of the somewhat formidable Blue Book of some 420 odd pages embodying the Committee's conclusions is the difficulty of threading a way through the maze of opposing viewpoints, often on matters of fundamental importance, and of deciding the precise degree of assent forthcoming for particular recommendations. As Mr. Kikabhai Premchand left England before the main Report had been settled, the separate report which he has presented is not only a clear and concise analysis of all the matters under discussion but should command particular attention as embodying the views not of a politician but merely of an experienced and practical business man enjoying the confidence of the mercantile community in a unique degree, who is disinterestedly working to the best of his capacity to serve India.

INDIAN NOTES.

(Continued from page 198.)

Indian Coal.

Like the British coal mining industry, the Indian coal trade has its troubles. It has not had a particularly good year, prices having been so low as to necessitate the temporary closing down of many second-class collieries. But recently there have been signs of a revival, and the future does not appear to be altogether dark. The Indian coal trade really depends for its prosperity on its exports. During and after the War it lost most of its principal export markets, and these it is now gradually recovering. The extent to which it will succeed in developing the export trade will depend on the extent to which it can supply good coal at lower rates than its competitors. The establishment, within the last few years, by the Government of a Grading Board, has materially helped to improve the reputation of Indian exported coal. For the Board's certificates are accepted as conclusive evidence that the quality of coal contracted for will be delivered. They ensure that the trade does not suffer, as it has suffered in the past, by the shipment of second, or third-class coal as first-class. For the Grading Board Indian coal proprietors are grateful to the Government of India. But they look with suspicion, not to say alarm, on the policy of the Government in permitting the Indian State Railways to mine their own coal. For this policy, which means that the State, as colliery proprietor, competes directly with private enterprise, must tend to retard the progress of the coal industry. As the Chairman of the largest of the Indian coal companies said at its last annual meeting: "Many pits working first-class coal are nearing exhaustion, and the greater cost of sinking new mines must cause companies less favourably placed than ours to consider very seriously whether it is worth whole burying money which, owing to the Railways Board spending public money on the seductive policy of mining its own coal, may never return to its shareholders." The rationalisation of the industry is engaging attention in India, but no definite action has been yet taken. There are, of course, many difficulties in the way, and these will need to be thoroughly explored before anything can be done.

INDIA IN PARLIAMENT.

In the House of Commons on February 11 the Secretary of State for India, in reply to a question by Sir A. Knox whether there had been any cessation in India of Communist propaganda by agents of the Third International associated bodies since the resumption of diplomatic relations with the Soviet Government of Russia, said that no breach of the undertaking with regard to propaganda had been reported to him by the Government of India.

Mr. Wedgwood Benn also stated that apart from small fluctuations due to seasonal movements, no change in the number of British troops in India has been recently made or is at present contemplated. In reply to a supplementary question as to whether he was satisfied that the present complement of British troops in India was sufficient to maintain peace and order owing to recent political disturbances, Mr. Benn said that in all these matters the Government acted under advice which he believed was good.

THE WEEK AT HOME

London, Tuesday Morning.

Russia and Religion.

It seems difficult to accept the view of the *Daily Herald* and of the *Manchester Guardian* that the agitation which is now being made in England against the attitude of the Bolshevists in Russia towards organised religion should be discountenanced because it is political. Naturally and admittedly a part of this anti-Bolshevist agitation is suspect, for many of those who are indulging in it are closely allied to an active anti-Bolshevist political campaign. But when you have the Pope and leaders of the Church of England and of the Dissenting Churches, together with religious heads of Jewry, all acting for the once in unison, it is too much to suppose that there is no smoke behind the fire.

That there is, however, any political solution to this trouble, which, it is claimed, is Russia's own affair, may well be doubted. There can be no active interference in Russia's administration, but at least the Christian world, in the opinion of those supporting the present very wide agitation, is entitled to record its protest. The British Government, which has resumed diplomatic relations with Russia, is now in a very delicate position, for many of its members have marked and known Christian sympathies. That fact, however, is by no means the same thing as saying that it ought at once to break off all relations with Soviet Russia. The problem is one not so much of rights and wrongs as of the best way in which to alleviate a position that all civilised Governments must feel to be lamentable.

Alcohol and Health.

The fanatical "Pussyfoots" can have gained small comfort from the evidence which medical men gave last week before the Royal Commission on Licensing; there is small prospect, indeed, that propangandists will derive any benefit from this Commission. For there has been a remarkable consensus of expert opinion that the present restrictions of the consumption of "strong drink" are sufficient for the welfare of the nation. Sir George Newman showed quite conclusively how infinitely better the state of the nation is to-day than it was year ago and how real is the temperance of modern England in the matter of drink. He gave no encouragement to the advocates of total abstinence.

This evidence of the people who really do know the extent to which alcohol is being consumed in excess of what is good has been regarded by some observers as providing the most excellent of reasons for winding up this Licensing Commission at once. If these good people on the Commission want to tighten up the Licensing Laws, then, it is argued, they must show reason, and this they have conspicuously failed to secure. I must confess that all my sympathies are dead against those who would further rob us of our liberties.

The Flying Inn.

But there are ways in which the Commission on Licensing might effect an improvement in the places at which liquor may be consumed. As things are, there are many tied public houses which may open for such and such a time to sell liquor and are closed for the rest of the day. In other words, our inns, even as places where refreshment may be had at all times, are fast disappearing.

Everyone of us knows a few establishments which still satisfy our medieval souls, but their whereabouts we would not for worlds disclose. On the whole, however, the inn in England is in a rotten state; often enough, if you try to enter it "out of hours," you are denied entrance. Possibly it is because the profit on the sale of liquor is too high, but more probably because there is a lack of organisation. It is well that the matter is being seriously taken up now by people who cannot be suspected of any but the most respectable morals.

Individuals as Limited Companies.

An amusing sign of the times is provided by two recent announcements made by authors, namely, the formation of "R. C. Sherriff, Ltd.," and of "St. John Ervine, Ltd." The two very successful playwrights whose names are herein contained have obviously intended to circumvent the income-tax assessors. Quite justifiably, too. The difficulty is that, owing to the way in which income-tax is assessed in this country, authors pay tax and super-tax on the yield of any particular year. They cannot, like business concerns, place anything to "reserve."

If you think of it, this dodge is perfectly fair. An individual suddenly receives a sum which, as the *Manchester Guardian* says, "really represents a sort of deferred dividend on the work and experience of his previous career." Why should he, knowing that very probably he will not have the same luck again, not take legal steps to reduce the tax on it?

It will be very interesting to see whether the Inland Revenue Authorities try to have their own back on these people, whose example seems likely to be extensively followed.

What is Being Read.

It is extraordinarily difficult to discover what is being generally read by English people; perhaps the converse is easier to find out. The *Morning Post*, at any rate, has been publishing letters from modern authors containing confessions upon what they have not read. Most of these authors seem to have been those who can be properly described neither as high-brow nor as low-brow. The result is not very surprising. There is a complete neglect of such old fogies as Shakespeare, Scott, Thackeray, Trollope, Dickens, and Meredith. One might have guessed as much from their works.

But what of those readers who do not write at all? The English "classics" must be read by some of them: otherwise there would be no reprints. According to the Manager of Mudie's (whose central library, by the way, is moving from New Oxford Street to Kingsway) War books and detective stories are still the most widely asked for (the library has 2,000 copies of "All Quiet on the Western Front"!).

What would be interesting to know is how much such authors as Bacon, Milton, Thomas Browne, Swift, Peacock, St. John Lucas, to mention a few of *my* "favourites," are read by the multitude. In other words, perhaps, how many people dictate their own reading?

PERSONAL AND GENERAL

TO-DAY

February 20, 1930 (New Style).
February 7, 1930 (Old Style).
Ramadhan 21, 1348 A.H., of the Muslim Calendar.
Shebat 22, 5690, of the Jewish Calendar.

Sir Murdoch and Lady Macdonald are due back in London to-day (Thursday).

Muhammad Hussain Effendi has been appointed Egyptian Consul-General in London.

Sir Robert Waley Cohen sailed on February 12 in the Aba for the Gold Coast and Nigeria.

M. Zulafacar, Counsellor of the Afghan Legation, left London on February 11 for Berlin.

Mr. J. B. Body and Miss Body left for Egypt on February 14 and will be away until April.

Lord and Lady Carson left Eaton Place on February 14 for Egypt, where they will remain for about a month.

Sir George and Lady Murphy left London on February 13 to join the s.s. Narkunda at Marseilles on their way to Egypt.

General Shah Wali Khan (Afghan Minister to the Court of St. James's) was received in audience by the King at Buckingham Palace on February 15.

M. Abdul Kerim Fafwat, Secretary to the Royal Egyptian Legation in London, has been appointed in a similar capacity to the Legation at Teheran, Persia.

The Earl and Countess of Radnor and Lady Helen Pleydell-Bouverie left London on February 13 to join the P. and O. s.s. Narkunda at Marseilles for Port Said.

Mr. Richard Maconachie had an audience of the King at Buckingham Palace on February 15, and kissed hands upon his appointment as his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Kabul.

Atta Beg Amin, Secretary of the Iraq Legation in London, has been promoted to be Secretary of the Iraq Legation at Angora. He is leaving London shortly to take up his new post.

Sir Kay and Lady Muir, accompanied by Mlle. Stancioff, have left London for Egypt, Palestine, the Ægean Isles and Athens, and will be abroad for two months.

We learn from private sources that H.E. Jafar Pasha al Askari, Iraq Minister in London, may in the near future be sent on an important mission to Persia as representing his King and his Government.

The Duke and Duchess of Northumberland and Earl Percy arrived recently at Delhi, where they have been staying with the Viceroy of India. Other guests have included the Marchioness of Titchfield, Lady Guernsey, and the Earl of Aylesford.

Abdul Rasul Beg Chalabi, a graduate of Cambridge University, and son of the Minister of Education in Iraq, has been successfully operated on by Sir Percy Sargent for tumour on the brain. We are happy to say that he is now recovering at the Empire Nursing Home.

M. Yovan Doutchitch, who was Yugoslav Chargé d'Affaires in Cairo three years ago, has been re-appointed to the Court of Abdin, and is expected in Egypt shortly to resume his duties. M. Doutchitch has represented his country at Madrid, Athens, and on the Permanent Council of the League of Nations.

The Anglo-American Club at Belgrade, under the presidency of Mr. Prince, American Minister in Belgrade, entertained Mr. Nevile Henderson, the newly appointed British Minister, to luncheon on February 13. On February 15 Mr. Nevile Henderson gave an address at the inaugural dinner of the Zagreb section of the newly-founded British Society in Yugoslavia.

A free lecture will be delivered on March 12, at 5 p.m., under the auspices of the University of London, on "Legal Administration in Egypt." It will be given by Sir Maurice S. Amos (late Judicial Adviser to the Government of Egypt) at the London School of Economics (Houghton Street, Aldwych, W.C.2), and the Chair will be taken by Sir Leslie Scott.

Mr. H. Bowman, Director of Education to the Government of Palestine, and Mrs. Bowman, arrived in Cairo on February 1, staying at Gresham House. Mr. Bowman has been visiting Egyptian Government schools to see how handwork and technical education is being carried out. He has been accompanied on these visits by Mr. W. A. Stewart, who has recently been appointed Supervisor of Technical Education to the Palestine Government.

THE PASSING OF MRS. VAN MILLINGEN.

[*We are indebted to a correspondent in Australia for the following appreciation.*—ED.]

The post has just brought word to friends in this distant land of the death in late November of Mrs. Hope Mackenzie van Millingen, widow of Professor Alexander van Millingen, one of the most distinguished scholars resident in Constantinople up to the time of the Great War. He died in England in 1915, since which date Mrs. van Millingen had made her home in England and in Florence. The wide circle of friends of the van Millingen family will be pained to hear of Mrs. van Millingen's death. Since the death of her eldest son, Charles, who served with distinction in the War, Mrs. van Millingen had been in frail health, but the news of her passing comes as a great shock and grief to her friends. Few scholars or people of distinction who visited the Near East in the old days but were entertained at the van Millingens' hospitable home. Mrs. van Millingen was a hostess of great charm, with a warmth of heart that included among her friends not only scholars and diplomatists but also all who came to Constantinople with worthy attributes to recommend them. Her unselfish nature, her gift for friendship, her gracious personality, together with the Christian culture and scholarship of her husband, made their home on the Bosphorus a centre that few who were entertained there will ever forget. Professor van Millingen's works on the archæology of old Byzantium will long remain standard books of reference on acount of their record of accurate and painstaking research as well as for their literary style.

Mrs. van Millingen is survived by one son, Evelyn, now in northern Siam, and one daughter, Frances, now residing in England. This is only another instance of how sadly the War has broken up family circles in different parts of the world, many members of which will live on in their former homes only as vital and very beautiful memories.

M. A. P.

PAMPHLETS ON PALESTINE.

"BRITISH POLICY AND THE PALESTINE MANDATE: OUR PROUD PRIVILEGE." A Memorandum by Herbert Sidebotham. (London: Ernest Benn. 12s.)

"LIKE ALL THE NATIONS?" By J. L. Magnes (Herod's Gate, Jerusalem)

Students of the problem of Palestine at least cannot complain of a lack of literature on the subject. Since the disturbances of last August, indeed, there has been a flood of printed counsel which is capable of sweeping off their legs all but those who have their feet firmly planted on the rock of fact. Naturally the greater part of this flood has emanated from Zionist sources. The two essays which we are here considering, however, cannot admit to the charge of being official. Both writers are well known, the first for his consistent support of Zionism in all its aspects, the second for his consistent support of Pacifism and of Zionism in its cultural aspect.

Shall we, then, find the grains of truth slipping down the current of these men's minds? Their sincerity cannot be doubted. What may be alleged against them, however, is, in the first case, aggressiveness, and, in the second, pusillanimity. Let us see whether such allegations are just.

Mr. Sidebotham, who writes as a Briton, is certainly a bold man. Just as certain Zionists say that the correct answer to Arab attacks on Jewish colonization is more colonization, so Mr. Sidebotham is always for audacity and more audacity. In his first chapter, for example, which is devoted to the Military Occupation of Palestine, he makes the astounding statement, after asserting that Palestine lay outside any obligation, moral or legal, incurred with the Arabs during the War, that "Politically, Palestine was not a country in a political sense but a mere ghost of the past, and had no separate political existence apart from Jewish history. In promising a national home to the Jews, therefore, Mr. Balfour was promising nothing that already existed or that belonged to the Arabs, but something that had to be re-created and could only be re-created by the Jews." This is quite needlessly extravagant. Zionists may originally have thought like this, as certain Englishmen were misled into thinking like this; but it is futile in 1929 to write in such strain. Though Mr. Sidebotham makes no mention of the Crusades, and refers to Christian interests in Palestine only in the slightest way, he does admit that before the Balfour promise Palestine "to the Arab was the southern part of Syria." Even if it were only that, how can this energetic writer insist that Palestine virtually had no significance to the Arabs? Is political coloration of a territory the only criterion? Too swiftly, indeed, too tragically the Arabs have supplied the answer to that rather ridiculous question. Whatever be the political future of Palestine, one thing can be certainly prophesied of it: Jerusalem will remain a City holy to Muslim and to Christian, as to Jew.

When Mr. Sidebotham explains the Mandate he is very lucid. The trust, as he rightly says, was one not only for Jews resident in Palestine, but also for all Jewry. Here again, however, he overstates his case. What impartial observer could accept the following as an accurate explanation:—

> The Arab had civil and religious rights under Turkey, but no political rights. While therefore there might be a presumption that we should give representative institutions, such grant would necessarily be subject to the main purpose of the Mandate. The Mandatary, at his discretion, was free either to withhold representative institutions or to adapt them to the main object of the Trust, namely, the creation of the National Home.

Nor is he much happier when he discusses what he calls the "Seed Time." For he begins this chapter with the following sentence:—

> The recent incidents at the Wailing Wall were merely the whip that was used to excite Muslim fanaticism, and the motives of the hand that held the whip had nothing to do with religion at all.

This is fairly accurate, but is it helpful? Substitute the word "Jewish" for the word "Muslim," and would it not be nearly as helpful? But there seems for Mr. Sidebotham little good in the record of the British Government in Palestine. Sir Herbert Samuel, for example, was weak—"during his term of office the rounded policy of the national home received many dents." All this endeavour to conciliate was most misguided, for "this belittling of the (Zionist) ideal never brought over a single Arab supporter: its exaltation would have brought over thousands." Of Lord Plumer, on the other hand, he writes glowingly, if ungrammatically:—"He was probably not a Zionist, except as a duty to be performed, but he had British phlegm, resolution, pride, and there were no troubles under him." That there are limits to what can be said in a pamphlet we fully recognise, but surely it is a little disingenuous to suggest that the tranquillity in Palestine during the régime of Lord Plumer was solely due to the High Commissioner's admirable personality?

With Mr. Sidebotham's statements which are the present concern of the Commission of Inquiry we have no desire now to deal: suffice it to indicate that all his assertions, which never fail of directness, appear to be derived from Zionist sources. His whole pamphlet, cleverly, forcefully, even eloquently written, is designed to depreciate Arab pretensions, to exalt Zionist claims, and to show how much better, even from Great Britain's point of view, British officials in Palestine might have behaved. (It is a small point, but he refers *tout court* to "Abdullah" and "Faisal." For example, and again ungrammatically:—"Trans-Jordan is at present an Arab reserve under Abdullah, the brother of Faisal, who governs very badly.")

In short, this pamphlet, which bears traces of hurried writing, claims altogether too much. It is difficult to think that it will really convince open-minded Englishmen, who, as conscious as is its author that Palestine is indeed a proud and privileged trust, are not likely to forget that the wording of the Mandate is an indivisible whole.

But how to secure a *via media* between Arabs and Jews in Palestine? It is significant that whereas an acute observer like Mr. Sidebotham can say that the best way is to lay the greatest possible emphasis on the Jewish National Home, a long standing Zionist like Dr. J. L. Magnes says in effect that the Arabs must be given what they desire. Dr. Magnes, who has a general philosophy of Pacifism which will not commend itself to everyone—even to those Arabophils who might be thought most to encourage it—speaks for himself alone, but claims really to speak on behalf of enlightened, democratic Jewry. Provided, he says, that Jewish immigration into Palestine, settlement on the land, and Hebrew life and culture are guaranteed, he is willing to agree to a Legislative Assembly for Palestine. A "Jewish majority" in Palestine is, he thinks, a mirage—at least in so far as hope of it constitutes a practical basis for immediate policy. The Jews, he says, are the great democrats of the world. How can they, then, deny even the beginning of democracy to others? He is anxious, terribly anxious, that the Jews shall not be "like all other nations," whose rule is based on force and power, whose idols are economic imperialism and militarism. And he seeks to disprove the theory that a minority has a right to keep "the other man

from achieving just aims." The granting or refusing of self-government to the Arabs should not, he thinks, be a question of policy, but one which "the Jewish conscience" can answer in only one way: "it must recognise, sooner rather than later, and from good will rather than through compulsion, that the inhabitants of this country, both Arabs and Jews, have not only the right but the duty to participate, in equitable and practicable ways, in the government of their common Home-land." How far is this removed from the attitude of Mr. Sidebotham, who would, presumably, deny Arab participation in the government of the country until such time as the aims of one section of the Palestinian people are secured!

Dr. Magnes, however, in reading whom one gets away with difficulty from the feeling that here is a martyr who drags his bleeding cloak before a hostile world, has a quite different attitude of the Holy Land from that of most of his less compromising brethren. He believes that "the Holy Land is no place for an Arab National State or Government, but for a bi-national country with a Mandate as nearly permanent as possible held by Great Britain from the League of Nations."

We have no space, nor is this the correct place, to discuss the ultimate ethical ideals of Dr. Magnes. He is not, nor would he claim to be, a political thinker, and the vagueness which exists in the last sentence that we have quoted from him is perhaps characteristic of the man in the rôle of practical politician. The idealist is apt to confuse details with principles, as the opportunist is apt to let details master principles. For this, at any rate, the world may be grateful to Dr. Magnes: that he has shown the possibility of putting discussion of the Palestine problem on a plane less heated than the normal one. His fate, as a spokesman of Jewry, is in his own people's hands. The non-Jew can only speculate whether the Jewish folk, inspired and re-created by contact with Palestine, will or will not become a community of "conscientious objectors."

"GUSH" ABOUT INDIA.

"VEILED MYSTERIES OF INDIA." By Mrs. Walter Tibbits. Illustrated. (London: Eveleigh Nash & Grayson, Ltd. 21s. net)

A critic remarked of the first part of this book that it should contain more travel and less theosophy. Yet how could I make "Veiled Mysteries" into an ordinary travel book? How can I omit references to what I have learned, in many lives, in that land of mysticism and spirituality which among the many called, has made me chosen to penetrate the outer film? . . . If one would give me his house full of silver and gold, I cannot go beyond the commandment of the Lord to write either good or bad of mine own mind; but what the Lord says, that will I write. She the woman whose eyes are open writes; she writes which heard the words of God and and knew the wisdom of the Most High, which saw the wisdom of the Almighty, falling into a trance, but having her eyes open and remembering it next morning.

The passage quoted above sufficiently indicates the nature of this book. It is intensely earnest and intensely egotistic. It is both sloppy and serious. It is composed, throughout, in a succession of staccato exclamations which are often totally unintelligible and not always accurate. The authoress wraps herself round in purple clouds from which she projects syrupy beams (the use of mixed metaphors is infectious) which successfully distort any vision we might have had of India and of theosophy. We are, by the time we reach the last page, left exhausted and gasping for fresh air. We wish that we could say some words of commendation of a work which has evidently been undertaken from the highest motives. But a diet consisting almost entirely of treacle can hardly be other than nauseating. C. S-W.

A Sericultural Congress opened in Beyrout on February 13. The President of the Lebanese Council, enumerating the causes for the decline in the silk industry, estimated that the annual production was only worth £500,000, which sum, with the projected reforms in agriculture and industry, he expected to treble within five years. Commemorating the occasion, special postage stamps have been issued of six values and different colours, having vignettes representing a mulberry leaf, cocoons, and a silkworm.

PALESTINE'S AGRICULTURAL COLONISATION.

With Mrs. Philip Snowden in the Chair, Sir John Russell spoke to the Anglo-Palestinian Club on February 10, in the First Avenue Hotel, W.C. The Director of the Research School at Rothamsted emphasised the fact that Jewish agricultural colonisation in Palestine could not be judged by ordinary economic standards: sentiment played so great, indeed an incalculable part in the whole affair. He took his audience for an imaginary tour through Palestine, starting with the rain-starved south up to the northern area, which enjoyed a climate similar to that in England. The great problem of Palestine, he said, was water. At present most of it was running to waste. A solution lay in the afforestation of the hills, which would hold the rains, and so enable springs to be tapped. The Government of Palestine was fully aware of the urgency of the problem.

He showed in an interesting fashion the difference between Individualist Colonies and the Communist Colonies. The former were incomparably better run; some of the farming on them reached a very high standard. In the Communist Colonies the technical standard was indifferent; their schemes struck one as unpractical —cows, for instance, would never become Communists;— and the tendency was for their best men to desert in favour of the Individualist Colonies.

To the older colonies, established by P.I.C.A., the lecturer paid a handsome tribute. These, as he explained after his main lecture, employed Arab labour, in contradistinction to the policy pursued in the Zionist Colonies, which forbade the employment of all but Jews.

One point about this colonisation Sir John made forcibly, namely, that the new immigrants into Palestine were being spared the sufferings and anguish which the pioneers in, say, Canada or Australia, had to endure. Instead of having to erect an earth shack and being content with the barest necessities for the first few years, the Zionist colonists were provided, by their organisations, supported by the world of Jewry, with newly built houses and modern conveniences. This scheme, though it meant that the outlay of capital thus necessitated would never be made good, was excellent, especially for the women and children. Of the children of the Jewish colonists, incidentally, Sir John said that he had seen none happier or healthier anywhere in the world.

Dealing with particular forms of agriculture, the lecturer said that he thought it impolitic for the Jews to attempt to compete with the more cheaply produced Arab grain. Cereal growing required little skill, and since the Jewish labourer demanded twice the wages of the Arab labourer, it would be wiser for the Jewish colonists to concentrate upon higher grades of stuff—such as good class dairy and poultry produce—which required more skill and knowledge than the Arabs possessed. At present Palestine had actually to import certain of her necessities —dairy produce, for example. In this direction, therefore, there was considerable room for development.

Of the Jaffa orange industry Sir John spoke highly. It was extremely well run, and had a virtual monopoly. Of cotton, on the other hand, he held out no hopeful prospects. The dead Sea area was a horrible one to work in, and in any case cotton required vast stretches of land to make it profitable.

In considering the whole problem of agricultural colonisation in Palestine, the lecturer said, two things must never be forgotten; first, that the immigrants were not going to Palestine to make money, but to make a new nation—in other words, it was on the basis of sentiment and not of economics that the question had to be studied— and secondly, that there was in Palestine and neighbouring countries a large demand for agricultural produce, and also, that for outside Palestine there was, in the world of Jewry, a market based on sentimental preference.

Mrs. Snowden thanked Sir John for his address, and Col. Solomon thanked Mrs. Snowden for presiding.

THE EVOLUTION OF ALBANIA.

At a meeting of the Near and Middle East Association held on February 7, at 133, Queen's Gate, Mr. J. Swire spoke on Albania. He said that Albania was afflicted by three plagues:—the journalist (with notable exceptions), the propagandist, who manipulated the journalist, and the diplomatist, who employed the propagandist. The journalist too often assumed a patronising attitude, believing that the Albanians were mere pawns in a game between Italy and Yugoslavia, and that it would be fruitless to understand their point of view; hearing few facts and much fiction, he produced articles that were superficial and misleading. Albania's Balkan neighbours, through the propagandist, had striven by constant false reports to misrepresent Albania as incapable of self-government, a land of perpetual unrest and religious fanaticism. In point of fact, he said, law and order in Albania were at present, perhaps, better than in any other Balkan State. Of religious fanaticism there was none—although religious divisions had in the past been manipulated for political ends—and it was significant that a country which was 69 per cent. Muslim venerated as its national hero Skanderbeg, "the sword and shield" of Christendom in the 15th century. False reports and misrepresentation of facts had done much harm to Albania, discouraging capitalists, tourists and others from interesting themselves in the country.

"The Albanians," continued Mr. Swire, "are, on the whole, possessed of exceptional courage, patriotism and ability, and the determination with which they are working to recover from the blighting effects of four centuries of Turkish misrule is truly remarkable. In their efforts to consolidate their independence and to achieve prosperity they are fortunate in being guided by King Zog, a man whose courage, patriotism and energy are beyond all praise." It was both Albania's good fortune and her misfortune to be of considerable international importance. That importance had saved her from partition, but it had involved her in unfortunate international complications. On her coastline were three important anchorages—the roadstead of Corfu (neutralised by the fact that while Greece held the island, Albania held the mainland), Durazzo (which was not, and could never be, of great naval importance), and Valona (a bay which provided a secure anchorage for a large fleet). The island of Saseno, annexed by Italy in 1920, commanded the Bay of Valona; it was heavily fortified and a submarine base had been established there. But the importance of Valona Bay lay primarily in the fact that, whereas the average width of the Adriatic Sea was 100-120 miles, the distance from Valona to the Italian coast was only 47 miles. Brindisi, a base for light craft, was 79 miles distant, while the distance to Taranto, the nearest Italian naval base, was 159 miles. Pola was 439 miles away. There was no naval base on Italy's eastern coastline, which was extensive, flat and exposed. On the other hand, the Yugoslav coast was comparatively short, sheltered by the Dalmatian islands and well provided with secure anchorages. Thus, if the fleet of a Power co-operating with Yugoslavia were to base itself upon Valona Bay, it would close the Adriatic, sever Italy's maritime communications and, possessing every geographical and strategic advantage, establish complete ascendancy over the whole of Italy's eastern seaboard.

Turning to Italy's relations with Albania, Mr. Swire stated that it was the probable formation of a powerful Yugoslavia and the declaration in favour of the principle of self-determination which gave her both the desire and pretext to declare, on June 3, 1917, "the unity and independence of the whole of Albania under the shield and protection of the Italian Kingdom." But Italy underestimated the strength of Albanian nationalism, to which a great impulse had been given by four years of invasions and foreign dominations. Italy feared that, unless she herself held Valona, it would fall within the sphere of influence of a rival Power. The Albanians, however, were not prepared to submit to any bargaining between Italy and the Allies at Albania's expense, and they eventually, in June, 1920, rose against the Italians and drove their outlying troops into Valona. Albania, Mr. Swire pointed out, is not in any way a gateway to the Balkans, either strategic or economic. Rather is she a place apart, isolated by the mountain barrier which constitutes the eastern half of the country and which enabled the forbears of the present inhabitants to survive successive invasions of the Balkan Peninsula. In warfare mountains are a danger to the aggressor and of advantage to the defender only if his dispositions are made in such a manner that he may take the aggressor at a disadvantage as he emerges from the passes. Thus it is clear that, in the event of war between Italy and Yugoslavia the initial advantage in Albania would lie, all things being equal, with the Yugoslavs, if the Italians attempted to invade Yugoslavia through Albania (unless, possibly, the Italians undertook operations on a very large scale with successive limited objectives), and with the Italians, if the Yugoslavs attempted to reach the Albanian coast. But, whereas the Yugoslavs would be able to concentrate near the Albanian frontier upon the outbreak of war, the Italians would be able only to concentrate at Italian ports, and before Italian troops could deploy into effective positions in Albania, the Yugoslavs could pass the Albanian mountain barrier and deploy to oppose them, unless the Albanians themselves were strong enough to hold up the Yugoslav advance until the Italian reinforcements had occupied a "bridgehead" on the Albanian side of the Adriatic. Accordingly Italy's "minimum programme" was to strengthen Albania sufficiently to ensure that Yugoslav troops could not deploy into the coastal regions before Italian troops were landed, and her maximum programme, to ensure that Albania could defend herself without Italian assistance in a war in which the principal theatre of operations was elsewhere. The Albanians would never tolerate for a moment any Italian penetration, colonisation, interference with their internal affairs or infringement of their independence. Mr. Swire gave reasons why, in his opinion, Albania and Italy were justified in fearing Yugoslav aggression, and laid the responsibility mainly on "The White Hand," and finally expressed his conviction that under the guidance of their able King the Albanians were capable of and would succeed in preserving their independence, both theoretically and practically, and of assuring themselves a great and prosperous future.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

AGRICULTURAL PESTS IN CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—My attention has been drawn to some errors in the Cyrpus letter in your issue of January 23, and I shall be obliged if you will kindly publish the following corrections:—

The principal method used in the destruction of locusts in this Island last year was a system of purchase of locusts collected in hand nets, and not the spraying of arsenite of soda solution, which was used over a comparatively small area only. The latter method was tested on a large scale some years ago and was then found unsatisfactory.

The figures quoted by your Correspondent from the Agricultural Supplement to the *Cyprus Gazette* of December 27 for the cost of the purchase of rat tails during the past ten years should read "rather above £1,000 a *year*," not "a month." The figures up to December 31, 1929, are now available, the total of rat tails purchased in the last ten years being 1,745,222, and the cost over this period was £14,074.—I am, etc.,

M. T. DAWE,
Director of Agriculture.

Cyprus. February 5.

NEWS IN BRIEF.

The French Government has conferred on M. Maurice Nahman, the Cairo antiquarian, the rank of Chevalier of the Legion of Honour.

A large party of Jews from Jerusalem went to the Hebron cemetery on February 11 to bury the blood of 60 victims of the Hebron massacre.

A report that Prince Nicholas of Roumania has become engaged to the Infanta Christina, second daughter of the King of Spain, is officially denied.

Bishop Palmer, formerly of Bombay, is to preach the annual sermon for the British and Foreign Bible Society at St. Paul's Cathedral on Tuesday, May 6.

Mgr. Bauer, Bishop of Zagreb, has invited all the Bishops of Yugoslavia to take part in a joint conference, which was to be held yesterday, on the position of the Roman Catholic Church in Yugoslavia.

The Turkish Finance Minister has invited Mr. S. C. Wyatt, President of the Council of the Ottoman Public Debt, to visit Ankara early in March to discuss the whole question of the payment of Turkish debts.

Lord Lloyd has instituted what will be called the Lord Lloyd Empire Essay Prizes for the pupil in each of six British schools in Cairo and Alexandria who annually writes the best essay on an Imperial subject selected by Lord Lloyd.

Earthquake shocks were recorded in Cairo, Athens, Crete, and over the Aegean on February 14. In Crete serious damage was done; 10 villages were destroyed and several persons injured. Many buildings in Candia were left in danger of collapse.

The first party of travellers on a new route which will enable them to go from London to India in eleven days instead of three weeks, arrived at Constantinople on February 15 in the Simplon express. They left again an hour later in the new Taurus express, which links Europe, Iraq, and India by way of Aleppo, Nisibin, Mosul, Baghdad, and Karachi, thus bringing London within eleven days' journey of India.

NOTES AND NEWS

170, Strand, London, W.C.2,
Tuesday Morning.

The Fair.

I have been to practically every one of the British Industries Fairs, and have noted each time the steady improvement in the range and quality of the exhibits. This year's London section at Olympia is more impressive, however, than any previous Fair. One senses in the wealth of new exhibits a growing imagination on the part of our manufacturers which was not in evidence before the War. Olympia seems to make it quite clear that, no matter what the commodity, we are still capable of producing better goods than the foreign manufacturers, while it is abundantly evident that the quality of British goods— the asset which has stood us in such good stead in the past -is being carefully safeguarded. It only needs satisfactory world conditions such as we can look for after a good harvest or two for these factors to play their part in the export returns, for whatever may be said to the contrary it is an undoubted fact that the foreign buyer prefers British goods and will give them the preference if he possibly can.

The Tariff Truce Proposals.

The untimely Tariff Truce Conference opened this week at Geneva -I say untimely advisedly, because there seems little doubt that events have stultified the utility of such a gathering. The Conference is, of course, a sequel to the World Economic Conference of 1927, the tenor of whose recommendations was a demand for freer trade, the response to which has not been at all encouraging. Tariffs have been reduced in some cases but have been raised in others, and in the last few months we have seen two countries introduce new tariffs which are professedly of a protective character. That, however, is not all. It is an admitted fact that certain countries have anticipated the Conference by raising their tariffs, which means that, if Great Britain agreed to a tariff truce, we should deprive ourselves of any means of retaliation for a period of three years. It is not surprising that the Dominions have decided against representation at the Conference, and in view of Mr. Baldwin's categorical statement that he will be no party to a tariff truce it is difficult to see how the present Government can consent to such a proposition.

The U.K. Orange Market.

It should be a source of great satisfaction to orange growers in Palestine (where the area under this fruit is steadily being increased) and Cyprus (which is now coming to rank as a producer of oranges on an important scale) to know that the figures for the last few years indicate that the United Kingdom is gradually increasing its imports of this fruit. As a matter of fact there has been an increase every year since 1924 with the exception of 1927 and 1928, but the ground lost in these two years was fully regained in 1929 when the imports totalled 9,271 thousand cwt. as against 7,520 thousand cwt for 1924. So far, however, the great bulk of our supplies come from foreign countries, the figures for 1929 being 7,783 thousand cwt. as against 1,488 thousand cwt. from other parts of the Empire and Mandated territories. Apart, therefore, from the fact that the market is expanding there is ample scope for increased sales by Palestine and Cyprus by supplying fruit that we now buy from Spain, the United States, Brazil, and other countries. The problem of a larger outlet is vital for Palestine, not so much now as in the next decade when the new orange groves will be bearing their fruit, and it is incumbent on the orange growers to see to it not only that their fruit reaches the market in first-class condition, but alo that reasonable attention is paid to the publicity side of the trade. Advertising is the way to the increased sale of oranges as of other products.

Sudan Trade Progress.

The figures for the trade of the Sudan for the first eleven months of last year make a remarkably good showing. There was an increase in respect of every one of the principal items, the largest advance being, of course, in respect of exports, which, as a result of cotton developments, showed an advance of £E866,480 at £E6,314,410. There was, however, a very significant rise in public imports which at £E4,065,048 were £E278,414 up. The total increase in the value of the imports was £E329,149, and the substantial advance in the public imports may justly be regarded as indicating a steady improvement in the economic position of the country. As I have pointed out before, things are now going well with the Sudan, and it only needs a succession of good harvests, coupled with reasonable prices for cotton, to bring about an era of rapid progress.

COMMENTATOR.

BANK OF ATHENS

Capital and Reserves - over Dr. 300,000,000

HEAD OFFICE: ATHENS.

Telegraphic Address: "Bancathen."

96 Branches in GREECE; also in LONDON, UNITED STATES, EGYPT and CYPRUS.

Correspondents all over the World.

ITALIAN FINANCIAL ASSISTANCE FOR TURKEY.

(From Our Own Correspondent.)

Constantinople, February 12.

With the acceptance by the Turkish Treasury of a loan of one million pounds sterling from an Italian syndicate, operating through the Banca Commerciale Italiana, it is hoped in governing circles that stabilisation of the depreciated national currency will automatically follow in due course. There are good grounds for believing that the accommodation thus granted to Turkey is the outcome of the visit to Angora some few weeks ago of Signor Volpi, the Italian ex-Minister of Finance who is now at the head of a powerful syndicate of Italian bankers and capitalists.

It is scarcely to be expected in these hard times that purveyors of millions of sound sterling resources to Oriental Governments can be actuated solely and entirely by philanthropic motives. That a *quid pro quo* must have been carried off in the valise of the accommodating Italian ex-Minister is certain—but the exact nature of the benefits to accrue to the Italian syndicate has not yet been divulged. Count Volpi, after carefully scrutinising Turkish budgetary statistics, is reported to have suggested foreign "control" and "guarantees" as concomitants of anything in the nature of a loan to Turkey. "Control," as savouring of the old-time capitulatory régime, was at once rejected by the Turkish Ministry, but apparently a basis of agreement has been reached on the question of "guarantees."

The nature of the guarantees offered and accepted has not transpired, but there has been much vague talk "dans les coulisses." It has been said, *inter alia*, that a cession was to be made to the Italian group of the Mersin-Tarsus-Adana railway, the exploitation of which has lately been relinquished by a French company in favour of the State. Any scheme of this nature is too akin to that mapping out of political spheres of action in Anatolia which is anathema to Ismet Pasha's Cabinet, and the suggestion can, therefore, be dismissed off-hand. It is stated, on the other hand, that the guarantees offered by Angora and accepted by the Italian syndicate turn on the revenues of the Turkish Tobacco Monopoly. If this be true, one is led to surmise that the Turks must be happy to obtain funds at a very critical juncture on relatively easy terms, and that the Italians, despite French and British experience of this market in the past, are apparently quite content to sit down and wait patiently not only for a remunerative return on their invested capital, but for that all-important corollary, the gradual extinction of the debtor's liability.

As our French friends so aptly put it: "Les bons comptes font de bons amis," and anything that makes for peace and international goodwill is all to the good. Italy single-handed, however, has never as yet advanced money to Turkey and it is therefore singularly unfortunate for the Italian syndicate that the very day after the financial contract was signed, Turkish Unified Bonds should have slumped by over 20 points on the Paris and Constantinople Stock Exchange—a rapid decline unprecedented even in the old Sultanic days.

CYPRUS TRADE IN 1929.

Increased Imports and Exports.

The report on Cyprus trade for December shows that, as compared with December, 1928, there was a large decrease of £86,923 in the value of imports, which at a total of £119,478 were also £26,336 below the five year average. The principal items accounting for the decrease were:- explosives (minus £7,669): cement (minus £1,663); flour (minus £27,935); machinery (minus £12,090); motor cars (minus £10,659); edible oils (minus £2,822); seed potatoes (minus £2,056); and wood manufactures (minus £5,473).

Exports, of the total value of £119,439, increased slightly as compared with those of December, 1928, although there was a considerable falling off in shipments of carobs (minus £10,242); potatoes (minus £6,291); and raisins (minus £7,035). Increased exports were recorded in asbestos (plus £1,861); pyrites (plus £12,845) and cotton (plus £2,237).

The total value of imports and exports for the year, as compared with the previous year, were:—

	Imports.	Exports.
	£	£
1929	1,983,833 ...	1,635,736
1928	1,840,442 ...	1,435,767
Increase ...	143,391 ...	199,969

During the month 20 steamers called at Larnaca, 23 at Limassol and 20 at Famagusta as against an average of 27, 28, and 20 respectively. During the year 288 steamers called at Larnaca, 348 at Limassol and 247 at Famagusta.

Special telegraphic arrangements have been made by Imperial and International Communications, Ltd., for the convenience of exhibitors at the London and Birmingham sections of the British Industries Fair. Telegrams for transmission over the world-wide cable and wireless system of the company may be handed in at special stands at both Olympia and Castle Bromwich, and there are "telegraph restant" facilities for oversea buyers and other visitors.

It is reported from Athens that Greece, by the agreements at The Hague, obtains 490,000,000 gold marks in 60 unequal annuities and 9,000,000 marks per annum in respect of Eastern reparations. The total of £58,000,000 suffices to cover the War debt to Britain of £23,000,000, to America of £4,237,057, and the regular payments of debts to France. In addition, Greece obtains 19,000,000 gold marks, which will be devoted to the settlement of claims for War damages, particularly to shipowners.

Engineering Topics

(By Our Engineering Correspondent)

Cables for Suspension Bridges.

The subject of cables for suspension bridges has again come under discussion. Suspension bridges are not only common but in many localities could not be satisfactorily or economically replaced by structures of any other kind, so the matter is one which assumes great importance. Investigations go to show that not only must the wire used be of suitable alloy, and of suitable dimensions to withstand the strains that will be brought to bear upon it, but the care with which it is drawn and with which the after-treatment is effected have much to do with its durability and reliability.

So far, the largest proportion of the wire used in the construction of cables for suspension bridges is manufactured at the Roebling works, which were founded over 100 years ago by John A. Roebling, for the manufacture of wire for making cables for suspension bridge work, and it is claimed that the methods he inaugurated and brought into successful operation are still in use.

That is not to say, of course, that no improvement in the material turned out have been made. As a matter of fact the steel cable made there for the Brooklyn Suspension Bridge was made from wrought iron wire, cold drawn, with a tensile strength of about 71 tons per square inch. The wire for the Hudson River bridge cables, which were made at these works in 1927, had a tensile strength of over 100 tons per square inch. It will be remembered that few wires, before Roebling's time had a tensile strength of more than about 10 to 15 tons per square inch.

A description of the metal used shows that acid open-hearth steel, made from specially clean scrap and high quality pig iron, is used, the specification of composition being unleaded, in the presence of a small amount of manganese, to produce a steel of entirely eutectoid structure. The specified carbon content is .85 per cent. Impurities are kept very low, but in view of the extreme care taken in other respects, engineers will be surprised to note that a sulphur and phosphorus content of up to .04 per cent. is allowable. It is stated that the steel is carefully dead-melted and poured slowly into the ingot moulds. These are of square cross-section finished with rounded corners, these having a downward taper and being provided with a sink-head or hot top.

In the manufacture of the wire, the ingots are heated and every trace of scale is blown from them by jets of high pressure steam, after which the ingot is rolled down until it forms a billet, which, as soon as it is reduced to a certain size, has its entire outer surface removed so as to ensure it being free of scale and impurities. The rolling-down process is then resumed and the billets brought down into rods. It is claimed that by the exercise of due precautions plus the unusual practice of slow pre-heating, blooming by easy reductions, de-scaling the ingot and shaving down the hot billet a material of excellent surface characteristics is produced which requires neither chipping nor grinding. It is a rule in the plant that if any ingot or bloom has any marked surface defects it is not good enough for wire making. The billets after they have been brought down to rod form are rolled down in a continuous rod mill of the Morgan type which operates so rapidly that the leading end of the resulting wire is being wound into coils before the tail end of the billet is out of the heating furnace. Close pyrometric control of the furnace temperature and uniformity of working speed ensures that the rods are always delivered to the coiler at exactly the same temperature, well above the critical temperature. The further cooling of the reels is controlled by passing them through a tunnel which is surrounded by iron jackets which are water cooled under full temperature control.

Drinking Water.

The purity of drinking water is one of the points on which everyone, general public, engineering and medical professions, insists. The question as to how various pollutions affect the water is one that to-day hardly ever arises except in cases where the waters are drawn from some mountain region or watershed where migratory birds or wandering animals can contaminate the sources, or where vegetation may set up some special action. Quite recently, it will be remembered, the water supply of a part of one of our large cities became affected by a growth of some particular algae which caused an unpleasant taste and colour, without doing any real harm to the water itself.

Before a representative body of water engineers, Mr. Rushton dealt with the subject recently, and expressed what some may have regarded as the somewhat orthodox view that any appreciable amount of sewage present in water will alter the natural life content and increase certain forms of life which are far from desirable in water that is to be used for human consumption. Further, drainage from wild and from cultivated lands differ considerably, and invariably it is found that where a small amount of organic matter enters a stream, an increase of weed growths, generally filamentious, takes place and these may and frequently do harbour other growths which may become a nuisance.

Regular Inspections.

So important is the question of purity in connexion with drinking waters that a number of water supply undertakings have instituted regular weekly or bi-weekly biological examinations of the water under their control, such examinations being sometimes more or less suspended from October to March. These act as guides to the engineer, and not only show him any growth at its beginning so as to enable him to cope with it before it becomes formidable, but assists him to keep his filter beds clear and free from "blow-outs" and other troubles.

This, however, does not answer the question as to where these organisms which give rise to trouble in drinking water, apart from bacteria, come from in the first place. So far, little has been ascertained in that direction, and it seems equally difficult to say why they they should be prevalent during some summer seasons and not appear during others. There seems still to exist a wide field for research work in connexion with water engineering.

The total direct shipments of oranges from Palestine to the United Kingdom up to February 9 amounted to approximately 1,100,000 boxes, as compared with 688,000 boxes at the corresponding date last year. Total shipments to the Continent amounted to about 345,000 boxes, as compared with about 208,000 boxes shipped up to the corresponding date last year. Transhipments to the United Kingdom via Port Said have totalled about 150,000 boxes, as compared with about 79,000 boxes at the corresponding date last season.

THE MARKET FOR POWER PUMPS IN GREECE.

The supply of water for domestic purposes as well as irrigation in the Provinces of Greek Macedonia and Thrace is one of the major problems with which the colonization department of the Refugee Settlement Commission had to cope when it attempted to settle several hundred thousand refugees from Asia Minor in these two Provinces (says the American Consul at Salonika, Mr. Charles J. Pisar, in a recent report). There is still much work to be done in the provision of an adequate water supply, however, and with the general improvement in economic conditions it is anticipated that in the future there will be a gradually increasing demand for pumps, including those destined for irrigation, contruction, industrial, and other purposes. The volume, however, in the near future at least, will be comparatively small.

There are no important industries in Macedonia and Thrace which require the storage of large quantities of water and the use of Triplex or similar large pumps. Many of the industrial plants, including the breweries, have deep wells from which they obtain water by means of small centrifugal or deep well pumps. In Salonika the water supply company has three small reservoirs situated on the hills in the rear of the city. Two of these reservoirs are filled from artesian wells and the other by numerous springs. A Belgian firm has six 25-inch centrifugal pumps in use for supplying pressure in the city water mains. Diesel engines provide the motive power. There is urgent need for a larger water supply, but while the foregoing company contemplates the installation of additional equipment, no definite plans have been made.

There is a relatively fair demand for centrifugal pumps in the Provinces of Greek Macedonia and Thrace. Dealers estimate that during 1928 between 250 and 300 centrifugal pumps were sold in this territory. Preference is shown for centrifugal pumps equipped with impellers for use in muddy water. Such pumps are extensively employed by contractors engaged in reclamation and drainage work and in the construction of sewers. There is also a fair demand for power pumps for lifting water from deep wells. Several attempts have been made by local manufacturers to make centrifugal pumps. One of them appears to have met with success, but is still experimenting and has not placed his pumps on the market. There are no statistics available showing the exact number of pumps imported into Macedonia and Thrace, but power pumps come largely from the United Kingdom, Germany, and Austria.

In order to market power pumps successfully in this territory it is advisable to appoint importers and dealers in machinery in Salonika as distributors. Such firms keep in close contact with the trade. They usually maintain a technical staff capable of setting up pumps and demonstrating them to purchasers as well as of making repairs. As a rule, however, the firms in this territory operate with limited capital, and they are not in a position to carry a large stock unless manufacturers are prepared to grant them reasonable credit facilities. When selling machinery of any kind, dealers are required to grant to the purchasers easy terms of payment extending over long periods. They are, therefore, inclined to handle the products of manufacturers who grant them corresponding facilities. In quoting prices, c.i.f., quotations at the port of destination of the merchandise are preferable.

Every year an international trade fair is held at Salonika, usually for two weeks in September. Visitors come to this fair from all parts of Greece and the Greek islands, and particularly from the neighbouring Balkan States. This fair provides a suitable means of introducing such equipment as pumps and is regarded as a most effective advertising medium.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS, UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

*†CIRCASSIA ...	Feb. 27	¶‡BRITANNIA ..	Mar. 27
*CASTALIA ...	Mar 12	*MASSILIA ...	May 2

¶ Leaves Marseilles April 3.

*First class passengers only. Specially low fares. †Calls Port Sudan
‡ First and Third class passengers.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Birkenhead, February 27). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Manipur for Calcutta (Birkenhead, February 27).

Bibby Line.—S.s. Leicestershire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 5).

British India Line.—S.s. Domala for Bombay (London, March 8); s.s. Mandala for Colombo, Madras, and Calcutta (London, March 8).

Cunard Line.—S.s. Bactria for Gibraltar, Calamata, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza; also at Volo if sufficient inducement offers (Glasgow, February 20; Swansea, February 22; Liverpool, February 22); s.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume; also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool, March 15; Swansea, March 18).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 1); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 29).

P. and O. Line.—S.s. Bhutan for Calcutta (London, February 28); s.s. Ranchi for Bombay (London, February 28).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, February 26); s.s. Persian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, March 8).

Ellerman and Papayanni Lines.—S.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 1); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, March 1; Swansea, March 6); s.s. Manchurian for Gibraltar,*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 8; Swansea*, March 8). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

The Egyptian Government has decided that on the expiration of the present contracts the twelve keepers of coastal lighthouses, which have been manned by British men, shall be replaced by natives.

The National Bank of Roumania made a net profit of 177.8 million lei for 1929. From the net profit 20 per cent. is placed to reserve. For the year the gross dividend is 480 lei per share.

The traffic receipts of the South Indian Railway Company for the week ended January 18 amounted to Rs.10,90,924, making the total from April 1 Rs.5,34,40,174, as against Rs.4,92,39,387 for the same period of the previous year.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended January 20 amounted to £E10,740, making the total from April 1 £E286,542, as against £E286,206 for the corresponding period of the previous twelve months.

At a Sericulture Congress at Beyrout, the President of the Lebanese Council, enumerating the causes for the decline in the silk industry, estimated that the annual production was only worth £500,000, which sum, with the projected reforms in agriculture and industry, he expected to treble within five years.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 18.

Dull conditions have prevailed in most sections of the Stock Exchange during the past week, the main exception being the strength of gilt-edged stocks, the success of the Indian Government and Hastings Corporation issues providing a stimulant in this direction. The Home railway dividends, to which further reference is made below, exceeded market expectations in some cases, but prices did not respond, and realisations by holders caused some reaction. The "Hatry" settlement passed off smoothly, but heavy conditions prevailed in the industrial market, and in the absence of activity in Wall Street international stocks were quiet. A further sharp break in Royal Mail stocks, for which no obvious explanation is forthcoming, was an unpleasant feature of the shipping section, and while a fair amount of business was passing in Rhodesians, other speculative markets were idle.

Railway Dividends.

The announcements of the final dividends, to be paid by the Underground group and three of the "Big Four" railways more than came up to expectations. All declared an increased rate as compared with last year, which indicates that very considerable economies, apart from the wages cut, must have been effected. The London, Midland and Scottish Railway proposes a full ordinary dividend of 4½ per cent., against 3½ per cent. in 1928. In view of the fact that gross traffic receipts declined £616,000 this extra 1 per cent. can only have been brought about by stricter economies. Similarly, the Southern, in spite of a contraction of £84,000 in traffic receipts, will pay 2½ per cent. on the Deferred Ordinary shares, compared with 2 per cent. in 1928. An advance from 4¾ per cent. to 7½ per cent. in the Great Western dividend has been recommended, and this cannot be entirely explained by the rise of £635,000 in traffics. The Underground Group proposes to pay 8 per cent. on the ordinary shares, 7 per cent. having been paid a year ago. A considerable proportion of the progress made by the main line concerns must also be attributed to the stimulation in coal traffic and the greater activity in general merchandise, as they fared considerably worse in the matter of passenger business. Satisfactory as are these announcements, they were insufficient to overcome the lassitude of the market in English railway junior stocks. This can be attributed to the adverse current returns, the anticipated increase in coal bills, uncertainty as to the effects likely to be experienced by Budget changes, and the possibility that the higher dividends may inspire the unions to press for the removal of the wages cut of 1928. The pessimism is, however, not fully justified, and with further progress likely in 1930, many of the junior stocks have great attractions as lock-up investments.

Departmental Stores.

The results recently declared by several large departmental stores justify the faith in investors in these concerns. Despite trade depression, the business of these large shops appears to be as profitable as ever. Indeed, trade for them appears to be more remunerative as time goes on, but this is probably due, in part, to their absorbing the business previously done by smaller shops. Two of London's best-known stores declared increased profits last week, and so has Lewis's, of Liverpool, Manchester, and Birmingham. The profit of Harrods, including dividends from D. H. Evans and Co. and Dickins and Jones, which it controls, for the year ended January 31 last was £834,188, an increase of £59,632 over the preceding period. The special reserve account is to receive £50,000, or twice as much as last year, and the balance carried forward is £149,699, a substantial increase over last year's £116,033. A final dividend of 15 per cent. is recommended, making 20 per cent. for the year, the same as in the past two years. The ordinary shares now yield about £5 12s. per cent. Selfridges have announced a net profit of £481,312 for 1929, against £476,417 last year. The highest figure in the firm's history, that for 1926, included that of its branches and amounted to £504,214. But, in view of the fact that this year's profit does not include the profit of branches, the directors state that the present result is a record. On the basis of last year's dividend Selfridges' ordinary shares yield about £8 per cent. Lewis's report shows the 1929 profit to be £773,991, an increase of £66,667 over last year. The usual substantial allocations to reserve are made and the dividend at 15 per cent. for the full year is the same as during the last few years. At the present price Lewis's ordinary shares give a return of about £6 4s. per cent.

Investment Trusts.

The general decline in security values during the past few months gives rise to a certain amount of concern regarding the position of investment trusts, whose whole business is, of course, so intimately connected with security values. It may not be out of place to reiterate the principles upon which properly conducted trusts act. The funds of a trust company are spread in such a way as to minimise the total risk. Secondly, investments are made by experts. Thirdly, since the levelling out of risks is part of the object of investment trusts, profits are conservatively handled and reserves are built up. It should be noted, however, that the old-established trusts are in a better position than the new ones. This is due to two very definite reasons. In the first place, it is only trusts which have been in operation a number of years that have built up sufficient reserves to guarantee an equalisation of dividends even over bad years; secondly, just after the War there was an opportunity of buying high-yielding stocks and shares abroad, an opportunity which newer companies have not enjoyed. Subject to this distinction it may be said that investment trusts should be able to pay steady dividends despite recent ups and down on the Stock Exchange. Among the older companies one of the best known is the Foreign and Colonial, whose stock yields about £5 16s. per cent., while among companies formed after 1925, Stockholders' Investment Trust's stock yields about £6 2s. per cent.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from
RANGOON, CALCUTTA, and COLOMBO

THE INDIAN MARKET IN 1929.

In their market report for 1929 Messrs. Premchand, Roychand and Sons state :—

Conditions in British India during 1929 were highly abnormal both in the economic and political spheres. A series of untoward events occurred one after the other. The unusual occurrence of frosty weather at the beginning of the year destroyed a considerable part of the winter crops. This was followed by communal riots in Bombay of such a violent character that drastic steps were needed to re-establish order, and a curfew order had to be passed. Over a hundred persons were killed, and for ten days the city was in a state of panic. The monsoon broke seasonably, but there was an excess of rain in some parts and drought in others. Sind and Assam suffered from floods, which rendered thousands homeless and did incalculable harm to crops. Kathiawar and the United Provinces experienced drought in the autumn. Later, a plague of locusts destroyed the already scanty crops in Sind and the Punjab. The strike fever continued throughout the year all over the country. The worst sufferer was Bombay, where the cotton mills were idle for 210 days during the year and the number of workmen on strike was 125,400. The jute mills in Calcutta were fresh victims of communistic activities, which culminated in a general strike. It is well to note that labour in Calcutta is well housed and well paid and there seem to be no real grievances. The Bengal Government took prompt and firm action and the strike fizzled out at the end of August after lasting about five weeks. With a view effectively to counteract the competition of the jute mills on the Continent of Europe, the working hours of the Calcutta mills were raised from July to sixty a week. The iron and steel works at Jamshedpur were comparatively quiet and fortunately there was no actual strike in the works. The dock workers in Karachi struck work during the visit of the Royal Commission on labour. Even the railways were not immune from the contagion.

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

WESTMINSTER BANK
LIMITED
HEAD OFFICE: 41 LOTHBURY, LONDON, E.C.2

Control of Currency and Credit.

The financial history of the year has directed attention anew to the serious disadvantages under which India labours through not having a single authority to control currency and credit. Those who have studied the history of our currency and exchange are painfully aware of the fact, brought out so clearly in the report of the Hilton Young Commission, that there is a divorce between the control of currency and control of credit in India, and so long as that divorce continues the position cannot be healthy. Further, so long as the Government of India is the sole currency authority, its operations have to be conducted in the full glare of the public, and are suspected at times when political feeling runs high. Operations which in other countries are conducted by Central Banks and pass unnoticed as parts of the financial mechanism of the year are dragged into the arena and often distorted by political feeling. We have never disguised our opinion that the true remedy for this state of affairs is the organisation of a Central Bank, and that the country suffered a severe disability when the proposals for such an institution were rejected. We may feel this disability even more acutely in the future when the gold supplies of the world are rationalised between the different countries, each according to its needs; when their distribution is made we shall have no central institution to fight for our quota. However, it is no use raking amongst the dead ashes of the past and sighing for what might have been. In the present state of public feeling it is probably unwise to revive the scheme for a Central Bank, which must await a cooler atmosphere. It may also be said that the close co-operation between the Finance Department of the Government of India and the Imperial Bank mitigates to some extent the evils flowing from the divorce between the control of currency and the control of credit. But we suggest that it is possible to bridge the gulf still more effectively by setting up some advisory body to assist the Finance Department in the control of currency, such a body to be representative of commerce and industry, the Exchange and the indigenous banks. The rôle of this body would necessarily be advisory; the responsibility must rest with the Government so long as it is the sole currency authority and cannot devolve its authority on a Central Bank. But an advisory body would keep the Government in close touch with financial and commercial opinion.

A survey of the trade of India as a whole reveals that she has not suffered to the extent that she might otherwise have done from the disturbing economic factors both at home and abroad coupled with the world financial crisis. Exports and imports amounted to Rs.611 crores despite a decrease in agricultural produce owing to frost and floods, and when compared with those of last year and the previous quinquennial average, must be considered satisfactory. On the industrial side, the main industry—cotton—suffered heavily in Bombay on account of labour troubles and the growing menace of outside competition. The steel industry has not yet fully recovered from last year's disturbances. For the coming year the crop prospects are fair and the yield is likely to be normal. In the world markets, the demand for India's produce continues unabated. The industrial position is basically healthy, provided labour does not impede its progress. The Government of India's finances are intrinsically sound and, given normal conditions in international money markets, they should improve further. Railway earnings are steadily growing and expansion continues on healthy lines. Irrigation schemes are being pushed forward energetically, and time alone can prove the real benefits which India will derive from them. The credit situation is good, although marred at times by unfortunate outbursts of political hysteria. Prices of commodities were stable and exchange was maintained. Despite communistic propaganda and political unrest, India has enjoyed peace. An auditor of the factors set forth above will conclude that the intrinsic position of the country is sound.

BRITISH INDUSTRIES FAIR.

A Wonderful Display.

(From Our Own Correspondent.)

This week saw the opening at Olympia, in London, and at Castle Bromwich, Birmingham, of the British Industries Fair, to which, on this occasion, a greater importance attaches than in any year since its inauguration. The reason for this scarcely needs explanation. We are suffering at the present time from a very serious trade depression, and it is naturally hoped that the Fair will give a great fillip to trade endeavour and by its success will conduce to that hopeful atmosphere which is so essential to commercial progress. To judge by the results on the opening day the Fair promises to fulfil expectations. Orders have poured in, and foreign buyers have been well in evidence, and while it is not anticipated that there will be so many foreign visitors as on some previous occasions—owing to the world trade situation—the falling off in numbers is not likely to be very great, and it is very probable that the foreign orders will be well up to the average.

This is the first time that Olympia has been the home of the London section of the British Industries Fair, and I do not think that anyone is likely to deny that the change has been for the better. The Fair has had many London habitations, all of them open to objections on one score or another. Olympia has been altered specially to house the Fair, and the result is a compact display which has been lacking on previous occasions. Those who have visited Olympia for other exhibitions may expect a sense of vastness which detracts from the exhibits, but so far from that being the case there is an air of cosiness and comfort, despite the addition made to the existing building. Olympia's stand area, excluding gangways, was over 190,000 square feet before the building of the Empire Hall. The addition of two floors of the Empire Hall has increased the available space by 30 per cent., and when the remaining two floors are completed for next year's Fair the stand space will exceed 300,000 square feet.

Inside Olympia it is difficult to visualise such a thing as trade depression or to realise that Great Britain is having to fight as she has never fought before to retain her position in the world's markets. The setting embraces every conceivable kind of what may most fitly be termed the lighter manufactures. It is, in short, an epitome of the products of British industry, a demonstration of the triumph of craftsmanship. Whatever impression may be carried away from Olympia certain it is that no one can fail to appreciate that the famous quality of British goods is being more than maintained. This is the outstanding feature of the Fair, and it makes it certain that in equal conditions British goods will once more hold their own in the overseas markets.

From one end to the other, Olympia can show new and improved products. There are so many objects of surpassing interest that it is difficult to do justice to them in a first review of the Fair, but I may instance here a few of the more interesting exhibits that I noticed. There is, for example, a typewriter with an interchangeable carriage, keyboard and platen, making it possible to use 70 different styles of type and 20 languages. Then there are cinema projectors as supplied to all leading London theatres in the face of foreign competition, also microscopes as supplied to Glasgow and Nottingham Universities, beating U.S. and German competition. In the Stationery, Printing and Publishing section mention may be made of maps with washable surfaces, so that they can be marked freely. Then in the Musical Instruments and Wireless section there is a gramophone playing 36 records without attention, changing the needle each time, and brushing and replacing each record in the magazine when finished. In the Toys and Games section are to be noted hot-air driven model warships which are being investigated by the Admiralty with a view to adaptation on real ships, and table "speed boat" races, the latest indoor game. There are many interesting exhibits also in the Clothing and Textiles section, notably a trouser support to take the place of braces or belt, prayer mats made in Gloucestershire for export to Mecca, and buttons that will not break in mangling or ironing. These are a few of the features of outstanding interest in a Fair which is certainly the most interesting of the whole series. There is not a stand that does not attract attention, and I must pay tribute here to the care shown in displaying the various products throughout the Exhibition. It is evident that as a nation we have learnt the art of showing goods to the best advantage, and anyone who thinks we are not an artistic race cannot do better than come to Olympia. A visit will correct the impression.

As usual the Empire Marketing Board has a large exhibit. It is the first thing to meet the eye on entering Olympia from the station end, and it strikes a most pleasing note. The South African stand, with its luscious peaches, pears, grapes and other fruits is a sheer delight to the eye. India has an interesting stand, showing various products such as rice, tea, coffee, lentils, spices, canned mangoes, guavas, and lyches, while the Cyprus exhibits include brandy, tobacco, carobs, and marmalade made from Cyprus oranges. I am sorry to see that the Sudan is again an absentee, and I should have thought that it might have been possible to provide for the representation of Mandated countries such as Palestine and Iraq. As the Empire Marketing Board advertises Jaffa oranges they might surely have been shown at the Fair. A welcome feature of the Marketing Board's display is that a large number of samples are on sale. These, at prices ranging from a penny to a shilling, include cigarettes, butter, coffee, honey, rice, tea, jam, eggs, and come from every corner of the globe.

BIRMINGHAM SECTION.

The "heavy" section of British manufactures is exhibited, as usual, at the Birmingham portion of the British Industries Fair. As the opening day of the Fair is always fixed for a Monday, those responsible for the London portion are well advised to dispense with a "Press Day" three days in advance. Birmingham, however, believes in one; but no amount of hospitality nor the most careful provision for the comfort and information of their guests can reveal the full scope of an exhibition when the bulk of the exhibits are still in straw or packing-cases or the stands are zealously veiled by canvas coverings from inquisitive eyes. This year it can at least be said that the contents of more stalls were visible than was the case last year; but, given the admitted frailty of human nature, especially of the exhibiting class, it may be doubted whether any private view of an exhibition three days before the opening day can be altogether a success. The exhibition authorities cannot be blamed, and when, as in the case of Birmingham, they are at such pains to make the visit of their guests of the Press enjoyable, it is doubly to be regretted that the dilatoriness of certain exhibitors should detract from the success of the Press Day inspection.

The Birmingham portion of the Fair continues this year its record of steady progress. A new building has been added on the north side, comprising a dining-room for exhibitors and visitors, a large Conference Hall, and a series of private dining-rooms for the use of the numerous trade and professional societies and institutions that have made a practice of meeting annually at the Birmingham Fair. The number of exhibitors this year is only two short of one thousand, as compared with 950 in 1929. The floor area of the exhibition building, under one continuous roof, is 450,000 square feet, or 35,000 square feet more than a year ago; and, for those who like statistics, it may be added that the length of the building is 1,620 feet, the total length of the gangways or aisles between the stands is four miles, and the space occupied by exhibitors' stands 214,000 square feet. The Fair is organised and controlled by the Birmingham Chamber of Commerce and is held under the ægis of the Board of Trade and the Birmingham City Council, the Lord Mayor of the City (Alderman M. L. Lancaster) being Patron of the Fair.

Objects of the Fair.

It is hardly necessary to point out to-day that the object of the Fair, the national and international character of which has become very marked, is to give practical effect to the slogan "Buy British Goods." The Fair is held essentially for business men for business purposes, and there is abundant testimony that it has done much to stimulate wholesale trade at home and abroad by bringing before the notice of buyers Great Britain's manufactured products. It is clear, too, that Empire trade is flowing more strongly in favour of buying British materials and products. One great advantage of this colossal exhibition, with its amazing diversity of manufactured products, lies in the fact that the goods, which buyers want to see, are assembled at one time and in one place. The stimulus of personal contact has created a new era in British trade and relationship, and the benefit arising from the fact that producers are in attendance to discuss with buyers or prospective buyers specifications and questions of manufacturing processes and costs can hardly be exaggerated. Every facility is offered so that buyers may get in touch with the factory behind the article, and see the conditions under which the goods are made.

The "take it or leave it" school of British manufacturers is rapidly dying out, if it has not already disappeared. There is a welcome readiness shown by home producers to manufacture precisely in accordance with the wishes of buyers. Throughout the Fair there is evidence of a desire to provide for the special requirements of the export markets, and the remarkably high standard of quality of the goods displayed is a tribute to the initiative, enterprise, and resourcefulness of British makers. In recent years a vast amount of first-hand information has been obtained as a result of world tours by representatives of important British firms regarding the needs of overseas countries, and this has been of the highest service in suggesting new methods of production and design. It has also done much in the direction of enabling British producers to meet foreign competition in the matter of price. As a matter of fact, British manufacturers, in very many departments of industry represented in the Fair, are successfully meeting foreign competition. They have for long done this in the superior and medium grade qualities; and now, in goods of a more inexpensive character—which are of a really good type, and made, in many instances, by mass production methods—the British maker is holding his own very well indeed.

Grouping of Exhibits.

The system of alignment introduced last year—by which all stands have frontage to straight avenues one-third of a mile long—was the first important step towards a new development of progressive grouping which will add to the convenience of trade buyers, not only in bringing the leading industries more closely together, but also in permitting allied trades to congregate in proximity to them. This scheme is so devised, taking into account the building extensions for 1930 and future Fairs, that any industrial section can automatically expand to any dimensions, still retaining its unity of interest, without disturbing the similar grouping of any other section.

The Exhibits.

The following groups of industries are represented, the number of exhibitors in each case being given in brackets:—Hardware, ironmongery, and brassfoundry (293); general heating and cooking (mainly by solid fuel) (40); gas (75); building and decoration, public works and roads (121); metals (ore and semi-manufactured, excluding precious metals) (80); engineering, transport, mining (217); electricity (122); services (50). In all, 998 exhibitors.

General Hardware.

The hardware, ironmongery and brassfoundry group is, as last year, the largest section of the Fair. The display is noteworthy for its comprehensiveness and the high quality standard of the goods, which testify to the progressive spirit of manufacturers and the efforts that they are making to develop the home and export trade. There is, moreover, an evident desire on the part of makers to meet foreign competition in a wide range of goods at competitive prices. Many of the products displayed bear the characteristic features of special markets. The general range is very wide, and it is to be noted that all grades are adequately represented—of the highest

class, of medium quality, and of the more inexpensive types. The demand for these last-named, which are excellent value at the relatively low prices quoted, has given a distinct impetus to mass production methods of manufacture. They are a direct challenge to the rivalry of foreign makers, and with good progress made in the modernisation and improvement of distributing services and merchanting facilities the tendency of overseas business is regarded as being upward.

Brassfoundry.

Brassfoundry is a comprehensive department. The schedule provides for the various sub-divisions of the industry, and there are well represented cabinet brassfoundry, plumbers' and engineers' brassfoundry, gas and electrical fittings, and shop and licensed houses fittings. There is again an excellent display of fancy brassware. The designers have succeeded in introducing much originality, and hundreds of new patterns make a first appearance. The prevailing tendency is to avoid over-decoration; effect is obtained by the delicacy of construction rather than by mere ornamentation. In decorative metal work the highest form of craftsmanship is revealed.

Hollow-ware.

The production of hollow-ware is another important department of the hardware group. In general terms this trade may be classified as follows: cast, unenamelled and enamelled; cast, tinned; wrought, unenamelled and enamelled; galvanised; tinned-plate; japanned; aluminium; and brass and copper. British made hollow-ware enjoys a world-wide reputation for durability and finish. Productive capacity is very great, and to-day hollow-ware in every conceivable size and shape is being made. Cast iron hollow-ware is the oldest branch of the trade, and there are displayed examples of Kaffir and Negro pots, rice bowls, and various kinds of cast ware, tinned and rustless. Copper cooking utensils have an elegance and durability all their own, and on the decorative side there are beautiful wares such as jardinieres, flower vases, palm pots, coal vases, and kettles of the hammered type.

Agricultural Needs.

The requirements of agriculturists and horticulturists have received full attention from British manufacturers. Dairy equipment, rollers, lawn-mowers, wheelbarrows, edge tools, spraying machines and syringes, all have a place in the Fair. The displays of edge tools embrace the requirements of all phases of the home and foreign markets. There is a remarkably wide range of products for export, and full regard is had for the requirements of those engaged in the cultivation of rice, cotton, tea, coffee and rubber.

Metals and Iron and Steel.

Non-ferrous metals make an extremely important section. Copper is exhibited in an immense variety of forms; and nickel silver, cupro-nickel and bronze are also much in evidence. Many non-ferrous alloys for special purposes are shown. There is a comprehensive exhibit which includes typical examples of the more important alloys of nickel and their applications. The extensive and effective use of stainless and heat-resisting material is demonstrated. The range and variety of iron and steel products are large, and the quality is of the highest. A large amount of space is devoted to high speed steels, chiefly Sheffield products. They include twist drills and huge shear blades for cutting sheets, plates and bars; and a variety of coil springs. The massive coil springs are used on warships.

Every conceivable form of manufacture is represented in pipes and tubes of iron and steel, and non-ferrous metals. The character of the exhibits emphasises the wide ramifications of the tube trade. The leading drop forgers have an attractive composite exhibit of forgings of steel and alloys showing the latest developments of this industry, so closely allied to modern engineering.

Gas Industries Section.

The Gas Industries section, which is under the auspices of the various national organisations of the gas industry, shows an increase this year not only in the area occupied, but also in the number of firms represented. Exhibitors have co-operated in the adoption of a uniform colour scheme, and, so far as the nature of their particular products permits, an open type of stand has been adopted. This reveals the section as a separate entity. The exhibits cover every phase of gas production and utilisation, from the marketing of the raw coal, through the processes of carbonisation and purification, to the appliances in which the gas is actually consumed. The displays of gas works plant and gas meters appeal primarily, of course, to the gas engineer, but in regard to the utilisation of gas for factory and domestic purposes, the appliances have a much wider interest. In addition to the improvements introduced by manufacturers the gas industry itself is prosecuting independent research into the quality and design of fittings and appliances. A special exhibit showing the methods adopted for carrying out some of these tests occupies a prominent place in the section.

General Engineering.

The display of engines and mechanical equipment is the largest ever seen at this Fair. Cold-starting heavy oil engines are a special feature, with a number of new models shown for the first time. Other exhibits include examples of heavy fuel oil engines; engines coupled with dynamos, for generating cheap electricity; petrol and petrol paraffin engines; horizontal and vertical oil engines of various kinds; tipping wagons; chain drives; a coal pulveriser; a huge excavator with special equipment for converting to work as shovel, trencher, scoop, or grabbing crane; lifting jacks and portable and stationary ram pumps; and rubber machines. There may also be seen water turbines, steam boilers, marine engines, hydraulic presses, nibbling machines, seamless metal hollow-ware heavy presses, conveyors, magnetic separators, machine tools, weigh-bridges, woodworking machinery, electric welders, chemical and foundry (moulding) plant, oxygen cutting machines, and new types of fuel economisers.

At a meeting of the Grand Council of the Federation of British Industries Lieutenant-Colonel Sir James Lithgow was nominated as president-elect in succession to Mr. Lennox B. Lee, who has held office for the past year. Sir Arthur Duckham and Sir Hugo Hirst were nominated as new vice-presidents, in addition to those already nominated.

ADVERTISING IN
"THE NEAR EAST & INDIA" PAYS

"THE NEAR EAST & INDIA" reaches the markets of a score of different countries stretching from the Adriatic to India—markets in many cases covered by no other British Journal. It appeals to the business men of ***all*** classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

THE CITY OF BIRMINGHAM.

On the eve of the British Industries Fair a new edition has been issued of the "City of Birmingham Handbook." Politics and industry between them have combined to make Birmingham the best-known of the industrial cities of Great Britain. The handbook gives us a picture of the city's administration, which has become of increasing complexity as the city has developed. The average individual has only a vague idea of the work entailed in the governance of a great community like Birmingham. The details given in this handbook bring this into clear relief. Town planning, education, health, a water supply, transport, are some of the major problems which have to be faced. How efficiently they have been tackled in Birmingham, which may justly be described as a model of civil administration, we must leave it to the handbook to tell.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended February 8 :—

Grain.—Further heavy falls in grain prices on consuming markets have been reported during the week, and in spite of the fact that local prices are now practically at the economic level of production, if not already below same, it is impossible for shippers to effect fresh business for early loading. Even for later delivery little interest has been shown so far, and sales have been on a very limited scale. No freight transactions of importance have been reported during the week, but a few small parcels have been booked for shipment from Constantza/Sulina to West Italy in the neighbourhood of 12s. 6d. In spite of the shipments which have been effected from Sulina during the winter, stocks there still amount to about 100,000 tons. The view is generally expressed that owing to the unfavourable conditions experienced this winter for drying the maize, there will be little of that commodity available for shipment before May. There is, however, a certain amount of Serbian kiln-dried maize in stock on the lower Danube; therefore, should any demand arise, this will help to eke out the small quantity of Roumanian maize which may be available during the early part of the season.

Timber.—Stocks at Constantza being small, only a few freight engagements were closed last week. A small steamer of about 130 waggons has accepted £8 for four ports Sicily, and a similar sized boat obtained £9 for three ports North Africa. Although transport of timber to Galatz has not yet been resumed, inquiries for space are coming forward, mostly for Mediterranean destinations. No engagements have transpired so far, but it is expected that tonnage for the Mediterranean will be in excess of demand when regular navigation is resumed; freights therefore are showing a weak tendency. Lack of snow is still handicapping the delivery of timber by road on the mountains and in the forests.

Weather and Crops.—The mild, calm weather has continued, and with a rising southerly wind the temperature yesterday reached 17 degree Centigrade in the shade, but to-day it has been steadily falling and is now only a few degrees above freezing point with a northerly wind. Last evening the wind became a gale, and was followed by rain at about 9 p.m., which, however, did not last and was not heavy in this neighbourhood, although more abundant falls are reported from the western and north-western districts. According to the latest official reports, the autumn sowings are practically everywhere in good condition and there has been no frost damage, except to an unimportant extent in a few mountainous districts owing to the absence of snow covering. From one or two districts there were complaints of dryness of the soil, previous to the precipitations of the last few days. It is just reported that the change in the weather has brought heavy snows to the northern districts.

Sulina.—Bar depth remains 24 feet and there are no fears of any diminution. River depth, minimum also 24 feet.

Constantza.—This week about 4,500 tons of grain arrived from the interior. Only about 1,000 tons were exported during the past week. At the time of writing two 5-6,000 ton steamers mentioned last week were still under the elevators loading for Rotterdam and Hamburg; two similar vessels were waiting berth for the same range, and several others are expected. Eleven vessels loaded over 47,000 tons petroleum products and three took oil fuel for bunkers.

Bulgarian Report.

Bourgas, February 1.—Business remains stagnant and the further weakening of markets abroad gives little hope of a change in the situation in the near future. With the exception of a few places in the northern parts of the country the weather has been mild and partly overcast. There were occasional light showers of rain.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

ALBANIA.

Dredges.—The Albanian Government are considering the purchase of one or two dredges for use on Albanian rivers. (D.O.T.)

EGYPT.

Requirements of the Ministry of Education.—The Central Stores Department of the Ministry of Education, Cairo, invites tenders for the supply during the school year 1930-1931 of linen, table requisites, cleaning materials, etc. March 22. (D.O.T.)

Requirements of Frontiers Administration. The Frontiers Administration, Ministry of War and Marine, Egypt, invites tenders for various stores. The schedule of requirements, which relates mainly to small quantities of goods, includes, among other articles, leather bandoliers, revolver lanyards, leather hose, wire brushes, galvanised buckets, green baize cloth, linen sheets, sacks, etc. April 5. (D.O.T.)

Lifts and Shoots.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply and erection of lifts and shoots for new sheds on mole (E). March 27.

North Delta Electricity Scheme.—The attention of tenderers is drawn to the following:—Quotations for copper conductors shall be based on the assumed price of eighty-five pounds per ton. Tenderers shall state variations to be made in the price for copper for every one pound rise or fall in the price of copper per ton. The purchase price shall be calculated in accordance with London prices of copper ruling on the day of the notification of the final acceptance of tender by the Department. Offers not complying with this clause will be disregarded. The attention of tenderers is especially drawn to the provisions of Article 45, Part II, of the conditions of tender and specification for high tension overhead transmission lines, isolated basins electricity scheme, Upper Egypt, and same article for Lower Egypt. Shortness of time will be a very important factor in deciding on tenders.

INDIA.

The Indian Stores Department invites tenders for the supply of tallow. March 4. (D.O.T.)

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 12:—

Egyptian Futures.

Sakel Contract.—More active markets have been witnessed during the past week, and whilst, on the whole, the position at the ruling level appears healthier, trade support continues to be lacking, and until the outlook improves in this quarter, it appears useless looking for any sustained appreciation. During the earlier trading, values developed renewed weakness, further liquidation of Continental long accounts carrying Mays very close to the 13d. level. At this point, fresh speculative interests began to operate, and their purchases, assisted by a certain amount of "short" covering, caused a sharp rally. When this demand was filled, prices started to slide away again, and in spite of the assistance of improving American markets, we finish the week with near positions showing declines of 35 to 32 points and more distant months 60 to 54 points. Local values have cheapened further with Alexandria since we last wrote, and this must have the effect of, sooner or later, attracting all consumers to this market. Even a moderate demand for locally hedged cotton would have an immediate reaction on the contract position, and it appears to us that this point is being disregarded, or perhaps outweighed, by the accumulated weight of depressing outside conditions, by those who continue to "bear" the position. With the Liverpool/Alexandria straddle standing as it does, fresh supplies cannot find their way over to this side; thus, as long as the Egyptian Government adhere to their present buying limits, the only bar to a readjustment of our contract position is to be found in the local stock of 8,000 to 10,000 bales of tenderable Egyptian Sakels and the Sudan crops. In view of this, we consider the position is gradually becoming more interesting from a "bull" point of view, and whilst it may be advisable to await some constructive trade developments before operating, we certainly consider those who have profits on the short side should take advantage of any further recessions to cover their commitments.

Upper Contract.—In spite of the fact that we continue to run at a substantial discount with Alexandria, this contract continues to attract little outside speculative attention. Only a limited amount of business has been transacted during the week, but there are signs that Continental and other consumers are becoming more interested in local offerings. This has already led to a certain amount of business, and, as further developments are probable, an improvement in the undertone is to be anticipated.

Egyptian Spot.

During the first part of the week business remained painfully dull, but the better tone in New York over last week-end has attracted a certain amount of inquiry, and some improvement has been witnessed during the past three days. As yet, however, the results have only been meagre, and probably a further rise will be necessary before confidence can be restored sufficiently to admit of anything in the nature of real activity.

Sakel.—There is little fresh to report in this quarter. Most of the small inquiry has been for cotton within a range of from pass to 75 on, with a certain amount of interest shown in cotton at about 175 on.

Uppers.—Rather more inquiry has been witnessed, both from home and Continental sources. The most popular range has again been 10 to 35 on.

Pilion has been neglected.

Maarad, Nahda, Fouadi, etc.—A limited business has been done in Maarad and Fouadi; Nahda has been neglected.

Sudan Sakel.— During the past few days the demand has shown signs of improvement.

Tokar Sakel has been neglected.

C.i.f. business.—This is naturally very much curtailed owing to the premium which Alexandria now maintains over Liverpool. Forwardings.—Last week's figures amounted to 3,165 bales Egyptian and 1,410 bales Sudan Sakel. Spot Sales estimated at 1,200 bales Egyptian and 570 bales Sudan Sakel. Quotations of Sakel show a decline of 40 points on the week. Uppers and Pilion are 5 points easier. F.G.F. Sakel to-day, 13.55d. F.G.F. Upper to-day, 10.14d. F.G.F. Pilion to-day, 10.80d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 6, state:—

Since our last report the futures market has been very active; the tone, however, has been weak and prices have lost a good deal of ground, this particularly in the case of new crop deliveries. The week's summary of price movements is as follows:—Sakellaridis: March, 27.57 dollars, 0.06 dollars down: May, 27.98 dollars, 0.24 dollars down; July, 28.13 dollars, 0.42 dollars down; November N.C., 27.25 dollars, 1.40 dollars down. Ashmouni: February, 19.00 dollars, 0.06 dollars down; April, 19.48 dollars, 0.10 dollars down; June, 19.65 dollars, 0.28 dollars down; August, 19.55 dollars, 0.53 dollars down; October N.C., 19.13 dollars, 1.04 dollars down; December N.C., 19.38 dollars, 1.17 dollars down.

Sakel.—The continuation of the decline in New York, together with the almost entire absence of interest in Egyptians from any of its usual consuming centres, have demoralised the bull element in our market, and at the same time have afforded all the encouragement needed to the views of short sellers. The result was an avalanche of sales, particularly of November new crop, the price of which delivery has lost about 1½ dollars on the week. May and July options have only been slightly affected by the decline, as operators are convinced that Government intervention will be extended to these two deliveries. Up to the present, the Government has not issued any definite official *communiqué* on the question of its eventual intervention in May and July, but the declaration in the House last week by the Minister of Finance, which was mentioned in our last report, is deemed to sufficient; as to the prices which will be fixed, the belief now is that they will not be 28 dollars for May and 28½ dollars for July, but rather 28¾ dollars and 28 dollars, respectively. The decline in New York, and that in November Sakel new crop, has naturally further diminished the demand from the trade for old crop cotton, and as conditions are hardly propitious for a nearly recovery, holders must inevitably fall back on sales of the futures positions of which the Government is buyer in order to dispose of their cotton. Sooner or later, therefore, the latter will find itself holder of a large part of the current season's crop, for, as indicated by figures given below, supplies actually in the country amount to over 2¼ million kantars.

We give below the statistical position of Sakel in Egypt, as at the end of January:—Stock Alexandria, 1,381,000 kantars; stock up-country, (about) 892,000 kantars; total, 2,273,000 kantars. At the same date last year the stock of Sakel in Egypt was about 1,076,000 kantars. We would add, for purposes of comparison, that exports of Sakel for the period February/August last season amounted to about 1,227,000 kantars.

Uppers.—The new decline in New York has accentuated the falling off in the demand from the trade for Uppers, and the amount of new business done this week has been extremely modest. Prices have

declined as a result of speculative sales, the bulk of which have been effected in October new crop. We give below the statistical position of Ashmouni and Zagora in Egypt as at the end of January:—Stock Alexandria, 1,580,000 kantars; stock up-country, (about) 1,191,000 kantars; total, 2,699,000 kantars. At the same date last year the stock of Ashmouni and Zagora in Egypt was about 2,613,000 kantars. We would add, for purposes of comparison, that exports of Ashmouni and Zagora for the period February/August last season amounted to about 2,309,000 kantars.

The week's receipts amount to 197,429 kantars, against exports 150,269 kantars; the stock in Alexandria stands at 3,449,858 kantars.

Spot.—The market during the past week has been excessively dull, the total turnover amounting to only 10,250 bales, of which we estimate 1,800 bales Sakellaridis, 8,000 bales Ashmouni and Zagora, 400 bales Pilion, and 50 bales other varieties.

Sakellaridis.—This variety has been neglected. The greater bulk of the business done has been in low grades. Spot differences show a distinctly easier tendency.

Ashmouni and Zagora.—The demand has considerably fallen off owing to the lack of business from abroad, and the reluctance of holders to sell their cotton on account of the difference in the February and April contracts has curtailed the turnover. Spot differences remain about unchanged.

Pilion.—A small turnover has been neglected at about last week's prices.

Other Varieties.—Practically no business done.

Crop, 1930.—The forecast of the acreage and the proportion of the different varieties which will be planted, remain unchanged from that given in our report of last week, except that the increase in the total acreage will perhaps slightly exceed 10 per cent.

GREEK ASSIGNED REVENUES FOR 1929.

The following revenue receipts are reported from Athens for the year 1929;—

	Drachmæ.	Increase. Drachmæ.
New revenues	903,344,543	+ 11,041,562
Old revenues	3,327,957,733	+156,434,474

Upon the basis of the above receipts and the relative security rights of the various loans, the following figures show the approximate security that was available for 1929:—

	Security available.* £	Service of loan requires. £	Number of times covered.
7 per cent. Refugee, 1924	8,276,106	922,500	8.97
6 per cent. Stabilisation, 1928 ...	6,747,762	684,653	9.85
6 per cent. Public Works, 1928† ...	5,836,020	265,720	21,96
8 per cent. Exch. Ref. Indem., 1926/28 ... ... } 6 per cent. Exch. Ref. Indem., 1928 ... ... }	4,374,560	1,059,200	4.13

* Exchange is calculated at 375 drachmæ per £1 (the stabilised rate) and all possible contingent future charges deducted.

† £4,000,000 at present issued. A further £18,000,000 can be issued ranking *pari passu*. The service of the whole £22,000,000—assuming the balance issued upon the same basis as the existing £4,000,000—would then be covered four times.

Notes of the Week.

Turkey's Economic Crisis.

One effect of the report circulated abroad that the Turkish Government intended to apply for a moratorium in respect of its Ottoman Debt payments has been to cause the Turkish Press to devote considerable attention to Turkey's economic crisis. There would seem to have been much loose thinking on the subject, in unofficial circles, if not in official quarters as well; but the Turkish Government, in the absence of more definite evidence, must be exonerated from any intention to do more at the moment than explore every possible avenue of escape from an embarrassing position. The Turkish Budget balances in the neighbourhood of £22,000,000, and of this amount a sum slightly in excess of £3,000,000 is devoted to the service of the Public Debt. From the Turkish point of view it would naturally be more convenient to effect economies on this item of the Budget than on the £8,000,000 spent on National Defence, Gendarmerie and Public Safety, or on the £3,000,000 devoted to very necessary Public Works, or on a meagre £800,000, which is all that can be spared for Public Education. The main reason, however, why the Government turns its attention to the Public Debt payments is that its most pressing difficulty at the moment is the depreciation of the Turkish pound, and the raising of funds for payments abroad tends to weaken the exchange still further. The reply, therefore, to the Council of the Ottoman Public Debt has been to draw attention to the fact that the money for the next payment due has already been deposited, and to add that the Turkish Government would like to discuss the whole subject with the Council with a view to discovering whether the payment of the amounts due can be effected without prejudice to the rate of exchange.

Accommodation, not Repudiation.

The suggestion that Turkey intended to default in the matter of her financial obligations is strongly resented in the country; but in the same breath there is insistence on the fact that any question of moratorium would concern only the debts of the old Ottoman régime, and that the Turkish Republic would never dream of repudiating its own engagements. It need not be supposed that the Turkish Government would officially endorse this attempt to distinguish between the sanctity of different categories of obligations; but the argument is urged with so much unction by the Press that, unless it is promptly challenged, there is some danger that it will come to be accepted as valid by public opinion in Turkey. The Government is on surer ground in trying to rally the people in support of a scientific development of the country's economic resources. An examination is being made of industrial potentialities in connexion with the raw materials that Turkey produces, and it has been decided that the services of foreign experts will be required, if Turkish industry is to be placed on a sound footing. It would be well if this investigation were linked up with the inquiry into Turkey's general financial position, which must result from any attempt to secure modifications in the method of paying the coupons of the foreign debt. For the moment the Angora Government is understood to have secured temporary help from Italy and from Russia; but these loans are at best makeshifts, and should not be regarded as offering in themselves any solution of the economic crisis.

General Pangalos Redivivus.

Once again a date has been fixed for the trial of General Pangalos. He is now due to be arraigned with his colleague M. Vagopoulos on March 7, on the charge that the latter, as Under-Secretary of State for the Interior, handed over the Eleusis Casino to a purchaser for less than four million drachmæ, while other would-be purchasers were prepared to pay seven million drachmæ. The ex-Dictator is held responsible for having approved of the transaction. A further charge will be laid at a later date against two Ministers of the Dictatorship for having sanctioned the purchase of eight Post Office vans at a time when they were no longer needed and at a price higher than that of other tenders. If the mention of these specific charges implies that there is to be no political indictment of the Dictatorship, the change of front, which may be attributed to the counsels of M. Venizelos, is a wise one. Too long a period has elapsed since General Pangalos's Dictatorship to make it profitable to the country to revive the political feuds of three or four years ago. On the other hand, if chapter and verse can be supplied for peculation on the part of those in authority, it will do good in Greece and may create a good

Digitized by Google

impression abroad to show that a new order has been instituted which does not allow officials, whether high or law, to enrich themselves at the expense of the State. So long as it is a recognised custom that foreign firms seeking big business in South-Eastern Europe must be prepared to bribe their way to a contract, the sum ultimately paid by the State is going to be increased by much more than the actual amount that may be handed over openly or surreptitiously, if only to enable the contractor to safeguard himself against all possible contingencies. If the Greek Government can bring home such delinquencies to certain individuals, it will not necessarily mean that Greece alone has been an offender in the past in this respect. Rather will it be to her credit that she is prepared to face the washing of soiled linen in public. A lead has already been given in such matters by the Turkish Government, and Greece has gone one better in establishing a central body with supreme jurisdiction in regard to State contracts.

Recovery in Roumania.

While certain circumstances have recently led to the concentration of an embarrassing amount of limelight on aspects of Roumania's social life, mainly, if not entirely outside the province of any Government, the present Roumanian Cabinet has had the satisfaction of seeing some of the fruits of its wise and courageous economic policy. The past year has closed with an adverse trade balance, it is true, but with one of less than a thousand million lei (actually £1,200,000) as compared with one of over five thousand million lei in 1928, and a satisfactory feature of the position is that an adverse balance of over four thousand million lei at the end of July has been reduced by the surplus of exports over imports—amounting to over three thousand million lei—during the last five months of the year. The bountiful harvest of last autumn has come to the country's help, but it is also fair to point out that Roumania has been able to derive no little advantage from the re-establishment of good commercial relations with the countries with which she trades. The results obtained, moreover, have been secured in the face of a general lowering of the price of cereals, and they suggest a marked improvement in transport conditions. In this connexion it may be pointed out that the Railway Administration has succeeded this year in balancing its budget. Its position is, admittedly, none too stable, in view of the considerable leeway that has to be made up in the reconditioning of the railways. The general impression conveyed at the present time by Roumania is that of a country grappling seriously and scientifically with important economic problems, with every prospect of deriving the maximum benefit from its considerable resources, if it can be assured of an adequate respite from political upheavals.

Iraq and Najd.

It is with great satisfaction that we learn, just as we go to press, of the complete success of the meeting which took place, on board H.M.S. Lupin, between King Faisal of Iraq and King Ibn Saoud of the Hijaz and Najd on February 23. All those principally concerned in this conference, and particularly the two Arab Kings and Sir Francis Humphrys, High Commissioner for Iraq, deserve the highest praise for their forbearance, tact, and statesmanship. A much healthier atmosphere in Arabia will be breathed as a consequence of this conference in the Persian Gulf, which is a striking indication of how lack of personal contact can breed suspicion and of how meeting can breed friendliness and good will. At the moment we can make no extended comment, contenting ourselves with summarising the main clauses of the Protocol to the Treaty of *bon voisinage* which was drawn up last week-end. According to *The Times*, these are: (1) mutual recognition of the independence of Iraq and Najd; (2) Exchange of diplomatic representatives; (3) Outlawing of tribal raiders; (4) Extradition of fugitives from justice; (5) Establishment of a Permanent Frontier Commission; (6) Undertaking to settle disputes over interpretation of the Treaty by arbitration; (7) King Ibn Saoud to give favourable consideration to Iraqi claims for reparations arising from raids in recent years; (8) If full agreement on the subject of police posts in the Southern Desert is not reached within six months, the dispute to be settled by an Arbitration Court of five members. This Treaty looks at the first glance to be exactly the comprehensive survey of the whole Najdi-Iraq problem which was hoped for, and as most likely to produce, as far as possible, peace and prosperity for the two Arab neighbours.

INDIAN NOTES.

The Bombay Budget.

The Government of Bombay is faced with serious financial difficulties, in addition to the political trouble which Mr. Gandhi may be able to cause in Guzerat. The Budget will indeed be balanced, but only by further inroads on the Provincial revenue, and on the Famine Fund, and by taxation which is certain to be unpopular and will probably be disappointing, even if it is imposed by the Legislative Council. The tax on motorists, in particular, will cause resentment, and, at this stage of Indian communications, could only be justified by dire necessity. Economies are sought by a further overhauling of the administrative machine. This is the readiest resort of Indian Ministers, but this particular cow has in Bombay been milked pretty well dry, and it may be doubted whether further reductions are possible without loss of efficiency and starving of necessary branches of activity. The Development Department is to disappear as a separate organisation, and the last will thus be seen of a well-meant, but injudicious and wasteful effort to force the pace. More interesting, perhaps, than the actual figures are the Governor's announcements on subjects cognate to the Budget. The result of the Government's examination of the mill industry was published over the week-end and will be examined in greater detail in next week's issue. It is recognised that the prosperity of Bombay City in particular, and in a lesser degree of the whole Presidency, is dependent on this industry: but its outlook is not bright, with an uncertain labour supply particularly amenable to the agitator's art, unskilful and sometimes dishonest management and keen competition from the up-country mills. The Government is again to examine the liquor position. The Government of Bombay was the first in India to accept the principle and goal of prohibition when it had no resources either to replace the revenue that would be sacrificed or to prevent illicit distillation and smuggling. It seems a pity that prohibition should still be regarded as the accepted policy when it is so impossible of fulfilment. Considerable sympathy will be felt with Sir Frederick Sykes, who is certainly working with great industry to meet difficulties which have been intensified by weak policy in the past. A further announcement of interest is the statement that a booklet is being issued, stating the policy of the Government of Bombay regarding the disposal of land under the Sukkur Barrage Canals, and also showing the steps necessary to improve and safeguard the canals of Lower Sind. It has been long recognised that the financial success of the Barrage Scheme and the regeneration of Sind cultivation depend on the proper disposal of the land. If there is, as there should be, a handsome return, the first claim on it would rightly belong to the areas in Lower Sind, whose supply of water will be affected, though it is hoped to no injurious extent, by the construction of the Barrage.

Indian Railway Finance.

In spite of floods and trade depression the receipts from the Indian commercial railway lines amounted last year to 707 lakhs. From this the loss on strategic lines of 181 lakhs has to be deducted. The balance of 526 lakhs falls short of the fixed contribution to the general revenues

BULGARIA'S DOMESTIC CRISIS.

It is, perhaps, unfortunate, though hardly to be wondered at, that the successful handling of foreign affairs by M. Liaptcheff's Government, which has to its credit within the last few weeks the agreement with Yugoslavia over the vexed frontier problem and a satisfactory settlement of the Reparations question, should be followed immediately by an internal political crisis. M. Liaptcheff came into power on January 4, 1926, when he replaced M. Tzankoff, the leader of another section of the Democratic Entente, the union of the so-called bourgeois parties who had been responsible for the *coup d'état* that put an end to the Agrarian régime and brought about the death of its chief, M. Stambouliski. For a brief period the country experienced the tragedy of a form of civil war, and the situation called for the exercise of a firm hand at the seat of government. As time passed, however, it was realised that repression could be carried too far, and that, if Bulgaria was to avoid the calamity of a permanent division between two bitterly hostile camps, some attempt must be made to recognise a dividing line between avowedly subversive doctrines and honest differences in political views. M. Tzankoff, accordingly, made way for M. Liaptcheff, who by common consent was the leader most likely to restore the greatest measure of unity to the Bulgarian people, and before long a more satisfactory spirit prevailed in the country. Four years, however, is an exceptionally long term of life for a Bulgarian Ministry, particularly when the Government's following is composed of three parties, who were brought together only by a common hatred of the régime which they joined forces to overthrow. Whether the long régime of power enjoyed by the Democratic Entente has to be regarded as a testimony to the thoroughness with which the Agrarians have been suppressed, or as an indication of the hold that the latter have gained in the country, compelling the bourgeois coalition to keep its fissiparous tendencies in check, may be left an open question. After four years, in any case, Bulgarian political nature has reasserted itself, and M. Liaptcheff has found himself unable to stave off a crisis that has been alternately latent or actively threatening for the last two years.

The present Bulgarian situation is fraught with more danger than is entailed in the usual Ministerial crisis in a Balkan State. Although it turns primarily on the personal antagonism towards M. Liaptcheff with which M. Tzankoff is credited, there is behind this the struggle between two sharply contrasted policies. M. Liaptcheff has stood for a policy of gradual appeasement in the country, and may be said to have re-established the right of the Agrarians to be regarded as a political party distinct from Communists. M. Tzankoff, on the other hand, from a desire, perfectly legitimate in itself, to see Bulgaria freed from the reproach of being a forcing-ground of Communism subsidised by Soviet Russia, would like to see war so waged against Communism that no Bulgarian party by calling itself Agrarian should tempt Moscow to regard it as a potential recruiting area for fresh Communists. The Macedonian problem has provided further occasion for differences of opinion between the rival sections in the Democratic Entente; but it is not easy to determine whether it has been used by the Tzankovists merely as an additional weapon against the Prime Minister, or whether they would, if they wielded the necessary power, adopt a different policy against the Macedonian Revolutionary Organisation. A political party that favours an administration of blood and iron could hardly fail to make capital out of the impunity with which rival sections of the Macedonians have endeavoured to wipe out one another, and it may well be urged that M. Liaptcheff's régime has been content to put a stop to such activities as threatened to embroil Yugoslav-Bulgarian relations, while turning an apparently blind eye to the contempt for law and order shown by the Macedonians in their promiscuous slaughter of their opponents. It remains to be seen, however, whether the Tzankovists really believe that the only solution of the Macedonian problem lies in the extermination of the irreconcilable element among the Macedonians, or whether they merely desire a tightening-up of the general administration of the country with a view to checking the perpetration of so many Macedonian murders, the perpetrators of which have hitherto contrived almost invariably to make good their escape. In the light of the experience provided by M. Tzankoff's former tenure of office foreign observers are, not unnaturally, anxious over the fate that might be in store for Bulgaria, if the Tzankovists should so carry the day that the Government found itself engaged in a war, so to speak, of two fronts, against the Agrarians and Communists on the one hand and against the Macedonians on the other.

Fortunately, the country has a considerable fund of sound common sense to draw upon at the present time of crisis. There is the proved sagacity of King Boris, who, however much he may desire to keep himself in the background, knows well how to exercise a restraining influence in the last resort. It is by no means certain, moreover, that the rank and file of the Democratic Entente have decided that Bulgaria is far enough out of the wood to justify the complete break-up of the coalition, that would be entailed by the adoption by a Ministry of the more extreme views of one of its component sections. A disquieting feature in the situation is the serious economic strain through which the country has been passing. It is apt to be believed abroad that Bulgaria has been tempted to exaggerate her financial difficulties as a make-weight in the demand for more favourable consideration in respect of Reparations. It would be better, indeed, for the country, if this were so; but there is reason to suppose that the economic stringency has affected more classes than may be expected to supply recruits to Communism, and that this fact has not been lost sight of by those who may consider it profitable to fish in troubled Balkan waters. For the moment conversations are in progress between the leaders of the three sections of the Democratic Entente, M. Liaptcheff, M. Tzankoff, and M. Bouroff—a clear indication that differences of opinion are still held in leash by all concerned—and it is to be hoped that a solution of the crisis will be found in a policy that will not compromise the general unity of the Bulgarian people, even if it contrives, with advantage to the country, to keep Communism within bounds and to convince Macedonian extremists that the interests of the great majority of the Bulgarian race must override the grievances of the few who have forfeited public sympathy by grave excesses.

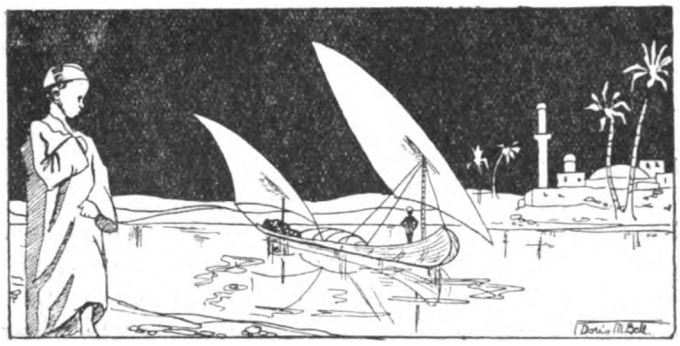
From Our Own Correspondents.



EGYPT.

Cairo, February 15.

The New Budget.

The Budget for 1930-31 has been submitted to Parliament. The estimates provide for a revenue of £E38,062,000 and an expenditure of £E44,950,000, as against £E38,950,000 and £E47,410,000 respectively in 1929-30. The anticipated deficit will, if realised, be met by a draft on the General Reserve.

The reason for the decrease in estimated revenue is that the proceeds from the ginned cotton tax, £E1,200,000, are to be devoted to the new Agricultural Reserve, and that the new Customs Tariff is not expected to produce in the first year the extra £E2,500,000, which it is to bring in, owing to the great rush of imports during the last quarter in anticipation of the increase in the duties. On the other hand, the decrease in expenditure is due to a more rigid budgeting in accordance with the possibilities of carrying out new works during the twelve months. The reason that former anticipated deficits have always turned into surpluses is that Departments have been accustomed to ask for credits which for divers reasons could not be expended during the year. Although the new Budget has been framed more strictly in accordance with practical possibilities, it is almost certain that, unless something unforeseen intervenes, the full draft provided for on the General Reserve will not be required.

The note by which the Finance Committee accompanies the Budget is on the whole an optimistic document. It opens with a reasoned defence of the policy of the Government in intervening on the cotton market with a view to maintaining prices. This, it must be admitted, has not been achieved, and it is no secret that the Government never expected to have to take over the quantities which it now holds and may have to accept in the near future. To what extent the Committee's contention that without State intervention the country's loss would have been very much greater is justified no one can say. But it is not unfair to object that, if the ordinary play of demand and supply had been allowed to operate, the spinners would have come into the market as soon as prices flagged, and so to a great extent would have counteracted any further tendency to drop, instead of, as at present, abstaining almost completely owing to the uncertainty created by this intervention of the State.

The General Reserve is set down by the Committee at £E37,000,000 on the opening of the new financial year on May 1 next. In reality it is some two millions less, since it includes cotton valued at about that amount, the proceeds from the sale of which are to be credited to the Agricultural Reserve. Of the General Reserve £E9,691,000 are invested in stock of the Egyptian Public Debt, a course which from the point of view of policy is much criticised by financial circles.

This policy was adopted because Parliament considered that it was in the national interest that a certain part of the Reserve should be invested in the Public Debt so as to reduce the amount held abroad. But there can be no sound reason for buying up a stock like Unified and Preference, which have an unlimited date within which they must be reimbursed and carry rates much below what it will be possible for Egypt ever to obtain for any loans she may want to raise in the future. Far better would it have been to buy up Tribute loans, which by contrast have to be reimbursed before 1951 and 1954 respectively. Thus while obeying the dictates of patriotism the State would have been better serving its own practical interests.

The Anti-Narcotic Campaign.

Russell Pasha returned this week fresh from his great success at the anti-Opium Conference at Geneva. He was accorded a most warm reception on his arrival here, and it looks as if the Egyptian community really appreciates the great work he has done in the short time his Bureau has been in operation. Particularly has the public fancy been intrigued by the idea that Egypt has been so much to the fore and in such a satisfactory position at the seat of the League of Nations and that she has been responsible for the revelations that have compelled certain countries to adjust and tighten up their legislation in the matter of the manufacture of noxious drugs. It is to be hoped that Russell Pasha will receive from the present Government the same support that he received from its predecessors, and that he and his staff, who were much touched at his public reference to the assistance he had had from them, will thus be able to carry on the campaign against the vice that has been threatening to undermine the life of the nation.

A Popular Diplomatist.

Rarely has any departing foreign representative met with such a spontaneous expression of regret and personal sympathy as is now being extended to the Marquis Paterno di Manchi, the Italian Minister. M. Paterno has been with us for over four years now, having been appointed in 1926 to succeed Conte Cacchia Dominioni. Those four years have coincided with one of the most difficult periods that either Egyptians or foreign residents in Egypt have experienced for some considerable time. During this period the Marquis has had constantly to be in touch with all communities, official and non-official. Often he has had to take up a definite position in defence of the interests of his country. But throughout he has shown such ability, such tact, and such personal qualities that he has managed to make a consistent success of his mission while retaining the respect and in fact gaining the affection, as the incidents of the past two weeks have plainly shown, of both foreigners and Egyptians.

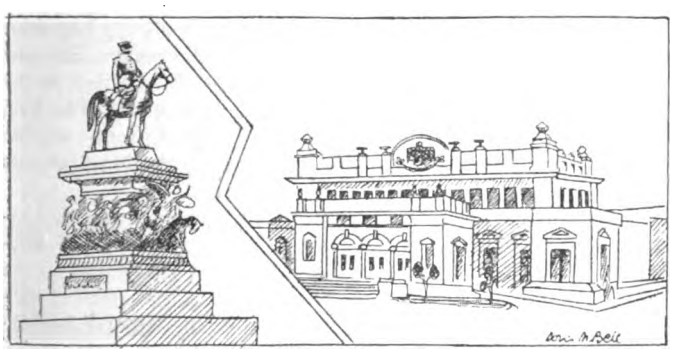
Egypt is no easy place in which to work, no matter in what walk in life one's activities are thrown. This applies not the least to diplomatic work, particularly on behalf of one of the big Powers having vast interests in the country and the Marquis de Paterno has the satisfaction of knowing that he has been one of the rare exceptions of a foreign representative's leaving Egypt in such to him eminently gratifying circumstances.

Lord Lloyd and British Education.

Further proof of his interest in the cause of British education in this country has just been afforded by Lord Lloyd. He has offered an oil painting of himself to the British Boys' School, which he was so instrumental in founding last year in Alexandria, and has instituted a prize to be awarded annually to the pupil in each of the six British schools in Cairo and Alexandria who writes the best essay on an Imperial subject chosen by himself. The prizes will be called the Lord Lloyd Empire Essay Prizes and will be presented to the successful competitors at the Rally held annually on Empire Day.



BULGARIA.

Sofia, February 13.

The Ministerial Crisis.

M. Liaptcheff, President of the Council, has just announced in the Press his decision at last to make the long expected changes in the Cabinet. This will be done as soon as possible after the Communal Council elections, which will take place on February 16.

The President of the Council hopes that after the customary consultations with the political leaders of the country, the King will appeal to him again to form a new Cabinet, from the Democratic Entente, the maintenance of which he thinks is necessary for continuing the struggle against the Agrarians and the Communists, who recently have been very active among the masses, taking advantage of the economic difficulties in which both the peasants and the town-dwellers find themselves as a result of the poor crops of the last two years. But it is impossible to anticipate the King's decision, so long as the Opposition is determined not to be ignored. In the Democratic Entente, moreover, it seems impossible to realise unity.

The Democratic Entente.

The grouping of the Democratic Entente, constituted for the defence of the régime which resulted from the *coup d'état* of June 9, 1923, consists of three main sections: that of the friends of M. Liaptcheff, who are the old "Democrats," that of the friends of M. Bouroff, who are the old "Popular Unionists," and that of the friends of M. Tsankoff, who are generally new men and for the most part ex-officers. These three sections have never reached a complete understanding in the Democratic Entente, but their differences have been growing for the last two years and especially during the last year. There has always been a profound gulf between the Liaptchevists and the Tsankovists, who entertain utterly different conceptions on the direction of public affairs. Between these two have come the Bourovists with a see-saw policy, as a kind of mediating agent.

Conflict has come about on internal policy, seldom on foreign policy, the Tsankovists taking great care not to estrange the Bourovists, on account of the incontestable predominance which the Liaptchevists have enjoyed in the Entente as in the Government. The Tsankovists have reproached and are still reproaching the Liaptchevists, who retain the Ministry of Interior, with having installed a too lax, if not an actually corrupt administration, which is unable, or does not wish, to enforce its authority on the revolutionary elements among the Macedonians with their sanguinary persecutions, so dishonouring to the country, or on the subversive elements of the Agraro-Communists with their unceasing conspiracies, so dangerous to public order and peace of mind. Moreover, on this point the Bourovists' point of view is not far removed from that of the Tsankovists. To these are joined a number of people with common grievances against the President of the Council, notably those dating from September, 1928, when the two parties provoked a ministerial crisis with the intention of obtaining the retirement of General Volkoff, then Minister of War, who was held, right or wrongly, to be the protector of the Macedonians and particularly of the Mihailovist Macedonians. This aim was frustrated. Soon, however, MM. Tsankoff and Bouroff had their revenge by getting General Volkoff sent as diplomatic representative to Rome, where he would be directly under M. Bouroff, Minister of Foreign Affairs.

The departure of General Volkoff, however, did not change the internal situation in any way: the antagonism between the Liaptchevists and the Tsankovists became, in fact, stronger. And so a new crisis was provoked in June, 1929, the Tsankovists, in conjunction with the whole Parliamentary Opposition, refusing to vote for the amnestying of Radoslavoff which was proposed by M. Liaptcheff, whom the Bourovists did not like overmuch and whom they admired only for saving the Cabinet. But this vote could only excite the animosity between the rivals, who since that time have engaged in practically open warfare, the Liaptchevists urging their chief to throw overboard their disloyal companion, who ought no longer to be tolerated, either as President of the Sobranye, or as a member of the directing committee of the Democratic Entente, and the Tsankovists replying that they were the masters of the house, having presided at the formation of the Democratic Entente, and that they who found themselves uneasy had only to leave the party. Soon there began to be talk of the necessity of reforming the Cabinet, with a view to purging and consolidating the Government and the parties on which it relies for its maintenance of power.

The reforming, always promised and always postponed, was this time desired by the Liaptchevists against the Tsankovists and by the Tsankovists against the Liaptchevists. The attitude of the Bourovists, however, was unknown, owing to the prolonged absence of M. Bouroff, who, with M. Molloff, was abroad, pleading the cause of the Bulgarians in the matter of Reparations. In short, the problem of Reparations had arisen in the meantime, owing to a decision of the first conference at The Hague, and M. Liaptcheff, happy to be able to delay matters, profited by the occasion to postpone a reconstruction of the Cabinet. Like Clemenceau during the War, he said to all those who came to speak to him of the unsatisfactory internal situation and of the serious economic crisis: "I am busy with Reparations and nothing else interests me. When this question is settled, we shall have time to think of reformation." People trusted him and waited patiently for the settlement of Reparations, at the same time continuing to deliver themselves of bitter criticism in the Press.

Internal relations became so strained that when the two Ministers returned from The Hague, it was thought that a rupture was imminent in the Democratic Entente,

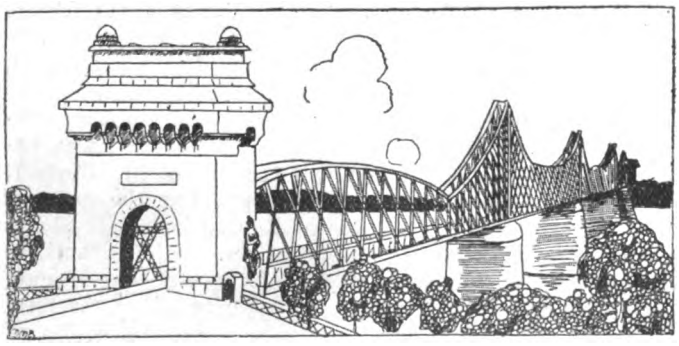
Digitized by Google

M. Liaptcheff finding it quite impossible to reconcile the rival groups. The Liaptchevists hoped that the Bourovists would this time go with them against the President of the Sobranye who was pictured as representing the elements of conspiracy and to whom were attributed rumours of negotiations with certain soldiers or ex-soldiers for the purpose of defeating M. Liaptcheff or of imposing conditions on him—rumours which became more alarming after the public declaration of General Schkoinoff, head of the Fascist organisation of the Rodna Zachtia, in favour of transforming this into a political party, which would put its forces immediately at the disposition of M. Tsankoff if he were to resume power. But the Bourovists, who until then had distributed their favours now on one and now on the other, did not approve of this, and when they met their chief to discuss the situation, they decided unanimously to oppose a rupture, and gave M. Bouroff an imperative mandate to intervene once more between M. Liaptcheff and M. Tsankoff with a view to obtaining a reformation of the Cabinet immediately after the communal elections of February 16 and not to wait for the vote on the Budget (which has not yet been even elaborated), as the President of the Council wished, so that there might be in the new Cabinet several Tsankovists, of whom the President of the Sobranye himself would be one, and so that M. Liaptcheff might change the Minister of the Interior.

It was at once remarked that these suggestions had a curious resemblance to those of the Tsankovists, and it was added that a preliminary agreement had been made between M. Bouroff and M. Tsankoff, an agreement by the terms of which the new Minister of Interior would be a Bourovist—and in this connexion the name was mentioned of M. Michel Majaroff, President of the Parliamentary group of the Democratic Entente, and formerly Bulgarian Minister in London and Petrograd, and Minister for Foreign Affairs.

This attitude of M. Bouroff and of his friends has aroused resentment among the Liaptchevists, who see in the demand for changing the head of the Cabinet or even only the Ministry of the Interior, held by M. Liaptcheff, a formal censure on the policy of the President of the Council, and threaten to defeat him in the Sobranye if he accepts the demands of their enemies.

In these circumstances, it would require a miracle to accomplish the famous reformation which for two years has caused so much ink and so many words to flow, and which M. Liaptcheff postponed until the present time only because he felt the impossibility of achieving this belated reconstruction.



ROUMANIA.

Bucharest, February 20.

Bessarabia.

There are constant rumours prevalent, fed, perhaps, by the Opposition Press, touching the dangerous increase of Bolshevism in Bessarabia. These are so disquieting to the public mind that the Government has thought it advisable to publish a statement on this subject by the Minister Director of Bessarabia, M. Moldovanu, who says that, although there are indeed Communist agitations in that province, in which Jews and Roumanians alike, and without distinction of social class, take part, the villages remain calm and the peasantry as a whole are not affected. The chief centre for Communists appears to be the town of Tighina, but the total number in the whole Department at the last elections was only 4,662. Moreover, the general attitude is peaceable, for there were no violent incidents on the day of the local government elections. The same peaceful conditions reign, he says, on the other side of the Dniester, where nothing more alarming has happened than some recent military manœuvres. With regard to the rumours of recent movements of troops to the Bessarabian frontier, M. Moldovanu says that he had called for some detachments of gendarmerie to keep order during the by-elections which took place a short time ago, as he did not wish to make use of the regular Army in connexion with politics. So much for the impending Bolshevist danger in Bessarabia. But such rumours are insidious and do not fail to have an unfortunate effect on the minds of an excitable people, and it seems a pity that the Press should stoop to such methods of fighting its political campaigns.

Commercial Treaties.

Since the publication of the present Customs Tariff in April, 1929, the Government has been busy preparing for the conclusion of commercial treaties with all the countries trading with Roumania. The first of the series has now been concluded with Italy and provisionally signed by the representatives of each Government, at Rome. The final signature is being reserved for M. Madgearu on the occasion of his visit to Rome towards the end of this month.

Negotiations are being carried on with France, Germany, Poland, and Sweden towards the same end. Roumania's relations with the last two countries have been greatly intensified and strengthened in recent years; with Poland by railway agreements, both in regard to passenger and transit services, and a proposal is now on foot to start an air line from Bucharest to Warsaw in the course of this spring; with Sweden through the concession of the match monopoly and the keen activity of Swedish industrial enterprises in this country. It is understood that the way is being prepared for the conclusion of a commercial treaty with Great Britain also, and with Czechoslovakia. It is reported in this connexion that M. Madgearu, Minister of Finance, is in close negotiation with representatives of the neighbouring agricultural States, exporters of cereals, especially the members of the Little Entente, Poland and Hungary, with a view to achieving a Customs armistice by common agreement.

Visit of M. Albert Thomas.

The visit of M. Albert Thomas, of the League of Nations, to Roumania has been the occasion for a warm display of hospitality on the part of his Roumanian hosts. He travelled in a special carriage from the Czech frontier and was received by a representative of the International Labour Bureau and a delegate from the Ministry of Foreign Affairs. During his visit the Hospital of the Ministry of Labour will be inaugurated, and M. Thomas will give a lecture at the Roumanian Social Institute.

Miscellaneous News.

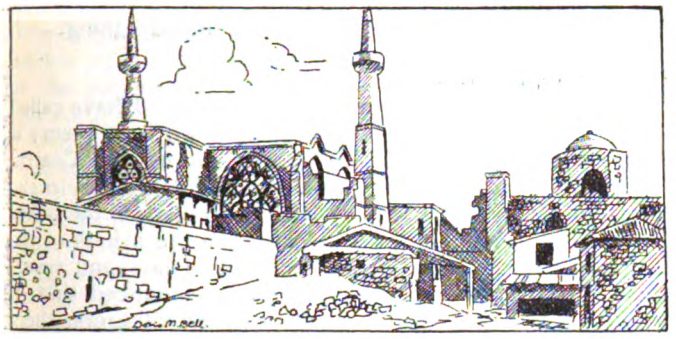
Queen Marie and Princess Ileana are about to start on a visit to Egypt, where they will remain for several weeks.

The weather continues fine with a slight frost. There has been very little snow this winter in the plains south of the Carpathian Mountains, and even on the mountains this has not been a good season for winter sports.

The prospects for the harvest are excellent in the meantime, so long as there is no cold rain followed by frost, which would destroy the crops on the fields unprotected by snow. In some districts the weather has been so mild that the trees are beginning to bud. It is to be hoped that the fruit trees will not suffer from a late frost. In Bucharest the lilac bushes have already stout green buds, but there is a general feeling of apprehension that this is

Digitized by Google

not really spring, for the weather, being conservative, is apt to adhere to the old calendar, according to which we are still only in the first week of February, that is, almost in mid-winter, and there is plenty of time yet for wintry weather to surprise us. The Danube has been open all winter, though there has not been very much shipping traffic and the ports of Galatz and Braila complain of dullness. The grain trade has suffered here as elsewhere from the low prices on the world market; as a consequence cereal exports were very low during 1929 and the year closed with an adverse trade balance of 981.5 million lei, in spite of the favourable balance of the last four months of the year.



CYPRUS.

Nicosia, February 11.

Armenian Refugees.

For several weeks rumour, chiefly from Athenian papers, has stated that steps are being taken to bring numerous Armenian refugees from Greece and elsewhere to the island. An Englishman from London at Athens has, it is said, been in collaboration with an Armenian Bishop and other leading compatriots, arranging terms for their transportation. The refugees would be conveyed gratis by an English vesesl, would be provided with work at the asbestos mines and elsewhere, and would receive —each family or individual—a sum of money on arrival, to start with. The project is strongly opposed by the Press, which sees in it, if realised, a design by which the ethnological character of the island, hitherto preponderatingly Greek, would be affected in an artificial and unnatural manner. Opposition is not due to hostility towards Armenians, whom indeed the Greeks have befriended, but to the reason given, and because there is unemployment and distress in the island. The Greek Archbishop has addressed a long letter, published in the Press, to the Governor, strongly protesting against the reported movement.

Cypriots in Egypt.

Members of the very large colony of Cypriots in Egypt appear still to nourish hopes that there may be a relaxation of the terms under which it was finally decided last year that applications could be made for the adoption of British nationality, a privilege which would now be a great advantage to Cypriots domiciled in Egypt. As the terms would involve residence for a time in the island, and the acquisition of some property there, few except wealthy members of the colony can comply with the conditions. The Greeks appear to regard the decision, which was the most natural in the present circumstances of Egyptian development, as an "injustice," and argue about it much as they do regarding their inability to obtain union of the island with Greece.

Local Greek Committees.

On February 8 a meeting was held under the presidency of the Archbishop—the Holy Synod, the Abbot of Kykkou, the nine elected Greek members of the Legislative Council, and Mayors of the towns and chief villages being present —to nominate a committee of three or four persons, who will proceed, at their own expense, to Athens to represent Cyprus at the Centenary fêtes of Greek independence, to be held in Greece. Also to elect a committee of eighteen persons as members of a Central National Organising Committee. These are to consist of three persons from each of the six administrative divisions of the island, together with the Holy Synod, the Abbot of Kykkou, the members of the Council, and one representative of the Press.

Education, Greek and Turkish.

By direction of the Secretary of State, Canon Newham, Director of Education, has been requested to retain office till September 30 next. His successor has not yet been appointed. The Greek Press continues to regard the new Education Law as a "tyrannical" measure, and advocates continued persistence in the demand for the appointment of a Greek and a Turk, as Directors of Education for their respective communities.

THE STUDY OF RELIGIONS.

Sir Denison Ross presided at a meeting on February 21, in the Caxton Hall, Westminster, which had been summoned for the purpose of forming a society for the study of religions.

Sir Denison Ross said that the proposal to form the Society originated at the Conference on Living Religions of the Empire which was held at the Imperial Institute in 1924 at the time of the British Empire Exhibition at Wembley. It was felt by many who took part in that conference that some kind of society should be promoted to continue the study of the subject, and to disseminate information on the results of that study. They did not wish to found a new creed or to advocate an existing one, or to discuss any particular religion.

Sir Francis Younghusband, in moving a resolution to form the Society, said there was no doubt of the growing interest in Britain in other religions than our own. In the Empire there were more Muslims than Christians, and about twice as many Hindus as Muslims, and it was incumbent upon Londoners at the centre of the Empire to try to understand the religions of their fellow-subjects. Those who, like himself, had served in various parts of the Empire, felt the need of learning something more about the fundamental bases of the lives of peoples with whom they had come into contact, and they also wished that the people of London would take a greater interest in the other religions of the world. He believed there was far greater interest than most of them really thought in Buddhism, Hinduism, and Islam. That Society, in fact, would provide for the study of religions what other societies did for geography, geology, and anthropology.

Mr. C. E. M. Joad said he approached the subject from a different angle from that of Sir Denison Ross or of Sir Francis Younghusband. He spoke of the unsatisfied needs of the present generation for belief, and thought that there should be available for the young wistful agnostics some centre in which information on all religions might be found.

After some discussion, in which fear was expressed lest the Society should pursue some missionary aim, it was decided to leave the exact title of the new Society in the hands of an organising Committee and to submit a Constitution to a later meeting.

NEAR AND MIDDLE EAST ASSOCIATION.

Mr. H. C. Luke, C.M.G., Chief Secretary to the Government of Palestine, will lecture to the Near and Middle East Association on "The Story of the Assassins" on March 10, at a quarter to nine o'clock. The lecture will take place at 64, Queen's Gate, by kind permission of the Dowager Lady Boyle. Sir Denison Ross will preside.

The Patriarch Dimitri, in the name of the Orthodox Church of Serbia, has addressed a protest to all the Orthodox Autocephalous Churches and also to the Archbishop of Canterbury, against the persecution carried on against religion by the Soviet Government. He states that there has never in the history of the world been such a campaign against the Church and against faith in God.

School of Oriental Studies, London Institution
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 6.

Mr. Gandhi's Offer.

"Let the Viceroy," Mr. Gandhi has written, "satisfy these very simple but vital needs of India, and he will then hear no talk of civil disobedience, and the Congress will heartily participate in any conference where there is perfect freedom of expression and demand." The "very simple but vital needs" are: (1) Total prohibition. (2) Reduction of the exchange rate to 1s. 4d. (3) Reduction of land revenue by at least 50 per cent. and making it subject to legislative control. (4) Abolition of the salt tax. (5) Reduction of military expenditure at least by 50 per cent. to begin with. (6) Reduction of the salaries of the highest grade services to one half or less, so as to suit the reduced revenue. (7) A protective tariff on foreign cloth. (8) The passage of the Coastal Traffic Reservation Bill. (9) The discharge of all political prisoners, save those condemned for murder or attempt thereat by the ordinary judicial tribunals, the withdrawal of all political prosecutions, the abrogation of Section 124 A, Regulation 11 of 1818, etc., and permission to all Indian exiles to return. (10) The abolition of the Criminal Investigation Department, or its transfer to popular control. (11) The issue of licences for the use of firearms for self-defence, subject to popular control.

The Threat.

The above offer was embodied in an article in *Young India*. It was preceded by what may be called a threat, couched in these words, the last being those least worth attention, as being the least "sincere":—

"When the peasant is fully awakened to the sense of his plight, and knows it is not *kismet* that has brought him to his helpless state but the existing rule, unaided he will, in his impatience, abolish all distinctions between the constitutional and unconstitutional, even between violent and non-violent means. The Congress expects to guide the peasants in the right direction."

Mr. Gandhi does not say what the Congress thinks the *right* direction. In any case he could speak only for the Congress of to-day; he could, indeed, speak only for himself and some others as members of it; for there are very deep divisions of opinion within the Congress.

A Criticism.

I have been discussing this offer of Mr. Gandhi with one of the leaders of the smaller of the two great communities in India, a man influential enough in that community to have been one of the very few invited to take part in the confidential discussions that preceded the interview that Mr. Gandhi, Pandit Motilal Nehru, Sir Tej Bahadur Sapru, Mr. Jinnah, and Mr. Patel had with the Viceroy just before the Congress sessions in Lahore. This leader, after saying that, though he had never thought Mr. Gandhi possessed of the political mind, and in fact he thought him a muddle-headed man, yet he had been ready to work with him as the accredited leader of the majority community, and as a deeply sincere man. As the Congress had declared independence as India's goal, the time had passed for conferences in which the Congress should take part; so that an offer on Mr. Gandhi's part, at this date, looked like shuffling, and was difficult to understand. If it was taken with what he considered the underhand dealing of Mr. Gandhi and Pandit Motilal Nehru towards Sir Tej Bahadur Sapru, Mr. Jinnah, and Mr. Patel at the interview with the Viceroy in December, it went to show that his former opinion of Mr. Gandhi as a deeply sincere man was not one he could any longer hold. He no longer held it. He no longer considered the Congress as representative of sensible Indian opinion.

Mr. Gandhi's Methods.

There would not be political trouble, presumably, in a Utopia, but if there were, it might well be trouble brought on by such "statesmanlike" methods as Mr. Gandhi's. He has just said, in an interview with a Press representative: "I am trying to conceive a plan whereby no suspension need take place by reason of any outside disturbance, a plan whereby civil disobedience, once started, may go on without interruption until the goal is reached. It should not be impossible to devise such a plan. I am going to leave no stone unturned. A disturbance is likely, although one may take all safeguards. It is humanly possible that no outbreak may occur. The plan I am trying to think out is to prevent the discontinuance of civil disobedience in case such an event happens. If I do not succeed in discovering such a formula, and if there is a recurrence of an affair like that of Chauri Chaura, I should not hesitate to stop the movement." The Chauri Chaura "affair"—it is a mild word—was a bloody thing.

Muslim Opposition.

There was a word of the peasants in what I have called Mr. Gandhi's threat. Here is another word of them: it is from a resolution passed this week by the Central Muslim Federation, Delhi, which "notes with concern the efforts made by the Congress leaders to disturb the peace of village life in India by inculcating in the minds of the ignorant masses ideas of disobedience of law and severance of the British connexion, and is convinced that, if these ideas capture the imagination of the villagers, there is bound to be an outbreak of violence, resulting in widespread bloodshed and anarchy. It therefore resolves that it is incumbent on all those who abhor anarchy and bloodshed to take immediate and effective steps to counteract these dangerous activities. . . ." Practical work along the lines indicated is to be started in the villages forthwith.

Sikh Opposition

There is opposition also from amongst the Sikhs. The following is from an appeal addressed by a number of Sikhs to the leaders of the community: "By throwing out the Nehru Report the Congress has not solved the problem of the rights of minorities. Whether our goal is Dominion Status or complete independence, the communal problem will have to be solved one day. By shelving this question the Congress has increased its troubles. The Congress thinks that it will stand in need of *jathas* for its campaigns of civil disobedience and *satyagraha*, and knows these *jathas* will be supplied neither by the Hindus nor by the Muhammedans, because they want more and more rights without making any sacrifices. The Congress should know now that the Sikhs cannot be made goats of sacrifice."

The Communal Problem.

There was a word there also of the communal problem. I will pass on to that. An attempt seems to be being made, by Hindus, of course, that is, those of the majority party, the ruling party that would be in an independent India, to create so strong a fiction that people will believe in it. The fiction is that India is, or can be made, not part Hindu, part Muslim, part Sikh, but *national*, as national, say, as England was during the stress of the Spanish Armada, when for a time the differences between Catholics and Protestants were buried, as France was during the Great War. The attempt is the Hindu Mahasabha's way of getting out of coming to any agreement with Muslim and Sikh. One would say that it will cut no ice, but one of the Mahasabha leaders, Dr. Moonji, is very persistent in his effort to keep the fiction alive. His line is not to point to the life in it, but to the "death" in communalism. I take this from a statement of his to the Press late last week: "I cannot understand the language of great men who aspire to be leaders . . . and try to create the impression that the only cause of delay in the attainment of Dominion Status is our inability to bring about a welding and true unity. Can anybody now say that if this unity *is* brought about, Dominion Status will come immediately? Can any one hope to bring about a true unity on pacts and agreements? Then, why did not true

Digitized by Google

unity accrue from the Lucknow Pact of 1916 ? And which pact shall we make and with whom? Can anybody be sure that true unity will flow and swamp the country, if these pacts are made; or is it intended, that as there are several intervening stages before Dominion Status is reached, at every future stage we must face the need of bringing about a unity by pacts and agreements, as we did, though fruitlessly, in 1919?" There is a great deal of something like special pleading there, but I cannot enter into that. Let men like it or not, there must be pacts. They need not be binding for ever, or for a moment be believed to be so.

The Assembly Affair.

While it is distinctly dishonest, in my opinion, to speak of Chauri Chaura as an "affair," the trouble between the President of the Assembly and the Government of India over the policing of the Chamber may very properly be called an affair. It began about three weeks ago. I did not mention it at the time, thinking it would blow over immediately; seeing it also as a storm in a teacup, but not liking to say so. As Sir Tej Bahadur Sapru has since said so, I might have saved myself my scruple. It now appears to be not a storm in a teacup. I suspect from the appearance of obstinacy on the Government side that they have seized this pretext to compel President Patel to a resignation, or are going to see that he takes in once and for all that his words and acts in future must be Speaker-like. That would be my line, were I the Government. It is intolerable that the President, under a profession of impartiality, should act as an Opposition leader, holding a position of special strategic importance. Three-fourths of the Congress look upon him all the time as their man. Even if his conduct were above reproach, that would make things wrong. We want a Speaker for our Parliament whom everyone will think of only as the Speaker.

[In the Legislative Assembly on February 20, Mr. V. J. Patel, the President, read a letter from the Viceroy outlining on behalf of the Government the basis of a convention designed to provide for the future control of the arrangements for the protection of the outer and inner precincts of the House. The President in announcing that he accepted the proposals in the spirit in which they were offered, added: "I shall always welcome and be guided on matters affecting the security of this House by the considered advice which the authorities concerned may tender to me."—ED.]

BURMA AND THE STATUTORY COMMISSION.

The movement for the separation of Burma from India, to which reference was made in THE NEAR EAST AND INDIA a few months ago, appears to be making progress. The Government of Burma, in their memorandum for the Statutory Commission, put forward the proposition that the closer British India approaches to responsible government the less justification there is for including Burma in India. This proposition was re-affirmed quite recently by the Governor of Burma, Sir Charles Innes, at a public dinner in Rangoon. The Burmans are, the Governor added, unanimous in their opinion regarding ultimate separation although they differ on the question of time. That the desire for separation is very strongly held by the people of Burma seems now to be completely established. "It is undeniable," says the report of the Indian Central Committee, "that there exists among the people of Burma a strong demand that Burma should be separated from India."

The advocates of separation say that India and Burma have nothing in common; that the province suffers financially from its connexion with India; and that Indian competition with Burmans is prejudicial to the latter. On the other side it is argued that Burma was conquered, and has been developed, with Indian money; and that if she were required to pay her debt to India her financial condition would be very much worse than it is now. Then there is the question of defence to be considered. So long as Burma is a part of India she is protected by the Indian Army. But if she were separated from India some provision would have to be made for her defence; and she might find that the cost of this would be even heavier than the burden that she now bears.

These two matters, namely, defence and finance are admittedly of vital importance. Indeed the majority of the members of the Indian Central Committee are of the opinion that their consideration and settlement are a necessary preliminary to a decision on the main question. And Sir Arthur Froom, who favours separation, admits in his minute of dissent "that the present financial and military relations between Burma and India constitute a problem of some difficulty which will have to be faced." He thinks, however, that it can be satisfactorily solved, and he suggests that with that end in view it should be examined by an authoritative and representative body.

Indian opinion, as expressed in the Indian newspapers, does not appear to be generally favourable to separation. It is admitted, somewhat grudgingly, that if the Burmans claim the right to separate, the Indians cannot, consistently with their own demand for self-government, refuse. But there is a tendency on the part of the politicians to decry the movement for separation on the ground that it is really demanded, not by the Burmans, but by the Government and the European commercial community for their own selfish ends. No evidence is forthcoming in support of this view. On the contrary the definite statement which the Central Committee have made, and which is quoted above, shows clearly that it is the people who are pressing for separation. They have taken the initiative, and have urged on the Government to support their case.

INDIAN NOTES.

(Continued from page 226.)

of the State by 86 lakhs. This has to be provided from the reserve which, however, will still exceed 18 millions sterling, in addition to 9 millions in the depreciation fund. In spite of increased expenditure in the coming year on improving the condition of the lower-paid employees, it is anticipated that the earnings will more than cover the contribution to the general revenues. So far the condition of affairs is distinctly satisfactory, though it is liable to be disturbed by strikes such as that which has lately occurred on the G.I.P. Railway. Less satisfactory is the outlook for railway development. Owing to the higher rates of interest now prevailing, it has been decided to cut down fresh expenditure drastically and to confine new work to schemes already in process of execution. This may be sound financial policy, but it is none the less regrettable that it should be regarded as necessary, when so many areas in India are unserved by railways. It also postpones indefinitely the improvements in the railway connexions of Karachi with the north, long promised to that enterprising and not unvocal port. Even if as both the Finance Member and Sir George Rainy aver, the embargo is only a temporary expedient designed to meet a combination of exceptional circumstances, its effect cannot fail to be unfortunate. We confess that we are not impressed by Sir George Rainy's defence of the new policy. When railways can be shown capable of earning more than 6 per cent. on any capital which can be put into them, the problem of providing a regular and adequate supply of funds, without violent breaks and dislocations, and with sufficient continuity to ensure efficient and economical working, cannot be insoluble. The Indian State Railways are amongst the largest buyers of the iron and steel trades of this country. We imagine that the latter would be only too willing to assist in the provision of the requisite finance if they could be assured of a commensurate return in kind. Anyhow, we commend the suggestion to the attention of Mr. J. H. Thomas and the Finance Member.

CHURCH UNION IN SOUTH INDIA.

In the absence through indisposition of Lord Chelmsford, Sir Leslie Wilson presided at a meeting of the East India Association at the Caxton Hall on February 18, when a paper on "Some Recent Developments in the Churches in India" was read by Bishop Palmer, late Bishop of Bombay and now assistant to the Bishop of Gloucester.

After reciting briefly the principal objects and provisions of the Indian Church Act and Measure of 1928, which come finally into force on March 1 next and together confer upon the Church, "which has hitherto been called the Church of England in India," complete administrative autonomy, the lecturer, who is generally regarded as the chief author of the measure, said that two developments had made the continuance of the present anomalous position well-nigh intolerable. In effect it was a position of quasi-establishment, and when under the Act of 1919 the Government of India in all its branches passed into the hands of a majority of persons who were not Christians, establishment, or even quasi-establishment, of a Christian Church became absurd. Secondly, as the number of Indians in the Church increased it became clear that the ecclesiastical laws of England were more and more unsuitable to them. It became urgently necessary that the Christians of the Anglican Church in India should be free to develop their own forms of worship and that there should be no legal obstacle to their doing so.

The direct bearing which the passing of the Indian Church Act and Measure had upon the main subject of his paper—the projected union of Churches in South India—was twofold. In the first place none of the other Christian Churches in India is in any way established, and a union between the Anglican Church, while in a certain sense established, and these other Churches was impossible. Secondly, the complete freedom of action which the Act and Measure gives to the Church in India enabled it to make such a union as was now proposed without the consent or leave of the Church of England or any authority in it, although it was naturally hoped to have such approval.

After recounting the history of the movement which has long been going on for a greater unity between Indian Christians and between the Churches which are doing missionary work in India, Bishop Palmer outlined the outstanding features of the proposed scheme. The main difficulty, as in all schemes of unity hitherto proposed between episcopal and non-episcopal churches, was concerned with the existing ministers of the non-episcopal Churches. The problem had been solved in the form that the latter should continue to minister after the union as they had done before, but that they would not be transferred to Churches where their presence would conflict with certain general provisos, especially that

"The United Church will be careful not to allow any overriding of conscience by Church authorities or by majorities, nor will it in its administrative acts knowingly transgress long-established traditions of any of the uniting Churches.

"It is the intention and expectation that eventually every minister exercising a permanent ministry in the United Church will be an episcopally ordained minister."

The main questions now in controversy centred on this point. On the one hand the champions of episcopacy appeared to consider that no exceptions ought to be made to their principles, while those who had inherited a dislike or suspicion of episcopacy feared that the Church of India, Burma and Ceylon, as it would henceforth be known, when it had become entirely episcopal, would also profess all the doctrines which they disapproved and believed to be connected with episcopacy.

The agreements on doctrine and practice were, it was believed, sufficient to justify the union, but they were not nearly so complete as most people had supposed would be required. At the same time it was a mistake to compare the latitude of the proposed/united Church with the famous comprehensiveness of the Church of England, which was a settlement. The fact that certain very various teachings and practices would be permissible at the time of the union was not intended to convey any pledge that they would always be permissible. The Church would have to make up its mind from time to time whether they should go on, or whether a common mind had been formed which ought to be upheld by the Church. There were numerous other reasons for a provision which was not merely dictated by convenience.

It would not, Bishop Palmer concluded, be appropriate to judge the scheme as a piece of political statesmanship or an effort of diplomacy. It was nothing of the sort and would be insane if it were. It could only be so if there was behind it the will of Divine Power. He commended it to all those who cared for the ending of one more needless alienation in a greatly desired friendship, for the development of a beneficent society, for the courage which would venture much in a great cause, and for the first attempt at the reconciliation of the most divergent tendencies in Christendom which might be the beginning of a new age.

While the desirability or expediency of union on the terms postulated was challenged by several speakers, including the Rev. Dr. Firminger, formerly Archdeacon of Calcutta and a prominent figure in the Anglo-Catholic movement, and Sir Louis Dane, who criticised the proposals particularly from the administrative standpoint, the consensus of opinion was generally favourable to the scheme. Many of its supporters in this country undoubtedly share the view of Lord Chelmsford, who in a letter expressing his regret at being prevented from taking the chair at the meeting, said that the fact that Bishop Palmer, with his family tradition of Churchmanship, had felt himself able to advocate the union of the Churches in India had largely influenced his own decision to support the scheme.

The need of greater help and sympathy from home for the new self-governing Church in India was stressed by Bishop Eyre Chatterton, who shared the hope of Sir Arthur Hirtzel that the scheme would be carried to a successful conclusion. Speaking as one who had helped to extend and strengthen this inter-denominational co-operation so widely practised on the mission field in India, the Rev. Dr. Paton, Secretary of the International Missionary Council, said that he was confident that there would be an enormous increase of power and influence in spreading Christianity by union such as was contemplated in South India. The proposals were also supported by the Rev. Dr. Stanton and the Rev. E. C. Carr, both former agents of the C.M.S. in India, and by Mr. H. Harcourt, a former member of the Indian Civil Service.

BRITISH AND FOREIGN BIBLE SOCIETY.

The British and Foreign Bible Society is arranging for the reorganisation of its work in India. Hitherto the country has been divided into Agencies each with its own Secretary, assisted by an Advisory Council. The Committee has realised for some time the necessity of a General Secretary whose duty it will be to co-ordinate the work generally and to think and plan for the whole of India. One of the great problems, which is essentially an All India one, is that of the Native States, where work has hitherto been partial and piecemeal. The Society believes that with the appointment of a General Secretary to co-ordinate the whole organisation, considerable advance will be made.

It will also be a part of the new official's task to keep in close contact with Government officials and Church leaders. In Africa, the native Churches are the distributors of the Bible, and the Society consequently employs very few colporteurs in that continent. The Society hopes that it may be possible to get the native Churches in India to undertake this distributing work as earnestly as the African Churches. H.R.H. the Duke of Connaught is the President of the Society and Sir Charles J. Owens Chairman of the Executive Committee.

Sir Michael O'Dwyer, G.C.E., K.C.S.I., formerly Lieutenant-Governor of the Punjab, will lecture on "The Present Situation in India" at the Sesame Club, 49, Grosvenor Street, on Monday, March 3, at 8.45 p.m.

A GREEK VILLAGE TALE.

The Sabbath Breaker.

(FROM ANDREA KARKAVITSA.)

A scorching July day, the Feast of Our Lady and St. Swithin's Day. Overnight the priest's wife had a bad dream. Sunday dawned and Sunday's dreams, folk say, come true at noon. The poor woman told her husband so and trembled like an aspen leaf as she spoke. But the priest cared little for such things.

"Bless the woman and her dreams! Hold thy peace," he replied.

"And how may I hold my peace, husband, when I saw it all so so clearly? The house fell in and thou wast killed and I, alas! was left all alone, desolate, wandering about in the chill winter days begging for a mouthful of bread." And with these words the priest's wife burst into tears and beat her breast.

Ding-dong. . . . Ding-dong . . . ! The harsh peal of the village church bell from over the hill at Mazi at that moment broke on their ears. It was the hour of matins.

"A pest on the parish! Louts and dullards," cried the priest scoffingly, as he gathered up his tools, "what need have ye of a church?"

"Get thee to thy worship, husband," whimpered the woman. "On such a day, meseems, it ill befits thee to work in the fields."

"Let me alone, wife; be quiet. To-day I have the horses and to-day will I thresh, nay even were it Easter Day. 'Tis not always we have the weather to work. Put bread in the wallet and hold thy peace."

"I am fearful, husband; I saw the dream clear enough. The house fell and thou wast killed . . ."

"Peace, fool! Put bread in the wallet," angrily interrupted the priest, "lest I curse thee and thy foolish dreams."

His tawny beard shook with rage. His wife gulped down her tears and made no reply. Poor soul, she was a good woman, and knew not how to gainsay her husband.

The priest meanwhile completed his preparations, donned his short cassock, pulled a woollen cap over his head, bound a cord round his waist, slung the wallet with his food over his shoulder, opened and slammed the door, leaving the house without even bidding farewell to his tearful wife who stood meekly watching him with an aching heart.

Papavasili, the priest, came from the village of Gastouni, over away in Kelevi, the land of Paraskeva, the famous brigand. Before entering the priesthood he traded as a muleteer and used his ropes and pegs to some purpose. The countryside trembled at his name. Many had he robbed and beaten on the highway. Even his wife he had stolen, the daughter of a local magistrate. Suddenly the whim took him and he became a priest. Prudent folk were sceptical, and deemed it a hard matter, but he . . .

"Forsooth! hard indeed!" he cried. "Wait a few days and ye shall see."

And so it came about. A hundred dollars to the Bishop and a brace of geese besides and the bargain was made. Papavasili was nominated parish priest for the four villages of Zonga, Zoulatika, Mazi and Retouni. The peasants desired a priest and did his bidding. But Papavasili, ill-suited for such a charge, took little heed of them and performed his duties in his own way, caring nought for Gods or Men. Feast Days or Working Days, it was all one to him.

So now, as soon as he reached the threshing floor, he fetched and harnessed his horses to the thresher: six horses abreast. All around lay piled the cornstalks ready for the horses's hoofs.

"Whoop! Whoop!" he cried, and lashed the air furiously with his long driving whip.

At the sound of his voice the horses pricked up their ears and strained every muscle at the traces. They pushed and plunged one against the other and started forwards. Round and round they turned, dragging the heavy thresher and stamping on the ears and stalks with their hoofs. And Papavasili behind them lashing his whip savagely, cried out:

"Whoop! Whoop! Whoop!"

The threshing floor shook under the horses' tread. The hills around re-echoed with the priest's cries.

The sun rose to the meridian. What a sun! Scalding rays hot enough to cook an egg. The horses pulled on strenuously, though exhausted with the heat. Their coats shone like a mirror with sweat; windless and ready to drop with fatigue, their nostrils puffed like a blacksmith's bellows. Snorting, neighing, panting, they raced round the threshing floor, trampling the straw under their hoofs and throwing up the grain in a golden shower. And the priest, whip in hand, now ran behind them, and now, gasping heavily, overcome by the exertion, momentarily stopped. His cap had long since blown off and his long, unkempt hair streamed behind him in the breeze, while the sweat fell dripping from the strands of his tawny beard. But still he ran on and on, ever shouting: "Whoop! Whoop! Whoop!" And if a horse lagged for a moment he cursed and swore, anathematising the beasts with all the oaths at his clerical command.

Soon two horses fell, succumbing to the heat and over-fatigue. And the priest howled like a wolf, stamping on the ground and rolling his angry eyes. Suddenly, calling down curses on their heads, he lifted his hands aloft and shook his fists at the sky, trembling with rage.

"Woe to! Beshrew me! Holy Mother, whether thou wilt or no, I will thresh my corn this day, aye and garner it too, or the Devil take me. I am no woman to fear silly dreams!"

Then roughly dragging the fallen horses off the threshing floor, he seized the end of the traces himself and, brandishing his whip, began to go round with the rest.

"Whoop! Whoop! Whoop!" he yelled unceasingly.

But Papavasili had not made many rounds when suddenly he was aware of a terrific noise which struck his ears coming from the distant hills across the plain. He turned his head and saw in the dim distance something that appeared to him like a flock of white sheep apparently running towards him. The noise grew louder and louder, like the tumult of the sea as its waves burst over the rocks. Soon the priest perceived that these were indeed no sheep but that a might flood of water was rushing rapidly upon him and fast encircling the threshing floor. Seizing his wooden spade, he began hastily to collect the corn under the thresher, but when he found water all round him and saw the trembling horses pawing the ground and trying to break the traces that held them, a great terror fell upon him.

"I have sinned, O my God, I have sinned!" he cried in his anguish and fell on his knees.

But God did not listen to him then; it was too late. And the threshing floor began to rock like a boat on a stormy sea. Water lay everywhere till only a span of dry ground was left round the priest's feet. It no longer rose fast but just rippled and gurgled gently with a slow murmur, gradually ascending like some sea of the dead. Ghastly pale, Papavasili watched its progress with blood-shot eyes. Now the water lapped his feet and, terror struck, he turned his eyes hither and thither in despair kicking the ground, biting his lips and tearing off his cassock. He strove to loose the horses and mount and flee, but the beasts would not let him approach them, and looking first this way and then that he climbed up on the thresher; perhaps the water would not reach him once there.

And the water rose and rose, noiselessly now without any murmur but with a cold sinuous movement like that of some venomous serpent about to enfold him on its coils. Slowly it reached the thresher and began to cover it until the priest's legs were ankle deep in water, while the horses snorted and stamped tugging with all their might at the traces, raising their heads towards the field beyond and

Digitized by Google

whinnying plaintively as though seeking help, until at last they broke loose, plunged into the torrent and swam to dry land, leaving the priest a solitary despairing figure alone in the flood.

Now the water had reached his waist, then it crept up to his chest and soon covered his shoulders. He gazed longingly with envious eyes at the fields beyond. There was no water there. He saw the green meadows, the cloudless sky, the peaceful hills. He watched the cattle as they wended their way slowly homewards and listened to the tinkle of the sheep bells, the shepherd's pipe and the barking of the dogs; sounds of laughter, voices, greetings . . . he heard them all. Pigeons were flocking home to roost and birds screeched and twittered as they flew over his head.

Ding-dong! . . . Ding-dong! . . . Ding-dong! . . . clanged the church bell at Mazi tolling for vespers. Papavasili listened and shuddered; it seemed to be striking his death-knell. But he did not remain long in his agony. The water reached his mouth and covered his eyes till, finally, a wave rose with a dull roar and hurled him from the thresher. Straw and corn floated over his body and spread like a shroud round his watery grave.

Thus passed away his sinful soul. Few regretted Papavasili, but all men were sorry for his poor wife. The same day the house fell in, the goats died and she, poor soul, lost her reason. She struggled on alone for some time until she found a little nook where she could rest her weary bones, but there, on the spot where her husband perished, every year in July, at St. Swithin's tide, on the Feast of Our Lady were heard the whinnying and stampeding of horses and the cries of a priest vociferating ceaselessly "Whoop! . . . Whoop! . . . Whoop! . . ."

CHELEBY.

THE NAVY IN THE PERSIAN GULF.

With Vice-Admiral B. S. Thesiger in the Chair, Captain R. St. P. Parry, who was Senior Naval Officer in the Persian Gulf from 1926 to 1928, lectured to the Royal United Service Institution on February 19 upon "The Navy in the Persian Gulf." After tracing the history of the Gulf from the end of the sixteenth century, when the Portuguese were masters there, Captain Parry dealt with the attempts of the British to suppress piracy, the slave trade, and traffic in arms. In connexion with the slave trade, he said that there was undoubtedly a surreptitious traffic to-day, amounting to perhaps 500 souls per annum. This was very difficult to stop, since the slaves were conveyed in very small numbers and formed part of the crews of the dhows in which they were conveyed. The slaves came chiefly from Persian Baluchistan, and a few from Africa, the former being landed on the Batinah coast and the latter at Sur, or other places east of Muscat. Slaves in Arabia, however, were well looked after, for when not employed as house servants and bodyguards, they constituted the main body of pearl divers and formed the stock from which the pearl divers of the future were obtained; it was in the direct interests of their owners, therefore, that they should be given the opportunity of marrying, as well as being housed and well cared for. This form of domestic slavery had always been the custom in Arabia (it was in strict accordance with the Quran) and Great Britain was not in a position to interfere with it, so long as there was no infringement of the liberty of British subjects. A general freeing of slaves in Arabia would be nothing short of a calamity, for it would undoubtedly create an insoluble economic problem.

At the moment it could be truly said that Great Britain had constituted herself the "policeman" of the Gulf not only in her own interest, but also in that of all who resided in its littoral or whose trade interests took them there. The work of policing the Gulf was carried out by an armed yacht and three sloops, a squadron whose duties in peace time could be set down as being:—

(1) Enforcement generally of the Trucial Treaties, which included suppression of the arms traffic and slave trade; (2) protection of British interests and of those of British subjects in the Gulf; (3) protection of the oil supply from Persia; (4) questions dealing with the air route to India.

Having narrated some of his personal experiences in the Gulf, Captain Parry turned to the present political situation, which, he said, was in the melting pot. The questions outstanding between Persia and Great Britain included: (1) the status of Basidu and Hanjam, and the ownership of the other Gulf islands; and (2) the Persian claim to Bahrain. On the settlement of these largely depended the future position of the British naval base in the Gulf. Basidu, the western part of the islands of Kishm, had been British since 1823 uninterruptedly and without protest, until 1926, when Persia raised the question of ownership. In 1904 the base was moved to the Persian island of Hanjam and located within the telegraph concession granted by Persia to England in 1868. This was a more convenient position in every way—a better climate, more spacious and safer anchorage, a good water supply, good communication with India (it was a port of call for the British India Gulf Line steamers), better facilities for recreation, as well as occupying a valuable strategic position at the entrance to the Gulf. It was thought that the surrender of the British position at Basidu in exchange for a regularisation of the present British position at Hanjam might be possible. Failing such an arrangement, it would be necessary to look elsewhere. Captain Parry then considered the possibilities of Bahrain. Here the southern roadstead was much better than the northern; but here again the Persians had put in a claim to ownership, and the climate, moreover, was extremely damp and unhealthy. The only other part of the Gulf possessing harbours was the Musandam Peninsula.

The lecturer then dealt with the subject of air routes. By an agreement reached in June 1928, Persia consented to a limited service operating for a period of three years, from January, 1929, using only Bushire and Jask as aerodromes and Lingah as an emergency landing ground, but it was stated that this permission might not be renewed. The Arabian route had been reconnoitred by the Royal Air Force, assisted by the Royal Navy. Landing grounds and petrol dumps were to be established at Shaibah, Kuwait, Bahrain, Abu Dhabi, Sohar, and some points on the Hasa coast, and negotiations with the tribes concerned were now proceeding. Considerable opposition was being encountered on the Trucial Coast, the Shaikhs of Abu Dhabi and Ras-al-Khaima being bitterly opposed to any encroachment of their territory, while of the remainder only one, Hamrya, one of the least important Shaikhs, regarded the proposal favourably, and would offer facilities in return for an annual payment. There were, in short, many difficulties to be overcome before this route could be established, the chief of which was the hostility of the Arab Shaikhs, who had a horror of all forms of European penetration it also had the disadvantage of being longer and involving crossing the sea for 226 miles from Sohar.

Summing up, Captain Parry said that Great Britain was in the Persian Gulf because the Gulf formed an important link in the chain of British communications with the East, because the trade with Persia, Iraq, and Arabia was considerable (it amounted in 1927 to some £18,000,000) and with the completion of the railway from Khor Musa to Teheran and the further opening up of Iraq by the possibility of a railway from Baghdad to the Mediterranean it would tend further to increase, because of the oil supply (in both Persia and Iraq), because of the air route to India, and finally, because of the moral obligations to the peoples of the Gulf—and he concluded by quoting extracts from two famous speeches made by Lord Curzon on the British position and achievement in the Gulf.

In the discussion that followed the lecture Captain Sir Edward Headlam and Admiral Thesiger took part.

PERSONAL AND GENERAL

TO-DAY

February 27, 1930 (New Style).
February 14, 1930 (Old Style).
Ramadhan 28, 1348 A.H., of the Muslim Calendar.
Shebat 29, 5690, of the Jewish Calendar.

Sir Murdoch and Lady Macdonald returned to London on February 20 from Egypt.

Viscount Gage arrived at Baghdad last week and expects to return to London in about a month's time.

Signor Cantalupo, formerly Under-Secretary for the Colonies, has been appointed Italian Minister to Egypt.

Sir Philip Grey Egerton left London on February 20 to join the Ranpura at Marseilles for Port Said.

Lady Evelyn Cobbold, who is on a visit to Egypt, will return to 9, Carlos Place early in March.

The Turkish Ambassador and Mme. A. Ferid Bey will hold a reception at 69, Portland Place to-day (Thursday), at 10.15 p.m.

The Duke of York received at 145, Piccadilly on February 20 the Persian Minister and the Ethiopian Minister.

Sir Ian Malcolm, who left for Egypt at the end of January, will return to 57, Onslow Square about the second week in March.

Lord and Lady Hawke, who left England in December for India, are expected to return to 10, Belgrave Square about the middle of March.

Lord Lloyd, who has been admitted to the Freedom of the City of London as a member of the Glovers' Company, left 30, Portman Square on February 20 for Paris.

The Earl of Inchcape will return to 4, Seamore Place on February 23 from Monte Carlo, and will leave London on March 2 for Paris.

Lieutenant-Colonel and the Hon. Mrs. H. H. Spender-Clay arrived at 2, Hyde Park Street on February 18 from Egypt.

The Persian Minister in London will hold a reception on the occasion of the Persian New Year at 11, Prince's Gate, on March 22.

Mrs. Percy Mayer left Paris last week for the Hotel Semiramis, Cairo, where Mr. Percy Mayer hopes to join her later.

Sir Archibald Boyd-Carpenter and Sir Gould May arrived at Marseilles on February 21 from Bombay in the P. and O. s.s. Morea.

Sir Laurence and Lady Philipps, who left for Egypt at the beginning of the year, will return to 40, Hill Street, Berkeley Square, early in April.

Field-Marshal Viscount Plumer and Viscountess Plumer will return to 22, Ennismore Gardens from Santa Margherita about the middle of March.

Lord Stanley, M.P., and Lady Stanley, who have been on a visit to India since the middle of December, are expected to return to 10, Upper Grosvenor Street during the last week in March.

Sir Harry Goschen has been appointed a member of the board of management of the London School of Hygiene and Tropical Medicine, in the place of Lord Melchett, whose term of office has expired. The board have elected him as chairman.

Lord Headley, President of the British Muslim Society, lectured to the Anglo-Palestinian Club on "England as a Muslim Power," on February 25, at First Avenue Hotel, W.C.1.

Sir William Himbury, who has not been well lately, left England last week for the French Riviera to recuperate, and is not expected back in England until the end of March.

Major-General Sir Percy Cox lectured on February 19 to the oversea section of the Forum Club on Iraq and Persia. The lecture was the first of a series on "Outposts of Empire" which will be arranged from time to time by the committee of the oversea section.

Mr. Richard Maconachie, of the Indian Civil Service, whose appointment to succeed Sir Francis Humphrys as British Minister to Kabul was announced at the end of last year, left London last week to enter upon the duties of his new office.

Mr. Charles Abbott, a London barrister, who has been appointed by Lord Passfield a resident magistrate in Kenya, and who will administer the civil as well as the criminal laws there, as a Lieutenant in the Middlesex Regiment saw service in the Great War in India, Mesopotamia, and Salonika.

JAFAR PASHA AND THE DORSETS.

Jafar Pasha al Askari, Iraq Minister in London, dined last night (Wednesday) with his former captors, the Dorset Yeomanry, at their annual dinner at Weymouth. The Pasha was leading the Sanusi tribe of North Africa in 1916, when he and his followers were captured by the Dorset Yeomanry in one of the most famous cavalry charges of the War, the Pasha being taken prisoner by Lieutenant-Colonel H. K. W. Souter, the then commanding officer of the Yeomanry, after he had had his horse shot under him. Yeomanry from all parts of the country were invited to meet their distinguished former prisoner, who was their guest of honour.

M. Liaptcheff, Bulgarian Prime Minister, last week began negotiations with party leaders for a rearrangement of his Cabinet, which he wishes to complete before handing in the Government's resignation.

Lieutenant-Colonel Farrer Godfrey Pallin, who death occurred last week at the age of 51, at Southern Cross, Shaldon, served during the Great War in France, Italy, and Mesopotamia, being three times mentioned in dispatches and being awarded the D.S.O., besides obtaining the 1914-15 Star. In 1920-21 he took part in the operations in Mesopotamia, gaining another clasp.

THE WEEK AT HOME

London, Tuesday Morning.

The New Party.

However the new party of Lords Beaverbrook and Rothermere—the "United Empire Party"—be looked at, it certainly has fluttered the dove-cotes. Though why one should refer to doves in this connexion I do not know, for the reception of the formation of the Party has not been very peaceful. Generally speaking, one may say that the official Conservative attitude is one of anger and dismay, that the Liberals regard it with scorn, and that the Socialists welcome it whole-heartedly—but only as the most destructive agent of the opposition to them that could be imagined!

Perhaps one's first thought is to treat with derision the whole idea of a new Party forming round a single conception. To make up a party, it has quickly been pointed out, much more than one conception is needed: a Party is in effect, an attitude towards life, a general sentiment, something that is formed by and forms a tradition. In any case, decriers go on, what do they know of economics, these two newspaper magnates: is not what they have accomplished merely the soiling of a fine ideal, the working out of which requires years of patient study and infinite knowledge?

Others, however, reflect differently. The present generation of voters, they say, is not a thinking generation: the regular reading of the *Daily Express* or of the *Daily Mail* is scarcely an intellectual qualification. But this, they go on, has nothing to do with the case. It is perfectly feasible, in these ignorant, sentimental times, for such past masters in the "art" of public appeal to attract millions of uneducated or semi-educated people to their standards. Not, then, for its intrinsic worth, but for its concrete possibilities in influencing the electorate, it behoves the older parties to treat this new Party seriously. Buckle on your Free Trade armour, O ye Liberals; and produce, O Conservatives, patent proofs that the Empire Crusade is an impossible dream. Such is, perhaps, the main line of thought of the opportunist Liberal and Tory.

For the ordinary man, whose Party loyalty is not of that intense kind which moves him to resentment, contempt, or admiration for the new Party, it is extremely difficult to gauge its chances. So far as he can judge, it has one advantage only over the older parties, and that is the fact that its subscriptions are being made public. It may have a moderate success either because of the newspapers backing it, or, like the Labour Party, which had practically no newspaper backing, in spite of them. But the most probable result of all seems to be the confirmation in prolonged office of the Socialists. Judged from their anxious standpoint, the launching of this new Party must seem Heaven-sent madness!

Parties and Policy.

The formation of this new Party has unquestionably been the main event of the week, but another political development that deserves examination is the final severance of the Prime Minister from the Independent Labour Party. Now just as many Conservatives regret the formation of the new Party and aver that the correct thing for those who have formed it to have done was to reform them from within, so many Labour members regret the tactics of the I.L.P. But is such reform really possible? Could the Empire Crusaders persuade the Conservative Party to accept their views: could the I.L.P. hope to convince the Labour Party? The answer to both these questions is, obviously, No. No party which has a serious chance of holding office will adopt what is generally considered impracticable. But to maintain that the idealists (and let us, for the sake of argument, say that the Empire Crusaders and the members of the I.L.P. are idealists) should remain within the ranks of the more prosaic realists is, in my opinion, at any rate, silly. Independence is almost always better than hopeful acquiescence in what one believes to be wrong. The whole story of considerable changes in our modern civilisation is the story of energetic minorities, which flouted the opinion of humdrum majorities that had their feet and eyes on the earth.

Lest, however, it should be supposed that I am advocating support either of the United Empire Party or of the I.L.P., let me say at once that both the personnel and the principles involved inhibit absolutely my doing so. . . I am merely theoretically justifying their existence!

Chances and Effect.

In any case, it is futile now for Conservatives to complain of disloyalty in the formation of the United Empire Party: the die is cast. It is for them to circumscribe its chances, to nullify its effect, if they can. As yet, of course, it is too early to estimate the reaction of the country to the new slogan: personally I think the new Party may attract a greater percentage of people impatient with the older parties, if only because the problem of unemployment is increasing rather than diminishing, than those observers who are apt to believe that every vote has some intellectual basis appear to imagine. This seems to be the generation, and it is certainly the time, for "imaginative gestures," and the United Empire Party easily outstrips the other parties in imagination. On the other hand, there may be a fresh rallying round the personality of Mr. Stanley Baldwin.

But though it may quite conceivably upset all the previous calculations of Conservatives, and Liberals—because it is, apparently, to contest seats only where chances of success are real—no one, I think, supposes that it can return a sufficient number of members to Parliament to ensure the adoption of the Empire Free Trade policy. Even less is it probable that it could ensure what appears to be the corrolaries of this policy—if one is to judge by certain Die-hard references in the *Daily Mail*. In short, its chances of upsetting non-Socialists seem to be much greater than its chances of imposing its policy. It has been said that one of two things is inevitable: the dissolution of the Conservative Party, or the complete failure of the United Empire Party. Possibly, however, the future contains neither of these alternatives, for quite certainly all Party ideals are being modified in these testing post-War years. In any case, if the great Conservative Party does suffer death through such a formation as this new Party, then it must have outlived its day, even as the Liberal Party has largely outlived its day, in view of the emergence of the now greater Labour Party.

EXTERIOR ARABIA.

"AROUND THE COASTS OF ARABIA." By Ameen Rihani. Illustrations and Maps. (London: Constable. 21s.)

Mr. Ameen Rihani has become famous since he wrote a section of his Arabic work, *Muluk ul Arab*, in English and published it under the title of "Ibn Saoud: His People and His Land." The remainder of the English version of the original work has now been published, and is a far less ponderable study, though very entertaining and instructive. For this Lebanese-American went round the coasts of Arabia visiting practically all the more notable Arab chieftains except those residing between Hadhramaut and the Trucial Coast. The banner which he carried on his travels bore the device "Arab Unity," but his experiences taught him much, and though he may still fly that banner proudly, it seems to be sadly rent in places.

However, Mr. Rihani has much to tell; even the Arabic student may profitably read his fluently-written pages. To the general reader, one imagines, these glimpses of the coast of Arabia, cinematographic in outline and edged with a keen sense of humour, should afford long delight. Nor will the slight infusion of journalese repel the more serious reader, who, on the contrary, is likely to be led on to the discovery of the author's main conclusions. Alas! there is none included!

The book opens with the Hijaz, and with the character of ex-King Husain, very finely drawn. In his sketch of the head of the Sharifian family, then not yet fallen, the author shows most abundant power of description, with a wealth of significant detail. Jidda, and the land between it and Mecca (which this Christian author, by the way, did not reach) are drawn to the life, as, indeed, is the whole way of living of the more civilised Hijazis. Mr. Rihani is very fair in his estimate of ex-King Husain: he makes no attempt either to magnify or to minimise his considerable virtues and vices, but sets them all down. He seems, incidentally, to consider the Sharif's love of Islam as the main obstacle to the political ideal of a united Arabia, for he says:—

> The fact is that the Kings of Arabia will never progress, will never achieve a lasting success in anything, so long as they use religion as a means to political ends or even as a force for racial solidarity. King Husain, in his success and his failure, is a living and noble proof of what I say.

This notion of Pan-Arabia was, of course, the impulse of Mr. Rihani's travels in the Peninsula. It is interesting, therefore, to see how he diagnosed it. He saw clearly that the foundation of Arab unity was not in Syria or Palestine or Iraq, but in Najd and Al Yaman and Asir:—

> The foundation is in making up with enemy Ameers and putting down rebellious tribes. If King Husain had been able to gain them to his side and unite them under his standard, his would have been a power before which all the opposition in the north would cease and all the colours of the political zones would disappear. But his failure in Syria and Palestine left him without any authority to speak of in the Peninsula proper.

On Asir Mr. Rihani is equally lucid and sound: he is also extremely entertaining with character-sketches of certain inhabitants of the Idrisi's country. When he visited Asir, Saiyid Muhammad was the ruler—that staunchly anti-Turk Arab, so popular with Englishmen who knew the coasts of the Red Sea. The picture of him in this book is not unduly flattering, but it is immediately recognisable. Despite the Idrisi's negro blood, Mr. Rihani was drawn to him.

The description of the coast of the Tihama is excellently made—its heat, its moisture, its towns, its customs, its slave trade, and so on. On this last subject, by the way, Mr. Rihani raves in no ignorant fashion: he fully realises that domestic slavery in Islam is far different from slavery elsewhere. It was, however, immediately after seeing slave-dealers hoodwink authority in Asir that he wrote in his diary:—

> Arabia has to abolish slavery, or all its freedom, all its ancient nobility, and all its poetry are not worth a tent-peg.

His remaining chapters on Kuwait, Bahrain, and Aden are fascinating reading, and are, naturally, notable for their comments upon the connexion of the British with these places. There are in these points of fact and of interpretation which may be disputed, for he is concerned with the cost to the Arabs which the bringing by the British of peace and security has implied. Let it not be supposed, however, that Mr. Rihani is anti-British: he pays a handsome tribute to what has been accomplished by the waters of the Persian Gulf and of the Red Sea. He thinks, however, that it might have been more. His criticism is never malevolent, even though he seldom forgets that he is writing primarily for an American audience.

In short, this book, though it cannot compare, from the point of view of unity and directness with his volume of King Ibn Saoud, is a notable contribution to literature on Arabia, and it deserves to be read widely. It is plentifully illustrated, though a better index and a map of the Arabian Peninsula might usefully have been provided.

IN THE REIGN OF AKBAR.

"THE NEAR AND THE FAR." By L. H. Myers (London: Jonathan Cape 7s. 6d. net.)

Towards the end of his Preface, Mr. Myers explains why he has placed his characters in India at the time of Akbar. He says:—

> Take India in the reign of Akbar, the great Mogul—enough, and not too much, is at once outlined on the blank canvas. You see, I imagine, a vague picture of emperors on splendidly caparisoned elephants, white marble palaces, palm trees, and so on—nothing very precise, but plenty of fine confused colouring for a background. And that is excellent. Your comfortable, normal ignorance is what I count upon. It supplies all that is necessary; the rest is my affair.

Then he tells a tale full of romance, of philosophical thought and of psychological interest, and all the time, as he has promised us, we see the vivid graceful figures, against a background of "fine confused colour."

However the reader, in spite of his "comfortable, normal ignorance," and the fact that he is content simply to enjoy the unusual charm of the story, as it moves quietly along, cannot fail to realise that long study and deep knowledge of the country and period, as well as a rich imagination, have been necessary to make up that background. He will be grateful to Mr. Myers for the use which he has made of his knowledge, and will look forward to "The Root and the Flower," in which the story is to be continued.

NOTES AND NEWS

170, *Strand, London, W.C.2,*
Tuesday Morning.

The Fair's Success.

It is very satisfactory to be able to record the fact that, despite the prevailing economic conditions, the results so far recorded at the British Industries Fair both at Olympia and at the Birmingham section at Castle Bromwich have been well up to the average, and it is quite possible that by the time the Fair ends a record amount of business will have been done. A particularly notable fact is the large number of overseas buyers, who have come from all over the world, thus indicating plainly the status that the Fair has attained in its brief career. Home buyers are flocking to the Fair in multitudes, and it is already certain that last year's attendance figures at the London section will be easily surpassed on this occasion. The success of the Fair in recent years has naturally raised the question whether its influence on trade cannot be increased, and a committee is now sitting to consider among other questions whether two Fairs could be held in the year. There would seem to be good reasons in favour of an autumn British Industries Fair, for the interval of a year is rather long in these days when new developments are a matter of such frequent occurrence, and a second Fair, say in September, would give a fillip to trade at a time when it is in need of a stimulus.

The Tariff Truce Conference.

Things have not been going well with the Tariff Truce Conference at Geneva, which is not altogether a matter of surprise considering the conditions under which it assembled. In the first place several countries had gone out of their way to anticipate any action of the Conference by raising their tariffs in advance, and in the second place the Conference cannot by any stretch of imagination be termed representative. At an early meeting of the Conference M. Madgearu, the Roumanian Minister of Finance, showed how difficult it would be to arrive at an agreement even if all countries were represented. He explained that agricultural countries were in a difficult position as regards a tariff truce, as well equipped industrial countries do not need protection for their industries since they can extend them by rationalisation, while agricultural countries protected their industries to save them from disappearance, fearing that their industries might lose the little prosperity they possesed. M. Madgearu indicated that he does not believe that these apprehensions are always justified, but that it was necessary to reckon with public opinion. The representatives of various other countries also showed no particular enthusiasm for a tariff truce, Signor Bottai, the Italian Minister of Labour and Industry, saying that Italy considered the objects of the present conference premature. It remained for the representative of another country to criticise the unrepresentative nature of the Conference. As is well known, Mr. Baldwin has said that he will be no party to a tariff truce, but in view of the course of the proceedings at the Conference, it seems unlikely now that anything other than pious resolutions will be the outcome of the gathering.

Egypt's Finances.

On the whole an optimistic note is struck in the report of the Finance Committee dealing with the new Egyptian Budget, details of which have already been given in these columns. It is now anticipated that the expected deficit on the current year will become a surplus of £E1,500,000, not because of increased receipts, but owing to various departments not having been able to spend the amounts for which they budgeted. It is thought possible that the estimated deficit in the new Budget will also not be realised, which will no doubt be the case if there be delay in putting in hand the various works of development. A point of weakness is that at present about £E2,000,000 of the general reserve has been utilised to hold cotton off the market. In this connexion the Finance Committee express the view that intervention on the market has been justified, and that the consequences would have been much more serious but for this action. This is a matter on which there is considerable difference of opinion, and, as I have already pointed out, the permanent remedy for the Egyptain cotton situation is not to be found in the artificial stimulation of prices but in the lowering of the costs of production and in the improvement of the strains of cotton. The new tariff is also referred to, and the hope is expressed that ultimately the revenues will benefit by about £E2,500,000.

Suez Canal's Record Traffic.

The figures for the traffic through the Suez Canal in 1929 showed an appreciable advance on those for the previous year, the transits numbering 6,274 of a net tonnage of 33,466,014 as compared with 6,084 of a net tonnage of 31,905,898. Last year's totals would have been even better but for a falling off at the end of the year, and in view of the fact that there was an increase in the traffic in both directions one is justifitd in interpreting the results as an indication of a further improvement in certain directions at any rate—in the general economic position. The merchandise exported to the East amounted to 12,900,000 tons as compared with 12,000,000 tons, while the shipments to the West totalled 21,600,000 tons as against 20,600,000 tons. Coal figured prominently in the shipments to the East, while among the principal increases in Eastern shipments were oilseeds and vegetable oils, petroleum, minerals and metals, rubber and cotton.

BULGARIAN REPARATIONS SETTLEMENT.

(From Our Sofia Correspondent.)

In signing the Treaty of Neuilly, Bulgaria undertook to pay to the Allies as reparations a sum of 2,250,000,000 gold francs, in addition to the deliveries of cattle and coal which had to be made to Yugoslavia, Greece, and Roumania. As the Allies were not sure of the possibility of this payment they inserted a special clause in the Treaty, namely Article 122, which stipulated that "the Inter-Allied Commission (set up at Sofia) should from time to time proceed to examine the resources and capacity of Bulgaria, and, after having given to her representatives reasonable facilities to reach an agreement, it would be able to propose to the Reparations Commission at Paris a reduction of one of the instalments, the postponement of an instalment or the reduction of the total sum due from Bulgaria." It was on the basis of this clause that the first reduction of the Bulgarian debt was carried out in 1923. The protocol signed on March 21 of that year between the Inter-Allied Commission and the Bulgarian Government, then presided over by M. Stambouliski, divided the debt into two parts, of which the one, section A, was due immediately and the other, section B, would not be settled until after April 1, 1953. Section A comprised 550 millions, the remaining 1,700 millions being relegated to section B which was equivalent to the remission of that sum. Bulgarian reparations, guaranteed on the Customs, were then virtually reduced from this time to 550 millions, payable in 60 years by a series of payments fixed in advance. As at 5 per cent. interest this meant 27.5 million gold francs a year, the payments to be made by Bulgaria were fixed at 5 millions for 1923-24, 6 millions for 1924-25, 7 millions for 1925-26, 8 millions for 1926-27, 10 millions for 1927-28 to 1931-32, 20 millions for 1932-33, 32,895,336 for 1933-36, and 43,395,336 for 1934-36 until 1982-83. The total of these anticipated payments, without taking account of section B, would come to 2,253,266,800 gold francs or a little more than the amount originally stipulated; to which it is necessary to add the amount of the debt of occupation, which an agreement of March 28, 1924, fixed at an amount of 25 million gold francs, of which the payment, also bearing 5 per cent. interest, was arranged in a series of ten annuities ranging from 3 to 4 million gold francs, the total being 31½ millions.

When last September the Bulgarian reparations problem was again examined with a view to a complete and final settlement, always on the basis of Article 122 of the Treaty of Neuilly, Bulgaria had only paid 46 millions of the reparations debt and 18½ millions of the debt of occupation. The country had then to pay a sum which, as a result of accumulated interest, considerably exceeded the 550 millions fixed in 1923, and the service of which was approaching the full annual payment, which from 1934 would attain the relatively enormous amount of 43,395,336 gold francs which Bulgaria could never pay. The settlement at The Hague has completely changed all that. It has first formally extinguished the 1,700 millions of section B, then a new reduction was made in section A, the interest on which was greatly reduced, and the debt thus reduced, and further lightened by the remission by Great Britain, France and Italy of the unpaid balance of the debt of occupation, was divided into 36 annuities payable from 1930 to 1966, and fixed at 10 millions for the period 1930 to 1940, 11½ millions for 1940 to 1950, and 12,515,238 for 1950 to 1966, with in addition a payment of five million on April 1, 1930, or a total of 418,243,808 gold francs, representing Bulgaria's total reparations debt. The first payment will be made in one instalment on April 1, 1930. The subsequent annuities will be payable in two equal half-year instalments, the first on September 30, 1930, and the last on March 31, 1966. The annuities thus fixed constitute an unconditional charge, the signatories renouncing henceforth the application of Article 122 of the Treaty of Neuilly. However, Bulgaria will be able, should occasion arise, to demand the application of the procedure of the suspension of transfer instituted by the decision of the Reparations Commission of July 23, 1926 in accordance with the financial plan approved by the Council of the League of Nations on June 10, 1926.

These annuities will be guaranteed by the same special pledges as arranged for in 1923, such as the securities allowed by virtue of the Protocols of March 21, 1923, and September 24, 1928. They will be represented by a certificate of the debt furnished with coupons, which will be forwarded by the Bulgarian Government to the Bank for International Settlements acting as agent for the creditor Powers. The right of first lien established by Article 132 of the Treaty of Neuilly on all the property and resources of Bulgaria for the settlement of reparations and other charges ceases to have effect. But for the case where the yield of the special securities should fall below 150 per cent. of the sums necessary for the annuity, the Bulgarian Government undertakes to allocate to reparations, on the demand, and with the acceptance, of the Bank for International Settlements, additional securities to make up at at least the required percentage and to promulgate all laws necessary to this end.

The National Bank of Bulgaria retains its functions and obligations with regard to the payment of reparations, such as those resulting from the settlement of July 7, 1923, regarding the application of the protocol of March 21, 1923, and it will conform to that settlement as to all that concerns the realizing of the yield of the securities, the provision in national currency of the funds of the annuities and their conversion into foreign exchange. The creditor Governments renounce, from the date of bringing into force this agreement, their right to retain and liquidate property of Bulgarians within their jurisdiction in so far as these properties are not yet liquidated or have not yet been disposed of in a definite manner. However, Bulgarian properties subject to liquida-

tion in Roumania have been made the subject of an agreement on the basis of the payment to Roumania of 110 million lei in two equal instalments, of which the first is payable three months after the ratification and the second one year after. The restitution of the properties will take place on the payment of the first instalment and the revenues of the properties up to that date will go to Roumania. Bulgaria undertakes to conclude within six months from the putting into force of The Hague agreement all the necessary arrangements to assure the regular service of the part of the Ottoman Debt which falls to it and to discharge without delay the obligations which arise from the said agreements.

By a declaration appended to the agreement the creditor Governments state that they have noted the demand of the Bulgarian Government relating to benefiting by a remission of a part of the debt in the event of the creditor Governments obtaining remissions themselves of Inter-Allied debts. They declare themselves ready, should such a case arise, to examine collectively in a spirit of good will the possibility of giving Bulgaria advantages proportional to those which the special memorandum of the experts of the chief creditor Powers and of Germany, concerning external payments, and the report of the experts of June 7, 1929, accord to Germany, provided always that no Power should reduce by more than 50 per cent. its share in the Bulgarian annuities.

ECONOMIC DEVELOPMENTS IN GREECE.

The report of Hambros Bank, Ltd., for the week ended February 21 gives the following details :—

A Government Decree has been circulated to the Customs House authorities exempting from all duties articles required by the carpet industry for the manufacture of carpets, such as wool, colours, machinery, etc.

A provisional commercial treaty between Turkey and Greece was signed on the 8th inst., to take effect as from the 11th idem. All agricultural and industrial products of the two countries are to benefit by the most favourable nation clause. This provisional treaty is valid for three months, during which time it is expected that the final treaty will be signed.

In spite of last year's unfavourable conditions, the figures published to November 30 show an appreciable expansion in the export of wines during 1929 in comparison with the year 1928. Up to November 30 118,951 tons were exported, of a value of 511,565,197 drs., while up to November 30, 1928, 110,410 tons, worth 434,024,387 drs., were exported.

The figures of the Greek merchant navy for September 30, 1929, show an increase of the fleet under the Greek flag by 18 ships, of a total tonnage of 64,005 tons over the figures of June 30, 1929. In spite of the unfavourable conditions of the freight market, the Greek ships have been kept fairly busy. During November, out of a total of 115 ships chartered for the Danube, 32 ships of 48,987 registered tons were Greek, 30 of 65,126 tons were British, 28 of 75,938 tons were Italian, 5 of 10,298 tons were Roumanian, and 20 of 29,451 tons belonged to other flags. Good freightage was also reported during December owing to the mild winter in Roumania.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Calico and Shash.—The Survey of Egypt invites tenders for the supply of calico and shash for map mounting. April 23. (D.O.T.)

Iron and Steel, Metals, etc.—The Ports and Lighthouses Administration invites tenders for the supply of iron and steel, metals, etc., required during 1930-31. April 15. (D.O.T.)

Portland Cement.—The Egyptian Ports and Lighthouses Administration invites tenders for the supply of 100 tons of Portland cement according to B.S.S. 1925. April 22. (D.O.T.)

Clothing, etc.—The Frontiers Administration, Ministry of War and Marine invites tenders for the supply of clothing, etc., required during the year 1930-1931. The contract is in two sections, one section, consisting of clothing and stores to be obtained by contract and the other of a list of clothing, quotations in respect of which are required for workmanship and lining only, the outer cloths to be furnished to the contractors by the Administration. March 11. (D.O.T.)

Liquid Asphalt "Bitumen."—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of 600 tons of liquid asphalt "Bitumen," required for the year 1930-1031. April 12.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, March 12). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Glasgow, March 3; Birkenhead, March 13).

Bibby Line.—S.s. Leicestershire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 5).

British India Line.—S.s. Domala for Bombay (London, March 8); s.s. Mandala for Colombo, Madras, and Calcutta (London, March 8).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Corfu, Gruz, and Ancona if sufficient inducement (Liverpool March 15; Swansea, March 18); s.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, March 27; Liverpool and Swansea, March 29).

Johnston Line.—S.s. Kenmore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 1); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 29).

P. and O. Line.—S.s. Perim for Calcutta (London, March 14; s.s. Morea for Bombay (London, March 14).

Prince Line.—S.s. Persian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, March 8); s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 8).

Ellerman and Papayanni Lines.—S.s. Egyptian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 1); s.s. Gerano for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, March 1; Swansea, March 6); s.s. Manchurian for Gibraltar,*, Algiers*, Oran*, Patras, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 8; Swansea*, March 8). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port.

The Bulgarian Government is inviting tenders for the supply of 37 locomotives for the State railways.

For the summer season the Messageries Maritimes is introducing cheap fares in various services, which no doubt will be a great attraction to those who wish to take a Mediterranean holiday at that period of the year. The Messageries Maritimes has just issued a new series of most attractive posters illustrating various vessels of the company's fleet. The all-important thing in publicity to-day is distinctiveness, and these posters are admirably designed from that point of view.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, February 25.

It has been a patchy week in the Stock Exchange, a very dull tone being relieved temporarily by a slightly firmer tendency in the middle of the week. The fall in the sterling-dollar exchange and the offer of a number of high-priced trustee securities, followed by the unexpected issue by the British Government of 4½ per cent. Conversion Loan, checked the recent rise in the gilt-edged market, but Dominion and Colonial stocks were firmer than for some time past. Liquidation was again in evidence in the Home railway market at first, but better traffics produced a rally in mid-week. There was a fair amount of business in international securities, following an improvement in Wall Street, but Home industrials were affected by the uncertainties surrounding the Budget outlook and the political situation generally and by the publication of a number of disappointing company reports. Rubber shares, to which further reference is made below, were a little harder on the decision to suspend tapping for a month, but a reduction in crude oil prices in America depressed the oil market. Nothing has happened during the past week, indeed, to generate optimism as to an early recovery in activity or in prices.

Textile Dividends.

The past week has not been a happy one for the market in textile shares, and a group of depressing dividend announcements and reports has been followed by a lower tendency in values. There was first the Courtaulds' statement. The reduction in dividend from 15 per cent. to 10 per cent. had been expected, but the fall in profits from £5,171,997 to £3,743,828 exceeded market fears, while the necessity of writing £1,651,856 off Continental industrial investments was another unfavourable feature of the report. Then came the announcements of reduced dividends by Bradford Dyers (1s. 8d. against 2s. 3d.), Woolcombers (2s. 5d. against 3s. 3d.), and United Turkey Red (6 per cent. against 10 per cent.). Bradford Dyers also disclosed a fall in net profits to £538,255 from £819,994 in 1928, which compared with £708,319 in the preceding year. Earnings in fact amounted to only 4.4 per cent. on the capital employed, against 8.3 per cent. last year. While it cannot be denied that all branches of the textile industries have difficult times ahead of them, the depression in some of the securities has been overdone. Certainly this is true of prior charge stocks. Bradford Dyers 5 per cent. cumulative preference, for example, with their dividend covered over four times, return £5 15s. per cent., and Courtaulds 5 per cent. cumulative preference, whose dividend was covered by the actual earnings nearly ten times, yield £5 7s. per cent.

Rubber Restriction.

"The outlook for the rubber plantation industry is, by general consent, more problematic to-day than for many years past. Prices have fallen to the lowest level for a decade in the trade's annals, and consumption has fallen off sharply. The industry is partly the victim of its own productivity." In these words the present rubber position is very aptly summed up in the current issue of the "Rubber and Tea Quarterly," published by the well-known produce brokers, Wm. Jas. and Hy. Thompson, of Mincing Lane, London. Many attempts have been made by the industry to improve the situation, since the ill-fated British restriction scheme came to an end about fifteen months ago. The difficulty in the way of producing any effective remedy is that the producing side of the industry, despite the existence of two or three very large producers, is in the hands of innumerable small planters who cannot be brought to act together. A scheme has now been proposed, to which British, Dutch, French, Belgian, Swiss, and German planters are asked to conform, and consists in the simple but drastic plan of ceasing all production during the month of May. This would reduce the year's production by about 30,000 tons and thus bring about the much-needed equilibrium between supply and demand for 1930. The scheme has the merit of being much simpler than any proposals yet made, but doubts already exist as to how it is to be enforced on the innumerable little planters. The proposers are requesting answers from those concerned by early in March.

Footwear.

Most investors have in the past rightly placed considerable confidence in leading British boot and shoe manufacturing firms. Shares in these companies have for a number of years been at a steady price and brought in a regular income. This year's trading results have not been quite so generally satisfactory, and investors would be wise to watch new tendencies. Increased profits continue to be declared by the larger companies, especially those owning a "chain" of retail shops, but the smaller firms in some cases have declared lower profits this year compared with twelve months ago. Another important factor is that the expansion in export business has ceased, and, indeed, there is a decline of 7 per cent. in number and 5 per cent. in value for 1929, compared with 1928. The home demand, however, continues steady. J. Sears and Co., their subsidiary, Freeman, Hardy and Willis, and also Lennards are three firms which made increased profits for 1929, but Lotus, Public Benefit Boot Company, H. E. Randall, Stead and Simpson, L. and J. Weber and Phillips made lower profits, although not in all cases reducing their dividends. The ordinary shares of J. Sears and Co., which with Freeman, Hardy and Willis, constitutes by far the biggest group in the industry, can be bought to yield about £4 18s. per cent., while Lennards ordinary shares yield about £6 per cent.

The total quantity of petroleum products exported from Roumania during December amounted to 225,565 tons, as compared with 251,204 tons in the previous month, and 216,567 tons in December, 1928.

The total crude oil production of the Roumanian fields during January amounted to about 450,000 tons, an increase of about 55,000 tons over January, 1929. The production of the principal companies was as follows (in tons):—Astra Romana, 91,000; Steaua Romana, 67,081; Creditul Minier, 57,546; Phœnix Oil, 50,201; Sirius, 33,530; Romano-Amer, 25,303; I.R.D.P., 16,063; Petrolul Romanesc, 15,056; Colombia, 15,043; and Concordia, 12,676.

BRITISH INDUSTRIES FAIR.

London Section.

(Continued from page 221.)

Leather and Fancy Goods.

British travelling bags and trunks have long been known for quality and in addition the British manufacturer has now (and largely through the medium of the Fair) made a name for himself in the lighter leather goods such as the smart lady's handbag and the dainty writing table set. Leading firms in both branches exhibit, and in handbags, there is something suitable for everyone, including the "snatch-proof" bag and the sports bag which can be caried under the arm or slung from the shoulder.

Birmingham predominates in the Fancy Goods section, and it is essentially the section of new ideas. The new lampshades include a revolving shade which can be made to shed full light in one direction and a shaded light in the other, as well as lamps made to hook on to bed rails or to rest on the back of arm chairs. Papier maché and moulded ware are seen in new forms and the section includes new designs in umbrellas and parasols, and walking sticks ranging in price from a few shillings to sixty guineas.

Stationery, Paper and Printing.

The stationery, paper, printing and publishing trades section includes every kind of modern office equipment. Filing systems, maps with washable surfaces for planning marketing schemes, and a typewriter which can be adapted for 70 styles of type and 20 languages are among the exhibits. There are metal office furniture, including safes, and all kinds of stationers' sundries. Publishing houses show reference books and hundreds of trade and technical publications, and the printing exhibits include a well-known type-composing and casting machine, smaller machines for printing, embossing and engraving, showcards, calendars, cut-outs and printing on metal.

Furniture.

The furniture section, covering 17,000 square feet, is a representative one this year, including many firms not generally found at the Fair and exceeding last year's display by 5,000 square feet. Domestic furniture of all kinds is shown, including nursery, kitchen and bathroom furniture, beds and bedding, carpets, rugs, mats and matting, flooring and pannelling, picture frame mouldings, mirrors and overmantels. There is furniture for churches, schools and offices and a very representative exhibit of cane and wicker work and camp and garden furniture.

Pottery and Glassware.

The pottery and glassware section maintains the usual high standard. Practically all the leading firms which have exhibited in the past few years are there. China-ware again forms the strongest section, and there is again a representative display of glass.

Scientific, Optical and Photographic.

British makers of scientific instruments hold the lead in certain branches of the industry and in others they are becoming serious rivals to Germany. The Fair includes all branches and the latest advances in photography and cinematography are on show, including the world's largest aperture lens. While heavy steam and electrical plant is shown in the Birmingham section, the London section includes the almost human intruments for boilerhouse and machinery control.

Musical Instruments and Wireless.

The exhibits of musical instruments and wireless apparatus are together on the ground floor of the Small Hall where two excellent audition rooms have been provided. Several manufacturers of pianos who specialise in the large-scale export trade exhibit, but the strongest side of the section is gramophones. The exhibitors include the leading manufacturers of gramophone motors, manufacturers of a gramophone which will play 36 records on end and a firm showing the application of the long-playing motor to an ordinary gramophone, a record being used which plays three to four times longer than the ordinary record. In the wireless section the radio-gramophone is prominent.

Birmingham Section.

Wire Industry.

The makers of wire, which serves the needs of so many industries, are prominent. Wire in all gauges and in many metals and alloys, and in ferrous material is shown, together with woven wire in a variety of meshes. There are representative examples of high conductivity copper wire; mild steel wire; wire for making nuts, bolts, and nails; wire for the production of rivets; and silk, cotton, asbestos, and enamelled covered wire. British wire netting manufacturers are well represented. Accuracy of mesh and uniformity of gauge are ensured by the most up-to-date weaving plants, and durability and strength are guaranteed. The wire exhibits include many specialities, such as tinned copper wire and special high tensile wire for long spans. The vast array of wire products for engineering and domestic use is a matter of surprise even to many engaged in the industry. Domestic products include fire-guards, fancy screens, birdcages, woven wire mattresses, culinary utensils, reclining chairs, and flower-baskets. Then there are wire guards for machinery, so as to give full protection, with least hindrance, to workers, and guards for windows which are made to afford safety with the minimum interruption of light.

Builders' Requirements.

The display of building equipment is more comprehensive than at any previous Fair. Every conceivable kind of apparatus required by builders of private houses, factories, public buildings, theatres, or picture-houses is to be seen. Many exhibits shown for the first time reveal improvements and clever adaptations, the result of practical experience or research. The increased application of scientific principles in building work from the point of view of health and convenience is apparent.

Manufacturers have sent the best of their kitchen ranges and grates and cooking stoves (heated by fire, gas, or electricity). There are standard patterns, the efficiency of which has been proved by practical experience, and many attractive new models, including several to meet the exacting requirements of housing schemes, particularly in respect of space economy. Locks and keys, metal windows, safes and strong rooms, decorative tiles and terra cotta, architectural iron and stone work, granolithic paving, reconstructed stone, water and sanitary fittings, tubular scaffolding, safety ladders, and machinery for building operations, all have an interest of their own. Varnishes, lacquers, paints, and enamels again form an attractive department. Some of the decorative effects are extremely beautiful.

DRASTIC TURKISH FOREIGN EXCHANGE LAW.

The Grand National Assembly of Turkey passed a Law on February 20 authorising the Government to adopt drastic measures for the regulation and restriction of dealings in exchange and of the export of Turkish bills and notes. Breaches of the regulations are punishable by exclusion from business dealings from periods ranging from 14 days to 12 years and by fines from 100 to 500,000 Turkish pounds. Where the head office of a bank or a financial house is the offender, the penalty of exclusion from further business will apply to all its branches. The Law holds good for three years.

Motors and Motoring.

(By Our Motoring Correspondent)

Old Commercial Vehicles.

From time to time attention has been called to the bad condition and low efficiency of a number of the commercial vehicles in service on our roads, and the cry is once more being raised that the oldest of these should be scrapped. On the face of it the cry seems to be on behalf of users, who would be protected, by such a course, from using inefficient lorries and vans, but it is equally apparent that few makers would object to a wholesale destruction of old and second-hand vehicles. As a matter of fact, there is a feeling of pessimism amongst some makers and agents in the commercial vehicle industry regarding the effect on their trade which will ultimately be caused by the increasing number of second-hand vehicles about to come on the market. In this trade, as in some others, over-production —by which is meant the production of sufficient vehicles to fill the normal and new demand plus the production of more vehicles than have actually worn out during the period being dealt with—has had a bad effect and the increasing number of second-hand vehicles in good condition means that sellers will offer them at a lower and lower cost, with the inevitable result that those who would otherwise purchase new machines will simply spend their money on good second-hands. It will be remembered that immediately after the War the commercial vehicle trade of this country entered a period of depression which lasted for some years. This depression was attributed by the trade to the large quantities of Army disposals, in the shape of new and second-hand lorries which were being cleared off by auction at, in many cases, almost knock-out prices. The makers felt that until this surplus was absorbed there was no use in seeking to build up new machines. They rested on their oars until the worst of the Army goods fell to pieces and the "still-usables" were being relegated to the vicinity of the scrap heap, and then, with praiseworthy enterprise, started making new goods until, with what is probably a feeling of great astonishment, they find themselves exactly where they were a year or so after the Armistice. It is an astonishing thing that in this branch of the motor trade—the light car industry is almost in a similar position—it seems utterly impossible for makers to work in co-ordination, to adjust combined output to demand and maintain a steady and prosperous trade. It ought not to be difficult to decide on some method of working; no one has ever heard of a baker who decided to bake loaves without any idea of whether he would sell them; no modern newspaper would dream of keeping its presses running to cheapen the cost of newspaper production unless it knew that the papers it was printing would be bought. Yet a firm in the commercial vehicle industry will go on producing intensively until it can put a product on the market that will be cheaper than the other man's, never realising that the moment it succeeds in its object it throws the other man's products on the second-hand market and so robs itself of its prospective market. Further, there is no objection in the trades for which the commercial vehicle caters to the owning of a second-hand vehicle. In the case of the private car, the position is rather different; the style, finish, appearance, and condition of body work often count for more than engine efficiency. But in the second-hand lorry business appearance counts for little or nothing; the thing that does count is engine condition and general efficiency. Here the vicious circle rolls a little farther; the second-hand vehicle, in the case we have just exampled, has been knocked out, not by the higher efficiency of the mass-production car, but on price only, so that the moment it comes into the second-hand market at second-hand prices it is a better proposition for the buyer than the lorry which has defeated it, and it is bought, in preference to its conquerer, by every discriminating buyer. The suggestion now being made in many quarters as a way out of the difficulty is the establishment of breaking-up depôts all over the country at which second-hand cars can be dismantled. The idea is that by salving all accessories and parts it will be possible to give the owner such a price for his old vehicle that he will at once go and buy a new car. The fallacy here is so apparent that one wonders the idea was ever mooted. If the owner receives from the vehicle breakers anything like a good price, he does not buy a new car, but one almost at scrapping point. The reserve of second-hand vehicles would be swallowed up unduly quickly. Another flaw is that it presumes a good price being given for parts and accessories; good prices can only be paid for these if they can be used again. If they can be used again, similar new parts will not be required and all we have done is to make living a little easier for the vehicle maker at the expense of the engine and accessory maker. The sooner it is realised that in this, as in other trades, normal business lines offer the greatest prospects of success, and that the creation of artificial demands is certain to result in the production of very real slumps, the better.

Motor Boat points out that there is at present no intermediate between the comfortable utility craft burning paraffin and carrying from 20 to 200 people at 10 miles an hour, and the 12-seater speed boat running on petrol at 30 m.p.h. As the Board of Trade regulations will not allow the use of petrol in passenger craft carrying more than a dozen people, it is suggested that "there is a splendid opportunity in a large number of pleasure resorts for paraffined-engined craft giving real comfort and built to Board of Trade requirements, so that a moderately large number of passengers could be carried with perfect safety at a speed of, say, 15 to 18 knots. Water speeds are exceedingly deceptive, and the novice gets an impression of 35 to 30 m.p.h., very often when in rough water, when he is really only travelling at from 16 to 18 m.p.h."

Motor Duties.

It would be too much to expect the Chancellor to give any indication as to his intentions regarding the motor duties generally, although some of his colleagues seem to have given grounds for hope that the McKenna duties will not be removed. It is common knowledge that the trade is seeking to have the horse-power tax removed and a petrol tax substituted, and the reason for that attitude is not far to seek. The h.p. tax has made the light car what it is; a quantity production which for some time has been selling in large numbers; which has satisfied users and, to tell the truth, supplied the demand. As has been said on more than one occasion in these columns, there is every prospect of a bad time ahead for light car makers; the market is rapidly approaching saturation point; motoring is by no means so popular as it was a few years ago, and to the astute brains in the trade it seems that the only thing to stave off the threatened slump is for the system of taxation to be changed.

MOBILE WIRELESS STATIONS.

New Link in Egyptian State Telegraphs.

A novel use of the mobility of wireless communication is to be made by the Egyptian State Telegraph Department, which has just ordered from the Marconi Company three wireless sets mounted in motor lorries. These stations will be maintained for use when and where required in areas not supplied by the land telegraph and telephone system, so that practically any point in a wide range of country on either side of the Nile can be linked up at short notice with the main Egyptian telegraph system.

The motor lorries, also of British manufacture, will be of the six-wheel type, fitted with caterpillar attachments, so that they will be equally mobile on hard or soft desert country. Each lorry will carry a medium wave ½-kilowatt telephone transmitter and a small portable short-wave transmitter of 100 watts power. The aerials will be suspended from 70 feet portable masts, and the wavelengths used will be between 600 and 2,150 metres on the medium wave set, and from 20 to 50 metres on the short wave set. Self-contained power plant will be provided.

Egypt is a country in which, apart from the Delta, the towns and cities with their connecting railway and telegraph communications lie along a narrow strip of land bordering the Nile, with large areas of sparsely inhabited and desert country on either side. In these circumstances the mobile wireless stations will be of particular value in providing special extensions of the telegraph system either as a regular service or in times of emergency.

The Madras and Southern Mahratta Railway proposes to construct a railway between Niphain and Hakkal. The new line will be 140 miles long.

Bulgaria's exports in 1929 amounted to a value of 6,068 million leva, as against imports valued at 8,162 millions, the adverse balance being 2,064 millions.

Contractors to the British, American, French and Italian Admiralty and War Office.

ATTWATER & SONS, PRESTON, England

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended February 15:—

Grain.—There is no change to report in the position here; the only interest shown has been for Mediterranean destinations, and this only to a restricted extent. The amount of tonnage on the market is relatively small, but nevertheless great difficulty is experienced in completing the ships even for the Mediterranean. Rates from Sulina for the Continent are nominally in the neighbourhood of 10s. 6d., but without any demand, whilst 13s. 6d. to 14s. is quoted for March shipment from up-river. At Constantza tonnage is offered at 9s. for the Continent without takers. A 5,000 tonner has been fixed from the Danube, March loading, at 15s. 3d. Rotterdam, 15s. 9d. Antwerp/Hamburg range, full terms.

Timber.—Business from Constantza has remained desultory owing to lack of demand from abroad. Stocks at that port have increased and it is thought that owing to the restricted volume of timber exports this season, late shipments from Constantza will continue even after normal trading has been resumed from the Danube. There is no steamer loading timber in the river at the moment, although spot tonnage is available and idle.

Weather and Crops.—The rain which fell last week-end was followed by an abrupt fall in the temperature to between minus 6 and minus 12 degrees centigrade in the south, and minus 15 to minus 20 in the north, where, however, a considerable amount of snow fell at the same time; and even where the autumn sowings were not covered by snow there does not appear to have been much, if any, damage, as the intensity of the frost did not last. During the daytime on Monday there was a temperature of only between 1 and 5 degrees of frost in the north, whilst in the south there was a mild thaw, which on Tuesday spread throughout the country, only the mountain districts still having light frost. On Wednesday night, however, the temperature was again down to between minus 10 and minus 18 in the north, and minus 6 to minus 9 in the south; and notwithstanding the brilliant sunshine which prevailed, the shade temperature during the last two days did not rise much above freezing point. To-day, however, it is again warmer. According to the latest Government reports, last week's rain brought sufficient moisture to nearly all districts; but the high winds early this week and the powerful rays of the sun have left the ground rather dry in a few districts where the recent rain was light.

Sulina.—Bar depth is still 24 feet officially, and it is expected to be maintained without difficulty even in adverse circumstances such as bad weather or floods, as it is understood that the actual depth is now nearly 25 feet on the whole length of the entrance channel. River minimum is also still 24 feet.

Constantza.—This week about 4,000 tons of grain arrived from the interior and about 15,000 tons were exported to Rotterdam and Hamburg. Two steamers were under the elevators at the time of writing, and several others are expected to load grain. Fourteen vessels loaded nearly 37,000 tons petroleum products and two took oil fuel for bunkers.

Bulgarian Report.

Bourgas, February 8.—Inactivity still continues and at present there are only about 700/800 tons of maize and barley offering for Antwerp and Rotterdam. Tobacco shipped during the week amounted to about 350 tons. The weather has been mild, and light falls of rain are reported from many parts of the country.

A Constantinople message states that the Turkish Government has decided to reduce the transit duty on Persian rugs and carpets from 400 piastres per kilo (about 8s. per 2 lb.) to 3 piastres only (less than ¾d.). The heavy duty imposed by the new régime in Turkey upon the transit trade in Persian and Caucasian rugs has during the last four years had the effect of driving this important branch of the carpet industry from Constantinople, where it has had its headquarters for centuries, to other centres, and in particular London.

THE CHEMICAL INDUSTRY OF YUGOSLAVIA.

[A recent issue of the United States "Commerce Reports" contains an interesting survey of the important chemical industry of Yugoslavia. We give the following extracts.]

The manufacture of chemical products in Yugoslavia is unusually well developed for an agricultural country which has given little attention to industrial promotion and whose chemical industry is still in its infancy. Of outstanding interest, and in sharp contrast to the situation in the majority of agricultural countries, is the fact that the chemical export trade of Yugoslavia is considerably in excess of its chemical import trade. The exports of chemicals and allied products have been increasing and the total of £1,729,000 in 1928 showed an increase of nearly £760,000 from the 1924 figure. As the products of home industries still supply a very large proportion of the articles of general consumption in Yugoslavia, the domestic chemical industry is practically dependent upon foreign markets for its prosperity. Conditions abroad were favourable in 1927 and 1928 and the chemical plants increased their output considerably. The principal products are caustic soda, calcium carbide, calcium cyanamide, artificial fertilizers, and botanicals.

There are four electro-chemical factories in the Kingdom, located at Jajce in Bosnia; Ruse, Slovenia; and Dugi Rat and Shibenik in Dalmatia. Large hydro-electric stations erected prior to the War, for the purpose of manufacturing calcium carbide, supply the power for all of these factories. They have an annual capacity of nearly 100,000 metric tons, but production has been restricted owing to the difficulty of marketing the output. The leading industrial chemicals produced are as follows:

Calcium carbide.—Production, for sale, of calcium carbide approximates 27,000 tons, of which two-thirds is exported. The plant at Jajce, which obtains its energy from the Jajce waterfalls, produces most of the calcium carbide. The Dugi Rat factory, with a total capacity of 20,000 tons of carbide annually, and the one at Shibenik, with a capacity of 18,000 tons, convert some of the carbide into cyanamide.

Calcium cyanamide.—Exports of calcium cyanamide have been increasing steadily and in 1928 surpased 2,000 tons, destined chiefly for Austria, Czechoslovakia, Italy, and Hungary.

Ammonia and carbonic acid.—Ammonia and carbonic acid are produced at the Ruse factory, where cyanamide is used as the raw material. Exports of ammonia and its compaunds have been expanding in recent years.

Copper sulphate.—Copper sulphate is a by-product of smelters and superphosphate factories having occasion to make sulphuric acid.

Products from the distillation of hardwood.—In 1927, the latest year for which data are available, two important plants were reported to be engaged in the distillation of hardwood, the larger plant being located at Teslitch, Bosnia, and the other at Belisco, Croatia-Slavonia. In that year the total output of these two factories was estimated at 1,500 tons of colcium acetate, 800 of methanol, 700 of acetic acid, 250 of formaldehyde, 820 of sodium acetate, and small quantities of miscellaneous products, including tar and pitch, methyl distillates, acetone, ethyl acetone, chloroform, creosote, and resins. A large part of the production of these two factories is sold abroad. It is believed that the 1928 output was considerably greater.

Alcohol.—There are 14 alcohol distilleries in the Kingdom, with a capacity of 24,754,000 hectolitre grades (1 hectolitre grade equals 1 litre), and 54 smaller distilleries, with a total capacity of 4,798,000 litres, of pure alcohol. Consumption within the country, which is said to have increased, is still relatively small and conditions of the world market do not permit heavy exports. The production in the 1928 season is reported to have been augmented 30 per cent. as compared with 1927. Pure alcohol is produced in all parts of the Kingdom, with the exception of Montenegro and Dalmatia. The best qualities are made in Croatia-Slavonia, which is the centre of alcohol distillation. Exports of alcohol have been decreasing gradually.

More than two-fifths of the total chemical exports are comprised of industrial chemicals. However, with extensive distribution, two or three countries consume the bulk of the exports in each instance.

There are about 15 cotton and woollen mills in Yugoslavia, whose demand for dyes must be supplied almost entirely from foreign sources, as there is practically no production within the kingdom of either synthetic or natural dyes. It is not surprising, therefore, that in 1928 dyes and colours valued at £120,000 represented about 60 per cent. of Yugoslavia's imports of coal-tar products. As might be expected, Germany—with about one half—and Switzerland were the most important suppliers of artificial colours and dyes. It is of interest, however, that, largely due to sales to Yugoslavia of anthracene, phenol, and creosote (constituting the second most important item in the schedule of coal-tar imports), valued at nearly £20,000, Czechoslovakia outranked Switzerland as a source of supply of coal-tar products in general, assuming a position second only to Germany. Quantities of natural dyes are also consumed by the rapidly expanding textile industry. The expansion is particularly noticeable in the knitting and cotton branches. An important application of natural dyes occurs in the latter branch. In 1928 France slightly surpassed Greece as the most important supplier of these products. Yugoslav exports of natural dyes were negligible.

Explosives and Fertilisers.

Three factories were reported to be manufacturing explosives in Yugoslavia in 1928, located at Kamnik, Slovenia, Obelithchevo, Serbia, and Mahicno, Croatia. The former two are operated by the Government and their output is reserved for the needs of the military forces. Although no definite data concerning the production of the latter factory are available, it was reported that the daily output amounted to about 10 metric tons. A large actual as well as potential market for explosives is indicated by the fact that agricultural and mineral products rank first and fourth, respectively, among exports from the kingdom. In the past, an inadequate transportation system and the absence of the proper kind of labour have hampered the growth of the mining industry, but present indications point to a general expansion within the country, which would be accompanied by a partial or total remedying of the adverse factors mentioned, and should materially improve the market for explosives.

Yugoslavia is becoming an important exporter of fertilisers. Year by year exports have been increasing until in 1928 they attained a figure of £508,200 compared with £410,600 in 1927 and £228,800 in 1926. In addition to calcium cyanimide the electro-chemical industry also manufactures super phosphates and sulphuric acid. There are four plants making super phosphates and sulphuric acid, with a total capacity of 160,000 tons of the former and 30,000 of the latter. The Yugoslav consumption of fertilisers amounts to about 40,000 tons, of which around 34,000 tons are super phosphates. So far, the use of artificial fertilisers has been comparatively little developed, but the Ministry of Agriculture and the agricultural co-operative societies are making strong efforts to induce the farmers to increase their application. The area of the agricultural lands of the kingdom totals about 25,000,000 acres and the consumption of artificial fertilisers averages only 3.50 lb. per acre.

About 31 per cent. of the total area of Yugoslavia is covered by forests and this industry ranks first as regards capital invested. As might be expected, therefore, furniture manufacture is well developed, being concentrated at Zagreb and Subotica, and is of sufficient capacity to meet the ordinary demands of the population. As the kingdom exported nearly £20,000 worth of glue of various kinds, principally to Italy, while imports were negligible in 1928, it may be surmised that most of the glue required by the furniture industry is supplied by the two factories reported in 1928 to be operating at Zemun and Liubliana

and producing about 400 and 800 tons annually, respectively.

The bulk of the import of the group of gums, resins, and naval stores is comprised of rosin. Only about one-fourth of the total imports of 2,116 tons of rosin received in 1928 came from the United States, France having shipped 808 tons; Greece, 300; and Austria, 167 tons. Only relatively small amounts of turpentine of inferior quality are imported at present, chiefly from Austria and France. Wood tar is imported and exported; in fact, comprises the bulk of the exports of the group. Approximately £6,000 worth of beeswax was imported into Yugoslavia, probably for consumption by the leather, furniture and candle industries.

The manufacture of paints and varnishes is fairly well developed in the kingdom. The annual production ranges from 12,000 to 15,000 metric tons of paints and 2,000 to 2,500 tons of varnishes. Local factories supply approximately 80 per cent. of the consumption. The large proportion of the paints used are cold-water paints. Both the interior and exterior walls of houses are tinted with cold-water paints and require frequent renewals. Only the woodwork is painted with oil paint. Ready-mixed paints are used in fair quantities, but by far the greater part of the paint used is mixed by the painter. Exports of paints have been decreasing in recent years while imports have been increasing. Zinc oxide, lithopone, nitrocellulose varnishes, and prepared paints are the chief items imported. Of the total imports, amounting to nearly £150,000 in 1928, Austria furnished 29 per cent., Czechoslovakia 26, Germany 21, and Netherlands 9 per cent. respectively. The United States participated in the trade to a small extent.

Yugoslavia's foreign trade in essential oils in 1928 amounted to around £40,000. The various industries consuming essential oils are evidently largely dependent on foreign sources for their requirements—principally France, Germany, and Austria. In 1928 the United States secured approximately 7 per cent. of the trade, ranking fourth among the countries or origin. Probably the principal industrial consumers are the soap, pharmaceutical products, and liquor industries. The demand for essential oils in the soap industry is somewhat restricted, as only about one-fifth of the annual output of 18,000 tons of soap is represented by the better grade toilet soaps, for the preparation of which essential oils are principally required. Essential oils are exported only in limited amounts and include jasmine, rosemary and oil of roses.

Crude Drugs, etc.

This group constitutes one of the most important of the chemical products entering into Yugoslavia's foreign trade. Because of the pyrethrum flowers and opium poppies grown in the country and exported, the balance of trade in these commodities is preponderantly favourable, amounting to more than £360,000 in 1928. In that year exports were valued at approximately £468,600. Yugoslavia is the second largest world producer of pyrethrum flowers. It has been estimated that nearly 90 per cent. of the annual yield comes from Dalmatia, while Montenegro is also of importance. Italy purchases the larger part of Yugoslavia's foreign sales of pyrethrum flowers, while the United States is the second most important buyer. An insecticide powder is made from pyrethrum flowers in many of the Dalmatian towns. Poppies are cultivated in Macedonia and about £385,800 worth of gum opium derived therefrom was exported in 1928.

Evidently only a few firms manufacturing medicinal and pharmaceutical preparations exist in Yugoslavia and such cater chiefly for domestic demand, as no products falling in this category are listed among exports. The industry designated as "pharmaceutical products," which has been developing slowly since the War in and around Zagreb and Karlovatz, specialises in the manufacture of perfumes, cosmetics, and other products prepared by simple processes. Among the more important commodities imported are quinine and its salts, bought mainly from Germany. Prepared medicines and pharmaceutical preparations, including serums and vaccines, also are imported in greater amounts each year, chiefly from Germany.

Germany, Austria, Italy, and France supply most of the chemicals imported into Yugoslavia. Germany's share increased from 25 per cent. in 1924 to 37 per cent. in 1928. The leading chemicals shipped by Germany were industrial chemicals, coal-tar dyes and colours, medicinals, explosives, and paints and varnishes. The participation of Austria declined from 25 per cent. in 1924, to 16 per cent. in 1928. Paints and varnishes, explosives, industrial chemicals, and coal-tar products were the chief chemicals of Austrian origin. Italy, on the other hand, recorded a slight increase from 14 per cent. in 1924 to 15 per cent. in 1928. Industrial chemicals comprised the main item of chemicals imported from Italy. Imports from France have been approximately the same in both years and consist of naval stores, essential oils, and perfumery and toilet preparations. Just as Yugoslavia looks looks to Continental Europe for its chemical requirements so does it look there for its market. However, Italy rather than Germany, is the largest outlet, and received 21 per cent. of the total chemical exports while Germany accounted for 12 per cent. Austria, Hungary, and Czechoslovakia were the other large consumers.

TURKISH CUSTOMS LAW MODIFICATIONS.

Details are now available of a recent Turkish Law which modifies the provision of the Customs Law relating to the storage of goods in Customs warehouses, etc. The Law provides, *inter alia*, that imported goods may not be left for more than one year, and travellers' effects for more than three months, in Customs warehouses. Goods may, however, be left for three years in transit warehouses (and in premises which, originally transit warehouses, have become Customs warehouses) and in private stores to which the Customs have entry. In exceptional cases these periods may be prolonged by decision of the Council of Ministers On the expiration of the specified periods goods may be sold by auction by the Customs authorities. Before the sale is completed, however, the owner may take possession of his goods on paying the Customs duties and other charges, even if notice of sale by auction has been given. Any sum remaining with the Customs authorities after sale of the goods, and after the deduction of Customs duties and all other charges, shall be refunded to the owner. If the price realised for the goods is not sufficient to pay the Customs duty they must be exported. Goods in Customs and transit warehouses in respect of which the permitted period of storage had expired at the end of 1928 will be sold by auction, whether or not the results of the sale cover the amount of the Customs duty.

The tenth International Samples Fair at Liubliana will be held from May 29 to June 9.

It is reported that the Roumanian Government is to raise a loan of 1,000 million lei for the improvement of the State railways.

The Bulgarian Government contemplates raising the exising coefficient of 20 for import duties to the gold parity level, so that in future it will be about 31.

The total direct shipments of oranges from Palestine to the United Kingdom up to February 16 amounted to approximately 1,160,000 boxes, as compared with 802,000 boxes at the corresponding date last year. Total shipments to the Continent amounted to about 360,000 boxes, as compared with about 266,000 boxes shipped up to the corresponding date last year. Transhipments to the United Kingdom via Port Said up to February 8 totalled about 173,000 boxes, as compared with about 84,000 boxes at the corresponding date last season.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 19:—

Egyptian Futures.

Sakel Contract.—The action of this market continues to denote a great degree of activity; but, unfortunately, the business passing through has been mainly of a speculative character, trade interests still finding general conditions all against them entering into fresh commitments. As indicated in our last report, the undertone in this market promises resistance to any further decline; this particularly refers to near positions, which stand at such an appreciable discount with Alexandria that any demand must concentrate on the locally hedged stock. All the fresh speculative selling that has come in during the past week has centred on new crop position, Novembers particularly being favoured, and it seems a natural policy for those with "bearish" ideas to confine their operations to what is, at the moment, an uncontrolled position. Provided that the demand remains the same, and American values develop further weakness, the outstanding Sakel new crop short interest, which is now large, both at this side and in Alexandria, may prove a profitable venture. On the other hand, what is going to be the position should the Government, as appears probable at the moment, accumulate the greater part of the tenderable cotton in Alexandria? Whatever the ultimate effect of this action might be, there seems little doubt that its initial outcome would be to tighten near positions at this side and, at the same time, react in some measure on new crop values. Only moderate fluctuations have taken place from day to day during the past week, and the prevailing tendency has been for near and distant position to close in. During more recent sessions, fresh selling has been on a much reduced scale, and, given the encouragement of any favourable outside conditions, some recovery may be looked for.

Upper Contract.—Some Continental liquidation of near positions caused prices to ease somewhat in the earlier days of the week, but, since this, covering operations by spot houses have caused values to return to their previous level. Local spinners continue to buy very moderately, but the comparative cheapness of the Liverpool market has been taken advantage of by Continental users, who are now sending regular orders. The result is to be seen in the hardening tendency of near positions, and also in the disposition on the part of holders to harden their basis. There is nothing in the position to warrant any decided change for the immediate future, but there are signs of a gradual readjustment of the Liverpool/Alexandria difference.

Egyptian Spot.

During the early part of the week a better tone was noticeable, and an upward turn in the futures market caused the inquiry to broaden. Unfortunately, the reaction proved to be of only a temporary character, and interest has again subsided. That there is business waiting to be done appears obvious, but the behavour of prices the world over has destroyed all initiative for the time being. Rather more business was done during the first few days, and although prices have fluctuated, the decline seems to have been checked.

Sakel has been in very moderate request, but medium and good grades have both figured in the inquiry from time to time. There is some attractive cotton on offer in the better qualities, based on Liverpool, and we should not be surprised to see quite a run on it from local sources when buying does recommence, as it must surely do before long.

Uppers.—This cotton has attracted quite a lot of attention and probably accounts for 75 per cent. of the sales. The quality covered by "15 to 25 on" has been mostly in request, but "pass to 25 off" has also supplied its quota.

Pilion has been in moderate request at about 11d.

Maarad, Nahda, Fouadi, etc.—These growths have suffered from neglect.

Sudan Sakel.—There has been more doing in this growth.

Tokar Sakel.—Entirely neglected. We understand that the new crop auctions commenced on the 16th instant.

C.i.f. business appears to be moribund for the present.

Forwardings.—Last week's figures were returned at 2,575 bales Egyptian and 861 bales Sudan.

Spot Sales.—These have been estimated at 1,600 bales Egyptian and 1,100 bales Sudan Sakel. Quotations of Sakel show no change on balance, but Uppers have been advanced 19, and Pilion 10 points on the week. F.G.F. Sakel to-day, 13.55d. F.G.F. Upper to-day, 10.26d. F.G.F. Pilion to-day, 10.90d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 13, state:—

Since our last report the futures market has again been very active, but prices have continued to decline, this being particularly the case for distant deliveries. The week's summary of price movements is as follows:—Sakellaridis: March, 27.50 dollars, 0.07 dollars down; May, 27.64 dollars, 0.34 dollars down; July, 27.26 dollars, 0.87 dollars down; November N.C., 26.17 dollars, 1.08 dollars down. Ashmouni: February, 19.01 dollars, 0.01 dollars up; April, 19.43 dollars, 0.05 dollars down; June, 19.55 dollars, 0.10 dollars down; August, 19.10 dollars, 0.45 dollars down; October N.C., 18.73 dollars, 0.40 dollars down; December N.C., 19.02 dollars, 0.36 dollars down.

Sakel.—The downward movement in New York has continued, and at one time March there was quoted at 15 c., with October 15¾ cents; a collapse of this extent in American prices could scarcely be anticipated, and it simply demoralised our market, liquidations by long operators and some speculative selling being sufficiently heavy to force May down to 27 dollars and November to 26 dollars. On the day these low points were reached, the Government announced through its agent that it would be a buyer of May Sakel and June Ashmouni at prices to be fixed later. This announcement checked the selling movement and even induced a few profit-taking purchases. A slight recovery followed, which rise has been maintained up to to-day. The decline has not brought any improvement in the demand from the trade; practically no new business has been concluded with spinners, and the consequence of this state of stagnation will inevitably be that a very large quantity of tenderable cotton will be passed on to the Government in March. General market conditions can only be characterised as extremely depressing, and as regards the future course of prices of old crop deliveries, we believe these will fluctuate at round about the limits fixed by the Government or those which it eventually will fix. As to new crop options, we can only look for an even more pronounced falling off in prices. The Sakel/Upper straddle (March/April) this week stands at 807 points, against 908 points last week and 1,310 points at this time last year.

Uppers.—The Upper market has been marked by fairly active sessions, with the tone heavy as a result of the further decline in New York. The demand from the trade has again contracted, as, naturally, the higher our market remains over American, the less

attention will our cottons attract from spinners. Against the second February tender, dockets for 33,500 kantars were issued, bringing the total since the beginning of the month up to 48,250 kantars. It is obvious that the premium of 40 points fixed by the Government for April contracts has not curbed deliveries against February contracts; the bulk of the cotton tendered is rather poor style Zagora, and all of it has been, or will eventually be, received by the Government. As in the case of Sakel, future prices of this season's deliveries will remain about the same as those fixed, or to be fixed, by the Government, and for new crop deliveries we expect that our market will be governed by the fluctuations of October New York. In our opinion, the difference between October Alexandria and October New York should remain somewhere in the neighbourhood of 2 dollars, at least for the time being. The Ashmouni American straddle (April March) this week stands at 366 points, against 343 points last week and 267 points at this time last year.

The week's receipts amount to 198,274 kantars, against exports 147,130 kantars; the stock in Alexandria stands at 3,501,022 kantars.

The official figures of arrivals and exports for the period September 1, 1929, to February 5, 1930, are as follows:—Arrivals: Sakellaridis, 1,830,239 kantars; Ashmouni and Zagora, 3,419,217 kantars; Pilion, 245,030 kantars; Various, 308,363 kantars; Scarto, 51,138 kantars, total, 5,043,987 kantars. Exports: Sakellaridis, 1,138,243 kantars; Ashmouni and Zagora, 2,207,171 kantars; Pilion, 142,307 kantars; Various, 173,480 kantars; total, 3,661,201 kantars.

Spot.—Very little interest has been shown in the market during the week, the total turnover amounting to about 8,500 bales, of which we estimate 1,600 bales Sakellaridis, 6,500 bales Ashmouni and Zagora, 300 bales Pilion, and 100 bales other varieties.

Sakellaridis.—The small demand for this variety has covered all grades, and though holders appear anxious to liquidate their stocks, only a meagre turnover was registered, with an easing tendency in spot differences.

Ashmouni and Zagora.—The demand has fallen off in these varieties also, but spot differences remain about unchanged.

Pilion.—A very small business has been done in the better grades at about last week's premiums.

Other Varieties.—Nothing of interest to report.

Crop, 1930.—There is nothing of note to report this week; preparation of the land is going on in all districts, both of Upper and Lower Egypt, under more or less normal conditions.

The report of the Ministry of Agriculture for the month of January reads:—"Cutting of bersim catch-crop is going on in the areas assigned to the cultivation of cotton. Ploughing began in the southern part of the Delta and in some provinces of Upper Egypt. Ridging began in some of these regions."

The railway line between Tarnopol in Poland and Cernauti in Roumania, which has been in disuse since the War, has been reopened.

The number of motor vehicles registered in Yugoslavia as at January 1, 1930, was 12,025, comprising passenger cars, 7,124; trucks, 1,605; buses, 501; and motor cycles, 2,495.

It is announced from Bucharest that the minimum Customs tariff is to be extended to May 1, by which time it is hoped that all commercial treaties now under negotiation will have been concluded. The general tariff for all countries not having a commercial treaty with Roumania will come into force after May 1.

Why not visit
The SUDAN
this Winter?

KHARTOUM can be reached either via Egypt or direct by steamer to Port Sudan and thence by train-de-luxe. The social life of Khartoum during the season (December to March), the scenes of Wild Life on the Southern reaches of the White Nile, or interesting short trips organised by the Sudan Government Railways and Steamers from Khartoum, offer a unique variety of experiences to those in search of something out of the ordinary. It is also a new route to or from UGANDA and KENYA, involving neither difficulty nor discomfort. To the Sportsman it is Paradise.

Notes of the Week.

Afghanistan.

The position in Afghanistan is not likely for some time to come to offer such settled conditions that the prospect of a change in the occupancy of the throne can be ruled altogether out of court. On the other hand, it is difficult to discover on what basis ex-King Amanullah could found an excuse, still less a claim, for posing as an Afghan pretender. The contrast between his own abject flight from the country and the resolute part played by King Nadir Khan in restoring order, without any impelling desire to become King, must be sufficiently apparent to the warlike Afghans to make them unwilling to take back a monarch who has shown lack of personal courage in addition to other offences against the national conscience. Accordingly, reports of the ex-King's intention to return to Afghanistan on the strength of insistent demands from his former subjects may be treated with reserve, until, at least, health or other reasons cause King Nadir Shah to relax his hold on the country. Ex-King Amanullah's visit to Turkey, which on the occasion of his European tour of three years ago he selected as his spiritual home, can be explained more or less satisfactorily by the fact that some of his personal following were already there. His hurried trip to Ankara would be a necessary act of courtesy, in view of the hospitality shown him on his official visit to the Turkish capital, and any anxiety that might be felt in Kabul on the subject would be removed when it was found that Mustapha Kemal Pasha left two days after the ex-King's arrival, to spend Bairam at Smyrna. The news from Afghanistan suggests that some time may still elapse before King Nadir Shah succeeds in consolidating his authority to the extent that he must desire; but there is no reason to suppose that he is experiencing more difficulty in this respect than would be the lot of any other occupant of the Kabul throne, after the premium placed on tribal independence by King Amanullah's mishandling of his people.

An Abyssinian Indictment.

Until the other side of the story has been heard, Dr. Garabedian's appeal to the League of Nations must take pride of place among the sensational documents that have reached that body, or its Secretariat. More gruesome recitals have emanated from other countries nearer Geneva, but it has been left to a former physician to the Court at Abbis Ababa to supply an up-to-date setting for a story familiar enough in mediaeval Europe and still more recently in the Ottoman Empire. Dr. Garabedian's quarrel with the Abyssinian authorities has long been public property, and so far their version has held the field. He now appeals to the League of Nations for help to recover the sum of nearly thirty-six thousand pounds which, he states, represents the amount of the pecuniary loss incurred by him as a result of the treatment he received in Abyssinia. The trouble is alleged to have arisen from Dr. Garabedian's refusal to carry out the Regent's request, said to have been made first in 1925 and repeated in 1927, to remove three members of the Abyssinian royal family by poison. The alleged intended victims are said to have been the Empress Zauditu, Waziro Sihin, mother-in-law of Ras Taffari Makonnen, and Lij Yassu. Dr. Garabedian is probably not responsible for the Press annotations to these names, emanating from Geneva, which represent the Empress Zauditu, reigning joint-Sovereign, as being dead, and Lij Yassu, a former Emperor, now deposed, as a "sister of the legitimate heir to the throne." In all the circumstances it would not be surprising if the League of Nations decided that the mere possession by Dr. Garabedian of one of its passports did not constitute a sufficient reason for the League's action in regard to a monetary claim. Accusations of the smuggling of drugs, it must be admitted, are banal compared with an indictment for a poisoning conspiracy on wholesale lines; but whether Dr. Garabedian's case will progress much beyond the publicity that he has now secured for it may be doubted, unless the Abyssinian authorities retaliate by publishing their side of the quarrel.

Debate or Demonstration.

It is reported of the late Sultan Abdul Hamid that he refused to allow certain machinery to be imported into Turkey when he learned that it was capable of so many revolutions a minute. A similar kind of cloistered mentality is displayed by the Egyptian paper *Kowkab al Shark*, which has worked itself up into a state of considerable agitation over the news telegraphed to Egypt that the Oxford Union has debated the motion "That the

Digitized by Google

proposed Anglo-Egyptian Treaty should be rejected." Apart from the provocative character of the debate, the newspaper points to the incongruity of Great Britain's objections to the part played in politics by Egyptian students when Oxford students are allowed to suggest that the Anglo-Egyptian treaty ought to be rejected. As there must be others in Egypt troubled with the same misgivings, it may be worth while to point out that the difference between a debate in Oxford University and massed demonstrations of students in the streets of Cairo is as great as the difference between the revolutions for which a piece of machinery is responsible and those of which Abdul Hamid was so afraid. No objection could ever have been taken to a debate in Al Azhar even on such a subject as the advisability of the immediate expulsion of all foreigners from Egypt, if only for the fact that the exigencies of debate require that the motion should be opposed by an Opposer and Seconder, and such a debate would have meant that at least two students would be compelled to think on the subject, in order to find arguments in support of their case. There can be no relation between a seriously staged debate in a University and street demonstrations on the part of students, designed to stampede the politics of a country, which are essentially the negation of all exercise of thought or reasoning. Both the present and the late Government in Egypt have accepted this point of view, and it is to be hoped that the strong line taken by Nahas Pasha in the matter will have put an end for all time to a practice which was as prejudicial to the interests of Egyptian youth as it was derogatory to the prestige of the country. A University debate in England implies no factitious agitation on any given subject, but is to be regarded as a useful intellectual exercise for those who are qualifying for the responsibilities of citizenship.

INDIAN NOTES.

The Indian Budget.

The speech in which Sir George Schuster introduced his second Budget in the Legislative Assembly on Friday is entitled to a high place in the annals of Indian finance. Interest in this country in the statement resides as much in the questions of general policy raised by the proposals as in their incidence, serious though the latter may prove to be in several important directions. The fact that heavy additional taxation was likely to be proposed, and would probably take the form of the enhancement of the cotton duties, was generally understood. Twelve month ago the new Finance Member, it will be recalled, definitely envisaged such a possibility, although he rightly preferred to explore more fully the scope for further economies in expenditure before committing himself to any particular course of action. Fortified, no doubt, with the results of that examination and the experience gained during the intervening period, Sir George Schuster has wisely decided to grasp the nettle firmly. Like his predecessors he is handicapped by the very restricted sphere in which it is possible to broaden the basis of taxation for central purposes on account both of the general poverty of the people and the reservation of a number of heads of revenue for provincial needs, present or prospective. On the other hand, with the gap created by the remission of the provincial contributions still not covered by the normal growth of revenue, the problem of developing and reinforcing the Central Government's sources of income brooks of no delay. If anything could justify the recent diminution of confidence in India's credit it would be any semblance of hesitation on the part of the Executive, with the support of the Legislature, in adopting the steps necessary to balance the Budget. The measure of his task is indicated by the fact that, while the revised estimates for 1929-30 show a small surplus, the deficiency on the basis of existing taxation next year would be no less than 410 lakhs of rupees. Although the real and still more important work not merely of covering this formidable deficit but also of ensuring that for the first time for three years the annual outgoings are met out of current revenue involves the imposition of nearly five crores of new taxation, Sir George Schuster does not shrink from that unenviable duty.

India and Imperial Preference.

It is popularly believed that public opinion in India is practically unanimous in its opposition to the introduction of the principle of Imperial Preference into the Indian tariff. The view is, we know, very widely held, but it is far from being an accurate presentation of the position. The Indian Fiscal Commision, it is true, was impressed by "the almost complete unanimity with which Indian witnesses opposed the principle of Imperial Preference," but events have moved rapidly, in India as elsewhere, since 1922. The Commission, moreover, in our opinion, laid undue emphasis upon the necessity of treating the issue as one of principle rather than as essentially a matter of expediency, to be determined solely on its merits in relation to the circumstances of the particular industry or commodity which it is sought to benefit by that means. The idea that the trend of international trade after the post-War boom might be such as to make a preferential tariff the most practical and expeditious way of affording the requisite measure of assistance to an indigenous industry, with due regard to the consumer, is not even mentioned in the Report. In many respects the most interesting feature of Sir George Schuster's Budget is, therefore, the suggestion that in addition to raising the import duty on cotton goods to the general level of 15 per cent. ad valorem, there should be imposed for a limited term an additional surcharge of 5 per cent. from which British products should be exempt. If the proposal is accepted by the Assembly, it will more than offset the loss which Lancashire may suffer from the increase in the general tariff. The decision rests with the Legislative Assembly, the unprecedented action of the British Cabinet serving, as the Finance Member observed, merely to emphasise that, when the Government of India and the Indian Legislature are in agreement in fiscal matters, the intervention of the British Government is restricted to representation and appeal. The fight between the Bombay millowners and their political associates is likely to be a keen one, but there is a growing volume of responsible opinion in India which agrees with the contention so ably advanced by Mr. Kikalhai Premchand in his firm's annual review that the preference should be given, not in a spirit of political bargaining but solely as a matter of practical economics.

THURSDAY, MARCH 6, 1930.

RAPPROCHEMENT IN ARABIA.

All men of good will must rejoice at the provisional agreement which was reached on February 23 between King Faisal of Iraq and King Ibn Saoud of the Hijaz and Najd. For it is a fact that, despite the Treaty of Muhammarah which Sir Percy Cox signed in 1922, and the Treaty of Bahra which Sir Gilbert Clayton signed in 1925, with the leader of the Wahhabis, the popular sentiment as between Iraqis and Najdis has been far from cordial. Even where conduct was correct it was cold. It is notorious, indeed, that when Sultan Ibn Saoud (as he was before he mastered the Hijaz) was marching victoriously to his conquest of the domains of ex-King Husain, Iraqis in high position volunteered their services against the hated Wahhabis, and were restrained from thus embroiling Iraq only by the British High Commissioner. Suspicion of Wahhabi motives, indeed, has been a constant factor in Iraqi politics, and certainly it was reciprocated in abundant measure, though it is only just to add that recently there have been definite signs in Iraq of admiration of the Wahhabi leader's achievement. In any case, the basis of official relations between Iraq and the Hijaz-Najd is now changed. King Faisal and King Ibn Saoud have met for the first time in their lives, and each appears to have made an excellent impression on the other. Both Arabs are men of notable charm. King Ibn Saoud discovered (if he did not know it before) that King Faisal was no mere decadent scion of his arch enemy—the Sharif Husain—but a statesman who, as King of Iraq, had enjoyed nine years' friendship with his own friends, the British, and King Faisal saw that in Ibn Saoud was no mere reactionary Wahhabi, but a man of wide insight, shrewd grasp of the practicalities, and a genuine love of Arabia. To all appearances, indeed, the erstwhile enemies have become friends: a fact which is of the best possible augury for the peace and advancement of Arabia, where the personal element counts for much.

It is, indeed, an excellent thing that Iraq should be making this agreement in her own name, and not through the Mandatory Power which is her sponsor in foreign affairs until 1932, when she is due to enter the League of Nations. Mutual recognition and the exchange of diplomatic representatives will naturally follow this friendly contact between the two Kings; nor was it difficult, in view of the good will manifested by both sides, to secure agreement on the outlawing of tribal raids and the extradition of refugees, and an arrangment for providing reparations for past raids. Another very interesting feature of this meeting was the resolve to establish a Permanent Frontier Commission as between Iraq and Najd. This will be similar to the one provided for in the Treaty of 1926 between Iraq, Turkey, and Great Britain. In Iraq's northern boundary the scheme, which entails the meeting of the Commission twice a year to discuss all matters concerning the frontier—once on Iraq soil and once on Turkish soil—has worked admirably; it has, without doubt, knit close the bonds between Iraq and Turkey. It is no exaggeration to say, indeed, that at the present moment Turkey, who but a few years ago was an ever-present danger to Iraq, is Iraq's most friendly neighbour. There is no reason why desirable conditions should not be similarly established on Iraq's southern frontier.

The telegraphed summaries of this historic meeting in H.M.S. Lupin in the Persian Gulf look, however, almost too good to be true, and it need not be supposed that all difficulties were demolished at one swoop by it. To judge by the published accounts of it, one would imagine that "it was roses, roses, all the way," and, indeed, *The Times* went so far as to proclaim that Najd had accepted the Iraqi point of view on the question of the police posts in the desert. That would seem, however, at least to be premature. What was done at this meeting was, apparently, to leave this question, which was above all *the* outstanding question—for had not virtual agreement been reached at a former meeting between King Ibn Saoud and the late Sir Gilbert Clayton on most problems outside the frontier posts?—over for future discussion. It was stipulated that, if this knotty question were not resolved within six months, it should go to arbitration. In this connexion, it is, presumably, the precedent laid down in the Bahra Agreement of 1925 that will, if necessary, be followed. That would imply a special tribunal composed of two Iraqis, two Najdis, and a President of nationality other than that of the disputing representatives, to be selected by the two Governments of Iraq and the Hijaz-Najd in agreement. This tribunal's decision would be final and executory. But even if one is to treat the newspaper reports of this meeting in the Persian Gulf with some reserve, one must record with gratitude that an immense advance has been made in the Iraq-Najd problem. The atmosphere has been cleared; cards have been laid on the table; the principal actors on either side are now known to each other. For this consummation, tribute should be abundantly paid, as we have indicated in writing on this subject before the actual conference took place, to the two Kings, Faisal and Ibn Saoud; but no one, and least of all the Arabs themselves, is likely to overlook the patient and far-seeing work of the British authorities in trying over a long period of time to bring the two Kings together. One naturally thinks first of Sir Francis Humphrys, British High Commissioner in Iraq, and of his immediate assistants, but it should not be forgotten, as Mr. George Antonius has pertinently reminded us in a letter to *The Times*, that the man who perhaps more than any other prepared the ground for this happy consummation was the late Sir Gilbert Clayton, who never overlooked the farther goal of peace in Arabia in securing the nearer aim of tranquillity in Iraq. The day when the definitive treaty between the people of King Faisal and the people of King Ibn Saoud is signed will be a happy day for Arabia: nor will rejoicing be less sincere among the people who have acted as mediators and well-wishers—we mean, of course, the people of Great Britain. It ought now to be patent to all observers that Great Britain stands for peace and unity in Arabia, not dissension and division, as is too often supposed by her enemies: and if this *rapprochement* between the two Kings does not convince them of the integrity of British motives, nothing will.

*The Near and Middle East

From Our Own Correspondents.

IRAQ.

Baghdad, February 12.

The Royal Conference.

After several disappointments and postponements, the much-discussed meeting of King Faisal of Iraq with King Abdul Aziz ibn Saoud of the Hijaz and Najd has been fixed for February 20. King Faisal is expected to leave Baghdad about February 15, and will travel by special train to Basrah. The Conference will be held on board the Port vessel Nearchus. The High Commissioner and Sir Kinahan Cornwallis (Adviser to the Minister of the Interior), as well as the Prime Minister of Iraq, are expected to accompany the King.

A *communiqué* issued by the Press Bureau states that the two Arab monarchs will confer on "the best measures to adopt to put an end to the activities of malefactors likely to disturb friendly relations between the two sister countries of Iraq and Najd." The conclusion of a treaty of friendship and an exchange of diplomatic representatives are considered likely to be among these measures. The Minister of the Interior, Naji Beg as Shaukat Pasha, has already left for Basrah, accompanied by the Director of Municipalities; he is to go on to Kuwait to meet Shaikh Hafidh Wahba, Counsellor of King Ibn Saoud, and his Foreign Under-Secretary, Fuad Beg Hamza, in order to discuss in detail the arrangements for the royal conference. Fuad Beg lately had an audience with King Faisal on his way through Baghdad to Najd from Cairo.

It is reported that the Shaikh of Kuwait is sending a deputation to congratulate King Ibn Saoud on his victory over Faisal al Duwish, and to attempt a settlement of outstanding questions between Kuwait and Najd. The Shaikh of Bahrain is also said to be sending a deputation.

Parliament.

The dissatisfaction of a number of deputies with Iraq's position in regard to Great Britain was voiced in the Majlis by Hikmat Beg Sulaiman, ex-Minister of Justice, who asked the Prime Minister what had been done by his Government to repeat the demands "based on promises made under the 1926 Treaty," put forward by the late Premier.

Naji Beg Suwaidi replied that his programme was essentially that of the late Government, and his aim was to put an end to all past and present restrictions and stipulations, and all treaties and agreements hitherto entered into with Great Britain.

A Baghdad deputy complained that the Government had done nothing to prepare for the forthcoming negotiations, and asked why the Conscription Law had not yet been submitted to Parliament. He suggested that no proposals of the Cabinet should be accepted until they had made some progress in the matter of negotiations. In the debate which followed, the Government was accused of failing to fulfil any of its promises, and in particular the new *Nizam* for the Ministry of the Interior was criticised as merely confirming the right of Advisers and Administrative Inspectors to interfere in the internal affairs of Iraq.

The Prime Minister in reply said that he was not prepared to submit the Conscription Bill to the Majlis until they had been shown the British proposals. The Government had expected the new High Commissioner to bring with him the London proposals for the new Treaty, but, to their disappointment, these were not yet ready. If Parliament was not satisfied with his Government, he went on, he begged to be relieved from the burden of office.

The Minister of Finance, when asked to make a statement on the measures taken by the Government to "remedy the fall in prices of grain and staple foods in Iraq," replied that he proposed to reduce the export duty on grain and cereals, and to buy locally all produce supplies required by the Government. The questioner (the ex-Minister of Education) considered these measures inadequate, and proposed instead that the Government should float a national navigation company to compete with foreign companies, buy large quantities of grain locally for sale in foreign countries, and alter its system of land taxation. To this the Minister of Finance replied that the suggestions put forward, though enterprising, were impracticable in the country's present financial position. The new Customs Law has since exempted Iraq grain from the export tax of 1 per cent. previously exacted.

The Customs Tariff Law was ratified in the Majlis by an overwhelming majority. High duties are levied on all luxuries and imported articles of food, drink, and dress; provisions and grocery stores will pay 20 per cent. instead of 15 per cent., silk and artificial silk 25 per cent. instead of 20 per cent. On the other hand, in an effort to encourage development schemes in the country the Government has exempted from customs duty nearly all imported building materials and machinery.

A Law for the protection of public health against injurious and adulterated foods and drinks is being prepared by the Government.

The member of Arbil complained of the high land taxation which was causing serious unrest in the northern liwas, and begged the Government to exercise more consideration in collecting revenue. The Minister of Finance replied that his information did not warrant any alteration in the present system of assessing taxes

Gertrude Bell Memorial.

On January 18 a portrait bust of Gertrude Bell was unveiled at the Baghdad Museum by King Faisal, in the presence of the High Commissioner, Lady Humphrys, and a representative gathering of Iraqis and British. The bust, which was executed by Miss Anne Acheson, forms part of the memorial doorway, in which has been incorporated some yellow Yorkshire stone sent out from

England. Below the bust is a bronze tablet bearing this inscription :—

Her memory the Arabs will always hold in reverence and affection. She created this Museum in 1923, being then Honorary Director of Antiquities for Iraq. With wonderful knowledge and skill she assembled the precious objects in it, and, through the heat of the summer, worked on them until the day of her death on 12th July, 1926. King Faisal and the Government of Iraq, in gratitude for her deeds in this country, have ordered that the principal wing shall bear her name, and with their permission her friends have erected this tablet."

New Route to Europe.

The Iraq Railways have opened a new and very attractive route home, the journey from Baghdad to London taking eight days at a cost of Rs.632, first-class including wagon-lit. The traveller will leave Baghdad by the night train for Kirkuk, which he reaches early next morning; he then goes by car to Mosul, where he will spend the second night in the new Railway Rest-house. Another day's motor run brings him across the Turkish frontier to Nisibin, where he takes the train, his coach being attached at Aleppo to the Taurus Express for Haidar Pasha. At Constantinople he can go straight to the Simplon Orient Express for Paris.

General News.

The Director-General of Agriculture, Anwar Beg Khayat, went as Iraq's representative to attend the conference held last month at Jerusalem to consider the best methods of fighting locusts in the Middle East by concerted efforts.

Jaafar Pasha al Askari is expected to arrive in Baghdad shortly on his way from London to take up his new post of Iraqi Envoy Extraordinary and Minister Plenipotentiary at Teheran. Kamal Beg Gailani, Secretary to the Minister of Foreign Affairs, has been appointed first Iraqi Consul at Kermanshah. Atta Amin Beg, Secretary to the Iraq Legation in London, is to be transferred to Angora, and will be succeeded in London by Husain Beg Afnan, formerly Master of Ceremonies.

The ex-Chief Rabbi of Baghdad, His Grace Ezra Sassoon Reuben Dangour, has died in Baghdad at a great age. All Jewish schools and institutions were closed as a mark of mourning.

THE HIJAZ.

Jidda, February 14.

Torpor in Jidda.

Far removed from the scene of the negotiations for a settlement of all the troubles of Arabia and sunk in the customary torpor that Ramadhan induces, Jidda seems to be for the moment entirely news-less. Absolutely no information filters through regarding the arrangements for the conference of Kings, the result of which is, however, awaited with quiet confidence. The return of the King is awaited less patiently, for the list of first-class problems demanding his personal attention is a formidable one.

Problems for King Ibn Saoud.

Among them is a comprehensive scheme for the electric lighting of Jidda and Mecca. Considerable progress has already been made in working out its details, and it has been decided that the enterprise shall be undertaken by a Corporation comprising the Government, the Mecca Municipality and the general public in equal shares. Meetings have recently been held for the purpose of explaining the scheme to those of the public likely to be sufficiently interested to take up shares; and up to date some 17,000 £3 shares (£1 paid-up appparently) have been taken up. The electrification of Mecca and Jidda will constitute, indeed, a great public service, and it is to be hoped that the scheme will be conceived in a sufficiently broad spirit to

allow of the ultimate inclusion of a tramway-line within its scope.

Another matter engaging the attention of the local authorities is the blazing of a car-trail from Madina to Al Ula, some 200 miles northward on the Hijaz railway. A suitable route has been discovered and tested, apparently lying for the most part parallel with the railway line.

Visitors to Jidda.

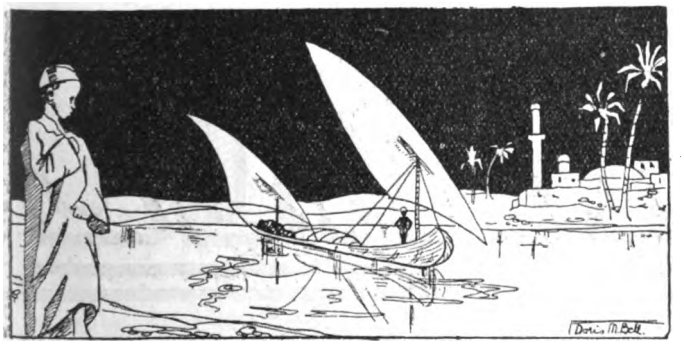
Recent visitors to Jidda include Professors Vensinck and Strothman, of Leyden and Hamburg Universities respectively, each of whom was here for a week or two—all too short a time for serious students of Arabia. Major Benton Fletcher has also spent some time here in quest of subjects for his brush, but his compulsory visit to the vaccination station at Suez *en route* appears to have started an affection of the eye which has placed him completely *hors de combat* during the whole period of his stay.

Pilgrims.

Pilgrims continue to roll in, and the number is now well over 35,000, most of whom are spending the Month of Fasting (now halfway through) in the gracious atmosphere of Mecca. I understand that, quite unwittingly, I gave offence by my omission to give any credit to the Lloyds agents here in connexion with the salvaging of the pilgrim steamer which ran on a reef about the end of December. I should, therefore, make amends by a declaration that the excellence of their work was taken for granted both by myself and probably also by all your readers. It was only their modesty which debarred me from knowing exactly what they did.

Foreign Representatives.

M. de Marcay has recently arrived from Beyrout to join the staff of the French Legation in the capacity of Vice-Consul. The nomination of Sir Andrew Ryan to be the first British Minister at Jidda is now an open secret, but it is not yet known when he is likely to arrive to take up his post.



EGYPT.

Cairo, February 22.

Anglo-Egyptian Negotiations.

Nothing definite has yet been decided on the date of the Egyptian delegation's leaving for London or on its composition, but the question of the negotiations continues to be debated by various organs of the Arabic Press. There seems to be consensus of opinion that the one difficult question will prove to be the Sudan, and the Wafd is being pressed not to give way on this. From what can be seen from the London papers which have arrived, it would appear to be accepted that the Egyptian delegation is going to negotiate on the basis of the proposals made to Mohamed Mahmoud Pasha by Mr. Henderson. This is, however, by no means as clear as the writers in those papers would seem to think. If one examines both the statement made by Nahas Pasha, when he presented the proposals to the two Chambers, and the resolution authorising the Government to open negotiations with the British authorities voted by Parliament, it will be seen that the author of both texts, whom one can suspect of being one and the same person or body, was very careful not to say "on the basis of the proposals," but resorted to a formula, the ambiguity of which in the circumstances would justify one in thinking that it was not desired to commit the Government to negotiations "on that basis." It is, indeed, by no means excluded that an attempt will be made to reopen the whole of the negotiations on the ground that the negotiators have a mandate from the Egyptian nation, which Mohamed Mahmoud Pasha did not possess, and that, as the British Government negotiated with him, it would be only fair not to expect the Egyptian mandataries to negotiate on the basis reached with one who was not so authorised, but to accord to them the same facility of discussing the whole question *ab initio*. Whether when the Egyptian delegation gets to London and feels the atmosphere it will come into line with the view of the British Government, it is, of course, not possible to say at present, but it is perfectly clear from both the tenor of the debates here and from what one has heard from the Wafd side that its keen desire is to be able to discuss the whole question untrammelled by what has gone on before.

The Aero Club of Egypt.

The Aero Club of Egypt, inspired by the prowess of Mohamed Sidky, the first Egyptian aviator to fly the Mediterranean, is now a *fait accompli*. It has as its President Prince Abbas Halim, himself a pilot of considerable experience during the War and the man who has, perhaps, done more than anyone else to encourage sports of every description in this country. The founders include not only Egyptians but also prominent members of the various foreign communities. The statutes, which have just been approved, provide for the organisation of aeronautical competitions and of aerial excursions, conferences on the subject and every branch of activity connected with the furtherance of aviation. The Club is to be an Egyptian organisation and three-quarters of the Committee must be of Egyptian nationality. But its membership will be open to all nationalities, and it will be affiliated to the Fédération Aeronautique Internationale.

An Amazing Outburst.

A most amazing outburst has taken place in the Arabic Press over a lecture given at the American University by Dr. Fakhry Farag. The subject was "Equality between the two sexes: Is it possible to accord to woman all the rights and impose on her all the duties of man?" The lecturer, who dealt with the question from the sociological aspect, pointed out the inferior position which women enjoyed in Egypt and the harm which this is doing to the future of the race. But he was careful to stress the point that his remarks must in no wise be taken as being addressed to the Muslim religious authorities. He merely criticised the civil authorities, who, in order to keep abreast of the development of modern thought, had enacted provisions in the civil and criminal law of the country, which clashed with those of the Muslim religious law. His lecture has, however, been regarded as an attack on Islam, and it is somewhat surprising to learn that the legal authorities have lent an ear to the complaints of the Arabic Press and are sending Dr. Farag before the Assizes.

A message on February 22 stated that Athens had been visited by the worst deluge since 1896. Four inches of rain fell in twenty-four hours. The Ilissos, usually almost waterless, overflowed, flooding numerous houses, sweeping away a bridge and drowning two persons. The Kephissos also overflowed, flooding the Kolonos quarter. There were six victims, of whom two were electrocuted by the collapse of electric tramway poles. Many houses have collapsed, and 200 families are homeless. Schools in the flood quarters have been closed for a fortnight. The Boeotian Kephissos overflowed and flooded the railway, thus interrupting the train service with Salonika. The Simplon Express has been held up. The total damage caused in Athens is estimated at £13,000.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, February 13.

Speeches.

It has been a great week for addresses, and I had intended to mention two speeches—on the subject of the so greatly contested Coastal Traffic Reservation Bill—of the week before. First, the Viceroy, who has been to Lucknow to hold a durbar, spoke at the durbar, to the Taluqdars, to members of the family of the one-time Kings of Oudh, and at the I.C.S. dinner at the Chhattar Manzil. The Governor of Bengal and Mr. Villiers have addressed the European Association, here in Calcutta, and, for it has been the old story of its never raining but it pours, there have been unusually interesting speeches delivered in the Legislative Assembly: the Commander-in-Chief has spoken during a farewell visit to Alwar, and there have been other speeches. I cannot quote from them all, especially as there have been meetings of two or three political Associations, where resolutions have been passed that have showed what action on the part of large political groups may be looked for in the near future.

Things Left Undone.

If in these circumstances I should call attention to the Government's omission to invite a poet to the durbar at Lucknow, it might seem almost wanton; yet I am going to do that for of all the things done and the things left undone this week, that omission is perhaps the thing most worth calling attention to. The poet was Khurshaid Hasan. The durbar was held in his native city: that city was the home of Mir Anis, his father's father, the most revered of all the Urdu poets there have yet been. Lucknow is a city where stories of Mir Anis are still told. I was myself told two the day before yesterday. All Lucknow now knows that Khurshaid Hasan was not invited, and by degrees the news will spread throughout India. They tell me that Khurshaid Hasan himself does not feel offended; "but," said my informant, "I resent the omission myself." I had no doubt he did.

Political Unrest.

We have now had at least forty years of unceasing political unrest. It has sometimes been a flood, sometimes an ebb, but it has never ceased. It was the thing most talked of in my own circle during my first year in India—1900—and it was by far the most talked of thing—this political unrest—during last December. Any man might ask why the Government's long effort to deal with the plague should have been so unavailing. I may especially; for two of my one-time colleagues were murdered in a riot in Delhi in one of the most troubled years, and but for something into which a measure of accident entered I might have been in the place of one of the two men. So I have asked why the Government's effort has been so unavailing. While searching in my mind for the answer I remember that Pandit Jawaharlal Nehru maintains that the British have destroyed the culture of his country. They have not done it, the Pandit would probably admit, by deliberate acts, but by so exclusively promoting in India what belongs rather to our civilisation than to India's. Had I been Viceroy, not only should I have seen that Khurshaid Hasan was invited to the durbar: I would also have asked the Governor to invite him to recite to me at Government House. One thing is certain—that, were there still Muslim Kings in Oudh, Khurshaid Hasan would be invited to the palace once a year. Our Government's failure to keep up the old customs tells much more against it in the matter of popularity, or the reverse, than any of the British officials know. They are all too cut off from culture to know. So I here call attention to the matter. It is of very great importance really. I have used the poet's name, but he is much better known as Urooj. That is his poetical name, or what the Urdu-speaking people call a "takhallus." The Government may never have heard of Urooj. If they have not, it is stupid. That is the word: part of the Government's failure to cope with the political unrest is directly to be accounted for by the fact that the Government is stupid.

The European Association.

I thought I would quote this from the speech of Mr. Villiers to the European Association: he is speaking of the controversy between the Government and the President of the Assembly over the policing of the Chambers: "Nor is this by any means the first time that there has been noticeable in the President that lack of impartiality which is so utterly destructive of all confidence. But if the confidence in the Chair has been destroyed, the confidence in the Home Members has frankly been shaken. . . . We hold no brief for anyone. If Mr. Patel is again at fault, he must be made to accept the full consequences of his fault. If the Home Member is at fault, the same must apply to him. All we ask and demand is that the Government of the country shall be so conducted as to avoid a repetition of this state of affairs." That is the forthright business man's way of speaking; but it is a little stupid. The Government must be composed of what human material there is. What is there? British officials woefully lacking in general culture, and a raw Assembly composed largely of Indians. One of them is elected to be President, when the Chair is vacant. There is no long tradition of an impartial Chair to control either the man elected, or, afterwards, those who elected him.

All-Parties Conference.

There was a paragraph in the *Pioneer* of the 8th on the subject of the proposed All-Parties Conference. I take this from it: "Sir Tej Bahadur Sapru has been in intimate touch with the leaders of all parties for some time past. He has been proceeding very cautiously, realising that a false or rash step will land him in almost inextricable difficulties, and bring upon him the wrath of either the Hindu Mahasabha, or the group known as the Central Muslims, or both. The decision to hold a preliminary conference, before announcing the resolve to hold an All-Parties Conference, is calculated to ensure that the All-Parties Conference does not end in a fiasco. The preliminary conference is expected to give Sir Tej Bahadur Sapru and his friends an idea of what to expect from the participants in the All-Parties Conference, and gauge the mood in which he is likely to find them." The preliminary conference there spoken of is to be held, it is understood, on February 27 and 28.

Western India National Liberal Association.

The Council of this long-named Association has adopted the following "statement":—1. As an essential condition of success of the Round Table Conference there should be a maximum of agreement among ourselves in India. 2. The only rallying-cry which can unite the different communities and classes is Dominion status for India, not as a distant goal or idea, but as an object capable of achievement within the shortest possible time. 3. In order to produce a favourable atmosphere the Government of India should implement the new policy by action calculated to remove all causes of irritation and produce calm and good will. It is not much less, all that, than if they had said: 1. The only thing that would satisfy us would be the moon. 2. The Government of India, in a favourable atmosphere, should bring down the moon. 3. No man amongst us should expect a bigger share of the moon than is given to all.

All-India Muslim League.

The Council of the All-India Muslim League has adopted a number of resolutions, this being part of one of them: "The Council further urges that it is of the utmost importance that the Round Table Conference should be called as early as possible, and that the date should be fixed and announced without delay." I have tried myself to stress the importance of the Conference being held soon. It will soon be a year since I first did so. Your Government appears not one to be hurried. But to return

Digitized by Google

to the League's resolutions: in them the Viceroy's announcement of October 31 is called "most timely": the revised procedure—a meeting between His Majesty's Government and representatives of India and the Indian Princes—is "satisfactory": the Muslim representatives should "constitute an adequate representation in character and number," and no particular organisation should be given "any preponderance": the recommendations of the Central Committee are "not acceptable, and the Council, therefore, is constrained to condemn the Report as detrimental to the general interests of the country, particularly inasmuch as they do not safeguard the rights and interests of the Mussalmans": the Muslims of India, the Council is of opinion, "will not be satisfied with or accept any constitution which does not put the Frontier Province on the same footing as the other provinces of India." There is in all that the promise of very stiff-necked opposition to what the majority of those present at the Round Table Conference are likely to want to press on His Majesty's Government.

Punjab Central Sikh Association.

The following is the text of the main resolution passed by the Central Sikh Association of the Punjab, the "Nehru Constitution" being what is better known as the Nehru Report: "Resolved that the Central Sikh Association is strongly of opinion that the withdrawal of the Nehru Constitution, in the absence of an alternative scheme, should not be misconstrued to mean that the Sikh claims have been duly recognised by the Congress. The Association further considers that the declaration of independence at this stage, when an epoch-making conference is proposed to be held in England, will hamper the speedy attainment of a Dominion constitution for India. The Congress programme is calculated to let loose the disruptive forces in the country, a step which is bound to spread chaos and disorder all round. . . ."

If this and the last two paragraphs are read together, with remembrance of the other schools of political thought in India, it will be seen how small a thing may be "the maximum of agreement among ourselves in India."

THE INDIAN BUDGET.

The real Swarajists, Sir Basil Blackett is reported to have remarked on a certain memorable occasion in the Legislative Assembly, are not those seated on the Opposition benches who have merely obstructed every measure of advance, but rather those, Indian and Europeans, who had carried on the government of the country in their despite. "Why," declared the late Finance Member, "I am a better Swarajist than any gentleman opposite. The veriest diehard could not have wished a better production than that staged by the political leaders in the past few weeks." Sir George Schuster must have been forcibly reminded of the substratum of truth underlying his predecessor's good-humoured gibe when rising last week to introduce his second Budget.

Instead of the anticipated surplus of Rs.30 lakhs, the year 1928-29 closed with a deficit of Rs. 106 lakhs, which more than absorbed the whole of the Rs.74 lakhs remaining in the Revenue Reserve Fund. While owing largely to a windfall of Rs.156 on German Reparations account the current year was expected to end without a deficit, it was clear, the Finance Member stated, that the gap made by the final remission of the provincial contributions had not been filled by the normal growth of revenue, and that it was necessary to seek new sources. In the coming year (1930-31), on the basis of existing taxation there would be, in fact, an estimated deficit of 552 lakhs. New essential demands for administrative purposes would alone require Rs.146 lakhs, and prospects in the main commercial services—railways, posts and telegraphs—necessitated allowing for a deterioration of 99 lakhs. The net addition to interest on deadweight debt was 107 lakhs, and the special provision for the deferred liability on cash certificates, and the increase in the ordinary provision for reduction or avoidance of debt would absorb 88 and 27 lakhs respectively. While the general improvement of revenue could not prudently be put higher than 5 lakhs, savings of 62 lakhs in the Civil estimates and a reduction of the military grant by 80 lakhs, in pursuance of the principle that only essential or productive expenditure should be admitted and in any case must be balanced by corresponding economies, reduced the gap to 410 lakhs.

If the cost—30 lakhs—of the remission of one-quarter of the export duty on rice for which the Budget provided were added, the total amount which it was necessary to cover by new taxation was therefore 440 lakhs. The Government's proposals included the reimposition of the duty on silver imports of 4 annas per oz., yielding 100 lakhs; an all-round increase of Rs.1½ per cent. in the import duty on sugar, 180 lakhs; an enhancement of the excise duty on kerosene from one anna to one anna six pies, the import duty at the same time being reduced from 2½ to 2 annas 3 pies—a net yield of 35 lakhs; an increase of one pie in the rupee in the income tax and super-tax on incomes of 15,000 rupees and upwards, and a corresponding increase in the super-tax in all grades other than the flat rate on companies, 70 lakhs; and the raising of the import duty on cotton piece-goods to the general level of 15 per cent.—125 lakhs. The changes were estimated to result, therefore, in a revenue surplus of 70 lakhs and as the increased taxes, other than income tax and super-tax would take effect from March 1, a surplus of 35 lakhs was also estimated in the current year.

The Finance Member then came to the most interesting and controversial part of the whole speech, namely the justification of the enhancement of the cotton duties and the proposal to recommend to the Assembly the imposition of an additional surcharge of 5 per cent. on all imported piece-goods of non-British manufacture, with a minimum rate of 3½ annas per pound on plain grey goods. After explaining that while the increase in the revenue duty from 11 to 15 per cent. would have a protective effect the peculiar circumstances in which it might be necessary to supplement it by some special protective measures which should be temporary and limited to purposes demonstrably necessary to meet Bombay's immediate needs, Sir George Schuster frankly referred to England's interest in the matter and quoted at length from the extraordinarily interesting correspondence which had passed between, not the Secretary of State, but His Majesty's Government and the Government of India in regard to the proposals.

The British Cabinet, he said, had not attempted to interfere with the Convention by which India enjoys fiscal autonomy when the Government of India and the Indian Legislature are in agreement. In fact the British Government so fully acknowledge the inviolability of the Convention as to provide striking evidence that it has become an integral part of the Indian constitution. The British Government merely asked that the reactions of their proposals in India and their serious effects in England, which they felt sure neither the Government of India nor the Legislature would desire to create, should be taken into account. "To this we replied," Sir George Schuster stated, "that, though we were deeply impressed by a message of this nature, we nevertheless felt bound to adhere to our main proposals. We pointed out the following considerations: First, that we needed revenue; secondly, that Customs is our chief source of revenue; thirdly that the duty on cotton piece-goods now stood below the level of the general revenue tariff; fourthly, Indian industry was suffering from deep depression and the Bombay mills were approaching a desperate position which might affect the whole future of this important centre of Indian commerce and finance. We recognised and deplored the possibility of serious effects in England, but we stated that we felt clearly bound to put India's interest first." On the other hand, the Government of India realised how important it was for India to take account of British opinion, especially at the present time, and while it could not

Digitized by Google

modify the general application of the 15 per cent. revenue it was prepared to propose to the Assembly that, as regards any additional and temporary protective measures, their application might be limited to non-British goods and that in these circumstances there should be imposed, in addition to the 15 per cent. revenue duty, a 5 per cent. protective duty, with a minimum of 3½ annas per pound on plain grey goods, on all cotton piece-goods from outside the United Kingdom, this protective duty to be enforced for three years only and an undertaking to be given that its effects should be examined by the Tariff Board before the end of that period.

After emphasising that H.M. Government had been informed that "it would not be right for us to ask the Assembly to commit themselves to Imperial Preference as a principle, but merely to adopt a particular course which, in our judgment, was consistent with India's interests at a critical juncture when much might depend on India's response to the British Government's appeal," and that the final decision on the proposals, which would be embodied in a separate Bill, must in any case rest with the Legislative Assembly the Finance Member continued:

"It is of course obvious that these proposals will evoke very considerable comment and will be subjected to the closest and most critical scrutiny. This we shall welcome, but I would at the same time appeal to all Honourable Members to exercise this scrutiny in a calm and judicial spirit before they pronounce any final judgment. It is for them to consider whether they can accept what I have indicated as the guiding principles underlying our proposals and whether these proposals do in fact meet India's immediate needs while being at the same time calculated to further her interests in the widest sense. It will not suffice to keep in view only those factors which in ordinary times might be held decisive, for the times are not ordinary. Within a few months representatives of India will meet representatives of Great Britain to discuss in the fullest and frankest way the future of this great country and much must depend on the spirit in which they meet. I would ask Honourable Members to give full thought to the grave importance of these wider considerations.

"It is obvious that any gesture of friendship which India can, spontaneously and without compulsion, make to the British Government in their own present grave industrial troubles is bound to strike a responsive note. For our part, our conviction is that, if our proposals are examined without prejudice, they will be found to be better adapted to India's needs than any other scheme we could put forward." The ultimate success or failure of the Bombay mill industry, in the Government of India's view, must depend entirely on the extent to which the mill-owners utilised the proffered opportunity to improve their efficiency and labour conditions.

The Finance Member concluded on an optimistic note. If, as he hoped, the wave of trade depression was passing and they found themselves next year with a surplus, there was no doubt that the money was needed. There were many desirable lines for the remission of taxation which retarded the country's economic progress and further beneficial new services, such as agricultural research, should not be starved. In any case, in a country like India, which was subject to such great climatic vagaries, a much greater margin of revenue was necessary than they had been working on during the past three years. But above all there was the consideration that the Central Government, after the Constitutional revision, would inevitably have to relinquish some sources of revenue to the Provincial Governments, in whose hands the real nation-building activities lay. "Of all tasks the responsibility for which my present office lays upon me, that which I take most seriously is the duty of finding revenue in order that those provinces, whose efforts are at present handicapped, may make a great start forward in developing services which the country really needs. It is to be hoped that the new taxes now proposed will open a way, if things go well, without burdening the economic life of the country or subjecting any class to hardship, to provide a margin for assistance to the provinces, after the Constitutional reforms." The uncertain factor was the political situation, and he added a grave warning against mischievous agitation. The Government had demonstrably done all in their power to create a strong and healthy financial position. Evidence of a sense of responsibility on the part of the leaders of public opinion inside and outside the Assembly and a determination to oppose revolution and repudiation of debt was essential to the restoration of the world's confidence in India. If the insidious lack of confidence continued to sap their foundations, the Government would do its best to protect them and would not hesitate to take strong financial measures for that purpose. But this would mean devoting their energies and resources to defence rather than constructive new enterprise; and that hopeful prospect of all-round recovery which would bring prosperity in so many directions and for which they had created all the requisite conditions would be unattainable. "The future in this respect lies in the hands of the leaders of non-official opinion in India. The responsibility rests with them, not with the Government."

THE INDIAN CRAFTSMAN.

Mr. H. V. Lanchester, F.R.I.B.A., who is well known for his architectural work in India, gave a lecture before the India Society on February 26 on "The Indian Craftsman and his Environment." The lecturer, in the course of his remarks, declared that the Indian had always been a skilful worker with his hands, but in order to rouse him to the maximum degree of effort, the resulting achievement must be in one form or another a work of art. This attitude is distinct from that of the European craftsman, who takes pride in skilled work even it be only fitting a tenon in a mortise or in connecting two lead pipes by means of a "wiped joint." Indian workers take pride in their work, in its beauty and delicacy, but it is not the workman's pride in his skill, but the creator's pride in realising his conception of something fine within the limits of his craftsmanship.

The Indian is an individualist, his attitude being that of the artist, and he co-operates badly when we ask him to confine himself to work forming part of a whole, with which he has no concern. He sees, what only a few among western people are permitted to see, that productive ability can only be pleasurable when it is an integral part of the pattern of life, and not something extraneous to be got through in order to live. Thus the traditional mode of work is also a mode of life. The work is carried on amid family and neighbours, as often as not in a shop or shed open to the street. Normally trades group themselves; in some cases of necessity, such as where the weavers stretch their yarn from tree to tree down the middle of the weaver's road; in others, though there is no absolute necessity, the convenience is obvious.

Some craftsmen find it advisable to work in isolated positions. The potter may often be found alone outside the town where he can dig and temper his clay, while some of the simpler crafts can migrate from place to place where they are in demand or the materials are to hand. Generally speaking, however, the workers will be found in the town in their own special street or bazaar. As you pass along this, if you are in the jewellers' quarter, you will see metal being drawn into wire, beaten into plates, hammered into designs, and soldered up into ornaments or into decorated vessels. Elsewhere lathes are turning woodwork or polishing lacquer on it, you will find a man carrying wood blocks for cotton printing, and in other parts the cottons or sateens being hand printed from those blocks. In the south of India many crafts are still efficiently carried on, such as dyeing, cotton painting and printing, wood and metal work, lacquer and fine weaving, together with other characteristic crafts, specimens of which are shown at the Victoria Institute, Madras,

Digitized by Google

where they can be purchased at fair rates. Good work is still produced in other parts of India, such as Rajputana and around Benares.

The occasion was utilised to present some drawings of Indian craftsmen by Mrs. Lena George to the Society, and slides of a selection from them were thrown upon the screen. The Siamese Minister, Prince Varnvaidya, a Vice-President of the Society, expressed the thanks of the India Society for the gift.

A MOMENTOUS SESSION.

It may be safely affirmed that the proceedings of the Tenth Session of the Chamber of Princes, which was held at Delhi last week, have finally dispelled any doubts which may have lingered in this country regarding the attitude of the Indian Princes towards the major constitutional problems of the day. The Chamber meets annually under the presidency of the Viceroy; and at this Session 42 Ruling Chiefs and 16 Heirs-apparent were present. It may be the case that the Chamber of Princes, as a body, has not yet fulfilled all that was expected of it; and proposals for the revision of its constitution and for the enlargement of its powers are at present under consideration. Nevertheless, last week's session was a notable gathering distinguished by the statesman-like attitude of the Princes towards the questions under discussion, and by the terse and vigorous speeches in which they expressed their views.

It is clear from the telegraphic reports that the opening meeting was marked by the sincerity and warmth of the speeches which were made by several Princes on a resolution, moved by the Chancellor, the Maharaja of Patiala, expressing happiness at the complete recovery of the King from his recent illness. Lord and Lady Irwin were also warmly congratulated on their escape from the attempt to wreck their train; and, needless to say, the resolution was passed unanimously, and not by a bare majority after an acrimonious debate, as was the case with the Congress. Emphatic disapproval of the policy of separation from the British Empire was expressed in a resolution, which welcomed the prospect of the early attainment by British India of its due place among the Dominions of the British Commonwealth. In moving this resolution, the Maharaja of Alwar said that India had been progressing, with the help of the British Government, towards her natural goal. He failed to understand what the practical results of independence would be except that they would mean that the country would be reduced to a state of chaos. On the other hand, the goal of Dominion status was an honourable one towards which they could all march together; and they in the Indian States could unanimously combine to wish British India success in the attainment of this goal.

The view thus definitely expressed by the Maharaja of Alwar was strongly endorsed by the Chamber, and the resolution was carried unanimously. It was quite evident, the Viceroy said, from the debates that if independence became the concrete political programme of British India, those pursuing it would succeed in destroying all hope of unity for India. The Maharaja of Alwar had rendered a public service, Lord Irwin thought, by making this abundantly plain to the world.

The opportunity to take part in the Round Table Conference was cordially welcomed by the Chamber, the Chancellor (the Maharaja of Patiala) moving a resolution to that effect. He also invited the Viceroy to recommend that opportunities be provided for consultation between His Majesty's Government in England and representatives of the Princes regarding proposals directly or indirectly affecting the States as they emerged from the Conference or from the report of the Butler Committee. Delegates from British India would, it was understood, attend the deliberations of the Joint Parliamentary Committee at a later stage than the Round Table Conference; and the Princes wanted to be afforded a corresponding opportunity. The Viceroy, in replying, said that it was contemplated that representatives of both British India and the Indian States should meet the British Government, either separately or together, as necessity might suggest.

As was anticipated, the report of the Butler Committee was vigorously criticised by the Princes. Soon after the publication of the report last year attention was drawn in The Near East and India to several difficult questions in respect of which the Indian States did not accept the view taken by the Committee. Most of these centred around the vexed problem of paramountcy, to which problem the Maharaja of Patiala devoted considerable attention in his speeches in the Chamber last week. He admitted that on several matters the Committee had found in favour of the States, but he was bound to say that on many other points vitally affecting the rights and obligations of the States the views expressed were unacceptable. It seemed to him to be the opinion of the Committee that paramountcy was a vague and undefinable thing, under the cloak of which justification could be found for any action of the Government of India. Such a loose conception of paramountcy cut at the very root of all the rights which the Crown had, in solemn promises, guaranteed to the States. If this view were accepted, the Crown and its agents could claim any rights they chose to assert and the States would have no rights except those which the Crown Agents thought fit to leave them.

On the question of intervention also the Maharaja was equally definite. It is stated in the Report of the Committee that it is the duty of the Paramount Power to protect a Prince against attempts to eliminate him and to substitute another form of Government. If these attempts were not due to mis-government but to a widespread popular demand for a change, the Paramount Power would be bound to maintain the rights, privileges, and dignity of the Prince; but it would also be bound to suggest such measures as would satisfy this demand without eliminating the Prince. The Maharaja of Patiala said that, according to this the Government of India claimed the right of intervention not merely on the ground of gross misgovernment, but on the ground that they might deem it expedient to suggest changes in the form of government immemorially established in the States. He urged the Princes strongly to repudiate this extraordinary dictum, as otherwise it might undermine and eventually destroy the whole fabric of the policy of their States. The obligation of the British Government to maintain unimpaired the privileges and dignity of the Princes involved the duty to protect the Princes against popular agitation. He could not understand how this obligation could give the Government of India the right to advise the Princes to change their hereditary and traditional forms of government merely because there was a demand for a change by a number of their subjects.

The Maharaja of Kashmir, the Maharaja of Bikanir and other Princes also spoke on the Butler Report, and ultimately the Chamber adopted a resolution inviting the Viceroy to appoint nominees to consult with nominees of the Chamber in order to define a basis for intervention and condemning the doctrine of usage and political practice expounded in the Report. The Viceroy said, at the close of the session, that he warmly appreciated the freedom of expression exercised. Even where he could not see eye to eye with their Highnesses it was a matter for satisfaction to them all that they should feel at liberty to speak with perfect frankness because it was impossible to expect differences of opinion to be resolved unless they were frankly stated.

Resolutions on several other important questions were adopted by the Chamber including one recommending to the Viceroy that he should take steps to secure that an Indian ruling Prince should lead the Indian delegation to the Assembly of the League of Nations at least once in a cycle of three years.

PERSONAL AND GENERAL

To-day

March 6, 1930 (New Style).
February 21, 1930 (Old Style).
Shawall 5, 1348 A.H., of the Muslim Calendar.
Adar 6, 5090, of the Jewish Calendar.

Lord and Lady Carson will return to 5, Eaton Place on March 14 from Egypt.

The Bulgarian Minister returned to London last week from Sofia.

Lady Nuttall left Cheshire last week for Egypt, and will be away until the end of March.

The Hon. Mrs. Spencer Graves returned to 20, Craven Terrace on March 1 from Egypt.

Sir Laurence and Lady Philipps will return to London from India and Egypt about the beginning of April.

The Hon. Alexander and Lady Margaret Shaw returned last week to 24, Princes Gate from Egypt.

Lady Evelyn Cobbold will return to 9, Carlos Place on March 10 from Egypt.

The Arab Horse Society is holding its London Show at the Royal Agricultural Hall on March 7 and 8. Judging will begin at 9 a.m.

Field-Marshal Viscount Allenby and Viscountess Allenby returned to 24, Wetherby Gardens on March 1 from India.

The Afghan Minister in London held a reception in celebration of "Id-ul-Fitr" at the Afghan Legation on March 4.

The Earl and Countess of Lichfield left England on February 27 for the South of France and Egypt, and will be away until April.

Lord and Lady Melchett, who left for South Africa early in January, will return to 35, Lowndes Square at the end of March.

Air Chief Marshal Sir John Salmond, upon his appointment as Chief of the Air Staff, had the honour of being received by the King at Buckingham Palace on February 28.

Mr. R. C. F. Schomberg will lecture to the Royal Asiatic Society on "The People of Sinkiang," on March 13, at 4.30 p.m., This lecture, which will be illustrated, will be given at 74, Grosvenor Street, W.1.

It has now been officially announced that King Faisal has appointed Jaafar Pasha al Askari, Iraq Minister in London, to be the first Minister Plenipotentiary of Iraq in Teheran in consequence of the new relationship between Iraq and Persia. Jaafar Pasha expected to leave London this month.

A lecture was delivered on March 3 at the Tacchomo Club, 174A, Hammersmith Road, London, by Miss Julia Chatterton on "In Quest of Folk Song in Yugoslavia—With Musical Illustrations." Yugoslav songs, the settings of which had been made by Miss Chatterton, were sung by Mr. D. Morgan Jones.

The Turkish Ambassador and Mme. Ferid Bey gave a dinner at the Turkish Embassy on February 27, followed by a reception and dance. The Diplomatic Corps and delegates to the Naval Conference were invited, and among those present were the Prime Minister and other members of the Government, representatives of the Diplomatic Corps and a large general company.

Lord Lloyd returned on February 25 to 30, Portman Square, from Paris, where he had been for a few days.

The Earl of Inchcape left London on March 2 to attend the Suez Canal meeting in Paris, and proceeded to the Riviera the following day to be with the Countess Inchcape, who, though very much better, is not yet able to return home.

The Air Ministry announces that Air Vice-Marshal Sir Robert Brooke-Popham, Royal Air Force, at present in Command of the Royal Air Force in Iraq, has been selected for appointment as Commandant of the Imperial Defence College. He succeeds Major-General W. H. Bartholomew, the present Commandant, who is due to vacate the apopintment at the end of December next.

THE ID-UL-FITR.

Two thousand Muslims gathered at the Mosque, Woking, on March 2 to celebrate the festival of Id-ul-Fitr, which marks the end of thirty days' fast of Ramadhan. Among those present were the Ministers of Afghanistan and Iraq and the Chargé d'Affaires of Egypt, cadets from Sandhurst, Lord Headley (President of the Muslim Society in England) and Lady Headley.

THE EX-SHAH OF PERSIA.

The death occurred on February 27, at Neuilly, of the ex-Shah of Persia, Sultan Ahmed, eldest son of Muhammad Ali. Sultan Ahmad was eleven when he was proclaimed Shah in 1909, upon the deposition of his father. He was actually crowned in July, 1914, and, after a somewhat uninfluential reign, was deposed in 1925. His was a most troubled reign, scarcely characterised by the force of the original members of the Qajar dynasty. After the War, during which the ex-Shah appears to have wobbled, was over, he came to Europe. In November, 1919, he visited London as the guest of the King and Queen, expressing, among other things, his satisfaction with the famous Anglo-Persian Agreement. But on his return to Persia he saw the trend of things, and when, four years later, he returned to Europe, it was probably with the consciousness that he would see Teheran no more. However that may be, he was in fact deposed, in favour of Riza Shah, in November, 1925, and ceased to take much apparent interest in his native land. His death, which was not wholly unexpected, can have no effect on the situation in Persia, where no active pro-Qajar sentiment is discernible.

It is officially reported that the Greek Minister in Angora has received instructions from Athens to sign the agreement relating to the exchange of populations. Thus direct negotiations between Angora and Athens have led to the satisfactory ending of a dispute which has dragged on for several years. Negotiations will now be begun in Angora with a view to the conclusion of treaties with Greece of amity, arbitrage, and commerce.

Where to stay in the East

THE WEEK AT HOME

London, Tuesday Morning.

Divided Parties.

Not often are the dissensions which exist in the three political parties so clearly seen as they were last week, when the serious fissures were made plain to the meanest intelligence. The Liberal Party made itself a laughing stock over the Coal Bill, because the Government was actually saved by the votes of Liberals, despite the very strong lead given by Mr. Lloyd George. But if it is now obvious that, so long as Mr. Lloyd George is at the head of the Liberal Party, no real unity can ever be obtained, so it is obvious that the Maxton-Wheatley group within the Labour Party will never become reconciled to the present heads of the Labour Party. There is this, however, to be said, that the I.L.P. will not deliberately wreck the Labour Party's position in the House, whereas the Asquith rump will quite cheerfully upset Mr. Lloyd George's plans there.

As for the Conservatives, what can one say? Their plight is truly pitiable. It is fairly evident that they are badly rattled by the manœuvres of the Beaverbrook-Rothermere combine, because their speeches have been partly in favour, and partly against this present attempt to realise Empire Free Trade. The very able speech of Sir Robert Horne, for instance, which went far closer to a *rapprochement* with the newspaper Peers than Mr. Baldwin has dared to go, has not so much cleared the air as it has darkened it with the not impossible suggestion that at last a real successor to the ex-Prime Minister has been found.

Nor can one see a real way out of the dilemma so long as the Conservatives pay lip service to the ideal of Empire Free Trade. For nothing is less to the liking to a section of the present generation of unthinking voters than the cry, which is being freely made by the Empire Free Traders, that the "orthodox" Conservatives are pursuing a wretched policy, based on tactics as opposed to a bold ideal.

The New Party.

It must be confessed, however, that the new Party of the newspaper proprietors is advancing in the queerest way. It would almost seem, indeed, that whereas Lord Rothermere, the implacable enemy of Mr. Baldwin, is for ever shouting "Onward," Lord Beaverbrook (who may, by the way, find it extremely inconvenient to fall out with Lord Rothermere) is in effect counselling "Steady." In any case, there is a lot of the old hotch-potch of the *Daily Mail* (No surrender in India or Egypt, evacuation of Iraq and Palestine, No waste, and the rest of it), which finds no echo in the columns of the *Daily Express*.

And so, just as the divisions in the older parties are being eagerly seized upon, cynical observers are disposed to ask how long the new alliance between the rival newspaper owners is likely to last. What can be regarded as certain is that Lord Rothermere will never hold out an olive branch to the official Conservatives; Lord Beaverbrook, on the other hand, appears to be less concerned with personalities. Presumably it is the main business of each of them to sell their respective papers, and it is questionable how long this terrific campaign for Empire Free Trade can be kept on the front page.

But apart from internal organisation, the new Party is begining to encounter severe opposition from men who really know the Empire. The other day, for example, Mr. Ormsby Gore made a speech on Empire Trade which in effect blew to smithereens the case which the new Party is endeavouring, without half his knowledge, to make—and also, it might well be added, the ideal to which so many equally ignorant Conservatives profess a passive allegiance. Mr. Ormsby Gore, who does know his subject, said what many philosopically-minded people have felt to be the truth, that it is folly to attempt to impose an artificial unity upon the Empire.

What the Conservatives obviously should do is not merely to say that the programme of the New Party is impracticable, but to show why it is impracticable, and, above all, to cease to pay homage to its ideal. The impression that many of them convey at the moment is that their own policy is really the same as that of the newspaper proprietors, who are, unfortunately, in too much of a hurry. For the sake of their honest souls they must dispel this impression. Their ignorance and what in effect amounts to their hypocrisy really constitute the main strength of the Empire Free Trade Party.

Rationalisation.

It is probably a sign of our uneducated times that slogans should be invented to gull the populace and be used by politicians for all they are worth. But it is a fair guide that the bigger the word the more suspicious should one be of it. Take the blessed word "Rationalisation." It is on the lips of every politician. We are to rationalise at home, abroad, and everywhere. "Imperial Rationalisation" appears to constitute the Conservatives' main hope of success at the next election. What in Heaven do these long-sounding titles really mean?

At present no one appears to distinguish sufficiently between natural and artificial rationalisation. Too much have we seen in recent years of amalgamations secured by people more interested in the sale of shares than in the production of goods. We have seen unemployment as the apparently inevitable result of amalgamations. We have felt, as Mr. Arthur Pugh, of the Iron and Steel Trades Confederation, said the other day, that the objective of present day rationalisation is "not so much to obtain more and cheaper commodities in order to increase consumption and a general standard of material comfort, but to be able more successfully to cut the other fellow's throat in competition either at home or abroad in a market which is already below productive capacity."

One would not be surprised if there were a general demand that rationalisation, which all recognise is inevitable, should be controlled by the State. It may be that economic matters are playing into the Socialists' hands. Or can those who supervise particular instances of rationalisation be relied upon not to overlook the human aspect?

Antoine Bourdelle.

By general consent, Bourdelle, an exhibition of whose sculpture and drawings is now being held at the Leicester Galleries, Leicester Square, was one of the most considerable figures in contemporary art. This Frenchman had extraordinary facility in almost every kind of sculpture: he knew the secret of all the great ages of sculpture, from the oldest to the newest. This exhibition is proof of his amazing versatility.

And yet, something appears to be lacking. Versatility is sometimes a substitute for real originality. One does not mean, of course, that Bourdelle had not personality. He had charm—several small bronzes in this show are completely charming—and he had force—as witness the figures of Rodin, Ingres, or Beethoven. But as certain pianists play with tone-colour with entire technical command yet fail to convey the impression of greatness, so Bourdelle leaves one with the impression that in mastering style he was apt to become a stylist rather than a creative genius. The style in him is much easier to discover than the man.

Alter Ego.

Mr. William Armstrong, A.F.C., arrived in Heliopolis early this month to take up his appointment as manager of the Near East Division of Imperial Airways. He is taking over from Major H. G. Brackley, D.S.O., who has been acting manager since last summer, and who will return to London to resume his duties as air superintendent.

Ahmed Riza Bey, a former President of the Turkish Senate, and founder of the Committee of Union and Progress, which fought against the Abdul Hamid régime, died last week in Constantinople. Ahmed Riza Bey has been called one of the makers of modern Turkey. When the new Turkish Parliament met in December, 1908, Ahmed Riza was chosen as its President. He was well known in London, which he visited during the Balkan Conference.

Book Reviews

AN ARABIC CRUSOE.

"THE HISTORY OF HAYY IBN YAQZAN." Edited by A. S. Fulton. (London: Chapman & Hall. 21s.)

The series of Oriental works which Sir Denison Ross is editing for Messrs. Chapman and Hall has been well named the "Treasure House of Eastern Story." This story by Ibn Tufail (who died in 1185) is indeed a pearl of great price, most eminently worth rescuing from the comparative oblivion in which it had fallen in England since Simon Ockley, in 1708, translated it from the Arabic. It should be pointed out that it is Ockley's picturesque version, done in clear, forceful English, that has here been reprinted, but Mr. Fulton, Assistant Keeper in the Department of Oriental Books and MSS. in the British Museum, has in places amended Ockley's text, basing his changes on Gauthier's Arabic text, which is the best extant.

It is a delightful and stimulating story, this account of Hayy Ibn Yaqzan ("the living one, son of the waking one"). This creature is born, or rather appears on a desert island, and is tended at first by a gazelle. For a time he lives a Crusoe-like existence. He observes the animals carefully, but finds soon that by the exercise of his superior intelligence he can dominate them. From merely physical observation he progresses into metaphysical calculation—the book is in fact a metaphysical analysis of the relations between Arabic philosophy and Muhammadan theology—and thus discovers a conviction in the existence of an all-powerful Creator. From this point he devotes himself to what is in effect Sufi doctrine, trying to merge his own intellect with the Active Intellect and his own body into that of the Eternal Spirit. Eventually there is drifted to the shores of this island one Asal, who has renounced the world to satisfy his spiritual ambitions. After Hayy Ibn Yaqzan has been taught by Asal to speak the two men recognise with joy that by different roads they have arrived at the same truth. The missionary spirit now impels Hayy to leave this island, in company with Asal, for another, in an attempt to convert to the higher ways an ordinary Muslim community living there under a wise King called Salaman (doubtless the prototype of Caliph Abu Yaqub, whose Wazir and physician Ibn Tufail was). This community is obeying the commandments of the Prophet Muhammad—particularly those which dealt with material things, such as rewards of the future state, and liberty in the matter of riches and food. Hayy found, therefore, that the material on which he hoped to work was altogether too forbidding. He saw then that Muhammad had decreed wisely, knowing mankind better than he. So he resolved to leave the island, and return with Asal to his original home. Before doing so, however, he went to King Salaman, and confessed that Muhammad's way was best. And this is how he justified at once the Quran and the Almohad Caliphs who practised "in beliefs, a purely spiritual conception of Allah; in conduct, a literal acceptance of Quranic teaching":—

> And he exhorted them (Salaman and his friends) to stick firmly to their Resolution of keeping within the Bounds of the Law, and the Performance of the External Rites; and that they should not dive into the Things that did not concern them, but that in obscure Matters they should give Credit and yield their Assent readily; and that they should abstain from novel Opinions, and from their Appetites, and follow the Examples of their pious Ancestors and forsake Novelties; and that they should avoid that neglect of religious Performances which was seen in the vulgar sort of Men, and the Love of the World, which he principally caution'd them against. For both he and his Friend Asal knew that this tractable, but defective sort of Men, had no other way of Salvation; and that if they should be rais'd above this to the Realms of Speculation, it would be worse with them, and that they would not be able to attain to the Degree of the Blessed, but would waver and fall headlong, and make a bad End. But on the contrary, if they continu'd in that State in which they were till Death overtook them, they should find Safety, and stand on the right Hand: But as for those that out-went them, they should also take place of them, and be the nearest to God.

This long extract is fair example of the excellent English and the refreshing thoughts that are contained in this book. It only remains to say that Mr. Fulton has contributed what seems to us a perfect Introduction, explanatory, appreciative, and never fulsome, and that the Publishers for their part have done worthily. It is indeed a book to cherish, both mentally and physically.

GERMANY AND ROUMANIA.

"DEUTSCH-RUMÄNISCHE WIRTSCHAFTSBEZIEHUNGEN." By Dr. Hermann Gross (Berlin: Walter de Gruyter & Co.)

This book on German-Roumanian economic relations is the thirteenth volume of a series of studies issued by Walter de Gruyter and Co., of Berlin and Leipzig, in which various aspects of Germany's economic life and international relations are subjected to close and comprehensive examination. In view of the special position that Germany occupied in the economic life of Roumania before the War, it was to be expected that no time would be lost by the Germans after the re-establishment of normal relations between the two countries, in a resolute attempt to pick up again the threads of the old relationship. Roumania to-day, however, is in a very different position from that which she occupied two generations or more ago. Germany seized her opportunity for gaining a hold on Roumania's economic life at a time when the gap between a restricted upper class and the peasants who formed some ninety per cent. of the population was only inadequately bridged by the beginnings of a middle class. Post-War Roumania has not only enlarged her territory and population and materially improved her prospects for industrial development, but has also by now acquired a business capacity of her own. There can never be German penetration of her economic life to the same extent as before the War; but the occasion for close trade relations remains, and Dr. Hermann Gross sets himself the task of a comprehensive investigation of conditions in Germany and Roumania, with a view to showing how the two countries are situated for supplying one another's needs. The book is of special interest to Germans and Roumanians, but it supplies a careful analysis of Roumania's economic conditions which is of value to others as well. It was, perhaps, inevitable that industrialised Germany should view with misgiving the attempt made by former Governments in Bucharest to force the pace of industrial progress in Roumania; but the author shows no signs of allowing any prejudice in this respect to impair the objective character of his examination. He shows how State help for artificial industries increased the total production, but was accompanied by neglect of natural industries identified with agriculture. He welcomes the tariff of August, 1929, that put an end to the system introduced by the previous régime in 1927. The policy of the Liberal Government led to the quasi-isolation of Roumania in the modern economic sphere, but there is no reason why the ground lost should not be made up again. Dr. Gross stresses the importance of road construction, and holds that railways through their inadequacy have been a hindrance to, rather than a promoter of, economic developments. As there are 800,000 Germans in Roumania, it is only natural that Germany should be strongly represented in the economic life of the country, and in the forest industry, in railway construc-

tion, and, above all, in the financial sphere Germans have no reason to be dissatisfied with the results of ten years of revived penetration. The author endorses the dictum of a Roumanian writer that "the Germans know us better than the Allies and they know what our market wants and how to do business in Roumania."

The volume, which concludes with a useful economic bibliography, suggests that a market which the Germans consider to be worth cultivating may also be worthy the attention of others.

ROMANTIC INDIA.

"THE SPLENDOUR OF INDIA." By K. T. Shah. (Bombay: D. B. Taraporevala. £2 10s.)

In this very handsome volume Professor Shah has, as the Marquis of Zetland observes in the Foreword, itself one of the best features of the book, embarked upon a work of no ordinary difficulty. We may agree that he has faced the task courageously without allowing his entire success. He has essayed to cover an enormous field, and has been somewhat over-ready to fill up the blanks in his own knowledge, or, indeed, in the knowledge that is anywhere available, by platitudes or vague assumptions. This is in part attributable to the lines on which he has worked. He admits that "it is by no means the definite purpose of these outlines to lay bare the less agreeable aspects. It has been the purpose of these pages to display the achievements of our ancestors." In other words, he has deliberately avoided the Cromwellian maxim of showing the warts on the countenance. A picture all light and no shade cannot be a true representation, and is as inferior to a real delineation as is the commonplace prettiness of Mr. Dhurundhar's pictures of Indian women to the real beauty of the old Mogul paintings, both of which are admirably reproduced in colour in this book.

Professor Shah's unwillingness to dwell upon the weaknesses and dark places defeats its own object, because the reader cannot but inquire how so wonderful a structure, based upon noble institutions and splendid men, fell so easy a victim to every invader from the North, to say nothing of the Western arrivals from the sea, all mention of whom Professor Shah studiously avoids. Professor Shah, of course, claims too much when he says that there is a connected, chronological, reliable narrative for 3,500 years. The absence of Indian historical writings before the Muhammadan invasions cannot be fully supplied by the evidence of inscriptions, images, and coins, and by the stories of very occasional foreign travellers, valuable as all these sources are as indications of the truth. Professor Shah is too inclined to plaster over the chinks in the knowledge with a surface of grandiloquence. Nor are his judgments always to be accepted. We may appreciate the greatness of Sanskrit literature without agreeing that it is older and grander and more stirring than that in any other language. The author quite unnecessarily goes out of his way to defend the impossible erotic poetry of the old Sanskrit writers, and thus involves himself in sad pathos when he says, of one author, that "the modern revival of interest in the sex problem may succeed in reviving the vogue of a genius in no way inferior to a Freud or even a Marie Stopes."

Mr. Shah's treatment of his own subject, Economics and Commerce, is disappointing. He is too inclined to abide in generalities, and to carp at the efforts of modern writers, such as Moreland, Kennedy, and the writers in the Cambridge Ancient History, to get down to hard facts.

It is more satisfactory to turn to matters in which praise can be honestly given. The chapters on Indian painting and music are interesting, though in the former sufficient weight is scarcely allowed to Persian influence. The book is exceedingly well got up, and the illustrations very numerous, though somewhat incongruously assorted. The reproductions from the exhibits in the Bombay Museum, and from Mr. Mehta's Indian Painting are especially good.

The book as a whole gives a good idea of the vastness, the beauty and the interest of India's historical remains. It is, therefore, well worthy of the attention of the European reader, who will not be affected by the somewhat demoralising tendency to dwell vaguely on the glories of a departed past.

Tuesday Morning.

Cyprus Trade Improvement.

The trade figures for Cyprus for the past year, brief details of which have already been given in these columns, provide obvious evidence of the growing prosperity of the Island. There was again an increase in the imports, though not to the same extent as in the previous year, the total being £1,983,833 as compared with £1,840,442 for 1928 and £1,585,940 for 1927, while the exports rose from £1,435,767 to £1,635,736, reducing the adverse balance of £404,675 for 1928 to £348,097. As in the case of other countries one has to make allowance in estimating the adverse balance for what are known as "invisible" items on both sides of the account. Thus among the invisible exports must be included the amounts spent by the mining companies as wages, while tourists represent another important asset. Thus last year the Island had 7,138 visitors while in addition 4,932 persons landed for the day only. It is estimated that the invisible imports last year amounted to about £180,000 and the invisible exports to £500,000. Allowing for these figures we get an adverse balance of no more than about £28,000, a negligible amount.

Features of the Trade.

Increasing efforts have been made in the past year to develop the resources of the Island, and it is evident from the above figures that the work already accomplished is now beginning to make its influence felt. There are a number of interesting features in both imports and exports which call for comment. For instance, there was a decrease in the value of the imports of soap by £4,096, which was due to the increased output of the local soap factories. The number of these factories was added to during the year, so that further decreases in imports of soap are to be anticipated in the future. Further evidence of progress in agriculture is provided in the increase in the value of the imports of agricultural machinery and implements, while the increased imports of iron and steel joists and cement, and the large imports of timber are an indication of the activity in building operations. One other feature of the import trade that calls for notice is the increasing demand for bicycles. The number imported in 1927 was 584, while for the two following years the figures were respectively 1,068 and 1,616. The increase in the exports, the value of which represented a record for the Island, was largely due to mineral production, principally asbestos and pyrites, but there were also substantial increases in respect of a number of agricultural products, notably barley and potatoes, and if it had not been for the substantial drop of £65,242 in the value of the exports of carobs, one of the Island's staple products, the trade figures would have made a much more satisfactory showing. As it is they are quite good enough to encourage the hope that Cyprus is now well on the road to a stable and enduring prosperity.

The Indian Cotton Duty.

The increase in the Indian Budget of the duty on imported cotton piece-goods from 11 to 15 per cent. came as a very unpleasant shock to Lancashire, and as might be expected has given rise to a considerable volume of protest. It is inevitable, of course, that the increase will mean a further reduction in Lancashire trade with India—a reduction which, however, should be somewhat decreased as a result of the additional protective tariff of 5 per cent. on cotton piece-goods not manufactured in the United Kingdom —and one can only wish that the India Government had not chosen this particular season for the measure which now falls with most untimely incidence. But the India Government has its financial difficulties like ours, and the fact that it has been unable to meet the representations of the Home Government on the proposal obviously means that the Government felt it had no other recourse in meeting the substantial Budget deficit but to include an increase in the duty on cotton piece-goods among the other proposed increases in taxation. It is at the same time not a little ironical that a Government which professes devout adherence to Cobdenism should receive such a lesson in the use of a tariff as a revenue raising instrument.

The Silver Duty.

The other feature in the Budget which is likely to arouse most criticism is the decision to re-impose the duty of 4d. per ounce on silver. This duty was removed ten years ago when the price of silver stood at a very different level from what it does now. At first sight it might be supposed that the result of this step would be to restrict the absorption of silver by India, but it is very probable indeed that the converse will be the case. The obvious consequence of the duty will be that there will be a tendency for the price of silver in India to rise, and that will no doubt conduce to increased confidence in the

metal among the Indian masses as a medium for investment, or rather for hoarding, for while the Indian public is learning to invest in the Western sense, the process is very slow and it is likely to be long before the Indian masses abandon the hoarding habit.

Conditions in the Balkans.

At the meeting of the Anglo-International Bank, Ltd., the Chairman, Sir Herbert Lawrence, commented on the improvement in the position in both Roumania and Yugoslavia during the past year. In both countries the change for the better has followed the introduction of a new Administration, which has taken measures better calculated to cope with existing difficulties. Thus in Roumania equality of treatment has been accorded to foreign capital, while the first step has been taken to reduce the export duties which have had such a hampering effect on the country's trade. As I have pointed out, Roumania is not reaping the benefit that was to be expected from the best harvest that she has had since the War owing to the fall in world prices for grain, but Sir Herbert Lawrence anticipates that, despite the low prices, the harvest will have a favourable effect on the economic position. Like Roumania Yugoslavia had an excellent harvest, and some of the farmers were able to take advantage of the better prices ruling in the summer, but here too, of course, the fall in prices prevented the yield of crops being of the fullest utility, though it is very significant that notwithstanding this factor there was a satisfactory balance of trade on the year.

Yugoslavia's Progress.

The general position in Yugoslavia has indeed shown a most marked improvement since the War, and in particular in the last year or so. Roumania, which, in consequence of its abundance of natural resources, was fully expected to take the lead in economic development in South-Eastern Europe, has lagged behind owing partly to the errors committed by previous Governments and partly to the great leeway that had to be made up as a result of the damage caused during the War. Yugoslavia, however, has begun to go rapidly ahead. Here agriculture is being improved, her important mineral resources are being developed—last year was a record year for mining in Yugoslavia—and she has a number of growing industries, one of which the chemical industry, a description of which was given in these columns last week, is expanding rapidly. There is, of course, a great deal to be done before the task of the economic reconstruction of Yugoslavia is completed, but the progress which has been made is such that the greatest hopes may be entertained with regard to the future. It is very satisfactory to know that relations between Yugoslavia and the United Kingdom are becoming much closer, and the work of development in certain directions, notably the mining industry, is being carried out with the assistance of British capital.

The Proposed Tariff Truce.

The course taken by the Tariff Truce Conference at Geneva has been distinctly amusing for those who do not believe such a project to be feasible at the present time. It seemed to be lightly assumed by advocates of the Conference that little difficulty would be experienced in securing unanimity on the subject, but in practice it has been proved that two of the chief countries represented are actually hostile to a truce. Italy, as I have already pointed out, considers that the time is not suitable, while now M. Serruys has come forward with the statement that France refuses to give any consideration to the truce as at present conceived. He added the interesting comment that France could not agree to the crystallization of tariffs in view of what has been happening in the last few months. The opposition of these two countries means, of course, that the conference is unlikely to achieve any result.

COMMENTATOR.

Wine production in Dalmatia last year amounted to 755,280 hectolitres.

A Treaty of Commerce and Navigation between Turkey and Great Britain was signed in Angora on March 1 by Zekai Bey, president of the Turkish Treaty Delegation, and Sir George Clerk, British Ambassador. The basis of the treaty is the most-favoured-nation clause, and its duration is five years. This is the first time that Turkey and Great Britain have concluded such a treaty.

Following upon the first Panhellenic Health Conference which is to be held in Athens in April next, the Greek Medical Association proposes to arrange an exhibition of exhibits in connexion with hygiene in general. The Exhibition will be held in the Zappeion Building between May 1 and July 31. All exhibits will be free of Customs duty and should reach Athens before March 31, but exhibits should not be shipped to Greece prior to the issue of a further announcement by the Organising Committee. The Committee is now making final arrangements with the President of the Republic and will shortly issue their programme. The exhibition is to be part of an active movement in Greece to increase and equip health centres in various parts of the country, to improve the sanitation of cities and to develop the new School of Hygiene at Athens on the lines recommended by the League of Nations Commission. It may therefore have an appeal to British firms from a commercial point of view, and in this connexion a copy of the League of Nations Report on "Collaboration with the Greek Government in the Sanitary Reorganisation of Greece," giving the recommendations regarding hospitals, malaria prevention, tuberculosis prevention, quarantine service, etc., is available for inspection at the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1. British firms interested should communicate with Dr. Vlatianos, President of the Organising Committee, Panhellenic Health Conference, Odos Kriezotou No. 1,

BANKING AMALGAMATIONS IN BULGARIA.

(From Our Own Correspondent.)

Sofia, February 25.

The tendency for the concentration of banking interests which has been in evidence of late both in Europe and America has not failed to make its appearance in Bulgaria, where the acute economic and financial crisis through which the country is passing has called for a thorough reform in the organisation of the banks so as to enable them to meet more advantageously the difficulties of the situation. In view of the dispersion of the Bulgarian banking establishments and the smallness of their resources, it has become evident that their activity cannot be assured satisfactory conditions except by regrouping or even by an absolute fusion. The movement has begun with the large banks, and from them it will extend, it may be hoped, to the smaller institutions which have so far been hostile to all change, preferring to risk failure rather than lose their individuality.

The first fusion was carried out by two foreign banks, the Franco-Belge (established by the Banque Belge pour l'Etranger and the Union Parisienne) and the Balkanique (established by the Wiener Bankverein, the Credit Anstalt of Vienna, and the Banque d'Escompte of Budapest), which now form the Banque Franco-Belge et Balkanique, with a capital of 150 million leva. A second followed at the beginning of this year between the Sofia branches of the Deutsche Bank and the Disconto-Gesellschaft after the fusion of these banks. And now, under the pressure of the National Bank which strongly supports the banking concentrations, three large Bulgarian banks, operating with native capital—the Banque Bulgare, established by a number of manufacturers, the Banque pour le Crédit National, established by the Société d'Assurances Balkan, and the Banque Franco-Bulgare pour le Commerce International, established by merchants in co-operation with French houses which subsequently withdrew, each having a paid-up capital of 30 million leva—have united to form the largest Bulgarian private bank, which will have the name of Banques Bulgares Unies and will have a capital of 100 million leva.

This fusion is an event of the first importance, the three banks having for the year ended December 31 last realised a balance of 900 million leva and a total business of three milliards two hundred and seventy one million leva. For it is not merely the creation of a new large bank by the fusion of three existing banks, each of which enjoys a large development both as regards investments and deposits. It is especially the constitution of a powerful banking establishment, which, having behind it almost the whole of the Bulgarian industrial and commercial world, and especially the almost unlimited support of the National Bank, to say nothing of that of public opinion, will be in a position to contribute better than any other to the recovery of the country's national economy. In the general opinion the most important and most immediate consequence of this notable banking reform will be to consolidate the national credit by the re-establishment of public confidence in the credit institutions of the country, the prior condition of any remedy for the economic crisis. The establishment of the Banques Bulgares Unies is the first definite step in the efforts to overcome the existing lack of confidence. It is felt to be a most satisfactory development that this step should have been taken by private enterprise, in evidence of its maturity, its energy, and its adaptability. It will be assisted effectually by the State, which is beginning already to apply a new credit policy aiming at the encouragement of thrift and the insistence on the concentration and improvement of national financial institutions.

FERTILIZERS

TIME and Science have provided many remarkable changes from the primitive ways of the ancients to the organised methods of modern farming.

In the provision of fertilizers, supported by scientific research and a free advisory service, Imperial Chemical Industries Limited are helping to produce bigger and more profitable crops in every part of the Empire.

Enquiries may be made to:—

IMPERIAL CHEMICAL INDUSTRIES LIMITED

IMPERIAL CHEMICAL HOUSE, LONDON, S.W.1

A booklet N.E.I.9. entitled "The Products of Imperial Chemical Industries Ltd." will be sent, post free, on application to the Publicity Department.

THE EGYPTIAN FILM MARKET.

The Egyptian film territory comprises Egypt, the Sudan, Palestine and Syria. The most popular films in this territory are super-films, features, western type and comedies (says an American Consular Report). British films, though rarely seen, are usually popular, particularly good comedies. Continental and local manufacturers continue to make wide use of the screen as a means of advertisement, showing process of manufacture and shipment of their goods. Local efforts to produce films have not proved successful.

Film imports into Egypt during 1928 were valued at £E58,442, as compared with £E51,937 in 1927. Films imported from France continued to dominate the market (about half the business), while roughly 25 per cent. of the trade was directly with the United States. British imports amount to £E7,108, an advance on the previous year's trade. Many of the films imported from France are of American production. Thus American films still outnumber those of any competitors.

Imports of cinematographic apparatus are not included separately in official statistics, but the market for these goods is visibly expanding, although it is still limited mostly to theatres in the principal towns. Up to the present time German, American, and, to a less extent, French manufacturers have secured most of the business. Some opening exists for the sale of the small portable cinema cameras and projectors for private use.

FUR PRICES LOWER.

The report of the London Fur Trade Association (Inc.) on the January raw fur skin sales states that the auctions attracted an unusually large number of buyers from all European countries, although very few representatives of the American market. The world-wide decline in the prices of primary commodities, accompanied by the general stagnation of mercantile activity, has had immediate and far-reaching effects on the raw fur trade. In consequence of the uncertainty of the market position, greater attention than usual was focussed on the London raw fur auctions, as buyers everywhere were looking for a reliable criterion of values. The results of these auctions show that the situation has, to a very large extent, been clarified, and, although declines have been registered in the prices of most raw furs, the confidence of the fur trading community has been largely restored and business activity renewed. Once again the finer furs have fared comparatively well, but only the freshest shipments of staple furs found ready purchasers. Stale goods generally were neglected. Several articles have found renewed favour and, at the present level, seem likely to achieve considerable popularity.

Mr. J. Chaker, representative in Egypt and Palestine of the Wagons-Lits Company, has been on a visit to Baghdad, where he has been undertaking negotiations with the Iraq Railways authorities in connexion with the inauguration of wagons-lits, dining-car, and Pullman services between Kirkuk and Basrah on the new Taurus express which is now running between Bombay and London.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

EGYPT.

Damanhour and Kafr el Zayat Drainage.—The Ministry of Public Works (Main Drainage Repartment) invites tenders for the supply of air compressing plant (semi-Diesel) and auxiliary machinery. May 1. (D.O.T.)

Photographic Material.—The Survey of Egypt invites tenders for the supply of rolls of sensitive paper and photographic chemicals. May 3. (D.O.T.)

Photocopic Papers.—The Ministry of Finance, Cairo, invites tenders for the supply of photocopic papers. March 31. (D.O.T.)

Various.—The Director-General of Prisons, Cairo, invites tenders for the supply within a period of twelve months commencing from May 1, 1930, of a variety of articles required by the Prisons Administration. The contract is divided into eleven sections, viz :—(1) Cotton, cloth, clothing, sacks, etc. ; (2) buttons, eyelets, needles, threads, etc. ; (3) blasting fuses, twines, cordage, miscellaneous enamelled articles, etc. ; (4) paints, metal polish, boot blacking, heel balls, naphthaline, marking soap, acids, etc. ; (5) leathers (native and English), oilcloth, etc. ; (6) fibres (Indian and Mexican), cane rattan, crin vegetal, bristles, horsehair, bassine, bassat, split rattan, etc. ; (7) lamps and electrical articles ; (8) copper hardware ; (9) tools, files, etc. ; (10) nails, ironmongery, belting, mild steel, galvanised plates, steel, etc. ; (11) dyeing of clothing and cloth. April 2. (D.O.T.)

Calico and Shash.—The Survey of Egypt invites tenders for the supply of calico and shash for map mounting. April 23. (D.O.T.)

Iron and Steel, Metals, etc.—The Ports and Lighthouses Administration invites tenders for the supply of iron and steel, metals, etc., required during 1930-31. April 15. (D.O.T.)

ROUMANIA.

Pencils.—The Supplies Department of the Roumanian Post Office Administration invites tenders for the supply of a quantity of pencils. March 22. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Birkenhead, March 12). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, March 13).

Bibby Line.—S.s. Shropshire for Marseilles, Port Said, Port Sudan, Colombo, and Rangoon (Birkenhead, March 19).

British India Line.—S.s. Domala for Bombay (London, March 8) ; s.s. Mandala for Colombo, Madras, and Calcutta (London, March 8).

Cunard Line.—S.s. Bothnia for Casablanca, Gibraltar, Genoa, Leghorn, Naples, Bari, Corfu, Venice, Trieste, and Fiume, also at Palermo, Messina, Catania, Gruz, and Ancona if sufficient inducement (Liverpool, March 15 ; Swansea, March 18) ; s.s. Bosnia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Volo if sufficient inducement (Glasgow, March 27 ; Liverpool and Swansea, March 29).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 29) ; s.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 10).

P. and O. Line.—S.s. Perim for Calcutta (London, March 14) ; s.s. Morea for Bombay (London, March 14).

Prince Line.—S.s. Persian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersin, and Cyprus ports (London, March 8) ; s.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 8) ; s.s. Sicilian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, March 19).

Ellerman and Papayanni Lines.—S.s. Egyptian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 8) ; s.s. Algerian for Gibraltar*, Algiers*, Oran*, Malta, Patras, Piræus, Syra*, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 8 ; Swansea, March 8) ; A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, March 22) ; s.s. City of Lancaster for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 22) ; s.s. Roumelian for Gibraltar*, Algiers*, Oran*, Piræus, Syra*, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 22 ; Swansea*, March 22) ; s.s. Manchurian for Gibraltar*, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz*, Ancona*, Venice, Trieste, Fiume, and Shushak (Liverpool, March 29 ; Swansea, April 3) ; s.s. Voluturno for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, March 29). *Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers ; Moroccan ports via Gibraltar : Tripoli (Barbary) via Malta ; Syria and Cyprus via Alexandria ; Greek outports via Piræus or other convenient port.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, March 4.

The feature of the Stock Markets during the past week was the strength of gilt-edged securities, which was helped by the early closing of the lists of the Government's offer of 4½ per cent. Conversion Loan and the Chancellor's statement that the results of the Loan were satisfactory. A reduction in Bank Rate had been anticipated in some quarters, but the position of the sterling-dollar exchange presumably deterred the Bank Court from making any change, despite the fact that the market rate of discount for three months bills is now one per cent. below Bank Rate. Home Rails showed little change. Among industrials a feature was the sharp rise in Austin Motors following a much more favourable dividend announcement than had been anticipated. The Post Office decision against the "Beam" system further depressed Cables and Wireless stocks. The more speculative markets were idle and inclined to droop, but a little support from America helped Internationals.

The Conversion Loan Offer.

The second Conversion Loan issue under the present Government made its appearance with less publicity than the first, which was made last November. The new offer, for which the subscription list has just closed, although offered in a different form, namely at £95 with interest at the rate of 4½ per cent., was as attractive to the investor as the previous Conversion Loan, the gross yield allowing for redemption being just over £5 per cent. The loan should appeal to holders of 5 per cent. Treasury Bonds maturing next May as these can be converted up till March 6 into the new Loan at the rate of £100 of Treasury Bonds convertible into £105 10s. of the new 4½ per cent. Bonds. Investors in search of first-class securities may also be attracted by the number of recently issued British Corporation and similar stocks now standing below the issue price. Thu Hastings Corporation, 1947-67 are quoted at a discount of about ½ per cent., Hull Corporation, 1941-61, discount about 1⅛ per cent., Nigerian Government, 1950-60, ¾ per cent. discount, and Central Electricity Board, about 1¼ per cent. discount. These loans, on which a first instalment has been paid by subscribers are all at 5 per cent., and being at a discount the yield is a little over this rate in each case.

Varied Motor Results.

In these days of trade depression one looks to the motor industry as one of the few industries to show signs of some prosperity, It is an industry for which this country is admirably suited, possessing as it does much of the raw material, the engineering knowledge and skilled workmen. The industry, however, presents a mixed showing. Amongst a batch of recent reports, Leyland Motors, producing commercial vehicles, has done very well. Net profit for 1929 amounted to £559,374, an increase of about £154,000 over the previous year. It is thus able to continue, as it has been doing for the last six years, the paying off of preference dividend arrears, a process which will probably be completed next year. Meanwhile, the directors are placing £120,000 to reserve against nil last year. Guy Motors have also increased their profit, the 1929 figure being £80,312, against £60,263 for the year before. Dividend is maintained at 15 per cent. The accounts of two other companies present a different picture. Crossley Motors, largely as a result of poorer business on its private car side, made the meagre profit of only £2,025 for 1929 against £120,711 the year before. Except for a 5 per cent. dividend in 1926 the shareholders have not received any distribution since 1921. Willys Overland Crossley also made a lower profit for 1929 at £21,585, against more than twice that sum in 1928, and the preferred ordinary shares received their dividend only by drawing on reserves. A hopeful sign is, however, given by another firm, Austin Motors, whose excellent results for 1929 enabled the paying off of the "B" preference dividend arrears, and the payment of 20 per cent. on both preferred ordinary and ordinary shares. The latter had not received a dividend since 1910.

Insurance Profits.

The accounts for 1929 of the Prudential Assurance Company, just published, are for the most part a record of favourable increases in the volume of business, and in profits for nearly all branches of the vast undertaking of this company. New business was larger than ever in the Ordinary, the Industrial Life and the General departments. On the other hand, although premium income has increased, claims have decreased. The general financial position of the company is as strong as ever. The total income has advanced by £1,172,000 to £42,964,000. Total assets at over £228½ million are about £9¼ million more than a year ago. The total insurance outstanding in the life department amounted to £659 million. The directors have allocated £1 million to investment reserve, against £500,000 last year, while the common contingency fund again receives £250,000. The £1 "A" shares whose dividends depend partly on the profits of the General branch of insurance again receive 18s. 10d. tax free, while the £1 "B" shares, 4s. paid, whose dividend depends entirely on the General branch, receive 1s. per share. "A" and "B" shares, therefore, now yield about £4 15s. per cent., and about £3 per cent. respectively. The ample security as to capital and the continued growth of the company's business marks them out as first-class investments.

Mr. G. M. Gillett, M.P., Secretary of the Department of Overseas Trade, announces that he has asked the Executive Committee of the Travel Association of Great Britain and Ireland to release Mr. Louis Beale from his duties as General Manager of the Association. Since Mr. Gillett's appointment as Minister in charge of the Department he has been specially considering whether the Department's organisation can be made of still greater use to British export trade. It is in this connexion that he was desirous that Mr. Beale should be permitted to return to work at the Department. The Executive Committee of the Travel Association at a meeting held on February 17, presided over by the Earl of Derby, President of the Association, agreed with much regret to accede to Mr. Gillett's request. Mr. Meredith, Secretary of the Travel Association, is to succeed Mr. Beale as General Manager. The change will take place early in April.

Engineering Topics

(By Our Engineering Correspondent)

Electric Welding.

Electric welding for boiler making purposes is not being received with a great amount of favour in this country, which seems strange when it is remembered that the largest works of the kind in the United States has been carrying out such work for many years and has such confidence in the process that it is producing boilers of plate up to any thickness made with welded seams. In fact, it claims that it can successfully weld plates up to 12 inches in thickness. The modern tendency is to use very much higher pressures in boiler work than was at one time thought possible, and to-day pressures of up to 600 lb. per square inch are relatively common. At one period of this development the opinion was expressed that rivetting was the only method of jointing that would withstand such a strain, but experience has shown the fallacy of that view, and to-day there are many welded boilers in existence which are working at very much higher pressures. The seams of the high pressure vessels used in oil refineries have been electric welded for many years, and so far there is no evidence of any having given way under the strain. It seems to me that what is wanted in connexion with this business is not an appreciation of the fact that successful welding can be done. Everyone knows, or should know, that what is wanted is some measure of standardisation regarding the conditions and methods of testing welded joints. Would it be possible to bring X-ray work to our help and examine, by its means, the interior of a weld after the metal has cooled down?

Mechanical Stokers.

Two mechanical stokers are being built for the London Power Co., Ltd., by the Underfeed Stoker Co., Ltd., at Derby, which present many features of mechanical interest. In the first place each is 31 feet wide, a size which corresponds to 700 square feet of grate area for boilers of 200,000 lb. normal evaporation per hour. I notice also that each unit operates in conjunction with "Usco" multiple plate air heaters to give an air supply of about 250 degrees Fahr., the steam pressure being about 525 lb. per square inch gauge with 700 degrees Fahr. of superheat. Thus we have arrived at last at the stage when a single mechanical stoker of the travelling grate type will operate a boiler with the high figure of 200,000 lb. evaporation per hour and over. Twin grates are another feature of these stokers and the problem of uniform distribution of the air supply to every point has also been solved. A large simple wind box of ample height and capacity receives the air, by way of two main compartments at the sides, from a forced draught fan. Underneath the travelling grate are a series of transverse compartments which all open at the bottom of the wind box. Each receives its air supply from this and so serves its own section of the grate above. There are a number of small shutters or dampers in these compartments controlled by suitable means, and by these it is possible to regulate the air supply to a nicety to any part of the furnace. The new arrangement marks a distinct step forward in mechanical engineering work of the kind.

Increasing Use of Oil Engines.

The use of large oil engines for land purposes is becoming increasingly popular, and one of the fundamental advantages of this type of engine is that size has practically no effect on the fuel consumption, as is the case with big steam plants. It is, therefore, quite possible to employ even medium sizes of these engines in a highly economical and efficient manner. This advantage, when coupled with a natural adaptibility of geographical location due to the ease in handling fuel supplies, the relatively small amount of water required, and that only for cooling purposes, and the comparative ease with which the waste products—which merely consist of gases instead of ashes and clinker—can be got rid of, cannot but give those who are considering the installation of power for any particular purpose much room for thought. Mr. W. S. Burn has pointed out that until recently the power of oil-engine units for land purposes was comparatively small, generally speaking, not much in excess of 2,000 kilowatts and the first cost per kilowatt was high, but the advent of the double acting, two-stroke engine has practically revolutionised the position, and now not only are much larger powers available for all purposes, but the first cost, weight and space have been considerably reduced, without in any way reducing either the efficiency or the useful life. Of course, the great defect of the older type of Diesel engine was its lack of reliability and the high cost of maintenance, but neither of these objections can be urged against the modern type of heavy oil engine, which is far simpler in design. It has a lack of vulnerable parts which makes for reduced cost of upkeep, amongst these being exhaust valves, intricate cylinder covers and a high pressure compressor plant. During the past decade or so the development of the oil engine has been almost entirely confined to the marine type, a service in which reliability is essential, and it may be readily seen that such a development has been on the right lines for land purposes in that it has improved reliability, a *sine qua non* for marine work, to the utmost extent. So far we have not produced engines for land use of the same size as for marine work; in fact, the cylinder dimensions of even the largest sizes are only moderate when compared with those

ruling in marine practice. So far, from about 500 b.h.p. up to about 12,000 b.h.p. represents the general run of land engines of the type and these are designed with from three to ten cylinders. These are indications, however, that much larger engines will be produced in the near future.

Breaking Strains.

In a paper about to be published by the Institution of Civil Engineers I am permitted to say that the author, Mr. O. H. G. Kerr Moseley states that an examination of different specifications for Manilla ropes shows that the breaking strains called for or breaking loads guaranteed do not increase regularly. This is very noticeable where a percentage allowance is made for ropes of different sizes. If these breaking loads are plotted the unevenness can be more readily seen. Tests carried out show that the breaking load does not increase in proportion to the cross-sectional area, but that as the size of the rope increases, so the proportional load decreases. The author has deduced a formula in terms of the size of the rope which meets this decrease, and tests have been found to be in agreement with this formula. To obtain the breaking load of large ropes and cables is not easy, and the results are unreliable, as it is difficult to grip the rope specimen without damaging it; therefore it is most convenient to be able to calculate the breaking-load of a rope from the breaking-load of the individual yarns from which it is made up, especially as these can be far more easily tested and ascertained. The method advocated is to test ten yarns from the rope and, taking the average of these results as the breaking-load of the yarn, the author's formula enables the ultimate breaking load of the whole rope to be easily ascertained. There are two methods of describing the breaking loads of Manilla rope, either in terms of the ultimate breaking load, or in terms of the pounds per pound weight of a fathom, and both can be calculated to form a regular curve. The strength of Manilla rope depends largely on the class of fibre used in spinning the yarn as well as on the correctness of the lay of the fibres in forming the strands and in closing the rope.

THE ROUMANIAN MARKET.

Messrs. Watson and Youell report as follows from Galatz for the week ended February 22 :—

Grain.—In spite of the relatively low grain prices ruling here, fresh business has not been possible owing to the depression on consuming markets and even for the few sales effected some time since, and which are now falling due for fulfilment, shippers, in many cases, are finding it a better proposition to accept proposals for the cancellation of same. Some slight interest, however, is being shown for Scandinavian destinations but otherwise the position is unchanged. Tonnage has been fixed for loading up river next month at 19s. three ports, 19s. 6d. four ports Denmark, whilst for the Continent tonnage is obtainable at from 15s. to 16s. full terms according to size and position. Rates from Sulina to the Continent are normally 10s. 6d. to 11s., but little has been done at these figures, whereas it is reported that a large parcel has been placed at 10s. From Constantza a few parcels have been booked at from 8s. 6d. to 9s.

Timber.—Owing to the limited volume of business at Constantza, steamers there are obliged to accept completion parcels for several ports at low rates. A 3,500 tonner is loading for four ports in Sicily and one port in Greece, and a Roumanian State liner for two ports in Syria combined with Port Said. A small parcel of about 60 wagons for Rouen has been placed at £9 10s. per wagon. In the Danube, notwithstanding the mild weather, business has not yet been resumed except for the loading of a comparatively small parcel for two ports in Greece. Levant tonnage which in previous years was usually able to find timber cargoes in the absence of grain, may be faced with a lack of regular employment at remunerative rates owing to the decline in the export of timber consequent on low prices in the markets usually supplied by Roumania, especially Alexandria. The Roumanian State Navigation Service has decided to employ two small vessels on the trade between the Danube, Constantza and Port Said, calling en route at Bourgas, Istanbul, Piræus, Beyrout, Haifa and Jaffa, according to inducement.

Weather and Crops.—The weather has been dry and seasonably cold with frequent changes from sunshine to cloud and occasional insignificant sprinklings of snow. The temperature rose at the beginning of the week but there were sharp frosts from the 19th to the 21st, the thermometer registering from 10 to 16 degrees Centigrade in the north and north-east and from 6 to 10 in the south. During Friday, however, it again became milder and the temperature was several degrees above freezing point this morning notwithstanding a strong wind from the east.

Sulina.—Bar depth 24 feet. River minimum 24 feet.

Constantza.—This week about 3,500 tons of grain arrived from the interior and about 10,000 tons were exported, mostly to the Weser. Three steamers are loading under the elevators at the time of writing. Ten vessels loaded about 44,000 tons of petroleum products and four took oil fuel for bunkers. The following Constantza traffic statistics may be of interest :—

	Imports. Tons.	Exports. Tons.
1925 ...	156,274 ...	707,292
1926 ...	234,129 ...	1,631,485
1927 ...	168,211 ...	1,861,892
1928 ...	139,421 ...	2,057,133
1929 ...	174,141 ...	2,606,296

Goods Exported	1929 Tons.	1928 Tons.
Petroleum products ...	2,130,762 ...	1,734,531
Grain	384,409 ...	238,042
Timber	53,555 ...	50,310
Sundries	37,510 ...	34,250

Bulgarian Report.

Bourgas, February 15.—Business remains quiet. About 1,500 tons grain are reported to have been booked for Antwerp Rotterdam and Hamburg at 10s. for loading next week. About 200 tons of tobacco were shipped during the week. There was a light fall of snow on Sunday morning, but in the afternoon the weather cleared and it remained fine the rest of the week. The temperature at nights has been about 3 degrees Centigrade below zero, whilst in the day time it has been mild.

The Yugoslav Ministry of Finance has issued an order providing for the abolition of import duties on ploughs and agricultural implements.

Near East Markets

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows under date January 31 :—

Arrivals in Kordofan stations and Tendelti amounted during January to 1,541 tons. Except for the second week arrivals during January showed a steady decline, thus arrivals were : First market week 363, second week 427, third week 337, fourth week 296 tons (remaining three days 118 tons).

January arrivals compare with other years as follows :—1930, 1,541 tons ; 1929, 1,928 tons ; 1928, 2,828 tons ; 1927, 1,780 tons ; 1926, 1,376 tons. Total new crop arrivals to the end of January do not show up badly, but this is due to the bumper arrivals up to the end of December which were the biggest known : Season 1930, 3,299 ; 1929, 3,337 ; 1928, 4,250 ; 1927, 2,949 ; 1926, 2,144.

Gedaref arrivals have been very good. Gezireh and Gebelaine arrivals to the end of January were about 440 tons, but this was much less than expected.

The El Obeid market closed on January 1 at 3d. more than on December 31, and went on daily increasing to the 16th, when the total equalled 29s. 10d. per cwt. Fridays the market is closed. From the 18th to the 23rd the general trend of prices was downward, the total fall being 12s. 3d. but from the 25th to the end of the month the market was again on the upward move, the daily increases which took place totalling 8s. 2d. The net increase of the month was, therefore, 26s. per cwt. Demand was much smaller than last year and was undoubtedly curtailed by the high prices ruling.

Reports of disease in gum trees, exhausted trees, too early tapping, pests attacking trees, etc., are nonsense. Any decrease is due to adverse climatic conditions—the persistent cold weather. During the last three days the weather has been warm, and if this continues without spells of severe cold we can expect largely increased arrivals after fifteen or twenty days.

Six weeks of abnormally cold weather has considerably reduced the period of gum exudation which closes with the rains normally coming in June. The productive period, however, might be extended by late or narrowed by early rains. It is impossible to forecast the crop any more than one can forecast the weather. January arrivals are comparatively small but they are larger than in 1926 in which year we had the largest crop recorded. At a guess one cannot now expect a large crop though it is still not impossible.

Prices ruling during January were not due to overseas paying high prices but to local competition for decreasing arrivals to discharge commitments based on expectations of a very large and early crop. There is great anxiety as to whether local dealers can possibly secure sufficient gum against their contracts for February delivery.

THE DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows for the month ended February 28 :—

Currants.

Greek.—The opening of the year has been most disappointing, buyers generally complaining of the scarcity of orders. The position remained practically unaltered up to the closing week, with no improvement to report. There was no pressure to sell, and naturally the prolonged inactivity and lack of interest has had a weakening influence, and in most directions a somewhat easier tendency was noticeable. There has been a great deal of talk about bad trade and lessened consumption, but this, of course, is only a passing phase, and we are pleased to report that the closing days of the month witnessed a little improvement in the demand. While this certainly cannot be attributed to any marked expansion of business, there is a slightly better tone, and in some cases a distinctly more healthy, cheerful feeling exists. With the knowledge that the trade is carrying small stocks and a revival is long overdue, only a small amount of buying is necessary to cause a rally. Closing prices show a slight decline. Transactions were difficult, and the little business effected has been principally in Vostizza growths. Sales comprised Pyrgos 37s., Amalias 38s., Patras 42s. to 44s., Gulf 43s. to 50s., and Vostizza 52s. to 56s. S.s. Bactria and Gerano arrived with further trifling quantities. Quotations are :—Prygos, 37s. ; Amalias and Patras, 38s. to 39s. ; Zante, 39s. to 40s. ; Patras, 41s. to 43s. ; Gulf, 42s. to 50s. ; Vostizza, 50s. to 58s.

Sultanas.

Smyrna.—The same featureless state of affairs which we experienced last month still prevails. Buyers see no reason to depart from their policy of purchasing sparingly. A little business has been put through at 47s. to 48s. for good qualities. Quotations are :—Rain damaged, 28s. to 31s. ; Fair to Good, 39s. to 50s. ; Cretan, 36s. to 60s.

Greeks.—Business continues slow, Ordinary at 39s. to 40s., Good to Fine at 45s. to 55s.

Figs.

Layers, Large Boxes, 32s. to 40s. Bags, Genuine, 27s. to 28s. Superior, 31s.

Home buyers visiting the London section of the British Industries Fair totalled 150,000, as compared with 111,000 last year, while the overseas buyers numbered 4,800, as compared with 3,700. At Birmingham the visitors totalled 150,000, as against 120,000 last year.

The Persian Majlis has passed a Bill forbidding all foreign exchange transactions except under Government control, the export and import of silver, and the export of gold. A commission is to be set up to fix the buying and selling rates, and another commission will control applications to deal in exchange.

Company Meeting.

ANGLO-INTERNATIONAL BANK.

Improvement in European Conditions.

The fourth ordinary general meeting of Anglo-International Bank, Ltd., was held on February 28 at Winchester House, E.C., General the Hon. Sir Herbert A. Lawrence, G.C.B. (the chairman), presiding.

The Secretary (Mr. J. Back) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: At the two previous meetings I mentioned that the process of liquidating the affairs of our predecessors was bound to be protracted, in view of their widespread international interests, but I am happy to be able to report that much progress has been made during the past year. I may here mention that we have recently entered into an agreement with the British-Hungarian Bank, whereby they take over our Budapest branch. We have thus taken a further step in carrying out the policy we have adopted of developing our relations with Central Europe through the medium of local banking connexions, instead of through branches of our own.

The year has been one of exceptional difficulty. At the commencement of the year, the continued boom on the New York Stock Exchange was attracting considerable funds from Europe to America at high rates of interest. This, apart from diverting money which would normally have been employed on the London market, and causing a rise in interest rates, had an unfavourable effect on the sterling-dollar exchange, and in February the Bank Rate was increased from 4½ per cent. to 5½ per cent., and eventually, in September, to 6½ per cent. This proved effective, so that it was possible gradually to reduce the Bank Rate until, in December, it stood at 5 per cent., although there was still a demand for gold from Germany and France. In fact, the ability of the Bank of France to increase their gold stocks, which amounted, at the end of the year, to the equivalent of no less than £342,000,000, was a particular feature of the year. The general uncertainty of outlook which prevailed throughout the year naturally entailed a restriction of normal business activities, and the adoption of a policy of caution. This policy is reflected in the figures contained in the present accounts, as compared with those submitted to you at our last meeting.

Turning to the principal items in the report and accounts, which are in your hands, the cash in hand and with bankers, money at call, and balances with bankers abroad, amount to £731,000. If to this be added the British Government securities and Treasury bills, our immediately available cash resources are brought up to a total of £1,396,000. Other investments, which are valued at market or purchase price, whichever is lower, have been reduced from £750,000 to £645,000, if we include the small item of £15,000 under the heading of investment in subsidiary company, which we are now showing separately, to comply with the new Companies' Act. The bulk of our investments is made up of our holdings in banks of first-class standing on the Continent.

As regards the acceptance branch of our business, there is, this year, a contraction in the figure for outstanding acceptances and guarantees from £3,147,000 to £2,567,000. Similarly, the item advances to customers and other accounts has been reduced from £4,438,000 to £3,811,000, including the item advance to subsidiary company, while, on the other side of the balance-sheet, deposits are lower. At the same time, we have maintained a higher percentage of liquidity.

Despite the contraction in the balance-sheet figures, we are able to show an increase in current profits, which, for the period under review, amount to £117,695. This amount, together with the sum brought forward from 1928, brings the total standing to the credit of profit and loss account to £138,227. Of this total your directors propose, in order further to strengthen the position of the bank, to place £100,000 to contingency reserve and £10,000 to premises amortisation, carrying forward the balance of £28,227 2s. 4d.

I would add that, although some of the events of 1929 must eventually have a beneficial effect, conditions are likely to remain unsettled for some time to come. A great deal has been done in recent years, notably by the League of Nations, towards the settlement of international questions and the stabilisation of monetary conditions, but some time must still pass before really satisfactory economic relations between the various countries are finally established. Viewing the situation as a whole, your directors feel it advisable to continue to exercise caution in the development of the current business and to adhere to their policy of consolidating the bank's position.

Roumania and Yugoslavia.

In Roumania, the Maniu Government, which came into office at the end of 1928, has already effected a number of reforms. Equal treatment has been accorded to foreign and native capital. A new Customs tariff has been introduced, and it is worthy of note that Roumania is the first country to reduce its Customs tariff in accordance with the recommendations of the Economic Conference held in Geneva in 1927. A complete reorganisation of the country's budgetary procedure and system of revenue collection has been carried out. The excellence of this year's harvest, which is the best Roumania has had since the War, should, notwithstanding the present low price of grain, have a favourable effect upon the economic situation of the country.

Last year I referred to the taking over of the Government of Yugoslavia by the King, supported by a Cabinet selected by himself. This Government has now been in office for a year, and it has unquestionably done much for the good of the country. One of its most important acts has been the revision and unification of the system of taxation. The Ministries have been reduced in number and the entire course of administration has been expedited. The harvest in Yugoslavia was highly satisfactory. The foreign trade figures for the year showed a favourable balance of 327,000,000 dinars. A decided improvement has, moreover, taken place in the situation of the National Bank, which increased its holding of foreign currency by approximately 50 per cent. during the year. Our friends the Jugoslav Union Bank continue to make steady progress. The arrangements which I mentioned to you last year as being in course of completion with the Agrar-und Industriebank Belgrade, were successfully terminated last April, when the latter bank was absorbed, a further step being thus taken towards the consolidation of the Yugoslav banking industry.

In conclusion, I think it can be said that, notwithstanding the unusual difficulties experienced during the past year, the general situation in Central Europe has continued to improve. I now beg to propose that the report and accounts be approved and adopted.

Sir Otto Niemeyer, G.B.E., K.C.B., seconded the resolution, which was carried unanimously.

The retiring directors, Mr. A. G. M. Dickson, Dr. Paul Hammerschlag, Sir Otto Niemeyer, G.B.E., K.C.B., and Sir William Peat, C.V.O., were re-elected directors, and the joint auditors, Messrs. Deloitte Plender Griffiths and Co. and Messrs. Binder Hamlyn and Co., were reappointed.

A vote of thanks to the Chairman and Directors concluded the proceedings.

Roumania's imports in November amounted to 3,073,384,303 lei, while the exports totalled 3,962,206,678 lei, giving a favourable balance of 888,822,375 lei.

It is estimated that the production of coal in Yugoslavia during 1929 amounted to over 6,000,000 tons, which represents a record. The production of coal in previous years was as follows:—1922, 3,729,329 tons; 1923, 4,100,704 tons; 1924, 4,185,240 tons; 1925, 4,132,126 tons; 1926, 4,140,752 tons; 1927, 4,744,936 tons; 1928, 5,050,797 tons.

Export and Import

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped, and the Importer that his money will not be paid over except in exchange for the goods he has contracted to buy, is the subject-matter of *The Financial Machinery of the Import and Export Trade*, a copy of which will be gladly sent on receipt of a postcard to the Secretary

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended February 26 :—

Egyptian Futures.

Sakel Contract.—One or two interesting features have developed during the past week, the most important of which came to light on Monday, when the Egyptian Government declared themselves buyers of the May position at 28 dollars. Whilst this announcement had no immediate effect on values—in fact, liquidation of near cotton by Continental holders during the early part of yesterday morning forced prices to the lowest of the week—it certainly had a salutary influence on those who have been recently "bearing" new crop positions in a confident manner. The result of this came into evidence yesterday afternoon, when active support for old crop months started to develop, and, with offerings rather restricted, values reacted sharply. The recovery has made further progress to-day, reducing the decline on the week to 18 to 24 points for near and 33 to 25 points for new crop positions.

Whilst trade reports still fail to reveal any improvement in the situation, more inquiry has been in evidence during the past few days. Whether this develops into actual business depends on the action of the market, and with this in view a gradual hardening in values would be welcomed by most sections of the industry. With old crop positions running at such a heavy discount with Alexandria, our market should respond quickly to any improvement in outside conditions. The locally hedged stock is so outstandingly cheap that business must concentrate here, and, with this the case, we certainly consider that those who have sold higher up should secure their profit.

Upper Contract.—In spite of the attractive basis of the local stock in comparison to the values maintained in Egypt, only a moderate business has been attracted to this market during the past week. This is, no doubt, mainly due to the pessimistic tone of reports from all consuming centres, and also to the fact that declining American markets have recently made the Upper varieties appear somewhat dear. The Egyptian Government have now intimated that they are buyers of June contracts at 19.80 dollars, but so far this has had little effect on the local outlook. A recovery in American values would do much to stimulate business at the present juncture, and should this materialise, cotton hedged here would be readily absorbed, leaving the position clear for a return to normal parity with Alexandria.

Egyptian Spot.

Fluctuations in futures have caused some irregularity in spot prices, and whilst Sakels have finished unchanged on the week, the tendency, both for Uppers and Pilion, has been a downward one. During the past few days there has been a decided improvement in the general inquiry, but actual business has remained as restricted as ever. There has been shown lately a considerable amount of interest in the March Sakel position. Operators have been attracted by the small local stock available, a point to which we have referred in previous reports. Owing to the discount at which we stand with Alexandria, little relief (in the form of consignments) is to be expected from that quarter, and when the demand for Sakel revives, as we believe it will do, spinners will be faced with the alternative of purchasing direct from Egypt at heavy premiums, or of buying new crop Sudan Sakel, unless, of course, they are early in the market. At the moment there is attractive cotton to be found in Liverpool at prices well below Alexandria, but we again warn our friends that the stock is limited, and it is not difficult to imagine the probable course of prices.

Sakel.—There has been an improved inquiry, but actual business has proved slow.

Uppers.—A fair demand has been experienced. Cotton at round the price of March contracts appears to be getting scarce.

Pilion has only been in moderate request.

Maarad, White, Nahda, and Fouadi.—Practically no business has been reported.

Sudan Sakel.—The demand has been dull.

Tokar Sakel.—This cotton has again been neglected. We have seen samples of new crop TIC, and in the unpressed state it appears to be sound, attractive cotton, of good grade and staple

C.i.f. business.—Very quiet. Forwardings were returned last week as 8,091 bales Egyptian and 1,130 bales Sudan Sakel. Spot sales have been estimated at 1,300 bales Egyptian and only 100 bales Sudan Sakel. Quotations of Sakel unchanged on the week. Uppers and Pilion are 10 points lower. F.G.F. Sakel to-day, 13.55d. F.G.F. Upper to-day, 10.16d. F.G.F. Pilion to-day, 10.80d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended February 20, state :—

Since our last report the futures market has been fairly active, with a rather weak tendency. The week's summary of price movements is as follows :—Sakellaridis : March, 27.50 dollars, unchanged ; May, 27.68 dollars, 0.04 dollars up ; July, 27.32 dollars, 0.06 dollars up ; November N.C., 25.86 dollars, 0.31 dollars down. Ashmouni : February, 19.00 dollars, 0.01 dollars down ; April, 19.43 dollars, unchanged ; June, 19.48 dollars, 0.07 dollars down ; August, 19.10 dollars, unchanged ; October N.C., 18.68 dollars, 0.05 dollars down ; December N.C., 19.00 dollars, 0.02 dollars down.

Sakel.—This week we have had a sequence of markets with practically no fluctuations in the prices of old crop deliveries, while there has been a slight decline in new crop options. The weakness of New York and Liverpool is, by contrast, making the prices fixed by the Government more and more prohibitive to spinners, and business with foreign consumers has become even more stagnant ; the result of the situation is that the stock of cotton in Alexandria is growing heavier from week to week. The Government has not yet taken a decision regarding the price to be fixed for its purchases of May contracts, and, as we stated in one of our previous reports, unless this price is such as will cover carrying charges from March into May, the quantity of cotton which will be tendered in March and which the Government will have to take up will attain very considerable proportions. There is no doubt that the tendency of the

market will continue to be very heavy and the prices of the deliveries not pegged by the Government's intervention may at any moment suffer a further decline. The Sakel/Uppers straddle (March/April) this week stands at 807 points, against 807 points last week and 1,329 points at this time last year.

Uppers.—The Upper market has been very inactive and the tendency weak, but with no great changes in price owing to the operation of the Government limit. The demand from abroad has again been most modest, and, failing a recovery in the prices of American, the dullness in business can only continue. The Ashmouni/American straddle (April/March) this week stands at 415 points, against 366 points last week and 277 points at this time last year.

The week's receipts amount to 177,333 kantars, against exports 129,317 kantars; the stock in Alexandria stands at 3,549,018 kantars.

Spot.—We have again had a week of very poor markets, the total turnover amounting to about 8,200 bales, of which we estimate 3,800 bales Sakellaridis, 4,000 bales Ashmouni and Zagora, 200 bales Pilion, and 200 bales other varieties.

Sakellaridis.—The cheapness of spot cotton as compared with the March contract produced a somewhat better demand, covering Fully Good Fair to Good to Fully Good. Only a very small business was done in cotton grading below Fully Good Fair.

Ashmouni and Zagora.—With the difference of about 40 points between the February and April contracts, holders prefer to keep their cotton in the hopes of obtaining the same premiums on the dearer month when February goes out; this fact somewhat restricted the turnover, though the demand was by no means good.

Pilion.—Practically no demand. A few lots of Fully Good Fair to Good and Good changed hands at about last week's premiums.

Other Varieties.—Very little interest was shown in Nahda, with spot differences slightly easier.

Up-country.—Business has been a little more active as holders are eager to gin their cotton and send it to Alexandria to be delivered to the Government. The remaining choice crop lots are being absolutely sacrificed as there is no demand at all for extra cottons, and merchants are only offering for such lots the prices they can obtain by delivering them to the Government.

Crop, 1930.—Preparatory work is going on, and it is expected that the first sowings will be effected at the beginning of March. The outlook for the supply of water during the summer is most favourable.

The Roumanian minimum tariff has been prolonged to May 1, by which date it is hoped that the series of new commercial treaties now in course of negotiation will be concluded.

Last year 2,822,900 tons of petroleum products were exported from Roumania, as compared with 2,344,016 tons in 1928. The totals of the products for last year were: motor spirit, 802,421 tons; illuminating oil, 774,321 tons; lubricating oil, 62,584 tons; gas oil, 388,914 tons; fuel oil, 788,641 tons; paraffin wax, 3,477 tons; and crude oil, 2,542 tons.

The total direct shipments of oranges from Palestine to the United Kingdom up to February 21 amounted to approximately 1,270,000 boxes, as compared with 852,000 boxes at the corresponding date last year. Total shipments to the Continent amounted to about 411,000 boxes, as compared with about 266,000 boxes shipped up to the corresponding date last year. Transhipments to the United Kingdom via Port Said up to February 15 totalled about 185,000 boxes, as compared with about 84,000 boxes at the corresponding date last season.
